Jackson/Charvel electric guitars and basses have set standards for creative innovation and unparalleled quality around the globe. In 1991, Jackson/Charvel celebrates ten years of custom quality guitars and basses produced with production-line efficiency for reasonable prices. Our unflagging commitment to excellence has propelled us to the apex of the industry in less than a decade. More and more players have come to recognize that we're continually introducing new design and electronics concepts that constitute genuine advances in the science and art of guitar manufacture, not just whistles and bells.

From our roots in a small guitar repair and modification shop in California, Jackson/Charvel has followed the American tradition of growth through determination, dedication, and creative drive. In response to unbelievable demand, we've expanded our operation to provide high-caliber instruments for musicians of all levels—from serious students to celebrated professionals. Whatever the model or price range, you can be sure that any piece by Jackson/Charvel is made with the utmost in design consideration, quality workmanship, and first-class materials.

Charvette guitars and basses are designed with the student, home musician, and semi-professional in mind. These instruments combine Jackson/Charvel engineering and design excellence with very reachable prices.

Charvel guitars and basses are intended for the dedicated performer who requires high-quality craftsmanship, hardware, and electronics without the higher cost of a made-to-order instrument.

The Jackson Professional series makes superior Jackson guitars accessible to the professional at any stage of his or her career by limiting custom options and utilizing production-line manufacturing techniques.

The Jackson U.S.A. series guitars are made in the Jackson plant in California and come with standardized hardware and electronics. They are available with Jackson's famous wild graphics, but with a significantly reduced price tag.

Finally, Jackson Custom Shop guitars provide the thriving professional guitarist or bassist with pretty much anything he or she can dream up: from finely crafted body styles to state-of-the-art electronics and hardware, to custom hand-painted graphics. You might pay more money, but you definitely won't get a better guitar than a Jackson.

With a range like that to choose from, we're almost certain to have the perfect instrument for you. So have a look at the Jackson/Charvel line. We think you'll like what you see.
Jackson/Charvel provides innovative technology and design
to great musicians around the world. Now we’re producing a
line of guitars for the semi-professional and home
musician — Charvette. These fine guitars utilize the exciting
design and electronic innovations that have kept Jackson/
Charvel on the leading edge. Charvettes are powered by
the latest generation of Charvel pickups, with precision
wound and matched coils to generate the tones you’re
after without the maddening noise that some cheaper
pickups produce (especially in the studio). Some models
are equipped with the same hardware used on Jacksons
that go for several times the cost of a Charvette. Because
they’re made by Jackson/Charvel, Charvette guitars
feature the same attention to detail and brilliant design
concepts that have made Jackson/Charvel the choice
of many of the world’s hottest guitar trends.

Charvette

The reverse headstock of this series (100, 200 & 300) gives it that vicious, nasty look for players who don’t mess around when it comes to cranking out the sound. With jumbo frets for smooth bending and genuine Indian Rosewood fingerboards, these guitars play as good as they look.

The model 100 is a no-nonsense machine for players of fusion and metal. With one ceramic humbucking pickup in the bridge position (a humbucker has two coils side by side to cancel out 60 cycle hum and flatten the tone) and a low-noise, high gain single coil size humbucker in the neck position, this guitar has what it takes to make some serious pandemonium.

The model 200’s pickup combo is a versatile system that lets you mix in all styles. It has one ceramic humbucker in the bridge position and two single coil size humbuckers in the middle and neck positions. The five-way slotted switch gives you total tonal control.

The model 300, with its low noise, high gain, single coil size humbuckings, lets you reach into the past (and the present) to pull out all the superior sounds that have been associated with this traditional set up.

Nowadays there’s hardly a rock guitarist around who doesn’t occasionally feel the need to hit the old whammy bar. Without a good tremolo system it’s hard to get those low moans and piercing whistles that keep you on the edge. Unfortunately, hard use of the tremolo bar can easily put your axe out of tune. That’s what locking tremolo systems are designed to prevent. The Charvette 50 series features the Charvette CH-120 single locking tremolo system. This hardware provides solid tuning stability with the locking head nut, but avoids the hassle of cutting off the ball end and restringing the strings down at the bridge. Tilt back fine tuners on the bridge stay out of your way and make tuning a breeze. The mounting system features two threaded anchors that provide extra stability to keep the bridge plate from pulling forward.

