Explanations of hazardous substance symbols

Hazard pictogram	Hazard class and hazard category
 GHS01 Exploding bomb	Explosive substances/mixtures and products with explosive materials: - Unstable, explosive - Subclasses 1.1, 1.2, 1.3, 1.4 Self-reactive substances and mixtures, type A Self-reactive substances and mixtures, type B (+ pictogram GHS02) Organic peroxides, type A Organic peroxides, type B (+ pictogram GHS02)
 GHS02 Flame	Flammable gases, hazard category 1 Aerosols, hazard categories 1, 2 Flammable liquids, hazard categories 1, 2, 3 Flammable solids, hazard categories 1, 2 Self-reactive substances and mixtures, types B (+ pictogram GHS01), C, D, E, F Pyrophoric liquids, hazard category 1 Pyrophoric solids, hazard category 1 Substances and mixtures capable of self-heating, hazard categories 1, 2 Substances and mixtures that release inflammable gases in combination with water, categories 1, 2, 3 Organic peroxides, types B (+ pictogram GHS01), C, D, E, F Substances and mixtures that release inflammable gases in combination with water, hazard categories 1, 2, 3
 GHS03 Flame over circle	Oxidising gases, category 1 Oxidising liquids, categories 1, 2, 3 Oxidising solids, categories 1, 2, 3
 GHS04 Gas cylinder	Gases under pressure: - compressed gases - liquefied gases - frozen liquefied gases - dissolved gases
 GHS05 Corrosion	Corrosive to metals, category 1 Corrosive/irritating effect on the skin, categories 1A, 1B, 1C Severe eye damage/eye irritation, category 1
 GHS06 Skull and crossbones	Acute toxicity (oral, dermal, inhalation), categories 1, 2, 3
 GHS07 Exclamation Mark	Acute toxicity (oral, dermal, inhalation), category 4 Irritating to skin, category 2 Severe eye irritation, category 2 Skin sensitisation, categories 1, 1A and 1B Specific target organ toxicity (one-time exposure), category 3 Respiratory sensitisation, category 3 narcotic effect Hazardous to the ozone layer, category 1
 GHS08 Health hazard	Respiratory sensitisation, categories 1, 1A and 1B Germ cell mutagenicity, categories 1A, 1B, 2 Carcinogenicity, categories 1A, 1B, 2 Reproductive toxicity, categories 1A, 1B, 2 Specific target organ toxicity (one-time exposure), categories 1, 2 Specific target organ toxicity (repeated exposure), categories 1, 2 Aspiration hazard, category 1
 GHS09 Environment	Hazardous to water - acutely hazardous to water: category acute 1 - hazardous to water, long term: categories chronic 1, 2

Hazardous to the ozone layer	Ozone 1

The hazardous substance symbols printed in the catalogue correspond to the labelling requirements for hazardous substances at the time of printing. They refer to the raw materials in their unprocessed state and give notice of products classified as hazardous. Changes reserved. For further information on the hazard statements, please see the corresponding Ottobock safety data sheet, which is available on request.

Searching, finding and ordering

This catalogue is organised into sections.

Tabs on the right-hand page margins as well as the subtitles at the top of every page also serve as quick and easy reference guides.

Awards

Lamination technology · Acrylic lamination resins

617H19S Orthocryl lamination resin 80:20 Speed

Name of product

- Lamination resin for small prosthetic and orthotic components
- Same mixing ratio of hardener powder and lamination resin as with 617H19 Orthocryl lamination resin 80:20 (max. 3%)
- Requires only half the curing time of Orthocryl lamination resin 80:20
- Using the same proportion of hardener powder prevents the formation of bubbles and a brittle lamination with a shorter curing time
- Consistent lamination quality as with Orthocryl lamination resin 80:20, with a reduced curing time
- Same viscosity with the same mechanical characteristics as Orthocryl lamination resin 80:20
- Can be combined with all common reinforcement materials in orthopaedic technology
- Hardener/colour pastes are easy to mix

Product description at a glance

Hazard information

Technical data

Article number	Description	Net contents
617H19S=0.900	Orthocryl Lamination resin 80:20 Speed	0.9 kg
617H19S=4.600	Orthocryl Lamination resin 80:20 Speed	4.6 kg
617H19S=25	Orthocryl Lamination resin 80:20 Speed	25 kg

Technical data

- Practical recommendation**
- Adding hardener powders in proportions greater than 3% results in the formation of bubbles and a brittle lamination with all lamination resins used in the field of orthopaedic technology. Use 617H19S Orthocryl lamination resin 80:20 Speed to make small components available for further processing more quickly, without jeopardising quality.

Tip

Plaster and forming technology

A plaster cast fabricated according to functional aspects is a prerequisite for good contact between the prosthetic socket and the residual limb.

Aside from skilled craftsmanship, the plaster casting technique – from taking impressions on the patient to practical positive modelling – also requires materials of high quality. The plaster used should have a porous structure and yet still be fine-grained. Once final corrections have been made, the plaster positive is sanded down to a smooth finish and thoroughly dried. Only then can the process of preparing a prosthetic socket using the plaster model be started.

Pedilen duplicating foams have proven excellent for precise forming of prosthetic sockets. The hardened, formed part is flexible and can easily be removed from the socket. It retains its shape and dimensions. These characteristics ensure precise and reliable finishing.

640Z5 Plaster insulating cream

- Separating layer for isolating the skin during plaster casting
- Readily visible transfer of markings to the negative with an indelible pencil or grease pencil
- Applied to the skin, an even insulating film forms immediately due to body heat
- Does not smear, drip or stick

Technical data

Article number	Net contents
640Z5=1	1 kg
640Z5=5	5 kg

85F1 Plaster parting agent

- For isolating plaster from plaster
- For isolating plaster from thermoplastics

Technical data

Article number	Net contents
85F1	1 l

Processing and usage examples

Immerse stockinette directly in 85F1 plaster parting agent and allow to soak, or fill plaster parting agent into a 642B2 measuring cup and immerse stockinette.

Take the stockinette impregnated with plaster parting agent out of the bottle or measuring cup and pull it directly over the model.

Immediately before vacuum forming, impregnate the stockinette with plaster parting agent again and rub it in.

699G* Biplatrix® quick plaster bandage

- Consists of a cotton substrate coated with a special natural plaster blend
- Latex-free
- Very good modelling properties
- Minimised dipping losses
- Easy to process
- Ensures high final strength, even with few layers
- Also available as 699G21 longuette for individual cutting
- Dipping water temperature: 20 °C to 25 °C
- Working time: approx. 2 minutes
- Load bearing capacity: partial load after 30 minutes, full load after 48 hours

699G21 Biplatrix® quick plaster bandage

- For taking a plaster cast
- Consists of a cotton substrate coated with a special natural plaster blend
- Latex-free
- Very easy moulding
- Minimised dipping losses
- Easy to process
- Ensures high final strength, even with few layers
- Longuette for individual cutting
- Dipping water temperature: 20 °C to 25 °C
- Working time: approx. 2 minutes
- Load bearing capacity: partial load after 30 minutes, full load after 48 hours

699G1 Elastic plaster bandages

- For taking a plaster cast
- Compression of the elastic bandage begins as the plaster cures
- Curing time adapted to the application
- Coated plaster bandage that leads to less plaster waste, is easier and faster to work with, can take loads earlier and results in a higher final strength of the bandage

Technical data

Article number	Length	Width	Order unit	Package contents
699G1=10-12	3.6 m	10 cm	Package	12 piece(s)
699G1=12-12	3.6 m	12 cm	Package	12 piece(s)

699G* Cellona® plaster of Paris bandages

- For taking a plaster cast
- Easy moulding
- The bandage is ready for loading or transportation after only approx. 30 minutes and fully cured after approx. 24 hours
- Coated plaster bandage that leads to less plaster waste, is easier and faster to work with, can take loads earlier and results in a higher final strength of the bandage

Technical data

Article number	Length	Width	Order unit	Package contents
699G3=6-10	2 m	6 cm	Package	10 piece(s)

699G9=20-10	3 m	20 cm	Package	10 piece(s)

Cellona® is a registered trademark of Lohmann.

