

FUTURE PROOF BANKING & TREASURY

Direct Treasury Solutions for Corporations

J I K O

Jiko Group, Inc. and its affiliates do not provide legal, tax, or accounting advice. You should consult your legal and/or tax advisors before making any financial decisions.

This material is not intended as a recommendation, offer or solicitation for the purchase or sale of any security or investment strategy.

Jiko Securities, Inc. is a registered broker-dealer, Member SIPC, and a wholly-owned subsidiary of Jiko Group, Inc.

Banking products are provided by Jiko Bank, a division of Mid-Central National Bank, Member FDIC, and a wholly-owned subsidiary of Jiko Group, Inc.

Securities investments: Not FDIC Insured - No Bank Guarantee - May Lose Value - Are Not Deposits

The power of direct treasury solutions

Treasury solutions to manage liquidity reserves should meet the following requirements:

- Minimal counterparty risks with maximum liquidity, especially under market duress.
- Transparent performance at or above the risk-free rate.
- Easy to manage with automated investment capabilities.

Historically, large corporations have had limited choices when it comes to managing their cash:

- Deposits at banks yield very little in the current yield environment (zero or even negative yield after fees) and FDIC insurance is limited to \$250,000.
- The ability to liquidate and wire against US Treasury Securities is limited. Most corporations are not equipped with advanced trading capabilities to fluidly manage dynamic portfolios of US Treasury Securities.
- Other cash equivalents such as commercial paper are not truly liquid on a day to day basis and present increased counterparty risk when compared to US Treasury Securities.

Money Market Funds, which represent \$4.7T in government securities holdings and are widely used by corporate treasurers, present significant drawbacks as well:

- Money Market Funds' (MMFs) performance typically lags behind government treasury index benchmarks due to fees and the reliance on proxy instruments such as Repurchase Agreements (Repos).
- The use of Repos is important to MMFs in order to maintain day to day liquidity, but it degrades performance as compared to the benchmarks (as apparent in 2020) and furthermore can present significant counterparty risk (Agency Repo for example back in 2008).
- Although very liquid, MMFs positions can take a day to trade in or out of, incurring trading costs along the way.

Jiko Advantage

Configurable

Automated investing

Instant liquidity

Seamless reinvestment at expiry

Secure & compliant

Liquid US T-Bill Ownership

The Solution

Jiko is a 5-year-old, growing banking organization founded and led by Wall Street veterans, quants and technologists, on a mission to redefine banking.

Jiko owns and operates a national bank as well as a broker-dealer, both running on Jiko's proprietary technology platform.

Jiko solutions allow clients to conveniently allocate excess cash into short-term US Treasury Securities (T-Bills) - or further out the Treasury curve should they wish to - with more ease and flexibility than MMFs.

Direct exposure to US Government Treasury Securities:

- Safe
- Yielding
- Transparent

Minimized counterparty risks:

- T-Bills are held in the client's name.
- Jiko keeps the T-Bills custodied on a fully-paid-for basis and protected -- FINRA customer protection rule 15c3-3.
- Peace of mind that in a black swan event, clients will be holding one of the safest and most sought-after instruments in the market.

Fluid and efficient:

- Funds are immediately available.
- Funds are always deployed - no idle cash.

US Treasury securities are issued by the US federal government and are backed by the "full faith and credit" of the US government. [Learn more here](#). Past performance is not indicative of future performance.

Jiko automated investments

Jiko's goal is to provide simple and transparent investments in US Treasury Securities with flexible options for customers to choose from based on risk and term requirements.

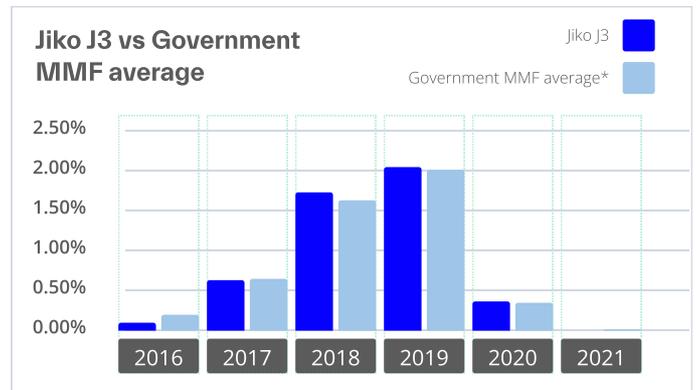

Investing in T-Bills directly as compared to Money Market Funds

We present here a performance comparison for Jiko's standard investment option, a buy and hold strategy that invests incoming funds in the latest on-the-run T-Bill of a given term. The term is chosen by the customer -- typically 1, 3, 6 or 12 months.

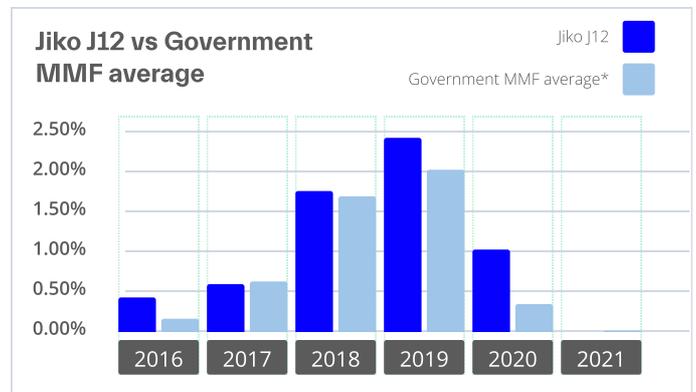

The T-Bills are simply held to maturity and when they mature the cash is immediately reinvested in the latest on-the-run T-Bill of the set term.

The charts on this page compare backtested performance (net of fees) for two such options (J3 and J12) to the average performance of leading Government Securities Money Market Funds*:

- J3 invests in 3-month T-Bills. This could be a good choice for a client looking for a cash equivalent holding.
- J12 invests in 12-month T-Bills. This could be a good choice for a client looking for more yield.

Average of leading Government Money Market Funds: DWS Government Money Market Series (ICAXX), UBS Treasury Institutional Fund (SETXX), Dreyfus Government Cash Management (DGCXX), Dreyfus Treasury Securities Cash Management (DPRXX), Fidelity Government Money Market Institutional (FRGXX).

Coming soon: enhanced flexible Treasury Securities investments

Jiko will allow for more configurable portfolio settings through the Jiko API. As an example, a Weighted Average Life (WAL) strategy would allow clients to hold a mix of securities, including US Treasury Bills, Notes and Bonds, optimized for a chosen weighted average maturity of the portfolio.

Past performance is not indicative of future performance. Investment involves risk. There is always the potential of losing money when you invest in securities.

Money Market Funds vs T-Bills under stress

While both destinations become attractive during periods of serious market stress, MMFs can diverge from T-Bills (as seen in the early months of 2020).

Figure 1.3 illustrates the dislocations that occurred in 2020. When markets performed poorly, MMFs stayed flat as repo markets were unmoved, yet T-Bills increased in demand due to the flight to asset safety.
