# General orthotics.

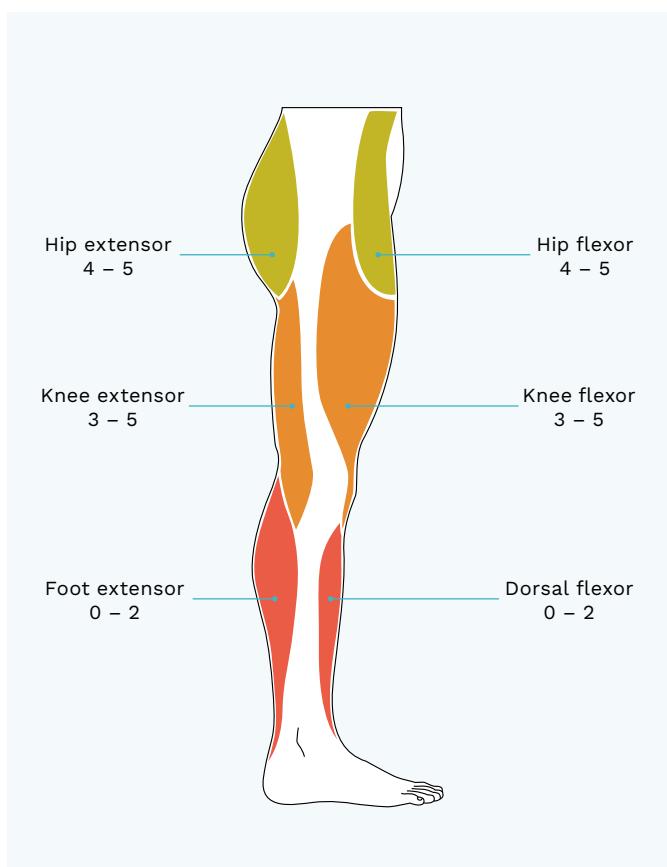

Global networking has also become important in the medical technology sector. In order to work with the same terminology internationally, the abbreviations of the English terms for the different types of orthoses are used.

These are already used in many countries in the corresponding fitting or device lists. Only the abbreviations common for the lower limbs are shown in the adjacent overview, but these are widely used for the entire locomotor system.

## Lower limb orthosis types

<b>HO</b>	Hip orthosis
<b>HKAFO</b>	Hip-knee-ankle-foot orthosis
<b>KAFO</b>	Knee-ankle-foot orthosis
<b>KO</b>	Knee orthosis
<b>AFO</b>	Ankle-foot orthosis
<b>FO</b>	Foot orthosis

## Muscle strength assessment according to Janda

0	No visible and/or palpable muscle contraction
1	Visible and/or palpable muscle contraction with no motor effect
2	Pronounced muscle tension, movement is possible if force of gravity is eliminated
3	Movement against gravity possible
4	Movement against low to medium resistance possible
5	Movement with normal strength

# Searching, finding and ordering.

- This catalogue is organised into sections.

- Tabs on the right-hand page margins as well as the subtitles at the top of every page also serve as quick and easy reference guides.

- The list of keywords lists all products in alphabetical order. Alternatively, the index lets you find the page numbers for products by reference number.

For more information or to place orders for products in the materials and tools category, please use the 646K1 Ottobock "Materials" catalogue.

You can find more on individual solutions for specialist orthopedic technology companies in the “Consulting, Planning and Equipping” catalogue (646K10).

### **Note: orthosis compendium**

Detailed explanations of the underlying illnesses relevant for custom orthotics, the biomechanics of standing and walking and the orthosis designs corresponding to the clinical pictures are found in our orthosis compendium for the lower extremity.

# NeuroRehabilitation.

The frequency of neurological diseases has been increasing for years. According to an analysis by Deloitte, the specialist field of neurology will grow by 24.6% by 2030, which is the highest percentage growth in any medical specialist field (Deloitte 2016). The objective of NeuroRehabilitation is to avoid the resulting day-to-day limitations as far as possible through targeted measures, restore functions and thereby improve quality of life. However, improvements are not limited to a certain period of time but can be attained at virtually any time through treatments and applications. Devices can make a major contribution here. Lost and/or limited functions can be replaced, assisted or strengthened by devices. In the rehabilitation phase, a device can maintain and improve therapy results that have been achieved, support the patient's mobilisation or prevent early compensating movements on the part of the patient. In day-to-day life, devices help maintain rehabilitation results and promote the use of mobility that has been regained in specific situations. Ottobock offers numerous devices that have been developed especially for the particular needs of NeuroRehabilitation. This includes pre-fabricated, semi-finished products that are presented in this section. All components required for the fabrication of custom orthoses are also described in detail in this catalogue.

## 28U70 GoOn

The 28U70 GoOn is an ankle-foot orthosis for elevating the foot in the neutral position.

### Features and benefits

- Easy handling and soft materials
  - High acceptance
- Easy to wash
  - Hygienic
- Universal size (adult size)
  - One size fits all users
- Spring elements made of individual filaments
  - Controlled lifting force, moderate guidance and torsion control of the foot
- Orthosis does not cover the heel and forefoot
  - High proprioception
- Dorsal spring construction
  - Can be worn with or without footwear, regardless of heel height. If the orthosis is worn without footwear, an additional hook-and-loop closure is required (included in the scope of delivery)
- Viscoelastic cushion
  - Minimised pressure on the top of the foot
- Front support attached directly to the foot
  - Very secure, firm fit

### Indications

- Drop foot in case of:
  - Fatigue syndrome
  - Problems with balance
  - Dementia
  - Parkinson's disease
  - Stroke
  - Traumatic brain injury
  - Multiple sclerosis
  - Neural muscular atrophy
  - Peroneal paralysis (paresis)

### Modes of action

- Light support for drop foot

## 28U90 Ankle-foot orthosis

Ankle-foot orthosis for lifting the foot in neutral position.

### Features and benefits

- Thin-walled design
  - Inconspicuous under clothing and in the shoe
- Long sole
  - Precise guidance of the foot, sole can be shortened as needed
- Low weight
  - No added strain
- Calf pad, easy to remove and washable
  - Good wearer comfort
- Pad with strap suitable for left-hand or right-hand use
  - Straightforward adaptation to the patient

### Indications

- Drop foot in case of:
  - Peroneal paralysis (paresis)
  - Stroke
  - Traumatic brain injury
  - Multiple sclerosis
  - Neural muscular atrophy

### Modes of action

- Passive, flexible limitation of plantar flexion
- Dynamically returns the foot to the neutral position

## 28U50 Malleo Neurexa pro

Thermoplastic ankle-foot orthosis with dynamic pronation strap.

### Features and benefits

- Dynamic pronation strap
  - Corrects supination
- Can be used as both a day or night splint
  - Prevents contractures
- Can be worn barefoot as well as with shoes
  - Flexible

### Indications

- Drop foot without/with moderate supination of the foot due to spasticity in case of:
  - Stroke
  - Traumatic brain injury
  - Multiple sclerosis
  - Neural muscular atrophy
  - Isolated peroneal paralysis

### Modes of action

- The special guidance of the closure straps with the combination of the elastic pronation strap ensures effective correction, even with acute hypertonicity of the lower leg musculature.
- Yields when spasticity occurs
- Returns the foot to the neutral position after relaxation

## 28U22 WalkOn Flex

Dynamic ankle-foot orthosis made of composite material, for lifting the foot and active energy return while walking.

### Features and benefits

- Low weight
  - High acceptance
- Made of fibreglass prepreg
  - Easy energy storage and return during the gait cycle
- Medial guidance of the longitudinal arch by the pylon
  - Prevents supination in solid footwear
- Spiral-shaped spring to calf band
  - Greater flexibility at heel strike, natural external rotation of the foot, less stability during pronation and supination than WalkOn/WalkOn Trimable
- Slim design
  - Inconspicuous to wear
- Trimable sole
  - Straightforward adaptation
- Two comfortable calf bands
  - Skin-friendly padding, washable and replaceable

### Indications

- Drop foot in case of:
  - Peroneal paralysis (paresis)
  - Stroke
  - Traumatic brain injury
  - Multiple sclerosis
  - Neural muscular atrophy

### Modes of action

- Supports dorsiflexion
- Promotes dynamic rollover
- Increases the stride length by improving muscle dynamics
- Promotes external rotation of the foot at heel strike
- Promotes a physiological gait pattern
- Reduces the risk of falling

## 28U23 WalkOn Trimable

Dynamic ankle-foot orthosis made of carbon, for lifting the foot and active energy return while walking.

### Features and benefits

- Low weight
  - High acceptance
- Made of carbon fibre prepreg
  - Energy is stored and returned during the gait cycle
- Medial guidance of the longitudinal arch by the pylon
  - Prevents supination in solid footwear
- Slim design
  - Inconspicuous to wear
- Trimable sole
  - Straightforward adaptation
- Dorsal pylon/spring to calf band
  - Good control at heel strike and toe-off
- Two comfortable calf bands
  - Skin-friendly padding, washable and replaceable

### Indications

- Drop foot in case of:
  - Peroneal paralysis (paresis)
  - Stroke
  - Traumatic brain injury
  - Multiple sclerosis
  - Neural muscular atrophy

### Modes of action

- Supports dorsiflexion
- Promotes dynamic rollover
- Increases the stride length by improving muscle dynamics
- Promotes external rotation of the foot at heel strike
- Promotes a physiological gait pattern
- Reduces the risk of falling

## 28U33 WalkOn Lateral

Dynamic ankle-foot orthosis made of carbon with lateral guidance to elevate the foot and for active energy return while walking.