699C6 Dauerbinde® K

- For compression after amputation
- To support and relieve the supporting apparatus and locomotor system
- For the fixation of bandages
- For the immobilisation of body parts
- For the reduction of haematomas
- 58% cotton, 24% polyamide, 8% spandex, 10% viscose
- Elasticity approx. 175%
- Easy handling for application of the long stretch bandage
- Strong fabric structure
- High permanent elasticity
- High restoring force
- Washable (can be washed 10 times at 95 °C with mild detergent, dry flat)

Information material

646D369=EN_ INT	699C6 Dauerbinde® K product brief
-----------------	-----------------------------------

Technical data

Article number	Length	Width	Colour	Order unit	Package contents
699C6=10	5 m	10 cm	Beige	Package	10 piece(s)
699C6=12	5 m	12 cm	Beige	Package	10 piece(s)

• Due to the high static pressure, the long-stretch bandage must be removed at night and when the patient is resting.

Dauerbinde® is a registered trademark of Lohmann.

699G2 Stucco plaster

- For fabricating positive moulds for orthopaedic technology
- Coarser grain than alabaster modelling plaster
- Quick hardening
- High strength

Technical data

Article number	Net contents
699G2=25	25 kg

699G4 Alabaster modelling plaster

- For fabricating positive moulds for orthopaedic technology
- Made of select raw stones, finely ground and very pure with a high index of whiteness
- After hardening, the surface is smooth and very well suited for modelling

Technical data

Article number	Net contents
699G4=25	25 kg

87G4 Porous plaster

- Special plaster for direct contact with silicones in vacuum technology for Pastasil and Chlorosil
- Porous plaster for silicone technology
- Harder than modelling plaster
- Very good stability
- Low water consumption

Technical data

Article number	Net contents
87G4=25	25 kg

Practical recommendation

- Mixing time approx. 2–4 minutes.
- To protect the product during use, open or partly used bags should be carefully folded and sealed.

Mixing ratio

Water	Porous plaster 87G4
1	1.6

645C1 Copying pens

- For marking on plaster casts and models
- Waterborne paint base

Technical data

Article number	Colour	Order unit	Package contents
645C1	Blue	Package	12 piece(s)

645C2 Grease pens

- For marking on damp plaster casts and models
- For marking, e.g. on thermoplastic materials
- For paper, glass, plastic, metal
- Good alternative to permanent makers, since easily removable
- Lead made of high-quality pigments
- Paintable with water

Technical data

Article number	Colour	Order unit	Package contents
645C2=2	Red	Package	12 piece(s)
645C2=3	Green	Package	12 piece(s)
645C2=5	Blue	Package	12 piece(s)

649G26 Soft Pad sanding paper

- For manual finish grinding of contours, curvatures and hard to reach areas
- Polyurethane foam with aluminium oxide
- Can be used wet and dry
- Highly flexible, does not buckle
- Does not form sharp edges
- Adapts to any contour
- Does not slip in the hand
- Produces a very fine and even finish

Technical data

Article number	Version	Length	Width	Grain	Height	Order unit	Package contents
649G26=320	320	115 mm	140 mm	320 – 400 (fine)	5 mm	Package	20 piece(s)
649G26=400	400	115 mm	140 mm	400 – 500 (super fine)	5 mm	Package	20 piece(s)

Processing and usage examples

Compress 649G26 Soft Pad sanding paper and submerge it in water until fully soaked.

With the soaked Soft Pad sanding paper, sand the plaster model using the abrasive side with circular movements and low pressure. (Do not rinse sanding residue under running water!) Soft pad sanding paper can be folded centrally, so that small radii can be worked without damaging the brim.

Soak Soft Pad sanding paper with water again and use the foam side to hone the plaster model in order to close fine pores with the accumulated plaster residue.

Product example

699G30 Cellacast Xtra® synthetic casting tapes

- For immobilisation after fractures, operations and orthopaedic corrections; for treatment of joint and bone disorders and for promoting mobilisation as well as for bandaging child patients
- For making temporary fastenings in prosthetics (socket protection/adapter securing, e.g. check sockets)
- For producing negative casts (orthotics)
- Alternative to the conventional plaster bandage
- Lightweight, permeable to air, X-ray transparent, waterproof and very stable once hardened
- Good adhesion to various materials, e.g. wood, lamination resin, foam, thermoplastic materials

i Practical recommendation

- We recommend using 641H9=2 latex-free examination gloves for processing.
- The bandage can be prevented from sticking to the skin by enveloping all surfaces that come into contact with the synthetic bandage in a body protection stockinette (e.g. 81A1 nylon stockinette) before applying the bandage.

Cellacast Xtra® is a registered trademark of Lohmann.

641T10 Plaster shirt

- Device to protect the body during plastering
- For upper arm residual limbs and shoulder disarticulation
- 88% polyamide and 12% spandex
- Prevents skin stressing
- Suitable for surfaces

Technical data

Article number	Size	Length	Width
641T10=M	M	665 mm	370 mm

641T9 Plaster sock

- Device to protect the body during plastering
- For forearm fittings
- 88% polyamide and 12% spandex
- Prevents skin stressing
- Suitable for surfaces

Technical data

Article number	Size	Length	Width
641T9=M	M	350 mm	75 mm

641T3 Protective body stockinette kit

- Device to protect the body during plastering
- Body protection stockinette and residual limb protection stockinette for transfemoral amputations
- 100% cotton
- Prevents skin stressing
- Suitable for surfaces

Technical data

Article number	Version	Length	Width	Order unit	Package contents
641T3=1	1	16 cm	30 cm	Package	6 piece(s)
641T3=2	2	33 cm	30 cm	Package	6 piece(s)
641T3=3	3	16 cm	38 cm	Package	6 piece(s)
641T3=4	4	33 cm	38 cm	Package	6 piece(s)

641T2 Body protection stockinette

- Device to protect the body during plastering
- Body protection stockinette for hip disarticulation
- 100% cotton
- Prevents skin stressing
- Suitable for surfaces

Technical data

Article number	Version	Width	Order unit	Package contents
641T2=1	1	Approx. 30 cm	Package	6 piece(s)
641T2=2	2	Approx. 38 cm	Package	6 piece(s)

640Z10 Cellona® skin protection cream

- Protection and care cream for use during plastering work
- Easy dosing
- Penetrates quickly
- The skin is covered by a permeable protective care film
- Ideal for highly stressed skin

Technical data

Article number	Net contents	Order unit
640Z10	0,1 l	Tube

Cellona® is a registered trademark of Lohmann.

99B25 Nylon stockinette

- For plaster casting, e.g. for KAFOs
- Suitable as filter tube for vacuum forming
- Polyamide

Technical data

Article number	Length	Order unit	Package contents
99B25	Approx. 50 cm	Package	10 piece(s)

Practical recommendation

- Can be individually shortened and welded.

Processing and usage examples

Pre-tension the 99B25 nylon stockinette, twist it and then secure it with combination pliers. Using a pair of scissors, cut off the end of the seam.

Using the flame of a cigarette lighter, weld the cut surface and then immediately smoothen the weld seam.

With the welded seam turned inwards, pull the sock over the model.

81A1 Nylon stockinette

- For plaster casting, e.g. for KAFOs
- Suitable as a filter and final layer for laminating
- For reinforcing Pastasil
- For vacuum technique with Chlorosil
- Polyamide
- Especially elastic
- Not pre-impregnated

Technical data

Article number	Length	Width	Weight
81A1=8	101.5 m	8 cm	1 kg
81A1=10	84.6 m	10 cm	1 kg
81A1=12	67.8 m	12 cm	1 kg
81A1=15	52.5 m	15 cm	1 kg
81A1=20	48 m	20 cm	1 kg

- i** **Practical recommendation**
 • Individually adaptable and weldable.

Processing and usage examples

Application example – vacuum forming in orthotics

Pull 81A1 nylon stockinette over the plaster model, cut to length so it is twice the size of the model, twist off and fold back again.

Application example – vacuum forming in prosthetics

Pre-tension the 81A1 nylon stockinette, twist it and then secure it with combination pliers. Using a pair of scissors, cut off the end of the seam. Using the flame of a cigarette lighter, weld the cut surface and then immediately smoothen the weld seam.

