UiPath **Reboot Work.™**

Tired of flaky automations and continuous maintenance?

Like the term implies, "continuous testing" is testing without interruption—anytime, everywhere, in any form. But most teams still can't build automated tests that reliably run unattended and adapt to changes – until now. With UiPath Test Suite, you can automate more and accelerate release cycles, without changing the way you manage testing. The results are faster automation, quicker execution, and less maintenance.

Let's take a closer look at how.

The challenge

. . . with finite staffing and testing resources

Test faster, test more, test often . . .

Only 45%
of testing organizations have automated more than half of their testing.
Source: 2022 State of Testing Report

Over 1/3
of testing leaders report difficulties in automating test activities.
Source: 2021 - 2022 World Quality Report

How do you adopt more advanced automation without changing testing processes or test management / ALM tools?

The solution: UiPath Test Suite

Production-grade automation for testing

Test Manager
Manage tests

Studio
Automate tests

Orchestrator
Distribute tests

Robots
Execute tests

Automate testing of web and mobile apps, APIs, virtualized desktops, robotic process automation workflows, and more.

Simplify testing with connectors for ServiceNow, SAP Solution Manager, Jira, Xray, and Azure DevOps. We continue to add new integrations.

Manage testing your way

For organizations with one ALM/test management tool or distributed testing teams using their own tools

1. Connect to Test Manager Hub
2. Continue using your tools
3. Execute automated tests directly from your tools with no changes to defect reporting

For centralized test teams with multiple ALM/test management tools

1. Connect to Test Manager Hub
2. Use Test Manager as a centralized, aggregated solution
3. Execute automated tests from Test Manager and report defects into your existing tooling

The advantages

2x
more test automation coverage due to production-grade capabilities

3x
faster test execution compared to traditional test agents due to production-grade orchestration

100s
of free pre-built automations for managing and validating environments

75%
faster test case automation due to a low-code interface and pre-built components

> 1.5 million
community automation experts to share knowledge and best practices

40%
less unplanned maintenance due to more reliable and resilient automations