### Features and benefits

- Effectively supports a physiological gait, even at different speeds and with different loads.
- High energy return of the orthosis
- Increases the stride length by improving muscle dynamics.
- Stabilises the ankle joint
- The orthosis permits forefoot loading for climbing stairs and squatting.
- Limits plantar flexion and supination when the orthosis is worn with a sturdy shoe.
- Easy to adjust thanks to a sole that can be trimmed to size
- Slim, lightweight design
- Optimised compliance thanks to a removable and washable pad/strap combination that can be aligned in the preferred direction for tightening the strap.
- The WalkOn lateral is available in adult and children's sizes (junior). The junior orthoses are delivered in a child-friendly dragon sports bag.
- For junior orthoses: the orthosis may be combined with other dynamic foot/ankle-foot orthoses (DAFOs) if the biomechanical requirements can be met more effectively as a result.

### Indications

- Drop foot, with or without mild spasticity, e.g. caused by:
  - Peroneal paralysis (paresis)
  - Stroke
  - Multiple sclerosis
  - Neural muscular atrophy

### Modes of action

- Supports dorsiflexion
- Promotes dynamic rollover
- Increases the stride length by improving muscle dynamics
- Promotes external rotation of the foot at heel strike
- Promotes a physiological gait pattern
- Reduces the risk of falling

## 28U34 WalkOn Reaction lateral

Dynamic ankle-foot orthosis made of carbon with lateral guidance to elevate the foot and for active energy return while walking. A frontal support element provides light support for the knee joint.

### Features and benefits

- The WalkOn Reaction lateral features highly dynamic properties and a high energy return.
- Stabilises the knee and ankle joint using ground reaction forces
- When standing, the alignment of the orthosis affects the statics in the frontal and sagittal plane.
- Easy to adjust thanks to a sole that can be trimmed to size
- Slim, lightweight design
- Optimised compliance thanks to removable and washable pad/strap combination.

### Indications

- Drop foot without or with moderate spasticity
- Minor impairment of the foot lowering musculature and minor impairment of knee extension

### Modes of action

- Promotes a largely symmetrical and fluid physiological gait with support for knee extension and flexion, depending on what is needed
- Its energy return supports toe-off and heel strike
- Prevents uncontrolled foot contact and foot slap at heel strike and supports knee extension during toe-off
- Influences the statics in the frontal and sagittal plane when standing due to the alignment of the orthosis

## 28U24 WalkOn Reaction

Dynamic ankle-foot orthosis made of carbon, for lifting the foot with slight anterior support for the knee joint and for active energy return while walking.

### Features and benefits

- Low weight
  - High acceptance
- Made of carbon fibre prepreg
  - Energy is stored and returned during the gait cycle
- Lateral pronation strap
  - In conjunction with the lateral pronation strap, it is possible to reduce varus deviation of the foot and ankle and supination of the forefoot. This should always be supported by a corrective insole (included in the scope of delivery).
- Shin pads with integrated closures
  - Skin-friendly padding, washable and replaceable
- Slim design
  - Inconspicuous to wear
- Anterior support
  - Good control at heel strike and toe-off
- Trimable sole
  - Straightforward adaptation

### Indications

## 28U25 WalkOn Reaction plus

Dynamic ankle-foot orthosis made of carbon, for lifting the foot with anterior support for the knee joint and for active energy return while walking.

### Features and benefits

- Dyneema-reinforced spring
  - Increases the resistance of the orthosis
- Low weight
  - Promotes high user acceptance
- Made of carbon fibre prepreg
  - Energy is stored and returned during the gait cycle
- Lateral pronation strap
  - In conjunction with the lateral pronation strap, it is possible to reduce varus deviation of the foot and ankle and supination of the forefoot. This should always be supported by a corrective insole (included in the scope of delivery).
- Shin pads with integrated closures
  - Skin-friendly padding, washable and replaceable
- Slim design
  - Discreet to wear
- Anterior support
  - Good control at heel strike and toe-off
- Trimable sole
  - Straightforward adaptation

### Indications

- Drop foot, without or with mild to moderate spasticity
- Suitable in case of additional loss of the foot lowering musculature and/or slight to moderate weakness of the knee extensors (muscle strength level 3 according to Janda)
- Also suitable in case of foot deformities that can be corrected with the 28Z10 lateral pronation strap and insoles.

### Modes of action

- Enables a largely physiological gait with higher stiffness than the familiar WalkOn Reaction. This means that even more effective support for knee extension and flexion can be provided thanks to the more powerful spring force
- Its energy return supports toe-off and heel strike
- Prevents uncontrolled foot contact and foot slap at heel strike and supports knee extension during toe-off
- Influences the statics in the frontal and sagittal plane when standing due to the alignment of the orthosis

## 28U25 WalkOn Reaction junior

Dynamic ankle-foot orthosis made of carbon for children.

### Features and benefits

- All fabric parts can be washed and replaced
  - Hygienic
- Low weight and open heel
  - High level of wearer comfort
- Highly dynamic characteristics
  - More control when walking
- Combination with additional dynamic ankle-foot orthoses (DAFOs) possible
  - Enhanced functions
- Open heel and anatomically designed frontal support element
  - No pressure points
- Shin pad
  - Better compliance

### Indications

- Infantile cerebral palsy
- Drop foot, without or with mild to moderate spasticity
- Hemiparesis
- Diparesis

### Modes of action

- Supports dorsiflexion
- Promotes dynamic rollover
- Increases the stride length by improving muscle dynamics
- Promotes external rotation of the foot at heel strike
- Promotes a physiological gait pattern
- Reduces the risk of falling

## 28FS100 L100 Go System

The Bioness L100 Go was designed for users with drop foot and is based on the principle of functional electrical stimulation. Stimulation takes place via one channel. Ottobock is the exclusive distributor for Bioness.

### Features and benefits

- User app for control and activity measurement
  - Easy handling
- 3D motion detection in real time
  - Reliable stimulation at the right time
- Easy to put on with one hand
  - Reliable application for the patient
- Electrode connections marked in colour
  - Reliable application for the technician/therapist and patient
- Textile electrodes for moistening
  - Easy handling and positioning
- Integrated 10 m walking test
  - Outcome and results can be analysed
- Intuitive fitting
  - Reliable application for the technician/therapist and patient

### Indications

- Drop foot in case of:
  - Peroneal paralysis (paresis)
  - Stroke
  - Traumatic brain injury
  - Multiple sclerosis
  - Neural muscular atrophy

### Modes of action

- An electrical stimulation impulse causes the dorsiflexion musculature to contract, lifting the foot during the swing phase

## 28FS300 L300 Go System

The Bioness L300 Go system is a multi-channel system. This version is a useful treatment option for users for whom adequate dorsiflexion is not possible with single-channel stimulation and who also have instability of the knee or weak thigh muscles. Ottobock is the exclusive distributor for Bioness.

### Features and benefits

- User app for control and activity measurement
  - Remote control and heel switch are only required as an option
- 3D motion detection in real time
  - Reliable stimulation at the right time
- Easy to put on with one hand
  - Reliable application for the patient
- Electrode connections marked in colour
  - Safe and easy for patient to use
- Textile electrodes for moistening
  - Easy handling and positioning
- Integrated 10 m walking test
  - Outcome and results can be analysed
- Intuitive fitting
  - Reliable application for the technician/therapist and patient
- Thigh stimulator optionally available in two versions
  - Knee instabilities in the sagittal plane can be treated with or without the L300 Go
- Various electrode designs
  - Better results due to more precise stimulation

### Indications

## 8165 Genu Neurexa

Knee guiding orthosis for the prevention of hyperextension, primarily following a stroke.

### Features and benefits

- Three-point principle, straps with guaranteed tensile strength, range of motion for splints can be limited, and/or continuously variable cross-strap against hyperextension
  - Counteracts hyperextension of the knee joint during the stance phase; hyperextension strap makes the brace suitable for gait training in therapy
- Orthotic bar joints adjustable in 10°/15° increments
  - Limits extension and flexion of the knee joint, resulting in pressure distribution, not limited to the hyperextension strap but can also be assumed by extension stops.
- Climate-regulating material
  - High acceptance and wearer comfort
- Front closure
  - Several alternatives for applying the brace
- Washable at 30 °C
  - Hygienic

### Indications

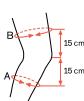

- Paresis of leg muscles resulting in hyperextension of the knee following:
  - Stroke
  - Intervertebral disc prolapse in the lumbar spine
  - Peripheral nerve damage

### Modes of action

- Supports and stabilises the knee joint
- Improves proprioception
- Supports sensorimotor function
- Prevents hyperextension
- Promotes the reduction of oedemas and haematomas
- Can relieve pain

## 28P30 Manu Neurexa plus

Wrist stabilisation orthosis with adjustable wrist joint, can be combined with hand support rest and Omo Neurexa plus.

### Features and benefits

- High-quality TriTech climate fabric
  - High level of wearer comfort
  - Flexible fitting
- Only one universal size and side
  - Easy to position and adapt
- Can be combined with the 28P31 hand support rest without using tools
  - Can also be worn as a positioning orthosis
- Can be combined with the 5065N=\* Omo Neurexa plus without using tools
  - Improved effect

### Indications

- Incomplete paralysis (paresis) of the forearm and hand musculature, for example due to hemiplegia following a stroke
- Intervertebral disc prolapse in the cervical spine
- Injury of the brachial plexus

### Modes of action

- Relieves the wrist in a continuously variable functional position
- Limits the range of motion of the wrist in the palmar direction
- Holds the hand with either palmar or dorsal support
- Supports gripping ability
- Can prevent malpositions
- Suitable for overnight positioning in combination with the 28P31 hand support rest
- Increased effectiveness for repositioning of the shoulder in combination with the 5065N=\* Omo Neurexa plus
- Can relieve pain

## 5065N Omo Neurexa plus

Shoulder orthosis, stabilises and relieves the paretic shoulder.