With the welded seam turned inwards, pull the sock over the model.

84V1 Vaseline

- For isolating the skin for plaster casts
- High melting temperature, more effectively keeping the Vaseline in the areas to be isolated
- Especially well suited for taking impressions in warm environments due to the high melting temperature, remaining on the skin for a longer period of time
- Very high purity
- Pasty consistency
- Easy to spread

Technical data

Article number	Net contents	Colour
84V1	0.225 kg	White

**Information material**

647G363	Instructions for use 642V15=1, 87A5
---------	---------------------------------------

642V15 Impresil kit with case

- For producing flexible and clean impressions
- Can be used for taking impressions and correcting trial fittings on the patient in many areas, including finger prostheses, partial hand prostheses, scar compression masks and gloves, forefoot prostheses, transfemoral and transtibial prostheses, liners as well as orthoses
- Enables taking a highly detailed impression of the area in question
- Clean processing under all ambient conditions
- Does not adhere to skin and hair, therefore easy to demould
- Unlike plaster bandages, does not leave residues on the skin
- Can be finished
- Can be sanded
- Saves time and material
- Refillable
- No irritants or allergens, therefore suitable for use on unbroken skin (no open wounds)

**Technical data**

Article number	Shore hardness	Package contents
642V15=1	30° Shore A	1 dispenser, 5 cartridges, 75 ml each (component A and component B), 20 static mixers

**Practical recommendation**

- To prevent the material from dripping, apply a maximum of 5 mm to vertical surfaces during each process step.
- The processing time can be extended by cool storage.

Processing and usage examples

Compensation of shape and volume differences in the trial phase of scar compression fittings.

Compensation of shape and volume differences in the trial phase of prosthetic sockets for the upper and lower limbs and in orthotics.

For taking impressions on the patient, e.g. partial hand/forefoot prostheses.

**Information material**

647G363	Instructions for use 642V15=1, 87A5

Article number	Package contents
756Y74	100 static mixers

Information material

647G363	Instructions for use 642V15=1, 87A5
---------	---------------------------------------

617F8 HS parting agent

- For isolating the residual limb socket before taking a cast
- Solvent-free

Technical data

Article number	Net contents
617F8=0.150	0.15 kg
617F8=1	0.865 kg

i Practical recommendation

- Before taking impressions, the residual limb socket should be dry and free of grease and oil.
- In order to achieve optimum isolation, the residual limb socket should be thinly swashed out with the parting agent or the parting agent should be applied thinly with a cloth and then dried with cold air.

616T3 ThermoLyn trolene

- Flexible polyethylene
- Used as a forming and parting material
- For orthotic components that require little stiffness but high flexibility
- For fabricating flaps in socket technology
- Individually cut to size, it can be used as a device for filling work
- Reusable and easy to clean due to its smooth surface
- Opaque
- Good transparency
- Low molecular weight
- Good thermoplastic formability
- High flexibility
- Temperature recommendation: processing temperature 125 °C (convection oven, infrared oven)

Technical data

Article number	Length	Width	Thickness	Colour
616T3=1	1,000 mm	500 mm	1 mm	Natural colour
616T3=2	1,000 mm	500 mm	2 mm	Natural colour
616T3=2000X1000X2	2000 mm	1,000 mm	2 mm	Natural colour
616T3=2000X1000X3	2000 mm	1,000 mm	3 mm	Natural colour
616T3=40X32X2	40 mm	33 mm	2 mm	Natural colour

i Practical recommendation

- Can also be used as a dummy material, e.g. with lamination technique.

Information material

646F265=EN_INT	Thermoplastics poster
----------------	-----------------------

617H37 Pedilen duplicating foam

- Two-component synthetic material, excellent for quickly taking impressions of prosthetic sockets
- Undercuts are transferred exactly and can be demoulded easily
- Can be finished, for example by sanding, application of 636K17 lightweight putty
- Sensitive to moisture

Technical data

Article number	Net contents
617H37=0.865	0.865 kg
617H37=4.600	4.6 kg
617H37=9.320	9.32 kg

i Practical recommendation

- Immediately after the Pedilen duplicating foam has hardened and cooled, line the cast with an adequately stable layer of plaster. Let this layer harden and fill the model with plaster.

617P21 Hardener for Pedilen rigid foams

- Hardener for all Pedilen rigid foams and Pedilen duplicating foams
- Hardener has no influence on the swelling factor, foam determines the swelling factor

Technical data

Article number	Net contents
617P21=0.865	0.865 kg
617P21=2.300	2.3 kg
617P21=4.600	4.6 kg
617P21=9.320	9.32 kg

i Practical recommendation

- Shake for 30 seconds before use.
- For the exact mixing ratio, we recommend the 642B2 measuring cup.

Mixing ratio for a residual limb length of 20 cm and a circumference of the residual limb (centre) of 20 cm

Pedilen duplicating foam 617H37	Hardener for Pedilen rigid foams 617P21
100	40

Product example

See the table below for further mixing ratios (Duplicating Foam: Hardener; quantities in g)

Residual limb length	Circumference of residual limb (centre)				
	20 cm	30 cm	40 cm	50 cm	60 cm
10 cm	50:20	100:40	150:60	200:80	200:80
20 cm	100:40	150:60	200:80	300:120	400:80
30 cm	100:40	200:80	250:100	350:140	400:160
40 cm	150:60	200:80	350:140	400:160	500:200

699S1 Pedilen impression foam

- Foamed synthetic material for taking foot impressions in orthopaedic technology, e.g. for insole fabrication
- For making plaster positives from a three-dimensional imprint
- Quick impression taking and easy removal of plaster positives

Technical data

Article number	Length	Width	Thickness	Order unit	Package contents
699S1=25	305 mm	140 mm	4 cm	Package	25 pair
699S1=25-5	305 mm	140 mm	5 cm	Package	25 pair

Thermoplastics

Thermoplastics are being used for more and more applications in orthopaedic technology. We offer a wide variety of thermoplastics from polyethylene (PE) and polypropylene (PP) to copolyester (PETG). The polyethylene (PE) and polypropylene (PP) synthetic material groups are particularly well suited for the fabrication of prostheses and orthoses. These materials are particularly lightweight and suitable for functional use in orthopaedic technology. Copolyester (PETG) is also used, for example in the fabrication of self-supporting check sockets.

In this context the Skinguard technology also stands out as one of the highlights in our selection of thermoplastics. Skinguard is an umbrella brand representing technologies with various antibacterial substances based on different active principles. Ottobock Skinguard technology protects the product against a broad spectrum of different microorganisms. The benefit for the user is that odours caused by microbes are considerably reduced and discolouration is decreased. Thus, this technology ensures the extended durability of the product. These additives also enhance the wearing characteristics and skin comfort.

617R15 T.P.C woven carbon fibre

- For high-strength, very thin orthoses on a thermoplastic material basis
- Matrix: TPU
- Type of fibre: carbon
- Can be thermoformed under pressure
- High tensile strength
- Suitable for surfaces
- Suitable for painting
- Potentially adhesive
- Can be welded with components of the same matrix
- Clean processing
- No special storage requirements (e.g. no cooling)
- Moderate thermoforming temperature: approx. 220 °C

Information material

646F265=EN_INT	Thermoplastics poster
646A174=GB	Prepreg technology product information
646T757=EN	Technical information T.P.C and T.P.C Textil

Technical data

Article number	Thickness	Packaging	Area	Fibre weight per unit area	Weave type	Fibre content	Resin content
617R15=2	Approx. 0.25 mm	6 Sheets at 1000 x 430 mm per sheet	2.58 m ²	200 g/m ²	Twill 2/2	60 % by weight	40 % by weight

617R18 T.P.C textile

- For prostheses and orthoses on a PP thermoplastic material basis
- Can be used as reinforcement for ThermoLyn PP-H (article number 616T20=*) as well as in the orthopaedic footwear specialism
- Matrix: polypropylene
- Type of fibre: aramid
- Can be thermoformed under pressure
- High tensile strength
- Suitable for surfaces
- Can be welded with components of the same matrix
- Clean processing
- No cooling required, but store UV protected
- Moderate thermoforming temperature: approx. 220 °C

Information material

646D1446=EN_INT	617R18 T.P.C textile product brief
646T757=EN	Technical information T.P.C and T.P.C Textil

Technical data

Article number	Length	Width	Fibre weight per unit area	Weave type
617R18=50X2	2 m	50 mm	400 g/m ²	Twill 2/2
617R18=100X2	2 m	100 mm	400 g/m ²	Twill 2/2

Practical recommendation

- The 617R18 T.P.C textile is particularly easy to process with the 755E62 and 755E5 Ottobock vacuum forming devices.

