Print perfect checklist

- Add your design to the template available on the next page.

**Bleed Area**Make sure to extend your background to fill the bleed area to avoid a white border. We require **1cm** of bleed all around.**Trim Line**

This is a guide where the design will be trimmed.

Safe AreaKeep important text or graphic elements within the safe area which is **6mm** from the trim line. This is to prevent it from being cut off, or from being too close to the edge, which does not look nice.

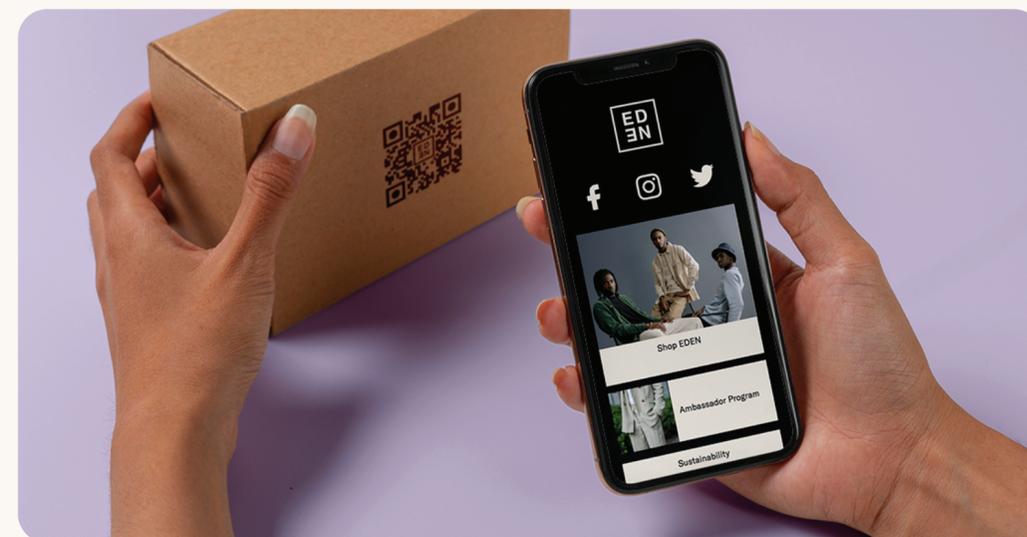

- We recommend using **12pt font size** (2mm height) or larger.
- Thickness of lines, strokes and gaps should be no less than **0.3mm**.
- All colors should be converted to **1 or 2 Pantone colors** only. Choose from the **Pantone Solid Coated or Uncoated** swatch libraries.
- We can also print 1-2 metallic colors (gold, copper, silver). You can choose from **Pantone 871 C to 877 C** for our metallic range.
- We can also use **Neon Pantone** colors but for 1 color design only.
- We **do not recommend Pastel or light colored** design elements. Ink might blend in with the translucent tissue paper and look subtle on print.
- Colors should have **100% opacity**, no gradient or tints.
- For best results, your design should be in **vector** format, but if an image will be used, it should be no less than **300 DPI**.
- In order to ensure your custom tissue prints correctly, we require that **all fonts be converted to outlines**.
- For optimal scanning, ensure **QR codes have high contrast** and measure **20x20mm or above**. Do not scale the QR code below a **minimum of 16x16mm**.