### Features and benefits

- Special orthosis design
  - Can be put on independently with one hand
- TriTech climate-regulating material
  - High acceptance and wearer comfort
- Design permits re-alignment of the humeral head
  - Reduces pain; proven to improve gait pattern
- Machine washable at 40°
  - Hygienic
- Can be combined with the 28P30 Manu Neurexa plus without using tools
  - Improved effect
- Forearm and shoulder sections with silicone strips on the inside
  - Best possible positioning and firm fit, optimised transmission of tensile forces
- Various lengths of traction elements included in scope of delivery
  - Individual adaptation to various user heights

### Indications

- Subluxation with neurological origin or painful restriction of movement in the shoulder and arm musculature, e.g. in case of:
  - Stroke
  - Intervertebral disc prolapse in the cervical spine
  - Injury of the brachial plexus
  - Peripheral nerve damage of the cervical spine

### Modes of action

- Realigns the humeral head in the socket
- Improves body posture due to better sensorimotor control, resulting in a more physiological gait pattern
- Supports the arm position in extension with slight exterior rotation
- Reduces spasticity of the upper limbs
- Can relieve pain

## 28PS200 H200 Wireless

Based on functional electrical stimulation, the Bioness H200 Wireless can improve the hand's active range of motion and provide support for simple grasping movements in everyday life. Ottobock is the exclusive distributor for Bioness.

### Features and benefits

- Easy one-hand operation
  - Independent use by the patient
- Remote control for selecting the stimulation program
  - Fast switching from functional hand mode to training mode
- Functional electrical stimulation of the hand
  - Improves and utilises hand function
- Regular training possible with training mode
  - Counteracts spasticity, rebuilds musculature
- Training mode
  - Expands active range of motion

### Indications

- Stroke
- Brain injuries (craniocerebral trauma)
- Incomplete spinal cord injury
- Neurological disorders

### Modes of action

- An electrical stimulation impulse causes the forearm musculature to contract, lifting or opening the hand

## EXOPULSE Mollii Suit

The near full-body neuromodulation suit relaxing spastic and tense muscles, activating weak muscles, and relieving related pain: The Exopulse Mollii Suit fundamentally changes the treatment field of neurological disorders and related symptoms. It is a near full-body neuromodulation suit that makes use of a physiological reflex mechanism called reciprocal inhibition: By sending an electrical signal to an antagonistic muscle, the spastic muscle subsequently relaxes. The combined effect of relaxing tense muscles and enabling the activation of weak muscles allows its users to enjoy a more active and less painful daily life. It is a personal assistive medical device which is used for low-energy near full-body electrical stimulation, reducing the typical symptoms associated with neurological conditions such as cerebral palsy, multiple sclerosis, stroke and other neurological disorders with similar conditions.

Notification: The information contained in this document is only intended for an audience outside the United States. This product has not been listed, cleared, or approved by the FDA. Not all products and services are registered or available for sale in all countries.

## 654K1|654K2 MyActive

The MyActive product range includes individual compression clothing to achieve an improvement in movement and balance control for persons with neuromotor control deficits. For a positive influence on posture, sufficient support should be achieved without restricting movement and thereby muscle function.

### Custom products from iFab

iFab offers flexible support for production bottlenecks and custom fitting solutions by taking over the time-consuming fabrication of devices and giving more freedom for core competencies. The iFab Customer Center (ICC) ensures efficient collaboration, where products can be configured and ordered in just a few clicks, order status and history can be assessed.

## Accessory for MyActive

## 654K3 MyActive FIT KIT

It is not always clear whether compression garments have a positive effect on the user. For this purpose, we offer two-piece bodysuits that can be individually adjusted to the user's body using Velcro fasteners. This makes it possible to test whether compression on the torso and pelvis changes the user's clinical picture.

## 17B53 System ankle joint

Joint with dorsiflexion function and dorsal stop to be established by filing the foot stirrup

Contoured medial and lateral joints, with compression spring

### Technical data

Article number	System width	Joint head Ø	Slot width	Length from joint center	Material	Quantity unit
17B53=16	16 mm	26 mm	2.5 mm	57 mm	Stainless steel	Pair
17B53=20	20 mm	28 mm	3 mm	66 mm	Stainless steel	Pair

### i Practical recommendation

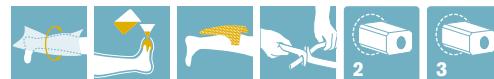

- Increased wear of the spring due to fully compressing it.
- We recommend using 636K8=20X2X10 Plastaband to isolate the joints for the lamination resin technique.

## 17B59 System ankle joint

Joint with dorsiflexion function and dorsal stop to be established by filing the foot stirrup

Straight medial and lateral joints, with compression spring

### Technical data

## 17AD1 Multifunction orthotic ankle joint

For use in thermoplastic ankle-foot orthoses. Dorsal and plantar limitation or spring support. With parallel alignment tool.

### Key features

- Includes parallel alignment tool
- New, modern design
- Available in adult and children's sizes
- Includes recommendations regarding weight classification and activity level

### Technical data

Article number	Max. body weight	Overall length upper section – foot stirrup	Material	Quantity unit
17AD1=93	35 kg	93 mm	Stainless steel	Pair
17AD1=120	100 kg	120 mm	Stainless steel	Pair

- The 17AD200 Nexgear Sixty-six ankle is:

- Only suitable for bilateral use (AFO/KAFO)
- Only usable for orthoses without ischium bars

- It can be combined with:

17KL100\*, 17KF110\*, 17KF210\*, 17LK3\*, 17B203\*, 17B203\* and 17B206\* orthotic knee joints (note the instructions for use), 17SL100\* lamination bars, 17SB100\* side bars, 17SF200=OS-\* and 17SF200=FT-\* foot stirrups

- Only for processing with lamination technique when combined with the following orthotic joints: 17LK3\*, 17B203\* E-MAG Active (with and without 17B206\* support)

- The 17AD200 Nexgear Sixty-six ankle includes a compression spring, stops, spring stops and lamination dummy cover.

The following are not included in the scope of delivery and must be ordered separately:

- 17SL100\* lamination bars/17SB100\* side bars and 17SF200=OS-\* and 17SF200=FT-\* foot stirrups
- 17AD200A=DY-\* lamination dummy set with dummy lower section and slotted oval head screw
- 743R6 orthotic joint alignment set

## Selection guide Nexgear Tango ankle

## Nexgear Tango ankle

The Nexgear Tango is a modular system ankle joint with comparatively high energy return. The four function modules ensure the configuration is able to be adapted to the user's needs.

### Features and benefits

- Double action ankle joint with four function modules (Stop-module, Spring-module, Reaction-module and Ultra-module) for dorsal and ventral use.
- For unilateral and bilateral fittings
- For adults and children, selection by weight classification
- Adaptability throughout the entire rehabilitation process thanks to modules that can be added and removed (modular design)
- Static alignment and dynamic adjustment (pretension) are carried out independently
- Serviceable stirrup thanks to replaceable shim plates
- A sustainable dummy concept with reusable steel dummies creates less waste
- Cushioning and a spring-mounted stop ensure that the joint stops silently
- Enables the patient to walk more smoothly and more physiologically
- Base body available in titanium and steel
- Making use of the titanium Tango joint reduces the weight of the orthosis

· Please order the separate components according to the individual needs of your patient.

17AD300=20-T	20 mm	110 kg (unilateral) / 160 kg (bilateral)	both sides	Titanium	Piece

- The weight classification permits unilateral use for a user body weight of up to 110 kg and bilateral use for up to 160 kg.
- The 17AD300 Nexgear Tango ankle joint can be combined with:
  - 17KO1=\* C-Brace
  - 17B203=\* E-MAG Active
  - 17KF110=\* Nexgear free knee
  - 17KF210=\* Nexgear posterior knee
  - 17KL100=\* Nexgear lock knee
  - 17LK3=\* Unilateral knee joint
  - 17SF300=\* Foot stirrup
  - 17LS3=\* Lamination bar
- For unilateral use, the manufacturer recommends using the lamination or prepreg technique to process the orthotic joint.
- The joint is to be used bilaterally in orthoses with ischial support.
- Use the next size up for unilateral fitting in cases involving:
  - Flexion contracture in the knee or hip > 10°
  - Pronounced torsion
  - Varus/valgus instability
  - Intense physical activity
- The 17AD300 Nexgear Tango ankle joint includes the joint base body, the appropriate screws and blind caps, the axial washers and an upper (part) lamination dummy.
- The following are not included in the scope of delivery and must be ordered separately:
  - 17AD301=\* Stop-module
  - 17AD302=\* Spring-module
  - 17AD303=\* Reaction-module
  - 17AD304=\* Ultra-module (only available for sizes 16 and 20)
  - 17AD305=\* Reaction-spring, blue (strong)
  - 17AD306=\* Reaction-spring, yellow (extra strong)
  - 17AD307=\* Ultra-spring, grey (ultra-strong, only available for sizes 16 and 20)
  - 17AD308=\* Spring dummy set

## 17AT1 Test brace set for 17AD300

Test brace set for 17AD300 consisting of 4 orthoses and 2 foot components. The 17AT1 test brace set contains various test braces and makes it possible to try out the 17AD300 Nexgear Tango ankle on the patient under professional supervision. Different configurations can be tested with additional use of the 17AT3 Fit-Kit, which contains all available modules for the Tango ankle joint (ultra, reaction, spring and stop modules) as well as the tools required to adjust them.