616F27 Silicone film

- Processing aid for T.P.C
- Generation of a prevacuum between an upper and lower film
- For fixing during heating and forming
- Thermally stable
- Highly elastic
- Processing temperature: max. 240 °C

Technical data

Article number	Length	Width	Thickness	Colour
616F27=5000X1000	5,000 mm	1,000 mm	1 mm	Transparent

Information material

646A174=GB	Prepreg technology product information
646T757=EN	Technical information T.P.C and T.P.C Textil

616F26 Silicone film

- Processing aid for T.P.C
- Generation of a prevacuum between an upper and lower film
- For fixing during heating and forming
- As separating film for the controlled partial welding of thermoplastics
- Thermally stable
- Limited elasticity
- Processing temperature: max. 240 °C

Technical data

Article number	Length	Width	Thickness	Colour
616F26=5000X1200	5,000 mm	1,200 mm	0.5 mm	Red-brown

636D3 Adhesive tape for vacuum technique

- For fixation in conjunction with the lamination technique
- Used in the prepreg technique
- Wide range of applications
- Base material: PE sheeting
- Silicone adhesive agent
- Temperature-stable up to approx. 200 °C

Technical data

Article number	Length	Width	Colour	Order unit
636D3	66 m	25 mm	Blue	Roll

636D14 Polyester adhesive tape

- Temperature-stable adhesive tape (to 200 °C) for vacuum technology
- Base material: polyester
- Water-resistant bonding
- Can be peeled off any time

Technical data

Article number	Length	Width	Thickness	Colour
636D14	66 m	25 mm	50 µm	Red

Information material

646A174=GB	Prepreg technology product information
------------	--

617H46 Bonding agent

- Universally applicable for sealants, adhesives, coatings
- For bonding and repairing vulcanised silicone rubber
- For sealing valves
- For making a vacuum bag out of 616F26 or 616F27 silicone film
- Pasty consistency
- Outstanding adhesive properties

Technical data

Article number	Net contents	Colour
617H46	90 ml	Transparent

Practical recommendation

- During processing, a thin skin will form on the surface of the adhesive after one minute. Any shaping of the silicone adhesive must be completed before this skin starts to form. A wetted modelling instrument or an ice cube have proven useful in shaping transitions.

Information material

646A174=GB	Prepreg technology product information

646M69 Sampler ring: ThermoLyn for definitive socket

- For the visual and haptic demonstration of the various thermoplastics
- Aids in selecting the various thermoplastic materials

Technical data

Article number
646M69

616T283 Antibacterial ThermoLyn clear

- Copolyester
- For fabricating scar compression masks, trial orthoses and self-supporting check sockets (limited wearing time)
- Antibacterial effect
- Transparency of the check socket facilitates precise verification of the fit and skin discolouration on the residual limb
- Good fracture resistance
- Very high impact strength
- High dimensional stability
- Can be over-laminated to secure adapters
- Temperature recommendation: 165 °C (convection oven, infrared oven)

Technical data

Article number	For the fabrication of	Length	Width	Thickness	Colour
616T283=8	Trial orthoses	400 mm	400 mm	8 mm	Clear

646D119=GB	Antibacterial SKINGUARD materials product information
646D695=EN_INT	SKINGUARD technology patient information

i Practical recommendation

- We recommend hot air for working edges.
- Es ist zu beachten, dass beim Verarbeitungsprozess Schrumpf auftritt.

616T252 Antibacterial ThermoLyn rigid

- Styrene butadiene
- For fabricating self-supporting check sockets for TT, TF and HD (for temporary use)
- The proven classic material for fabricating check sockets
- Antibacterial effect
- Transparency of the check socket facilitates precise verification of the fit and skin discolouration on the residual limb
- High rigidity
- Good fracture resistance
- High thermoplastic dimensional stability
- High resistance to the formation of stress cracks
- Extremely high impact strength
- Can be over-laminated to secure adapters
- Temperature recommendation: 160 °C (convection oven, infrared oven)

Information material

646D119=GB	Antibacterial SKINGUARD materials product information

Processing and usage examples

Place the pre-cut ThermoLyn Pedilon into warm water at approx. 60 °C in the 759P1=220 water pan. The material becomes transparent when it reaches its moulding temperature. Remove the pre-cut material with a wood spatula and allow the water to drip off.

Moisten hand and forearm thoroughly with cold water. Place the warm ThermoLyn Pedilon over the hand and forearm.

Final product: hand positioning orthosis

28A23 UCAST Orthosis for Wrist, Forearm

- From clinically tested aspen wood chips and sustainable polymer
- For malposition of joints as well as fractures
- Short curing time (about 5 to 10 minutes)
- Quick forming in just 3 to 5 minutes

Technical data

Article number	Perforation	Colour	Package contents	Quantity unit
28A23=N-M	medium (MP)	Black	10 piece(s)	Package

Processing and usage examples UCAST

HEAT 1-2 minutes in a heating device.

MOLD the splint by gently wrapping the fabric straps around the injured area.

SET wait a few minutes for the splint to harden, and you're done. Use cooling spray 633T18 and it will harden in seconds.

616T3 ThermoLyn trolene

- Flexible polyethylene
- Used as a forming and parting material
- For orthotic components that require little stiffness but high flexibility
- For fabricating flaps in socket technology
- Individually cut to size, it can be used as a device for filling work
- Reusable and easy to clean due to its smooth surface
- Opaque
- Good transparency
- Low molecular weight
- Good thermoplastic formability
- High flexibility
- Temperature recommendation: processing temperature 125 °C (convection oven, infrared oven)

Information material

646F265=EN_INT	Thermoplastics poster

616T3=40X32X2	40 mm	33 mm	2 mm	Natural colour

Practical recommendation

- Can also be used as a dummy material, e.g. with lamination technique.

616T120 ThermoLyn PP-C

- Polypropylene copolymer
- Possible applications: AFOs, KAFOs, FOs, TLSOs
- Wide range of applications
- Lightweight
- Good rigidity
- High impact strength
- Low tendency to white crack
- Good thermoforming properties
- Good shaping to orthotic joints
- Good welding characteristics
- Easy to dye with Ottobock thermopapers
- Temperature recommendation: 185 °C (convection oven, infrared oven)

646F265=EN_INT Thermoplastics poster

616T16 ThermoLyn RCH 1000

- Polyethylene
- Stiffening insole for inner shoes
- High-strength material
- High molecular weight
- Extremely tough
- High abrasion resistance
- Can be reshaped in a cold state
- Temperature recommendation: 195 °C (convection oven, infrared oven)

Technical data

Article number	Length	Width	Thickness	Colour
616T16=950X3	950 mm	910 mm	3 mm	Beige
616T16=950X6	950 mm	910 mm	6 mm	Beige

i Practical recommendation

- The shaping process is facilitated when vacuum-forming devices with rubber membranes are used.

Information material

646T752=EN_INT Technical information | ThermoLyn PETG clear

616T183 ThermoLyn PETG clear

- Copolyester
- For all liner fittings with/without distal connection
- Used as the first layer in definitive sockets, e.g. for Harmony fittings
- For transfemoral fittings with/without liners
- Highly transparent
- Shatterproof
- High impact strength
- After transfer of the check socket, no drying of the plaster is required
- Moist plaster requires no isolation for laminating
- PETG replaces the inside sheeting
- Very smooth inner surface
- Makes donning easier and increases the service life of the liner/soft socket/sealing sleeve
- Temperature recommendation: 170 °C (convection oven), 160 °C (infrared oven)

Technical data

Article number	Length	Width	Thickness	Colour
616T183=3	400 mm	400 mm	3 mm	Clear
616T183=5	400 mm	400 mm	5 mm	Clear

i Practical recommendation

- Store in a dry place, protect from moisture. Pre-dry at 55 °C in a convection oven prior to processing if necessary.
- Coat the model with 633F50 silicone grease.
- We recommend hot air for working edges.
- Please note that shrinkage occurs during processing.