The Model 150 comes with a Charvel ceramic plus humbucker in the bridge position for blistering lead tones and a high gain single coil size humbucker in neck position for a rounded, warmer tone. The 1-11/16” nut width is perfect for harmonic tapping techniques.

The Model 250 includes the same hot features as the 150 but has an additional low noise, high gain single coil size pickup in the middle position for a broader variety of sonic possibilities.
If you really explore the possibilities of the tremolo system in your playing, you may require the rock solid tuning stability provided by a double locking tremolo system. The Charvette 170 and 270 provide a precision machined double locking system that’s incredibly stable. The string scale is slightly reduced (24-3/4") to lessen string tension for easier bending and a lighter feel. Combined with the full 24 fret, 2 octave rosewood fingerboard and the trimmed down body with sculpted heel joint, this makes for one fast-playing guitar.

The Model 170 has a high output, wide tonal response humbucker in the bridge position and a hot, clean single coil sized humbucker in the neck position.

The Model 270 is essentially the same instrument as the 170, but with another Charvel single coil sized humbucker added in middle position for a greatly enhanced tonal range.

The model 400 bass has the fluid feel and full low end response you’d expect to find on a much more expensive bass. The genuine Rosewood fingerboard gives it a velvety touch while the new Charvel split coil pickup generates an exceptionally low signal-to-noise ratio, for a tone that’s clean and rich.

A full, sumptuous acoustic tone sometimes fits the bill better than a hot electric one. If you want to have the best of both worlds, the Charvette Model 500 is the guitar for you. You’ll be seduced by its gentle acoustic tones when it’s not plugged in, and amazed by its sheer power when it is. The 500 features active volume, bass and treble controls powered by a nine volt battery.
For many players, the guitar is an avocation. For some, it's a living. Here at Jackson/Charvel, the guitar is an obsession. We take our jobs very seriously. At the bottom line, our commitment is to our customers; people like you — devoted players looking for a superior quality instrument with state-of-the-art design and electronics for a reasonable price. And when we say "state-of-the-art" we mean it. We've been borrowed from, copied, and out right ripped-off by the biggest names in the business ever since the first Charvel hit the market. Are we flattered? Sure. Surprised? Not at all, we know a great innovation when we see one. After all, you won't find a more critical group of guitar enthusiasts than right here at Jackson/Charvel.

Many of the Charvel models feature the same hardware and pickups found on our more expensive Jackson models. So if you're ready for an axe that's going to go the distance, read on.
With a Jackson J-100 single coil at the neck and a J-120 single coil at the bridge, the TE Custom provides all those biting warm and bright tones you expect from a traditional single cutaway, while the additional J-100 in the middle position gives you all the sonic possibilities usually associated with the vintage double cutaway design. The top edge binding and mother of pearl style pickguard combine snappy looks with a nostalgic feel. Charvel's own head design features tuning posts that are staggered in height and perfectly aligned with the string both for smooth, stable tuning. The flat mount bridge with 6 adjustable saddles is perfect for those Nashville-style multi-string bends. The TE Custom is also available in ash with a see-through sunburst and with optional maple fretboards.

The late Randy Rhoads designed the Avenger's unique body shape with Grover Jackson. Charvel's version is an axe that sounds and feels as wicked as it looks. The double/single pickup at the bridge position uses two independent narrow humbucking pickups side by side for a humbucking breadth of signal or the biting sound of a single coil. A narrow side by side humbucker at the neck provides the crisp tone usually associated with single coil pickups but totally noise free. Together, these pickups provide a staggering range of tonal possibilities. From its enclosed body, high ratio tuning gears (custom made by Gotoh exclusively for Charvel) to its single-locking, fine tuning bridge, the Avenger is clearly a quality instrument.
There comes a time in your playing career when you need a guitar that won’t leave you broke but provides all the features you need as a pro. The Charvel 275 is just such an instrument. This workhorse keeps it simple so you can keep it off the ground. The 275 has been redesigned for 1990 with Charvel’s own “Dinky” body — slightly trimmed down from the traditional double cutaway body with a smaller perimeter, deeper cutaways and sharper horns for a less weighty feel with better access to the higher registers. The straightforward pickup combo — two noise free narrow humbuckers side by side at the bridge and a narrow humbucker at the neck — gives you the sizzling and biting lead tones you need and toasty single coil resonance without getting in your way. Charvel’s single locking tremolo floats free and clear in the special recessed bridge cavity found on most Charvel tremolo models.