### Technical data

Article number	Accessory for	Side	Shoe size Europe	Quantity unit
17AT1=1	17AD300	left, right	36-45	Piece

- The 17AT2\* test braces included may only be used on the patient for test purposes and under the supervision of qualified personnel.
- They can be used for patients weighing up to 110 kg with shoe sizes 36-45. The selection is made based on shoe size and body weight. (see below)
- The scope of delivery includes:
  - Two 17AT2 test braces, left/right, equipped with the 17AD300 Nexgear Tango ankle in size 14 (Shoe size 36-41, maximum body weight 50 kg)
  - Two 17AT2 test braces, left/right, equipped with the 17AD300 Nexgear Tango ankle in size 20 (Shoe size 42-45, maximum body weight 110 kg)
  - Two smaller 29F209=L/R-20-2 foot components with integrated foot stirrup, which can be replaced with the larger foot components in the size 20 test braces if needed (shoe size 36-41, max. body weight 85 kg)
  - Four 29U91 pads (size 14 and 20)
- The following is not included in the scope of delivery and must be ordered separately:
  - 17AT3=1 Fit-Kit for 17AD300
- The foot component of the test braces in size 20 (17AT2=L-20-1 and 17AT2=R-20-1) can be replaced with the enclosed smaller foot component with integrated foot stirrup (29F209=L/R-20-2) depending on the shoe size and body weight of the patient.

## 17AT2 Test brace for 17AD300

The 17AT2 test brace makes it possible to try out the 17AD300 Nexgear Tango ankle on the patient under professional supervision. Different configurations can be tested with additional use of the 17AT3 Fit-Kit, which contains all available modules for the Tango ankle joint (ultra, reaction, spring and stop modules) as well as the tools required to adjust them.

## 17B66 Multifunction system ankle joint

Multifunction system ankle joint with up to nine setting options (spring, fixed stop or spring stop)

### Key features

- Nine functional versions are possible thanks to the combination of springs, stops and spring stops in the dorsal and plantar joint channel.
- The ankle joint permits an angle adjustment of 50 degrees. The orthotic joint can be continuously adjusted within this angle.
- On the one hand, it is suitable for limiting movement, for example in case of ICP or spina bifida. On the other hand, it can be used to support dorsal extension in case of lower leg muscle weakness, to prevent hyperextension of the knee joint or for energy return during toe-off.
- It is also possible to use the 17B66 for dorsal and plantar support or as a dorsiflexion assist with an adjustable dorsal stop in case of peroneal palsy with or without a knee joint lock.
- Four foot stirrups are available for constructing various types of orthoses.

### Technical data

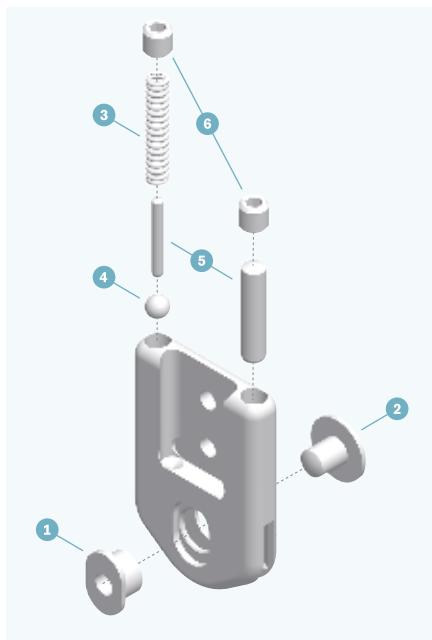

Article number	System width	Slot width	Material	Quantity unit
17B66=16	16 mm	3 mm	Stainless steel	Pair with screws
17B66=20	20 mm	3 mm	Stainless steel	Pair with screws
17B66=A-16	16 mm	3 mm	Stainless steel	Pair with screws
17B66=A-20	20 mm	3 mm	Stainless steel	Pair with screws

- With the 17B66=A-16 and 17B66=A-20 versions, the medial and lateral joint are straight, and the bar connection is lateral.

### i Practical recommendation

- Increased wear of the spring due to fully compressing it.
- The cylinder pin is located inside the spring. Using the cylinder pin can extend the life of the spring.

## 17PA1 CarbonIQ orthotic ankle joint

The 17PA1 ankle joint is a double-action joint based on Ottobock's 17B66 ankle joint. This type of joint offers the most versatile fitting by far. The different possibilities for settings and combinations allow the functions of this type of joint to be adapted to the user's requirements at any time, even if these change over the course of the fitting. Different versions to influence plantar flexion and dorsal extension are available.

## 17CF1 Carbon Ankle seven

Carbon Ankle seven carbon springs make it possible to construct especially lightweight ankle-foot orthoses which are also able to withstand high dynamic loads.

### Features and benefits

- Positive influence on the gait pattern
- Very lightweight design
- Classification makes it easy to select the right product
- Suitable for thermoplastic and laminated orthoses

### Indications

- Paralysis or weakness of the foot lifting and lowering musculature and/or the knee extensors. Examples of typical underlying diseases include
  - Spina bifida Poliomyelitis

### Modes of action

The carbon springs are designed to initiate extension moments of the hip and knee during walking and thus achieve extension and knee stability in the lower limbs. The energy generated during heel strike is stored in the carbon matrix and returned at toe-off. In contrast to conventional ankle joint orthoses, the limits in the plantar and dorsal direction are dynamic and are not subject to static restriction.

### Selecting and ordering

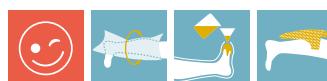

- The Carbon Ankle seven is selected on the basis of the user's body weight and activity level.

### Normal activity level

- A normally active user participates in all everyday activities independently and also performs relatively easy tasks.

### High activity level

- A highly active user is unrestricted in everyday life. The orthosis has to support quick changes in walking and running speeds, e.g. for people who do sports or for children.

17CF1=L12	left (L)	10 kg		22 mm	Piece
17CF1=R12	right (R)	10 kg		22 mm	Piece

- The specified weights are important for functionality, not durability.
- The classification applies to AFOs that are intended to influence the knee joint.
- The use of the Carbon Ankle seven carbon spring for KAFOs may require a deviation from the classification.

# KAFO/KO.

All knee joints and knee joint systems, including traditional mechanical and mechatronic, are presented in this section.

## 17KO1000=0\_B C-Brace KAFO

The C-Brace supports the user during the gait cycle and adapts to any everyday situation in real time. Flexion under load, walking over uneven terrain and on slopes or going down stairs step-over-step: all this defines a new level of mobility.

### Key features

- Unique SSCO® system (Stance and Swing Phase Control Orthosis)
- Microprocessor-controlled stance and swing phase
- Entire gait cycle can be controlled dynamically and in real time
- System responds quickly to any everyday situation

### Indications

- Unilateral or bilateral flaccid leg paresis or paralysis
- Physical prerequisites such as muscle status, joint mobility and possible axis deviations are crucial, as they must guarantee proper control of the orthosis.
- The user must fulfil the physical and mental requirements for perceiving optical/acoustic signals and/or mechanical vibrations.
- The existing muscle strength of the hip extensors and flexors must permit the controlled swing-through of the limb

### Contraindications

- Flexion contracture in the knee and/or hip joint > 10°
- Varus malposition > 10° or valgus malposition > 10°
- Severe spasticity
- Body weight > 125 kg

### Relative contraindications

- Spasticity
- Certification is required for the C-Brace! Please contact your customer service representative or your regional contact person regarding this.

# C-Brace.

## 1 Custom KAFO

Made of fibre composite material (Prepreg or wet lamination).

## 2 C-Brace joint unit

The microprocessor receives and processes sensor signals and controls the hydraulic dampening for each situation in real time.

## C-Brace Setup App

Individual settings for the user on the tablet.

Available for Android and iOS devices.

## 3 LED Display

Shows system status and battery charge level.

## 4 Knee support option

The unilateral adapter plate (17KF300=\*) for the lateral side or the medial support (17KF100-2=\*) are available in four versions each.

## 5 Ankle options

### Bilateral fitting:

17LA3N=16-T (< 85 kg)  
17LA3N = 20-T (< 110 kg)

## Components of 17KO1000=0\_B

### 17KO1 C-Brace joint unit

The C-Brace joint unit contains a 3D sensor in the joint axis, which measures the current position of the joint every 0.01 seconds. A microprocessor receives and processes the sensor signals and controls walking with the C-Brace in real time.

#### Technical data

Article number	Side	Max. body weight
17KO1=L	left (L)	125 kg
17KO1=R	right (R)	125 kg

### 17AO100 Unilateral C-Brace ankle joint

The 17AO100 unilateral ankle joint is a multifunction system ankle joint with a dorsiflexion effect. It is approved only in combination with the C-Brace.

#### Technical data

Article number	Bar width	Max. body weight
17AO100=22-T	22 mm	110 kg

### 17LA3N Unilateral system ankle joint

The 17LA3N unilateral ankle joint is a multifunction system ankle joint with a dorsiflexion effect.

#### Technical data

Article number	System width	Max. body weight	Material	Quantity unit
17LA3N=16-T	16 mm	85 kg (bilateral)	Titanium	Piece

# Patient selection aid for the C-Brace.

The selection aid helps to determine whether a patient is suitable for a C-Brace. However, this document should be considered only an aid. For the final decision, please fit the patient with a diagnostic trial orthosis (DTO).

## Cognitive requirements

The patient must be capable of ensuring the proper handling, care and use of the orthosis (e.g. hearing acoustic signals).