Processing and usage examples

Infrared oven

(e.g. 701E40=S) Preheat to 160 °C:a) For residual limbs up to 21 cm in length:Clamp 3 mm PETG in smaller 755X84=260x8 frame (diameter 260) in combination with 755T4=360 and heat 2:45 minb) For residual limbs over 21 cm in length:Clamp 5 mm PETG in 755T4=360 vacuum forming frame (diameter 360) and heat 4:10 min

Convection oven

(e.g. 701E7=2) Preheat to 170 °C:a) For residual limbs up to 21 cm in length:Clamp 3 mm PETG in small 755X84=260x8 frame (diameter 260) in combination with 755T4=360 and heat 12 minb) For residual limbs over 21 cm in length:Clamp 5 mm PETG in small 755T4=360 vacuum forming frame (diameter 360) and heat 13 min

Select smallest possible vacuum forming plate. We recommend using the following device:Vacuum pipe with two exchangeable 755X220 vacuum forming plates (diameter 260 mm and 360 mm) Remove the PETG sheet from the oven very quickly and immediately vacuum form with a high vacuum (if necessary, shape undercuts using a hot air gun, e.g. 756E9). Equipment:755E80 Mobile vacuum pump with tank641H13 Heat protection glove

616T83 ThermoLyn clear

- Copolyester
- For fabricating scar compression masks, trial orthoses and self-supporting check sockets (limited wearing time)
- Also in antibacterial (616T283)
- Transparency of the check socket facilitates precise verification of the fit and skin discolouration on the residual limb
- Good fracture resistance
- Very high impact strength
- High dimensional stability
- Can be over-laminated to secure adapters
- Temperature recommendation: 165 °C (convection oven, infrared oven)

616T69=12	400 mm	400 mm	12 mm	Beige

Product example

Practical recommendation

- We recommend using the 503F3 socket screw with Allen head in combination with the 29C3 or 29C5 setting nut.
- 633D5 double sided adhesive tape can be used to fasten the flexible definitive inner socket within the container socket.
- Please note that shrinkage occurs during processing.

616T690 ThermoLyn soft, black

- PE-C
- Suitable for fabricating flexible inner prosthetic sockets in lower limb prosthetics
- High flexibility
- Low density for especially low weight
- High tensile strength
- Odour-neutral
- High surface quality
- Can be subsequently thermoformed
- Comfortable to wear
- Washable
- Temperature recommendation: 130 °C (convection oven, infrared oven)

i Practical recommendation

- 633D5 double-sided adhesive tape can be used to fasten the flexible definitive inner socket within the container socket.
- Es ist zu beachten, dass beim Verarbeitungsprozess Schrumpfung auftritt.

616T59 ThermoLyn supra soft

- Ethylene vinyl acetate
- For fabricating highly flexible soft-walled inner sockets for the thigh
- Very high flexibility
- For more comfortable socket brims
- High surface quality
- Comfortable to wear
- Washable
- Temperature recommendation: 155 °C (convection oven, infrared oven)

Information material

646F265=EN_INT	Thermoplastics poster
646D733=EN_INT	ThermoLyn product information

Technical data

Article number	Length	Width	Thickness	Colour
616T59=10	400 mm	400 mm	10 mm	Clear
616T59=12	400 mm	400 mm	12 mm	Clear
616T59=15	400 mm	400 mm	15 mm	Clear

Product example

i Practical recommendation

- 633D5 double-sided adhesive tape can be used to fasten the flexible definitive inner socket within the container socket.
- Please note that shrinkage occurs during processing.

616T111 ThermoLyn supra soft plus silicone

- Ethylene vinyl acetate with silicone
- For fabricating highly flexible soft-walled inner sockets for the thigh
- Very high flexibility
- For more comfortable socket brims
- High surface quality
- Comfortable to wear
- Easy to sand
- Washable
- Temperature recommendation: 150 °C (convection oven, infrared oven)

i Practical recommendation

- Please note that shrinkage occurs during processing.

Product example

616T* ThermoLyn supra flexible

- Ethylene vinyl acetate
- Insoles
- Flexible diagnostic and definitive sockets for foot prostheses
- Flexible diagnostic and definitive sockets for lower and upper limb prostheses
- Waterproof splints and crutches
- Flaps and fasteners for orthoses
- Flexible socket brim design for orthoses
- Permanently elastic
- Shape-retentive
- High friction
- More comfortable socket edge design
- Comfortable to wear
- Large choice of colours
- Washable
- Subsequent welding possible
- Can be bonded to itself when heated
- Temperature recommendation: 80–100 °C (infrared oven), 100–120 °C (convection oven)

- i Practical recommendation**
- Plaster model: smooth.
 - Do not isolate the plaster model (e.g. with silicone grease).
 - Short transport distances from oven to model.
 - Do not use talcum powder.
 - Use clean and smooth Teflon foil as underlay when heating in oven.
 - When lamination discs, reinforcement strips etc. are subsequently welded to the model, keep model in vacuum conditions to ensure dimensional stability.
 - Avoid air pockets when welding the material.
 - Please note that shrinkage occurs during processing.

616G26 Polyester knit fabric

- For reinforcing Orthocryl soft resins, silicones and flexible thermoplastics
- Stretchable in one direction
- Stable in one direction
- High resistance to tearing

Technical data

Article number	Length	Width
616G26=150-1	1,100 mm	1,500 mm

616F26 Silicone film

- Processing aid for TP.C
- Generation of a prevacuum between an upper and lower film
- For fixing during heating and forming
- As separating film for the controlled partial welding of thermoplastics
- Thermally stable
- Limited elasticity
- Processing temperature: max. 240 °C

Technical data

Article number	Length	Width	Thickness	Colour
616F26=5000X1200	5,000 mm	1,200 mm	0.5 mm	Red-brown

633D5 Double-sided adhesive tape

- For inner socket – outer frame connection, for example
- Not suitable for reinforcement materials
- Base material: PE sheeting
- Double-sided acrylic adhesive material
- Transparent (covered with red separating film)
- Good frame fixation (no hook-and-loop closure required)
- High adhesive strength on various materials, such as plastics
- Good temperature resistance

Technical data

Article number	Length	Width	Colour	Order unit
633D5=19	50 m	19 mm	Transparent	Roll
633D5=50	50 m	50 mm	Transparent	Roll

Processing and usage examples

Clean the surfaces that are to be bonded (here the inner socket and the frame) with 634A58 isopropyl alcohol. Cut 633D5 doubled-sided adhesive tape to the required length.

Position precut adhesive tape in the corresponding locations and press into place.

Join and position the frame and inner socket. Compress the inner socket and remove the red protective film from the double-sided adhesive tape. Firmly press the two components together at the locations being bonded.

85F1 Plaster parting agent

- For isolating plaster from plaster
- For isolating plaster from thermoplastics

Technical data

Article number	Net contents
85F1	1 l

Processing and usage examples

Immerse stockinette directly in 85F1 plaster parting agent and allow to soak, or fill plaster parting agent into a 642B2 measuring cup and immerse stockinette.

Take the stockinette impregnated with plaster parting agent out of the bottle or measuring cup and pull it directly over the model.

Immediately before vacuum forming, impregnate the stockinette with plaster parting agent again and rub it in.

99B25 Nylon stockinette

- For plaster casting, e.g. for KAFOs
- Suitable as filter tube for vacuum forming
- Polyamide

Technical data

Article number	Length	Order unit	Package contents
99B25	Approx. 50 cm	Package	10 piece(s)

- i Practical recommendation**
- Can be individually shortened and welded.

Processing and usage examples

Pre-tension the 99B25 nylon stockinette, twist it and then secure it with combination pliers. Using a pair of scissors, cut off the end of the seam.

Using the flame of a cigarette lighter, weld the cut surface and then immediately smoothen the weld seam.

