

Monitoring Open Banking API performance

Keeping track of your Institution's key performance metrics within a secure and trusted API platform

Every Bank has to prove to regulators that API services are fully performant and compliant through an independent monitoring service. Failure to demonstrate performance could result in fines – which impacts the bottom line.

The Solution

Yapily provides a regulator-ready solution for Banks to monitor and report API performance.

Within a single view, Banks can monitor and maintain service quality while detect and resolve any performance issues. With real-time data, an institution has a greater understanding of context by benchmarking its API performance against competitors.

Using a secure and trusted solution, Banks can submit API information to the regulator with complete assurance.

Extensive

Coverage across all endpoints while latest releases are updated

Secure

'Open Banking Ready' infrastructure with security at the forefront

Context

Key performance metrics to benchmark against competition

Resilient

Architecture with 24/7 availability and low-latency connection