## Functional deficit

Neuromuscular instability of the knee joint in the sagittal plane

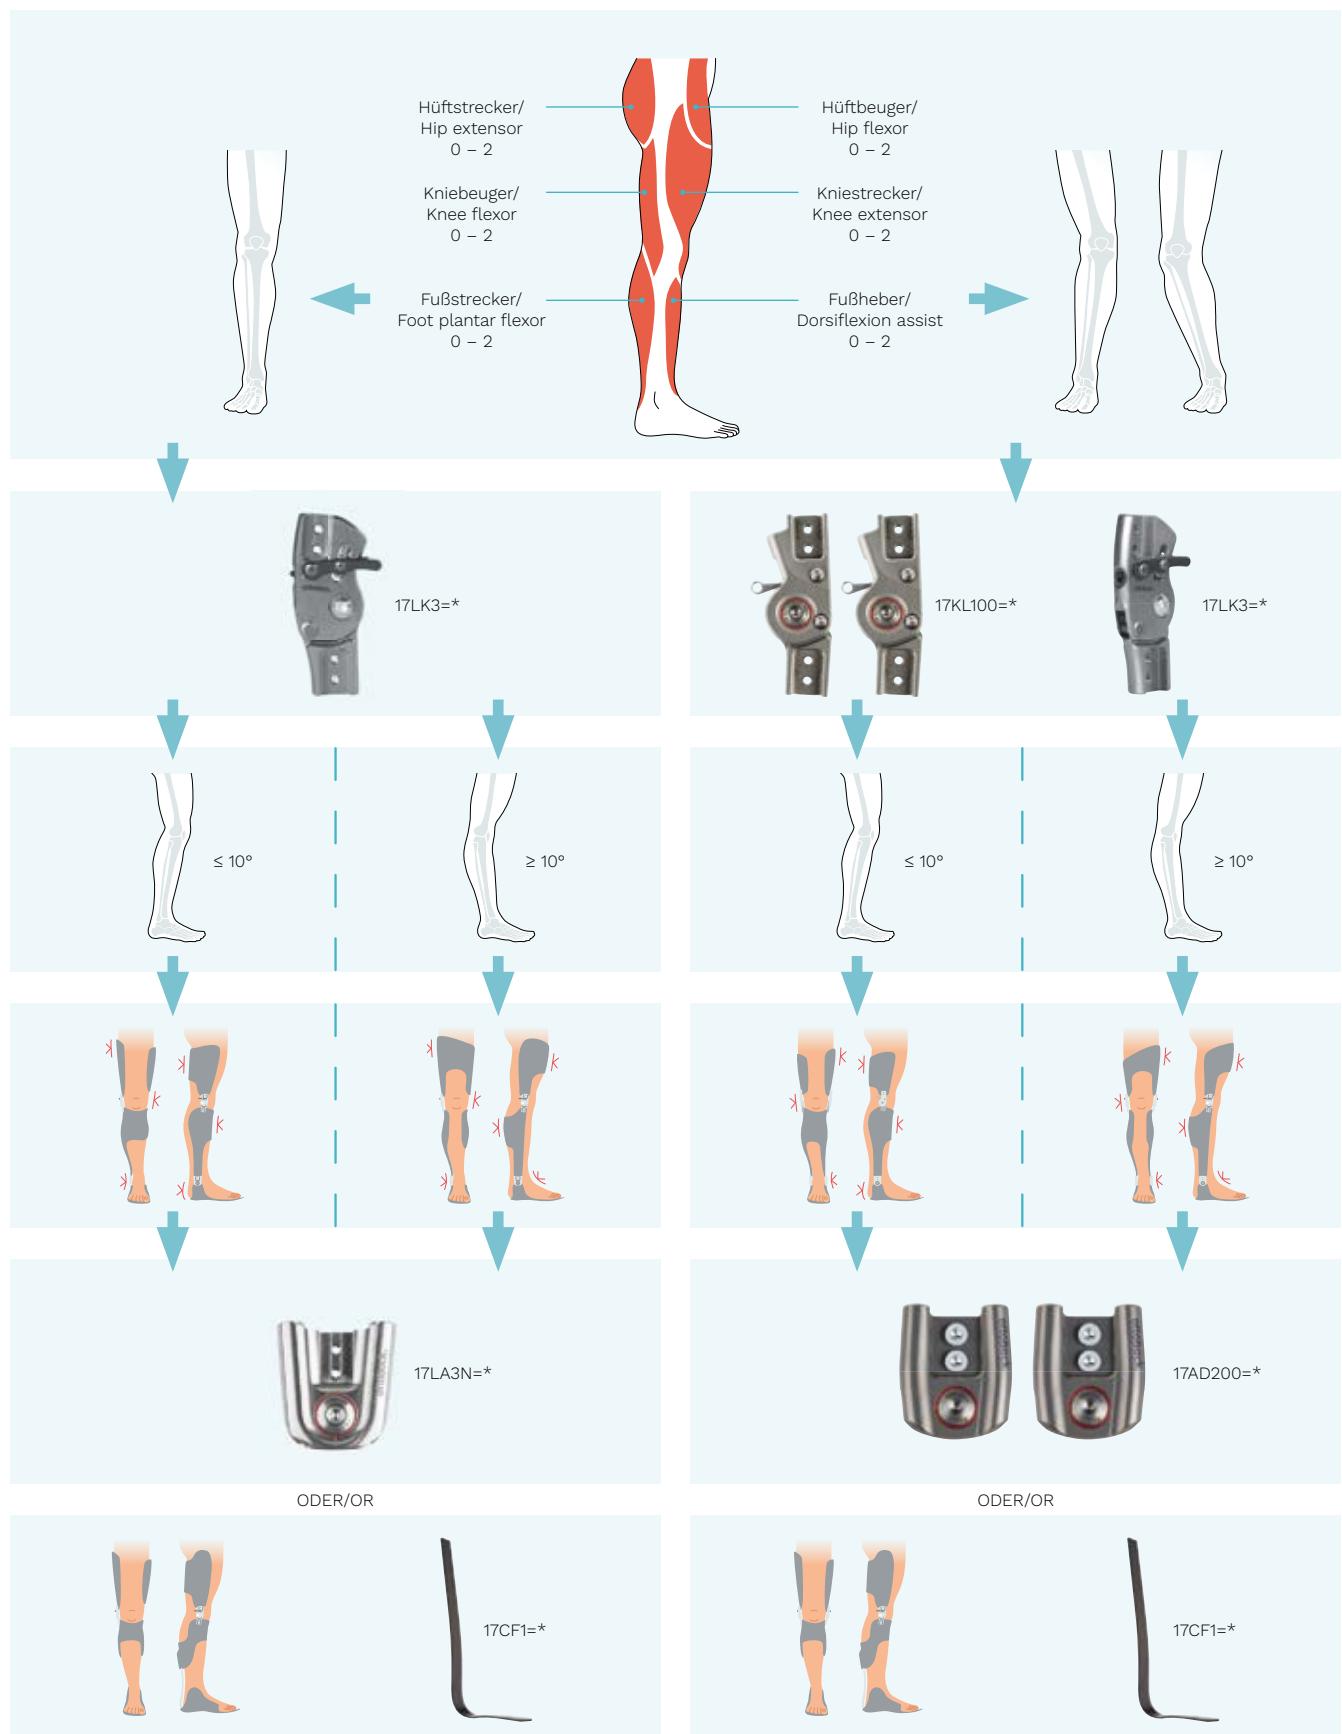

Diagnosis (by the physician):