The fat, silky frets and Indian Rosewood fingerboard of the 375 Deluxe feels so sleek you’ll never want to put it down. The enormously popular pickup combination (two single coils in the middle and neck positions and a humbucker at the bridge) give this guitar amazing versatility with both crystalline clean and grinding crunch tones. Whether you’re into pop, rock, metal, fusion, or avant-garde, the 375 Deluxe provides a tonal range broad enough to suit your needs. The Floyd Rose licensed double locking tremolo provides ultra-stable tuning so you don’t have to handle the bar with kid gloves. The 375 Deluxe is available with rosewood or maple fingerboard and an optional flame maple top and back.
With its sharkfin inlays, and finely bound fingerboard and headstock, the 475 Deluxe is a real looker. With two bi-level humbuckers in the middle and neck positions (for those honed clean single coil tones with absolutely no noise) a traditional humbucker at the bridge and active JE-1200 mid-boost circuitry (to fatten up the tone) this guitar will be your main axe for years to come. And as if its looks weren’t incredible to start with, the 475 Deluxe is available with an optional exotic wood top and back.
Contemporary electronics have taken the bass into a whole new universe. With the Jackson J-20 split pickup in the middle position and the Jackson J-10 single coil at the bridge, the 575 Deluxe Bass gives you the technology you need to produce those moaning, howling bass lines that sound like some kind of primordial emanations from the earth. The high density Jackson bass bridge enhances both lower and upper register harmonics, providing enough mass to intensify string resonance without detracting from its quick, sharp tonal response. The enclosed body tuning gears provide a high tuning ratio for accurate, stable tuning. They're custom machined exclusively for Charvel by Gotoh. A genuine rosewood fretboard provides a silky touch.

From its neck-through luxurious “Soloist” body design through it's Jackson noiseless pickups (two bi-level humbuckers at the middle and neck positions and a J-60BC humbucker at the bridge), the 650 Custom is a top-of-the line guitar for the serious player. The Royd Rose licensed double locking bridge floats freely in the special Charvel recessed bridge cavity. To feel the 650 Custom's bound matching headstock and 24-fret fingerboard, and hearken to the thick tones churned out by the JE-1200 active midboost is nothing short of inspiring.
The body of the fusion Special is taken from Jackson's Soloist model with deepened cutaways to stay out of your way when your bending into the higher register. Twenty-four humbuckers, placed at each position, produce a range of sounds from a high-pitched, treble-rich voice to a low-end, rumbling bass tone. The bridge pickup, designed for a brighter sound, is especially effective for strumming and leads. The neck pickup, with its smooth, rich tone, complements the bridge pickup well.

"Fusion Deluxe" features a deep body with a carbon fiber reinforcement plate, ensuring excellent sustain and playability. The neck is designed with a truss rod for stability and a contoured body for comfort. The electronics include a five-way pickup selector and two volume controls, allowing for a wide range of tonal possibilities. The guitar is available in a variety of finishes, including a classic black and white.

"Trouble Tribe" by Adam Wacht features the Fusion Deluxe, showcasing its versatility and sound quality in various musical genres.
For the fusion man (or woman) who likes to know he's touching wood, the superb two piece ash body with see-through sunburst finish of the Fusion Plus combines elegant lines with stunning materials. Its fantastic looks are further enhanced by the matching headstock and unique dots placed between the E and A strings. And the beauty of this charmer is not only skin deep: It's got a Jackson J80 humbucker at the bridge and a Jackson J50 at the neck for giant crunch and fat, silky clean tones. The individual coils in the pickups are wired separately for a wide range of sound combinations. The JE-0005 5-way pickup selector ignites both coils of the neck pickup in first position; the outside coil of each pickup in second position; both coils of both pickups in third position; the inside coil of each pickup in forth position; and both rear coils in fifth position. Combined with the last Fusion body and short scale length, this adds up to an axe that's as thrilling to play as it is to look at.