With the welded seam turned inwards, pull the sock over the model.

81A1 Nylon stockinette

- For plaster casting, e.g. for KAFOs
- Suitable as a filter and final layer for laminating
- For reinforcing Pastasil
- For vacuum technique with Chlorosil
- Polyamide
- Especially elastic
- Not pre-impregnated

Technical data

Article number	Length	Width	Weight
81A1=8	101.5 m	8 cm	1 kg
81A1=10	84.6 m	10 cm	1 kg
81A1=12	67.8 m	12 cm	1 kg
81A1=15	52.5 m	15 cm	1 kg
81A1=20	48 m	20 cm	1 kg

- i Practical recommendation**
 • Individually adaptable and weldable.

Processing and usage examples

Application example – vacuum forming in orthotics

Pull 81A1 nylon stockinette over the plaster model, cut to length so it is twice the size of the model, twist off and fold back again.

Application example – vacuum forming in prosthetics

Pre-tension the 81A1 nylon stockinette, twist it and then secure it with combination pliers. Using a pair of scissors, cut off the end of the seam. Using the flame of a cigarette lighter, weld the cut surface and then immediately smoothen the weld seam.

With the welded seam turned inwards, pull the sock over the model.

616T112=1.5-99 Transpad

- For fabricating flaps in silicone technology
- For fixing systems of orthoses and masks
- Flexible

Technical data

Article number	Length	Width	Thickness	Colour
616T112=1.5-99	1000 mm	1000 mm	1.5 mm	Transparent

633F50 Silicone grease

- Ideal lubricating layer during vacuum forming on all plaster models (also possible without sock)
- Simplifies the fabrication of consistent wall thicknesses
- Thixotrope
- Air permeable
- Not hardening

Technical data

Article number	Net contents
633F50=1	1 kg

Processing and usage examples

Remove a quantity of 633F50 silicone grease that is sufficient for the model and apply a thin, even layer to the model.

519L5 Silicone parting agent

- For parting, gliding and lubricating
- Protects rubber, plastics and elastomers from becoming brittle
- Compact and solvent-free
- CFC-free

Technical data

Article number	Net contents
519L5	0.4 l

646F265 Thermoplastics poster

Lamination technology

From traditional stockinette to modern carbon and fibreglass materials for lamination to proven and innovative lamination resins, we offer everything from a single source.

Reinforcement materials such as fibre composites are of special interest, since considerable weight reductions can be realised through their use with simultaneous high strength and stiffness.

Ottobock lamination resins were developed especially for the lamination technique and, in combination with our proven reinforcement materials, facilitate treatments of the highest quality in prosthetics and orthotics. Lamination resins feature high strength with low weight and dimensional stability with low wall thickness. Acrylic, epoxy and vinyl ester resins are particularly well suited for use in orthopaedic technology. Orthocryl acrylic resins are easy to mix, only require a short setting time and can be processed quickly. Orthopox epoxy resins on the other hand have to be mixed exactly and ensure the best bond with reinforcement materials. As a complement to our Orthopox liquid resin, the Ottobock resin film simplifies the lamination process and facilitates a more efficient flow of work, since the required component characteristics are guaranteed thanks to a precise and adjustable resin content. Orthovinyl vinyl ester resins bond to carbon fibres more effectively than an acrylic resin due to the structure. This achieves a high degree of stiffness at a low laminate wall thickness, which falls between that of an acrylic resin and that of an epoxy resin. Orthovinyl can also be processed as quickly and easily as an acrylic resin.

81A1 Nylon stockinette

623T3 Perlon® stockinette, white

- For fabricating laminates
- Knitted fabric
- Finely meshed
- Good stretching properties
- Good shaping
- Smooth surface after laminating
- Suitable for surfaces

646M39 Sample set of carbon profile bars

- 3 carbon profile bars (0°, 45° und 90°)
- The mechanical properties of the carbon fabric are dependent on the direction in which a force is applied. Under tensile load in the warp or weft direction, woven fabrics stretch only slightly. But if the tensile load is applied diagonally, e.g. at an angle under 45°, woven carbon fabrics are highly stretchable. The direction of the fibres should be adjusted according to the load.

Technical data

Article number
646M39

Information material

646A174=GB	Prepreg technology product information
------------	--

699B1 Fibreglass roving

- For reinforcement in lamination work
- Unidirectional
- High strength and stiffness in the longitudinal direction of the fibres

Technical data

Article number	Length	Weight
699B1	200 m	0.5 kg

Practical recommendation

- Suitable for the fixation of components such as adapters in the laminate, e.g. by sewing.

616H20 Carbon UD stockinette

- For axial reinforcement (bending forces) of thin-walled, high-strength laminates
- Designed especially for use with acrylic resins (e.g. 617H55 C-Orthocryl)
- The elastic weft thread allows the carbon threads to maintain their 0° orientation, regardless of the diameter
- No elaborate cutting or forming work is necessary with formed models
- The elastic weft thread facilitates forming the stockinette to the model and saves valuable working time
- Not suitable for surfaces

Product example

Technical data

Article number	Length	Width
616H20=20X5	5 m	20 mm
616H20=40X5	5 m	40 mm
616H20=70X5	5 m	70 mm
616H20=100X5	5 m	100 mm
616H20=150X5	5 m	150 mm

Practical recommendation

- If the laminate is to have radial strength (torsional forces), additional reinforcement materials are required. In this case we recommend using our 616G15 woven carbon fibre stockinette.

616G13 Woven fibreglass stockinette

- For fabricating thin-walled laminates
- Braid
- High torsional strength in laminates
- Torsion can be influenced by different circumferences (ideal angle: 45°)
- Good draping characteristics

Technical data

Article number	Length	Width	Weight
616G13=6	12.5 m	6 cm	1 kg
616G13=8	8 m	8 cm	1 kg
616G13=10	7 m	10 cm	1 kg

616G14 Woven carbon fibreglass stockinette

- For fabricating thin-walled laminates
- Braid
- Combines the properties of carbon and glass fibres
- Increased torsional strength in laminates
- Torsion can be influenced by different circumferences (ideal angle: 45°)

Technical data

Article number	Length	Width	Weight
616G14=8	11 m	8 cm	1 kg
616G14=10	10 m	10 cm	1 kg

616G15 Woven carbon fibre stockinette

- For fabricating rigid lamination resin side struts, clasps and connectors
- For fabricating thin-walled, high-strength laminates
- Braid
- Very high torsional strength in laminates
- Torsion can be influenced by different circumferences (ideal angle: 45°)

Technical data

Article number	Length	Width
616G15=20X5	5 m	20 mm

616G15=50X50	50 m	50 mm
616G15=80X5	5 m	80 mm
616G15=80X10	10 m	80 mm
616G15=80X25	25 m	80 mm
616G15=80X50	50 m	80 mm
616G15=120X5	5 m	120 mm
616G15=120X10	10 m	120 mm
616G15=120X25	25 m	120 mm
616G15=120X50	50 m	120 mm

Practical recommendation

- Facilitates excellent sandwich properties in conjunction with 17Y106 PVC profile as the core material, especially in prosthetics.