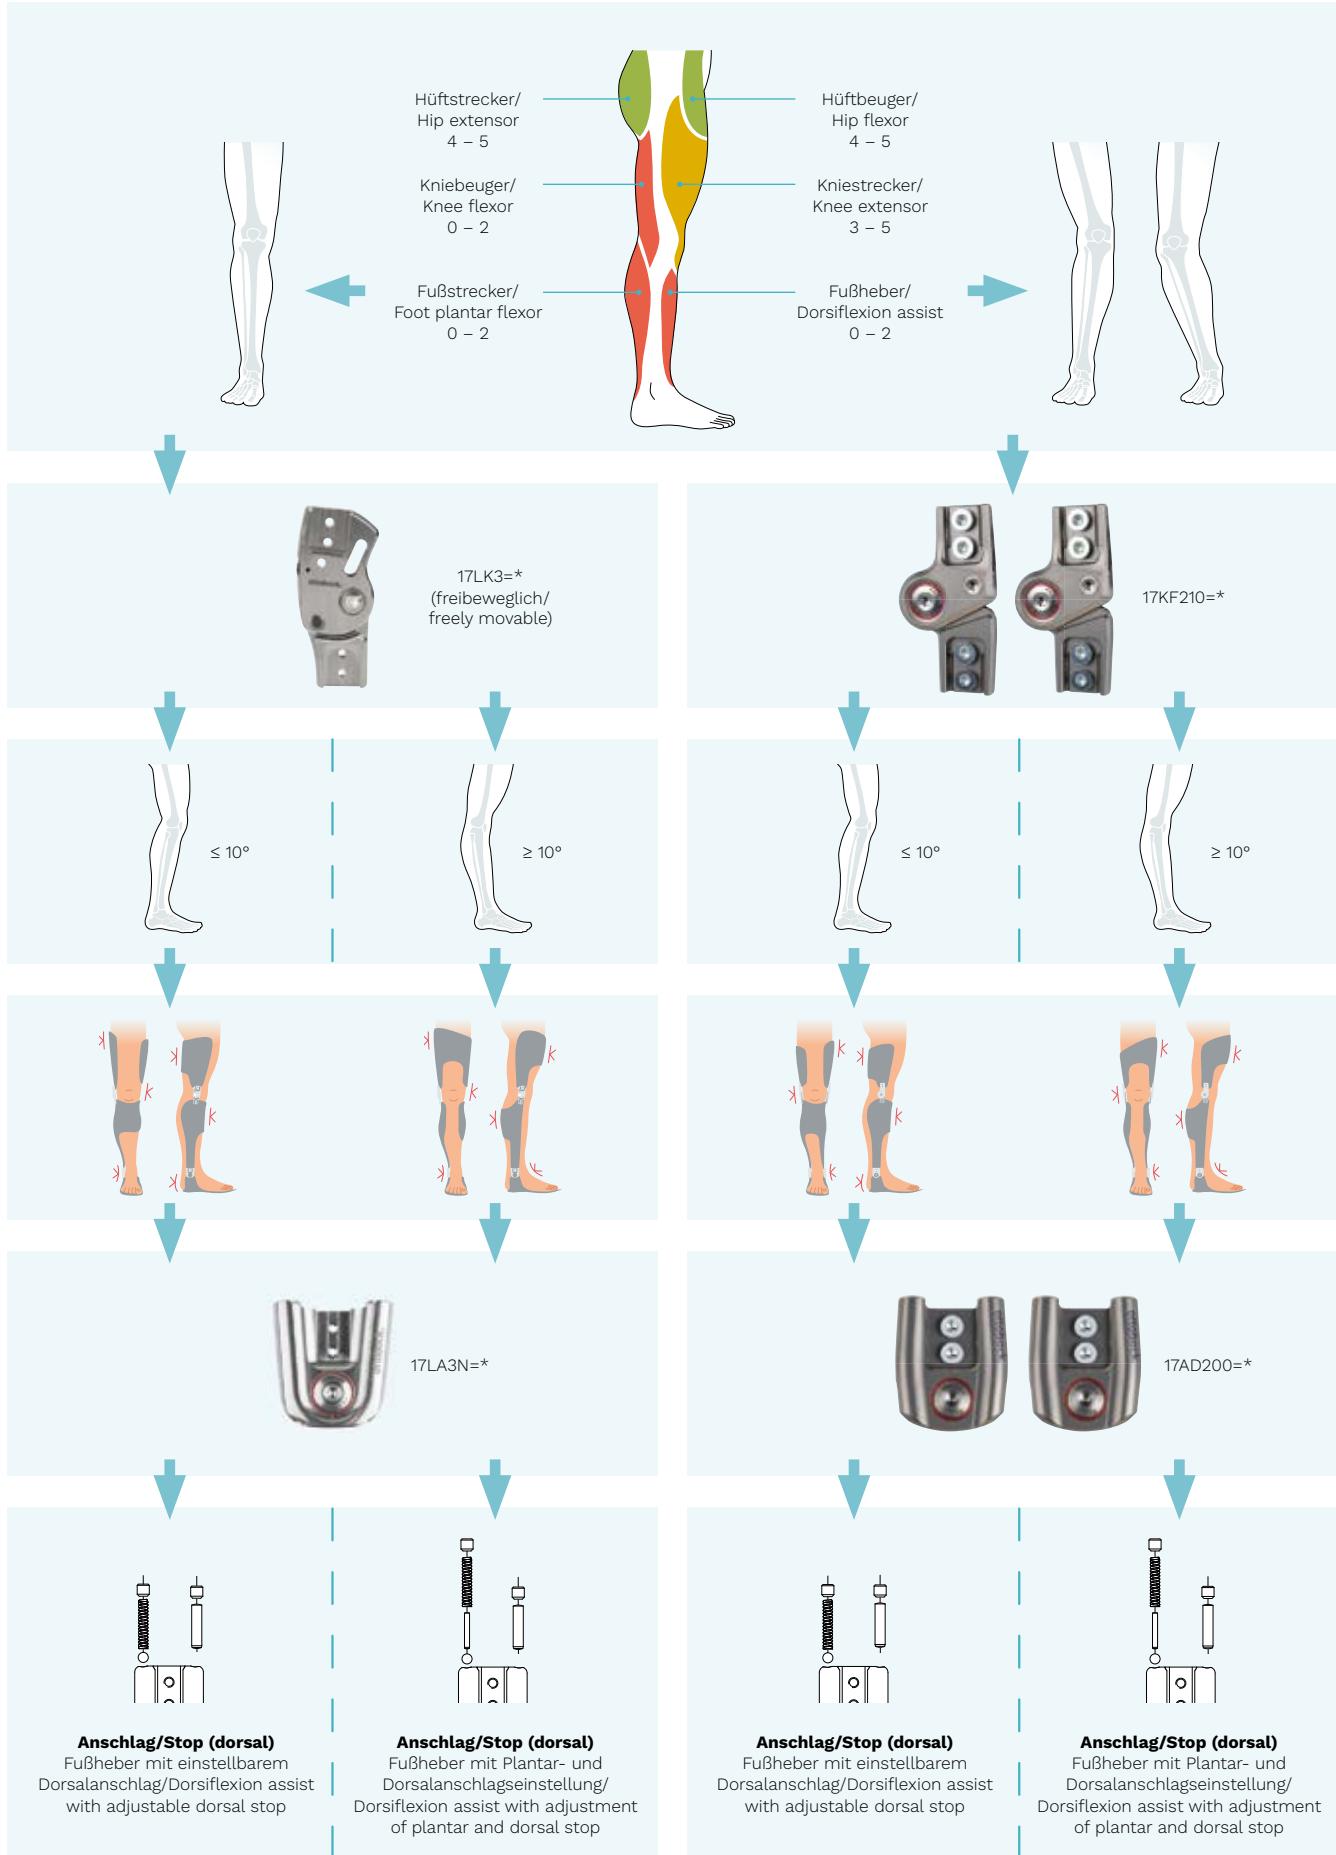

---

## Exclusion criteria

If any of the following apply to your patient, he or she cannot be fitted with a C-Brace at this time:

- **Swing phase initiation from a standing position is not possible**
- **Weight over 125 kg**
- **Severe spasticity**
- **Leg shortened more than 15 cm**
- **Knee and hip flexion contracture more than 10°**
- **Insufficient neuromuscular trunk stability for the trial phase**
- **Diseases that preclude the use of an orthosis (e.g. oedema, extensive skin irritation)**
- **Orthoprostheses**

## 17K32 Knee joint bar for children

Knee joint extension stop can be adjusted by filing, flat bar profile, no posterior placement

### Technical data

Article number	Upper/lower bar length	Bar width	Bar thickness	Joint head Ø	Material	Quantity unit
17K32=6	220 / 250 mm	12 mm	3 mm	16 mm	Stainless steel	Pair
17K32=5	300 / 320 mm	14 mm	3 mm	18 mm	Stainless steel	Pair
17K32=4	410 / 390 mm	16 mm	3 mm	20 mm	Stainless steel	Pair

**Practical recommendation**

- On worn joints, the tolerance can be reduced with the repair bolts. A suitable reamer is usually used for adaptation.
- The following shoulder screws can be used with the 17K29/32/33/34/42 joint bars for children:  
501A1=12x6xM4

## 17K33 Knee joint bar for children

Joints not filed out, joint centre 15 mm to the posterior

## 17KF110 Nexgear free knee

The 17KF110 is a free motion orthotic knee joint.

### Key features

- The 17KF110 Nexgear free knee is remarkably easy to handle for processing and maintenance.
- The joint is low-noise. This is ensured by the integrated damper at the end stop in the terminal stance phase.
- The joint has a ball bearing and runs smoothly. It has remarkably low flexion resistance.
- A sustainable dummy concept with reusable steel dummies creates less waste.

### Technical data

Article number	System width	Max. body weight	Length from joint centre upper	Length from joint centre lower	Posterior offset	Quantity unit

- The 17KF110 Nexgear free knee is:
  - Only suitable for bilateral use
  - Combinable with the following orthotic ankle joints:
    - 17AD200\*
    - 17AD300\*
    - 17LA3N\*
  - Combinable with the following bars
    - 17SL100=\* lamination bar (lamination and prepreg technique)
    - 17SB100=\* side bar (thermoplastic technique and bar-clamp device)
  - Available sides: right (R), left (L)
  - Available sizes: 10, 12, 14, 16, 20
  - Available materials: titanium (T), steel (ST)
  - Available contours:

## 17KF210 Nexgear posterior knee

The 17KF210 is a free motion orthotic knee joint with a posterior location.

### Key features

- The 17KF210 Nexgear posterior knee is remarkably easy to handle for processing and maintenance.
- The 17KF213 extension wedge set can be used to adjust the extension stop on the Nexgear posterior knee simply and conveniently to 5°, 10°, 15° and even -5°.
- In factory condition, the joint contains a 0° stop.
- A sustainable dummy concept with reusable steel dummies creates less waste.
- The joint has a ball bearing and runs smoothly. It has remarkably low flexion resistance.
- The joint is low-noise. At the end stop in the terminal stance phase this is achieved thanks to the integrated damper.

### Technical data

Article number	System width	Max. body weight	Length from joint centre upper	Posterior offset	Quantity unit
17KF210=*-10-*-*	10 mm	15 kg	~ 31 mm	10 mm	Piece

- The 17KF210 Nexgear posterior knee is:
  - Only suitable for bilateral use
  - Combinable with the following orthotic ankle joints:
    - 17AD200\*
    - 17AD300\*
    - 17LA3N\*
  - Combinable with the following bars:
    - 17SL100=\* lamination bar (lamination and prepreg technique)
    - 17SB100=\* side bar (thermoplastic technique and bar-clamp device)
  - Available sides: right (R), left (L)
  - Available sizes: 10, 12, 14, 16, 20
  - Available materials: titanium (T), steel (ST)
  - Available contours:
    - straight lower section, straight upper section (1)
    - contoured lower section, straight upper section (2)
    - straight lower section, contoured upper section (3)
    - contoured lower section, contoured upper section (4)
- The following are not included in the scope of delivery and must be ordered separately:
  - 17KF113=\* ball bearing pressing tool (optional)
  - 17KF212=\* dummy set (making an orthosis requires two dummy sets)
  - 17KF213=\* extension wedge set (optional)
  - 17SL100\* lamination bars/17SB100\* side bars

## Selection guide SCO\*.

\*Stance phase controlled orthosis systems.