Sometimes everything you need is simply not enough, some of us won't settle for anything but everything we want. If you're a fusion freak dyed in the wool with a hankering for the finer things in music, the Fusion Custom may be what you're after. This guitar has all the light speed features of the Fusion Deluxe (page 20) plus a tone control and an additional single coil sized "rail" humbucking pickup in the middle position for a vast array of tonal possibilities. To finish off an already perfect combo, the Fusion Custom also sports a matching painted headstock.
There's just no question your playing improves when your instrument responds to every subtle nuance of mood and feel. The freedom of the Fusion IV's 24 fret maple neck, and the unique way it's joined without a heel to the highly contoured body let you soar through lightning fast solos and changes with feeling. Independent non-overlapping treble and bass controls combine with a pan pot for continuous mix of the Jackson pickups (a J-20 split in front and a J-150 single coil at the bridge) to produce virtually any bass tone you can imagine. The Fusion IV's unique body design and painted neck and headstock make it hard to take your eyes off of it.

JOHNNIE LEE MIDDLETON
SAVATAGE

For a subterranean rumble you feel as much as hear, the Fusion V's active circuitry and noiseless pickups grab tones all the way down to the low B and really drive them. The pickups are full blade humbuckers, split up front and straight at the bridge, to provide a thick full tone with no 60 cycle hum. These are mixed right on the body with a pan pot that features a center detent position. For commanding lows and robust highs, there are active, non-overlapping bass and treble controls with a full 12db of cut and boost and center detent positions. All of this power and scope are packed into a beautifully contoured body with matching painted neck and headstock — a bass for the sincere professional who wants to leave all horizons open.
The totally unique body design of the Eliminator bass features a thumb rest contoured right into the face of the instrument with room enough for you to play up on the neck or all the way back on the high density Jackson bridge. That bridge produces a quick, sharp tonal response while enhancing string resonance in both upper and lower register harmonics. The 34" scale maple neck with 24 fret genuine rosewood fingerboard is joined to the body without the usual heel joint, making for incredible ease of access to the higher frets. The low noise humbucking P-J pickup configuration and Channel active electronics, including a pan pot and active, independent treble and bass controls produce a tonal range you have to hear to believe.

A particular favorite of the purveyor of straight ahead rock, the Predator has a grind that'll take off your fingers if you're not careful. It's teeth are a Jackson J-90C humbucker in the bridge position and a single coil sized blade humbucking pickup at the neck. The Floyd Rose licensed double locking fulcrum bridge sits in a special recessed cavity for perfect freedom of movement and has a new design that makes installation of the arm especially easy. The J-9006 special 5 way switch gives you some unique options: 1) neck; 2) neck and bridge (parallel); 3) both full (series); 4) both full (parallel) with filter circuit; 5) bridge (series).
LARRY ROLANDO
NASHVILLE SESSION/GARY MORRIS BAND

For a vintage look and feel combined with state-of-the-art electronics, Charvel presents the ST Deluxe. There are four narrow humbuckers with two side by side at the bridge for a traditional humbucker sound. With the five way controller, you can get the standard combinations of the front, middle, and bridge pickups while a three position switch lets you add the front bridge pickup at will, in or out of phase. The innovative headstock design provides a vintage look but with staggered tuning keys that line up precisely with the strings for reduced tension on the self-lubricating phenolic composite nut. The traditional double cutaway design features a reduced heel for greater playing comfort. All that adds up to a smooth playing instrument that warms your heart but doesn’t leave your sound stuck in the dark ages.