616G4 Fibreglass mat (Biegelow mat)

- For partial laminate reinforcements
- Good absorption of all Ottobock lamination resins
- Good draping characteristics

Technical data

Article number	Width	Weight per unit area	Weave type
616G4	950 mm	700 g/m ²	Randomly oriented fibre

616G18 Fibreglass cloth

- For partial laminate reinforcements
- Good absorption of all Ottobock lamination resins
- High strength
- Good draping characteristics

Technical data

Article number	Length	Width	Weight per unit area	Weave type
616G18=1	1 m	1,000 mm	280 g/m ²	Twill 2/2
616G18=2	2 m	1,000 mm	280 g/m ²	Twill 2/2
616G18=5	5 m	1,000 mm	280 g/m ²	Twill 2/2
616G18=10	10 m	1,000 mm	280 g/m ²	Twill 2/2

616G12 Woven carbon fibre

- For partial high-strength laminate reinforcements
- Processability including the woven edge is advantageous (edges are not sewn), because masking is not necessary
- Good absorption of all Ottobock lamination resins
- Good draping characteristics

Technical data

Article number	Length	Width	Weight per unit area	Weave type
616G12=50X1	1 m	50 mm	245 g/m ²	Twill 2/2
616G12=50X5	5 m	50 mm	245 g/m ²	Twill 2/2
616G12=50X10	10 m	50 mm	245 g/m ²	Twill 2/2
616G12=100X1	1 m	100 mm	245 g/m ²	Twill 2/2

5Z14 Reinforcement kit

- For frame and container sockets, e.g. for ISNY, M.A.S.[®], knee disarticulation and longitudinal-oval sockets
- For distal residual limb cap: 4 diamonds of bidirectional woven carbon fibre
- For frame construction: 2 T-shaped carbon fibre tape (3 layers) with reinforcing seams
- For medial socket brim: 2 triangles of bidirectional woven carbon fibre
- For axial frame reinforcement: 1 profile bar, 1 woven carbon fibre stockinette
- For radial frame reinforcement: 1 profile bar, 1 woven carbon fibre stockinette

Technical data

Article number	Weight
5Z14	0.466 kg

M.A.S.[®] is a registered trademark of Marlo Ortiz.

**Information material**

646D1465=EN_INT	5Z15 Anchor preform product brief
-----------------	-----------------------------------

5Z15 Anchor preform

- For reinforcement of the socket adapter Can be combined with 4R41, 4R42, 4R42=1, 4R43, 4R63, 4R89, 4R111, 4R111=T, 4R111=N, 4R116, 4R116=T, 4R117, 4R117=T, 4R119=NT, 4R119=T, 4R119, 4R119=N, 4WR95=1, 4WR95=2
- Quick, clean and easy reinforcement
- Preform with optimal fibre orientation in the direction of force
- Load-bearing fibre strands stay in place
- Saves time during the reinforcement process
- Very low material waste
- Good draping characteristics
- Simplified quantity control in comparison to rolled goods
- Good absorption of Ottobock lamination resins
- Can be combined with all Ottobock reinforcement materials

Technical data

Article number	Order unit	Package contents
5Z15	Package	2 x anchor preform

- Please note that the 5R2, 5R2=C, 4R63, 4R68 and 4R100 socket adapters may not be used with the 5Z15 anchor preform.

**Information material**

646D1410=EN_INT	5Z16/5Z17 Frame/container preform product brief
-----------------	---

5Z16 Frame preform

- For use in socket fabrication
- Can be combined with 4R41, 4R42, 4R42=1, 4R43, 4R89, 4R111, 4R111=T, 4R111=N, 4R116, 4R116=T, 4R117, 4R117=T, 4R119=NT, 4R119=T, 4R119, 4R119=N, 4WR95=1, 4WR95=2
- Tested for users up to 150 kg
- Clean and easy processing
- Pre-determined layer structure
- Simplified fabrication and less time to fabricate a socket
- Minimises waste of expensive reinforcement materials
- Simplified quantity control in comparison to rolled and sheet goods

Technical data

Article number	Dimension A	Dimension B	Dimension C	Package contents	Quantity unit
5Z16=280X700X150	280 mm	370 mm	700 mm	Three preforms for fabricating a prosthetic socket	Set
5Z16=350X700X150	350 mm	500 mm	700 mm	Three preforms for fabricating a prosthetic socket	Set

- Apply the M/L section with the short side oriented medially. Round the edges when shortening to the correct length.
- Wrap around the radial section: position the reinforcement triangle medially in the perineum with the point towards the end of the residual limb. The radial section can be used for left-hand (carbon on the outside) and right-hand (carbon on the inside) sockets. Perform the first casting with the M/L section and the radial section.
- Attach the anchor and position the faces of the star so they are centred over the anchor arms. Perform the second casting with the anchor and star.

i **Practical recommendation**

- Use 636K40 spray adhesive for easy handling and fast adhesion to the plaster model.
- When positioning the star, pull the rounded corners laterally in the medial direction so they lie horizontally against the residual limb model.
- Trim the ends of the M/L section and the radial section using sharp scissors so they fit onto the residual limb model.

617H37 Pedilen duplicating foam

- Two-component synthetic material, excellent for quickly taking impressions of prosthetic sockets
- Undercuts are transferred exactly and can be demoulded easily
- Can be finished, for example by sanding, application of 636K17 lightweight putty
- Sensitive to moisture

Technical data

Article number	Net contents
617H37=0.865	0.865 kg
617H37=4.600	4.6 kg
617H37=9.320	9.32 kg

i Practical recommendation

- Immediately after the Pedilen duplicating foam has hardened and cooled, line the cast with an adequately stable layer of plaster. Let this layer harden and fill the model with plaster.

617H11 Pedilen rigid foam 100

- For fabricating rehabilitation seating systems and for functional cosmeses
- Fast and safe processing with hand mixing procedure
- Precise taking of impressions
- Indentation hardness (at 10% compression): approx. 0.63 N/mm²
- No shrinkage
- Easy to refinish in cured condition, e.g. through sanding, lamination
- Sensitive to moisture

Technical data

Article number	Net contents	Expansion factor	Weight per unit volume
617H11=0.865	0.865 kg	12.5	approx. 100 kg/m ³

- i Practical recommendation**
- Shake for 30 seconds before use.

Mixing ratio

Pedilen rigid foam 600 617H61	Hardener for Pedilen rigid foams 617P21
100	100

617H61 Pedilen rigid foam 600

- For prostheses and shoe lasts subject to very high strain
- Fast and safe processing with hand mixing procedure
- Precise taking of impressions
- Indentation hardness (at 10% compression): approx. 10.20 N/mm²
- No shrinkage
- Easy to refinish in cured condition, e.g. through sanding, lamination
- Sensitive to moisture

Technical data

Article number	Net contents	Expansion factor	Weight per unit volume
617H61=4.600	4.6 kg	1.9	approx. 600 kg/m ³
617H61=9.320	9.32 kg	1.9	approx. 600 kg/m ³

- i Practical recommendation**
- Shake for 30 seconds before use.

617H41 Pedilen rigid foam 700

- For fabricating heel lifts and shoe lasts
- Fast and safe processing with hand mixing procedure
- Precise taking of impressions
- Indentation hardness (at 10% compression): approx. 12.50 N/mm²
- Screw and nail-resistant
- Thermally stable
- No shrinkage
- Easy to refinish in cured condition, e.g. through sanding, lamination
- Sensitive to moisture
- Attention: mixing ratio 100 (617H41 rigid foam):70 (617P21 hardener)

Mixing ratio

Pedilen rigid foam 700 617H41	Hardener for Pedilen rigid foams 617P21
100	70

Technical data

Article number	Net contents	Expansion factor	Weight per unit volume
617H41=0.865	0.865 kg	1.7	approx. 700 kg/m ³
617H41=4.600	4.6 kg	1.7	approx. 700 kg/m ³
617H41=9.320	9.32 kg	1.7	approx. 700 kg/m ³

- i Practical recommendation**
- Shake for 30 seconds before use.

617P21 Hardener for Pedilen rigid foams

- Hardener for all Pedilen rigid foams and Pedilen duplicating foams
- Hardener has no influence on the swelling factor, foam determines the swelling factor

617H35 Pedilen flexible foam 150

- For making flexible cosmetic body compensations
- Fast and safe processing with hand mixing procedure
- Precise taking of impressions
- Indentation hardness (at 10% compression): approx. 0.02 N/mm²
- No shrinkage
- Easy to refinish in cured condition, e.g. through sanding
- Sensitive to moisture

Technical data

Article number	Net contents	Expansion factor	Weight per unit volume
617H35=0.865	0.865 kg	7.1	approx. 150 kg/m ³
617H35=4.600	4.6 kg	7.1	approx. 150 kg/m ³

i Practical recommendation

- Shake for 30 seconds before use.
- Bonds well with 636W71 CP contact adhesive.