## 170K1 FreeWalk orthotic system

The FreeWalk permits a virtually natural gait as well as more safety and stability for patients with complete or partial paralysis of one leg.

The FreeWalk orthosis is pre-fabricated for the first fitting according to your specifications. The tool kit and datasheets are required to record the measurements needed for the fabrication of the orthosis.

- With height-adjustable pad retainers
- On request, you can order a test orthosis on loan in order to carry out a functional test with your patient. Please contact your customer service representative or regional contact person regarding this!
- Please note that the insole must also be sent to us.

### Practical recommendation

- We recommend using micro hook-and-loop on velour and hook on loop.

## Secure stance phase – light and inconspicuous

### **Slim-line design padding**

Attractive new padding design ensures that the orthosis has an optimal, slim-line fit to the contours of the leg.

### **Knee joint**

By securing the leg in the stance phase and unlocking the knee joint in the swing phase, the connection with the ankle joint enables a smooth and virtually physiological gait pattern for the user. The enclosed knee joint design provides secure protection against external impacts. Clothing cannot get caught either.

### **Ankle joint**

The ankle joint has been optimised to allow it to be easily fine-tuned to user. The freely adjustable angle between the ankle joint and foot stirrup makes it simple to optimise the functionality of the FreeWalk. A graduated measuring scale allows settings to be easily reproduced. The height of the foot stirrup can also be adjusted. The increased number of setting options on the foot section is a new feature. This makes it possible to attain a lower structural height, so the orthosis can also be adapted to shorter users. The ankle screw is now made of a non-corrosive material.

### **Closures**

Red closures are now also available as a new, attractive colour option (article no.: 170D20=2).

### **Clamp adapters**

The new FreeWalk features new sliding and rotating clamp adapters. In contrast to the previous model, where the clamp adapters were bonded with adhesives, the screws can now be loosened. This allows the straps to be better adjusted to users and their individual requirements.

### **Three-way switch**

A three-way switch now comes standard on the new FreeWalk (Reference number 170D71). This allows the user to choose between the "free-moving", "locked" and "FreeWalk mode" settings. Older FreeWalk orthoses can be retrofitted with the new three-way switch.

## 17B203 E-MAG Active

Launched in 2008, the E-MAG Active has proven to be a groundbreaking innovation in the development of orthotic knee joint systems. It has defined new standards in dynamics and mobility.

### Key features

- The PreLock function secures the user's knee joint even before full, maximum extension is achieved.
- A sensor system measures the leg position during walking and controls the orthotic joint
- The user can benefit from the functionality of the orthotic joint even if they have no function in their ankle
- It is suitable for users with a greater need for mobility who were previously unable to obtain an adequate orthotic treatment
- Using the E-MAG Active can prevent contractures and joint damage caused by immobilisation, reduce muscular atrophy and build up existing muscles
- It provides relief for the contralateral side and helps the user avoid making compensatory movements
- Less energy is required for walking, and users benefit from increased mobility

- The 743Y57 is a set consisting of the alignment inserts in sizes 5 through 9.

### 17MS30 Pull-release cable

The pull-release cable can be positioned anterior or posterior. Thanks to the change of direction, less force is required for pulling.

#### Technical data

Article number	Accessory for	Quantity unit
17MS30=A	17KL20=13 17KL20=13-A 17KL20=20 17KL20=20-A	Pair

- Thanks to the change of direction, less force is required for pulling.
- The pull-release cable can be installed in the anterior or posterior position.
- Side bars must be ordered separately.

## 17B42 Modular system knee joint

Locked knee joint with ring lock; straight medial and lateral joints

### Technical data

Article number	System width	Milled head	Length from joint centre upper	Length from joint centre lower	Material	Quantity unit
17B42=16	16 mm	25x4 mm	56 mm	38 mm	Stainless steel	Pair
17B42=20	20 mm	25x4 mm	56 mm	38 mm	Stainless steel	Pair

**Practical recommendation**

- On worn joints, the tolerance can be reduced with the repair bolts. A suitable reamer is usually used for adaptation.

## 17B20 Modular system knee joint

Locked knee joint with ring lock; contoured medial joint, straight lateral joint

### Technical data

Article number	Side	System width	Milled head	Length from joint centre upper	Length from joint centre lower	Material	Quantity unit

To process the bars, order also 636W28 (special adhesive and hardener).

## 17B95 System knee joint

Locked knee joint with wedge lock and pull-release cable

With 16 mm system width: suitable for body weight up to 50 kg

Medial joint contoured at the bottom and straight at the top, straight lateral joint

### Technical data

Article number	Side	System width	Milled head	Length from joint centre upper	Length from joint centre lower	Material	Quantity unit
17B95=L16	left (L)	16 mm	23x4 mm	50 mm	40 mm	Stainless steel	Pair

- The 17KL100 Nexgear lock knee is:
  - Only suitable for bilateral use
  - Combinable with the following orthotic ankle joints:
    - 17AD200\*
    - 17AD300\*
    - 17LA3N\*
  - Combinable with the following bars:
    - 17SL100=\* lamination bar (lamination and prepreg technique)
    - 17SB100=\* side bar (thermoplastic technique and bar-clamp device)
  - Available sides: right (R), left (L)
  - Available sizes: 10, 12, 14, 16, 20
  - Available materials: titanium (T), steel (ST)
  - Available contours:
    - straight lower section, straight upper section (1)
    - contoured lower section, straight upper section (2)
    - straight lower section, contoured upper section (3)
    - contoured lower section, contoured upper section (4)
- The following are not included in the scope of delivery and must be ordered separately:
  - 17KL103=\* long lock lever (optional)
  - 17MA1=1 Nexgear function switch (optional)
  - 17KL102=\* dummy set
  - 17SL100\* lamination bars/17SB100\* side bars

## 17PK1 CarbonIQ knee joint

The 17PK1=\* knee joint is a locked joint made of fibre-reinforced plastic with a pull-release cable. The locking system uses the latest technology for locked joints and offers a high level of security. It can be unlocked with one hand using the pull-release cable, making it very simple to use. The lock in the joint clicks into place automatically when standing up, without the risk of trapping clothes. Medial and lateral joints are straight.

## Aqualine orthotic system

The Aqualine orthotic system is a waterproof walking aid for orthosis wearers which offers the user the greatest possible safety with simultaneous freedom of movement.

### Key features

- All of its components are specially designed for contact with water
- The orthosis is lightweight thanks to its high-quality carbon material
- The orthosis is easy to clean

### Information for specialist dealers

- All components in a waterproof walking aid should be waterproof and easy to wash.
- The waterproof walking aid should have minimal contact with the skin.
- We recommend the use of antibacterial materials.
- We generally recommend the use of a full-surface non-skid sole or a bathing shoe, as well as the use of a knee joint with lock.

## Aqualine

The solution for wet areas

### Loop strap

The loop strap is comfortable to wear and can be removed for drying.

### Waterproof CarbonIQ knee joint

The waterproof versions of the CarbonIQ knee and ankle joints form the heart of the Aqualine orthotic system. The knee joint is equipped with a covered lock and can be easily unlocked using a pull-release cable. The high-performance plastic material is reinforced with carbon fibres.

### ThermoLyn

ThermoLyn is antibacterial and has ideal hygienic properties.

### Waterproof CarbonIQ ankle joint

The waterproof versions of the CarbonIQ knee and ankle joints form the heart of the Aqualine orthotic system. With nine different setting and combination options, the strength and angle of the ankle joint can be individually adjusted.

### Foot component

Double vacuum-formed foot component with sole.

## Components of the Aqualine orthotic systems

### 17PK1=\*-WR Waterproof CarbonIQ knee joint

The 17PK1=\*-WR knee joint is the waterproof version of the 17PK1 CarbonIQ knee joint. It is a locked joint made of fibre-reinforced plastic with a pull-release cable. The locking system uses the latest technology for locked joints and offers a high level of security. It can be unlocked with one hand using the pull-release cable, making it very simple to use. The lock in the joint clicks into place automatically when standing up, without the risk of trapping clothes. Contoured medial joint, straight lateral joint

### 17PA1=\*-WR Waterproof CarbonIQ orthotic ankle joint

The 17PA1=\*-WR ankle joint is the waterproof version of the 17PA1 CarbonIQ ankle joint. The double-action joint offers the most versatile fitting by far. Various possibilities for settings and combinations allow the functions of this type of joint to be adapted to the user's requirements at any time, even if these change over the course of the fitting. Different versions to influence plantar flexion and dorsal extension are available.

## 7U56 Polycentric knee joint bars with gear drive

Joints with interchangeable stops to limit extension as well as flexion, concave half-round bar profile, joint bars of thermoplastic synthetic material, forming temperature of 150 °C/302 °F

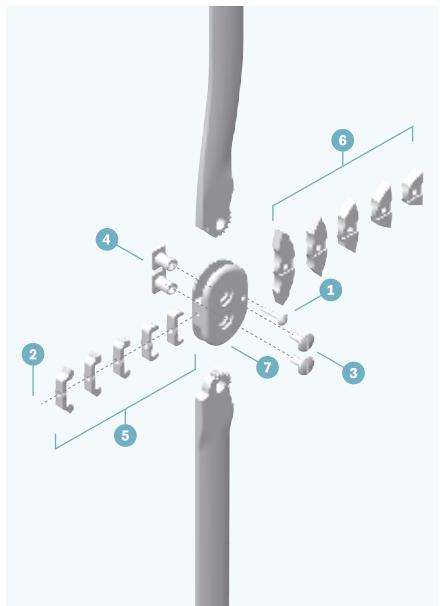

### Technical data

Article number	Length from joint centre upper	Posterior offset	Bar width	Bar thickness	Colour	Quantity unit
7U56=S	270 mm	16 mm	25 mm	5.5 mm	Black	Pair

### i Practical recommendation

- The 743Y56=1 size 1 alignment insert is aligned with the compromise pivot point in order to align the orthotic knee joints with the compromise pivot point according to Nieter. The compromise pivot point of the polycentric gear drive joints is therefore centred between the two joint screws.