CHRIS HOLZHAUS
DELBERT MCCLINTON BAND

With all the beauty of a vintage double cutaway design on a two piece ash body, the ST Custom takes you down memory lane in a soupéd up, turbo charged hot rod. With a modern twist on a traditional look, the unique Charvel headstock features staggered posts that line up exactly with the strings, eliminating the need for a string retainer and reducing friction at the nut. And this is not just any nut; it’s a special roller nut, designed to eliminate friction and binding for greatly enhanced tuning stability. The pickups in that vintage-looking mother of pearl pick guard are single coil sized humbuckers providing zero noise with a warm single coil tone. The turbo boost of this unit is a five way pickup selector with an additional 3 position mini switch for the activation, in or out of phase, of the front pickup at the bridge. This gives you 15 possible combinations! The bridge features lock down saddles to eradicate side to side drift.
ADRIAN SMITH
ΔGGP

Exactly the same quality instrument as the ST Custom, but with the addition of a double locking tremolo system for improved tuning stability.

The Spectrum is Charvel's proof that technology is limited only by the imagination. The central innovation the Spectrum is built around is the active JE-1500 para mid EQ tone circuit preamp with in/out bypass switch. Greek to you? Well that's a mid frequency sweep, like a wah pedal, built into your guitar! Just by turning a knob, you can select the exact mid level frequency you want and boost it right out into the stratosphere. That's tone control, through thick or thin, like you've never had before. And for a squeaky clean, warm timbre with absolutely no noise, the Spectrum is equipped with three Jackson J-200 bi-level humbuckers. These are two coils stacked on top of each other, so to the string it's a single coil, but to the amp it's a bucket of 60 cycle hum — totally noise free. Combine all that with the double locking fulcrum tremolo system — licensed by Floyd Rose — and you've got this century's guitar with next century's technology. The Spectrum is also available with a maple fretboard.
For years the only way for some of the world's best guitarists to get their hands on a Jackson guitar was to custom order it from the factory, and many of you still do (see page 50) but now there's another way. In response to the monumental demand for Jacksons, and with an eye toward making them affordable to virtually any working professional guitarist, Jackson has introduced a standardized line of guitars. By limiting the custom options to finishes and having the guitars made to Jackson's stringent specifications at the Chanel plant, we're now able to produce top quality guitars for very competitive prices. These guitars are made to the same exacting Jackson standards and with the same hardware, woods and electronics that have made Jackson the most sought-after guitars and basses in the world.

The Jackson Pro Series is designed for the professional working musician who requires a superior caliber instrument to match his or her superior talents.
With its light, trimmed down body and rich East African ebony fingerboard, the Jackson Fusion Pro does more to brighten your work day than a two hour lunch. While the bound fretboard and headstock with a pearl logo inlay keep your eyes dazzled, the Jackson JE-1500 para-mid EQ tone circuit keeps your fingers bringing home the bacon. The JE-1500 is a mid tone sweep that’s almost like having a wah built into a knob on your guitar. There are two Jackson J-200 bi-level noise-free pickups up front and a Jackson J-80B humbucking at the Rose licensed double locking bridge. The 24-3/4 scale length for light string tension, unified with a sculpted heel joint and lower bout surface cutaway make the Fusion Pro play like nobody’s business. It’s also available (sans lower bout scoop) with an exotic flame maple front and back.

When it comes to absolutely noiseless signal output and full spectrum adaptability, the Jackson Soloist Pro is second to nothing. It’s neck-through construction and ebony fingerboard give it sustain and warmth you just can’t get with lesser instruments. It’s elegant appearance is accentuated by the pearloid logo inlay and superb attention to detail. With deeper-than-traditional cutaways and heel-less neck construction, the Soloist Pro makes access to the 24th fret completely effortless. There’s a Jackson J-50C humbucker at the bridge for a big crunch and Jackson J-200 bi-level humbuckers at the middle and neck positions for razor clean warm tones. Combine this setup with an active mid-boost – the JE-1200 – and you’ve got a giant range of available sounds.
Its 3/4" carved flame maple top, bound neck and mother of pearl logo make the Soloist Archtop a sight to behold, but the real charge comes when you play it. With set neck construction, a mahogany body, and ebony fingerboard, this guitar is a sonic powerhouse. Jackson J-80C ultra low noise humbucking pickups in the bridge and neck positions with a 3-way toggle switch provide a hefty, powerful tonal texture. Featuring upper and lower bout surfacing cutaways for enhanced playing comfort and slightly reduced 24-3/4" scale length for a graceful touch, the Soloist Archtop is the pinnacle of the Jackson Pro line. For flawless tuning stability this guitar is equipped with a precision machined, high density double locking tremolo system.

Exactly the same quality instrument as the Soloist Archtop Trem (facing page) but with a string-through-body hardtail tunomatic bridge for those whose playing styles depend on multiple string bends and manual tremolo.
Once you've seen the Winger Boss' surreal contours in astounding Australian lacewood and bent your ear to its bottomless moaning resonance, you won't breathe freely 'til you've added it to your arsenal. A collaborative design by Kip Winger and Jackson/Chanel, it's slightly arched top and dished back make it fit you perfectly while the ebony fretboard spoils your digits and produces warm tones with a cutting high presence. Gold Jackson hardware and a pearl logo provide impeccable counterpoint to the ravishing lacewood grain on the neck-through body and headstock.

The Winger Boss' nervous system features active non-overlapping treble and bass controls and a pan pot for continuous mix of the Jackson low noise humbucking PJ pickup configuration.

The Phil Collen model represents yet another completely innovative Jackson guitar design. Designed by Grover Jackson in collaboration with Phil Collen, this is an entirely original, aesthetically engaging guitar that plays like only a Jackson can. It has neck-through construction for excellent sustain and stability, with a huge arched top and contoured back that grant a truly luxurious feel. A J-90C humbucker at the bridge and a J-100 single coil pickup at the neck provide a good tonal range with immaculate clean tones and massive chunk. The Floyd Rose low stress tremolo system furnishes action and impeccable pitch stability.
FRANK STEPANEK
BLACK UMHU

This distinctive instrument was designed by the late guitar virtuoso Randy Rhoads in collaboration with the Jackson guitar company. With its unique offset "V" body, beveled edges and cutaway for extra easy high register access, it's no wonder the Rhoads is being copied by so many other guitar manufacturers. Sharkfin inlays, a bound fretboard and mother of pearl logo inlay leave no doubt that this is a superior instrument. Neck-through construction and an ebony fingerboard provide unreal sustain and warmth, while the specially designed Jackson J-508 and J-50N pickups give you singing crunchy and vibrant clean tones. The JE-1200 midboost preamp elevates the midrange (at your discretion) for truly massive lead tones. With a double-locking bridge system for worry-free tremolo, and a recessed, side mounted jack plate for convenience and looks, the Randy Rhoads Pro is a primo instrument for the serious modern musician.

DANNY SPITZ
ANTHRAX

The radical design of the Warrior Pro—Jackson's newest production guitar—is not for the faint of heart. The amazingly well balanced body is highly contoured with deep bevels on all edges. Neck-through construction and sheer body mass united with a unique pickup combo give the Warrior Pro a really huge sound. The pickups are single-coil-sized rail style humbuckers, one at the neck and two paired at the bridge. Slanted in reverse, these pickups yield unique phasing, but the true warp drive of this battle axe is the juiced up Jackson JE-1500 parametric midrange sweep—like an internal wah pedal. A super deep, totally heel-less neck sculpt frees your passage all the way up to the 24th jumbo fret. Mother of pearl sharkfin and logo inlays, with the bound fretboard and evident attention to detail, say Jackson loud and clear.
For some of us, that simple label “Made in the U.S.A.” still means a lot. Jackson guitars were born in the U.S.A. From that first mind-blowing success, the Randy Rhoads, Americon made Jackson guitars have rocketed to the status of the most sought-after electric guitars in the world. To achieve the utmost in attention to detail and American quality control, but without the full cost of an entirely custom-made guitar, Jackson introduced the U.S.A. series. Made by Americans at the Jackson plant in Ontario, California with the kind of expert craftsmanship and drive for excellence only Americans can provide, the guitars of the U.S.A. series differ from Custom Shop Jacksons in only three respects: they are made in small production lots of 12 rather than individually; the hardware and electronics are standardized rather than custom ordered; and finally, they cost about 40% less! Every guitar in the U.S.A. series is available with ten different hand-painted airbrush graphics and a wide range of finishes.
The Fusion U.S.A. features the Jackson JS-1500 midrange sweep for a built-in wah-like effect; two Jackson J-200 bi-level pickups at the neck and middle positions for crystal clean single-coil sounds; and a J-50B humbucker at the bridge. An oil finish neck, on a shorter 24-3/4" scale grants incomparable comfort and speed of play. The double-locking tremolo system is mounted in Jackson’s special recessed bridge cavity for total freedom of tremolo movement. The whole instrument, from the mother of pearl Jackson logo and sharkfin inlays to the bound ebony fingerboard and sculpted heel joint, is formed and assembled by expert and conscientious craftsmen with unfailing attention to the subtlest details. Like all of the U.S.A series, the Fusion model is available with your choice of ten handpainted airbrush graphics or a sizable range of finishes.