All hip joint systems, classic components for hip rotation orthoses and reciprocal systems as well as hip abduction orthoses are presented in this section.

## 28L100 Cosa Junior

The Cosa Active/Junior hip abduction orthosis uses pads between the legs to reduce the scissor gait which occurs in various forms of infantile cerebral palsy. Reducing hip adduction improves the overall gait pattern and control of the trunk in addition to stabilising the basis for standing and sitting.

The Cosa Active/Junior is generally delivered in a 28L101=\*/28L100=\* starter set. It contains 2 pairs of 29L101=\*/29L100=\* pants to change and wash and 1 29L102=\* pad set.

### Benefits

- Minimisation of scissor gait enhances mobility (more freedom for knee, improved gait pattern)
- Improved torso control
- More stable base for sitting and standing
- Can be combined with additional orthoses
- Can be worn day and night
- Easy to customise
- Easy care, machine washable (in a laundry bag) at 40 °C
- High level of wearer comfort

### Indications

- Diparesis
- Hip dysplasia
- Hip joint subluxation, congenital
- Hypotonicity
- Tetraparesis

### Contraindications

- Hip joint dislocation

## 17H100 RGO hip joint system

The connection between the knee joint bars and the pelvic module is especially important for fittings with reciprocating gait orthoses. Our RGO (reciprocating gait orthosis) hip joint system helps users achieve pelvic rotation that imitates physiological rotation during walking. Thanks to the development of a bi-axial joint construction, pelvic rotation of 15° is possible without having to change the walking direction. The result: less effort, more effective gait pattern.

### Key features

- Easy to use due to modular connection between joint components
- Individual components can be replaced so the orthosis “grows” with the user
- A push-pull cable system transmits forces smoothly and requires zero maintenance
- Sitting joint lock release with pre-release of the locking mechanism; locking button for re-locking
- Integration of a customised pelvic module (thermoplastic or laminate materials)
- Easy disassembly and adjustment of the torso bars for hip flexion up to 10°
- Prefabricated lightweight alloy thigh bars with 0 mm, 5 mm or 10 mm offset available

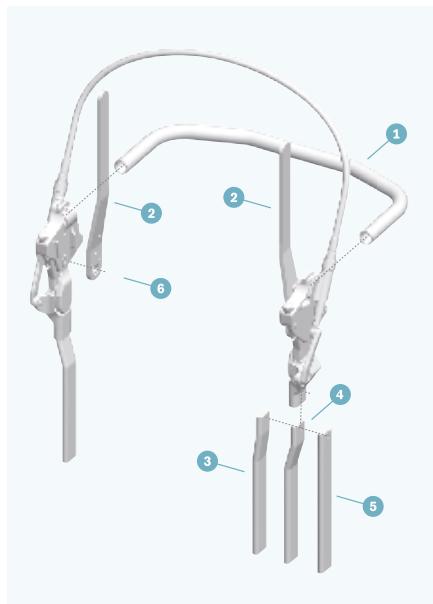

### Technical data

### General information:

The RGO hip joint system is suitable for patients up to 65 kg. The system is available in three different versions. 17H100=2 for ages 4-8, up to a body weight of 34 kg. 17H100=1/0 for ages 9 and up, up to a body weight of 65 kg. Pelvic tubes are available in 1cm increments for clear pelvic widths of 200 mm to 380 mm. The pelvic width must be measured between the two trochanters in both the sitting and prone position. When selecting the pelvic tube, also take into account the wall thickness of the pelvic module to be fabricated including the padding!

### Please check the desired combination!

## 17BK1 Correction system joints

Static joints for positioning orthoses

### Key features

- Improved rest position
- Protection, safety and the possibility of step-by-step joint mobilisation during the rehabilitation phase
- Promotes the growth of truncated tissue and/or reshaping of changed tissue, resulting in increased joint activity
- Prevention of malformations and restoration of joint functions

### i Practical recommendation

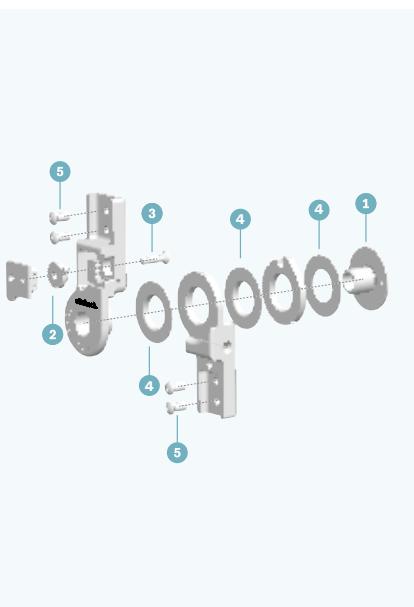

- Attention: This information is only a recommendation. The correct size for the respective patient must be determined and specified by the O&P professional in each case. The joints are used individually or in pairs depending on the application. We recommend always using a medial support, e.g., an integrated plastic joint. The produce must be used bilaterally (in pairs) for the knee and ankle joints. The left/right side indications refer to application of the joints on the wrist, knee joint or ankle joint. The sides must be reversed for elbow applications to accommodate the anatomical shape of the elbow (right to left and left to right).

### 17BK2 Dynamic unit for correction system joint

The 17BK2 dynamic unit is available for all four sizes of the 17BK1 static correction system joint and, depending on the joint size, offers a maximum spring force of approx. 10 Nm. Using the 17BK2 dynamic unit allows for extension or flexion yielding, depending on the joint and indications. Spring force is used to slowly bring the joint back into the desired position. The spring force is continuously adjustable, allowing for individual dynamic treatment of contractures.

## 88M2 Silicone scar compression mask and collar

Clinical studies have shown that compression and occlusion are two treatment options which have a positive influence on scar healing. The scar tissue is enclosed by the silicone compression products and, at the same time, controlled pressure is exerted. Silicone retains the moisture in the skin and the irritated scar tissue areas can regain their elasticity and flexibility without the use of additional creams. The material also retains its form and flexibility independent of any strain placed on it.

### Key features

- Facilitates healing
- Reduces scar formation
- Prevents the scar area from drying out
- Protects the scar against dirt penetration
- Easy to clean with pH-neutral soap and water

## 88BH1 Silicone scar compression glove

The custom-made silicone glove exerts controlled pressure on the scar tissue, also in critical areas such as the area between the fingers. Contracture of the fingers can be prevented by incorporating silicone strips with a higher Shore hardness. In addition, it does not lose compression due to material fatigue and the translucent material makes it possible to visually check the scar tissue during the therapy.

### Key features

- Facilitates healing
- Maximum compression effect even during extended use
- Reduces scar formation
- Protects the scar against dirt penetration
- Easy to clean with pH-neutral soap and water

## 24H1 MyCRO Band

The MyCRO Band from Ottobock is a temporary orthosis for the correction of positional cranial deformities. The orthosis guides the growth of the head through contact zones and growth zones and is custom-made for each child. Ottobock uses precise scanning and 3D printing processes to produce a customized, extremely thin orthosis. The innovative MySize Closure System™ adapts to the baby's cranial growth, while the open-air design ensures optimal comfort and hygiene.

### Features and benefits

- MySize Closure System
- Breathable open-air design
- Lightweight low-profile 3D Printed Thermoplastic Material
- Icon design
- High Resolution 3D scan design
- Flexible material and large opening for easy donning
- Soft Inner fabric lining that is removable and washable

### Indications

- For use on infants from 3 to 18 month with positional head deformation (Plagiocephaly, Brachycephaly)

### Contraindications

- Not for use on infants with pre-surgical craniosynostosis or hydrocephalus.

### Custom products from iFab

iFab offers flexible support for production bottlenecks and custom fitting solutions by taking over the time-consuming fabrication of devices and giving more freedom for core competencies. ## 130M1 3D AFO model

The 3D AFO models set new standards in orthopaedic industry. By using the latest FDM printing technology, we offer positive models that are unrivaled in terms of detail accuracy and edge definition. The models are particularly impressive in the treatment of children due to their hardness and precision - properties that are sometimes lost with conventional milled models.

### Key features

- Outstanding level of detail
- Harder than milled models
- Optimized use of material
- Uncomplicated ordering

### Custom products from iFab

iFab offers flexible support for production bottlenecks and custom fitting solutions by taking over the time-consuming fabrication of devices and giving more freedom for core competencies. The iFab Customer Center (iCC) ensures efficient collaboration, where products can be configured and ordered in just a few clicks, order status and history can be assessed.

## IP3131 KO model

The foam model is made of bubble-free rigid foam. The models can be ordered in various size gradations. A distinction is made between models up to 550 mm, models measuring 550–750 mm and models starting from 750 mm.

## IP3141 KAFO model

The foam model, which is made of bubble-free rigid foam, is available in a single or two-part version. As a result, models up to 750 mm, models from 750 to 1100 mm or models from 1100 mm upwards can be ordered based on the size gradations. Additional services can be added as an option: joint support surfaces\*, markings for joint axes, gluing in the metal core, drill hole to accommodate the alignment axis (per axis).

\* The design is specified by the customer

## IP3211 Torso model

3D positive model of a torso made from bubble-free rigid foam. The torso model is part of the 3D design product range.

### Key features

- Foam models made from bubble-free rigid foam in different densities
- Depending on the respective density of the rigid foam, the models can be used for different subsequent fabrication processes
- The density has an influence on the edge definition and temperature stability of the model
- Various sizes available