Neck-through construction, an ebony fretboard, and the JE-1200 active midrange elevator combine to produce incomparable sustain and a warm, fat signal in the Soloist U.S.A. Jackson’s impeccable craftsmanship and concern for quality are apparent in fine mother of pearl inlays, heel-less neck construction, and deeper-than-traditional cutaways. Two J-200 bi-level humbucking pickups at the front and middle positions afford single coil clarity of tone with no 60 cycle hum. At the bridge, a J-50B humbucking pickup delivers a full, gritty crunch. Sharkfin inlays and the Jackson logo in mother of pearl, with a bound fretboard and sleek bodylines, provide an elegant, clean look. The Soloist U.S.A. features your choice of ten graphics or finishes.
Dave Mustaine
Megadeth

Mother of pearl sharkfin and logo inlays, a bound ebony fretboard and exemplary artanship top off the Randy Rhoads USA's already extraordinary good looks. Two distinctive humbuckers, the J-50B and the J-40N meld with the JE-1200 active midboost circuit to create a thick, sultry tone. The feel and resonance of this piece are enhanced by neck-through construction and a high register cutaway. The tone, volume, and midboost controls and the 3-way toggle pickup selector are front mounted on a metal plate. The jack is side mounted and recessed for unmarred looks and functionality. A double-locking Floyd Rose licensed tremolo system supplies the utmost in pitch stability. Finally, as with all the USA series, the Randy Rhoads comes with your choice of 10 meticulously hand-pointed graphics or finishes.

Mike Wright
Charvel/Jackson R&D

Entirely original design, featuring deeply sculpted contours and radical extremities, combines with neck-through construction and Jackson USA attention to detail to make the Warrior the hottest new guitar around. Perfectly balanced and lighter than one might imagine, this unit features a neck sculpt with no heel whatsoever for unrestricted approach to the two octave ebony fretboard. The unique pickup combination — two rail humbuckers at the bridge and one up front — is endowed with uncommon phasing due to the reverse slant. Unparalleled tonal control and vibrance are afforded by the JE-1500 midrange sweep — a built-in effect that allows you to select and expand any midrange frequency band. Put together by the finest guitar craftsmen in America, as evidence by the precise inlay work on the neck and headstock, the Warrior is available with ten possible graphics or finishes.
Since 1978 Jackson has been building custom American made guitars for musicians who demand the finest instruments possible. Jackson Custom guitars are entirely custom made, one at a time and to your exact specifications. From rough cutting the general body shape, to hand setting the frets, to final set-up and inspection, Jackson Custom guitars are made by expert American craftsmen right here at our plant in Ontario, California. Every detail, no matter how minute, is given all the time and attention needed to produce a flawless instrument. We use only the finest woods, our own ultra-high quality electronics and the best hardware made.

Our extensively trained and inventive guitar makers will work with you to produce the instrument you want — exactly the instrument you want. You can choose from our broad range of body styles, including all of the Jackson bodies shown in this catalog, or even design your own body. There's a huge range of standard graphics or finishes to choose from and we even provide body templates for you to create your own graphic image. Simply put, if you can dream it up we can build it.