Mixing ratio

Pedilen flexible foam 150 617H35	Hardener for Pedilen flexible foams 617P32
100	50

617H42 Pedilen flexible foam 300

- For making flexible body compensations with high mechanical strength, e.g. for partial hand replacements
- Fast and safe processing with hand mixing procedure
- Precise taking of impressions
- Indentation hardness (at 10% compression): approx. 0.08 N/mm²
- No shrinkage
- Easy to refinish in cured condition, e.g. through sanding
- Sensitive to moisture

Technical data

Article number	Net contents	Expansion factor	Weight per unit volume
617H42=0.865	0.865 kg	4.7	approx. 300 kg/m ³
617H42=4.600	4.6 kg	4.7	approx. 300 kg/m ³

i Practical recommendation

- Shake for 30 seconds before use.
- Bonds well with 636W71 CP contact adhesive.

Mixing ratio

Pedilen flexible foam 300 617H42	Hardener for Pedilen flexible foams 617P32
100	50

617P32 Hardener for Pedilen flexible foams

- Hardener for 617H35 Pedilen flexible foam 150 and 617H42 Pedilen flexible foam 300
- Hardener has no influence on the swelling factor, foam determines the swelling factor

Technical data

Article number	Net contents
617P32=0.865	0.865 kg

i Practical recommendation

- Shake for 30 seconds before use.
- Mixing ratio hardener: A-component varies. For the exact mixing ratio, we recommend the 642B2 measuring cup.

**Mixing ratio**

Flexible foam, component A 617D50	Flexible foam, component B 617D51
100	40

617D50 Flexible foam, component A

- For the production of 2-component PUR foamFor custom orthopaedic components made to measure
- Fast and safe processing with hand mixing procedure
- Low weight
- Precise taking of impressions
- Indentation hardness (at 10% compression): approx. 0.01 N/mm²
- No shrinkage
- Easy to refinish in cured condition, e.g. through sanding
- Sensitive to moisture

**Technical data**

Article number	Net contents	Expansion factor	Weight per unit volume
617D50	0.865 kg	10	approx. 120 kg/m ³

**Practical recommendation**

- Shake for 30 seconds before use.
- Bonds well with 636W71 CP contact adhesive.

**Mixing ratio**

Flexible foam, component A 617D50	Flexible foam, component B 617D51
100	40

617D51 Flexible foam, component B

- For the production of 2-component PUR foamFor custom orthopaedic components made to measure
- Fast and safe processing with hand mixing procedure
- Low weight
- Precise taking of impressions
- Indentation hardness (at 10% compression): approx. 0.01 N/mm²
- No shrinkage
- Easy to refinish in cured condition, e.g. through sanding
- Sensitive to moisture

**Technical data**

Article number	Net contents	Expansion factor	Weight per unit volume
617D51	0.865 kg	10	approx. 120 kg/m ³

**Practical recommendation**

- Shake for 30 seconds before use.
- Bonds well with 636W71 CP contact adhesive.

Information material

646F265=EN_INT	Thermoplastics poster
----------------	-----------------------

616T3 ThermoLyn trolene

- Flexible polyethylene
- Used as a forming and parting material
- For orthotic components that require little stiffness but high flexibility
- For fabricating flaps in socket technology
- Individually cut to size, it can be used as a device for filling work
- Reusable and easy to clean due to its smooth surface
- Opaque
- Good transparency
- Low molecular weight
- Good thermoplastic formability
- High flexibility
- Temperature recommendation: processing temperature 125 °C (convection oven, infrared oven)

Technical data

Article number	Length	Width	Thickness	Colour
616T3=1	1,000 mm	500 mm	1 mm	Natural colour
616T3=2	1,000 mm	500 mm	2 mm	Natural colour
616T3=2000X1000X2	2000 mm	1,000 mm	2 mm	Natural colour
616T3=2000X1000X3	2000 mm	1,000 mm	3 mm	Natural colour
616T3=40X32X2	40 mm	33 mm	2 mm	Natural colour

Practical recommendation

- Can also be used as a dummy material, e.g. with lamination technique.

642B2 Measuring cup

- Polypropylene measuring cup
- Scaling facilitates a precise mixing ratio
- The 1000 g cup is especially well suited for laminating pelvic sockets and orthoses, and for taking impressions and foaming with large volumes.
- Reusable

Technical data

Article number	Volume	Minimum order quantity
642B2=50	50 g	100 piece(s)
642B2=100	100 g	100 piece(s)
642B2=200	200 g	100 piece(s)
642B2=400	400 g	100 piece(s)
642B2=1000	1,000 g	100 piece(s)

Practical recommendation

- The varying density of the foam and hardener results in a precise mixing ratio of 1:1. We recommend using a measuring cup to ensure this mixing ratio.
- Add slightly more than the required amount of liquid foam, since a small amount often remains in the measuring cup.

699Y3 Wooden spatula

- Versatile measuring tool
- Imprint in mm and inch
- Rectangular shape facilitates thorough mixing in the bottom and edge areas, for example with lamination resins

Technical data

Article number	Length	Width	Height	Minimum order quantity
699Y3	270 mm	18 mm	2.7 mm	100 piece(s)

Practical recommendation

- Add slightly more than the required amount of liquid foam since a small amount always remains on the wooden spatula.

**Information material**

646F297=GB Adhesives, putties, varnishes and thinners poster

636K18 Orthocryl sealing resin compact adhesive

- For bonding e.g. wood, plastics, leather
- In conjunction with 617P14 hardener paste or 617P37 hardener powder
- Basis: solution of an acrylic polymer in methacrylic esters
- Thixotrope

**Technical data**

Article number	Net contents	Colour
636K18	1 kg	Transparent

**Practical recommendation**

- Recommended for parting components prior to laminating.

**Mixing ratio**

Resin	Hardener	Pigment paste
100	1	3

Information material

646F351=EN_MASTER Lamination resins poster

617H21 Orthocryl sealing resin

- For sealing and reinforcing
- High-strength adhesive bonds, e.g. wood, foam
- Combined with filler material for making putties
- 617H21=25 P supplied in plastic canister (filling set available)

**Technical data**

Article number	Description	Net contents
617H21=0.900 E	Orthocryl sealing resin	0.9 kg
617H21=4.600 E	Orthocryl sealing resin	4.6 kg
617H21=25 E	Orthocryl sealing resin	25 kg
617H21=25 P	Orthocryl sealing resin	25 kg

- The 642K13 filling set is available as an accessory for metal containers of 25 kg and over.

**Information material**

646F351=EN_MASTER Lamination resins poster

617P37 Hardening powder

- For Orthocryl resins and 617H500 Orthovinyl resin as well as 636K18 Orthocryl sealing resin compact adhesive
- Includes 1 g measuring spoon
- Mixes well with Orthocryl and Orthovinyl resins
- Easy dosing
- Reduces the flow properties of Orthocryl and Orthovinyl resins

**Technical data**

Article number	Net contents
617P37=0.150	0.15 kg

**Practical recommendation**

- Applies to all Orthocryl resins: add max. 3% 617P37 hardening powder.

639A1 Talcum powder pharma

- Lightweight filler for sealing resin
- For powdering plaster models
- Pharmaceutical quality
- Powder form

Technical data

Article number	Net contents
639A1=1	1 kg

617Z8 Microballoon

- Very lightweight filler for sealing resin
- Powder form
- Density reduction and therefore weight reduction of the end product

Technical data

Article number	Net contents	Colour
617Z8=1	1 kg	White

**Mixing ratio**

Resin	Hardener	Pigment paste
100	1-3	3

Information material

646D1444=EN_MASTER	617H19S Orthocryl lamination resin 80:20 Speed product brief
646F351=EN_MASTER	Lamination resins poster

617H19S Orthocryl lamination resin 80:20 Speed

- Lamination resin for small prosthetic and orthotic components
- Same mixing ratio of hardener powder and lamination resin as with 617H19 Orthocryl lamination resin 80:20 (max. 3%)
- Requires only half the curing time of Orthocryl lamination resin 80:20
- Using the same proportion of hardener powder prevents the formation of bubbles and a brittle lamination with a shorter curing time
- Consistent lamination quality as with Orthocryl lamination resin 80:20, with a reduced curing time
- Same viscosity with the same mechanical characteristics as Orthocryl lamination resin 80:20
- Can be combined with all common reinforcement materials in orthopaedic technology
- Hardener/colour pastes are easy to mix

**Technical data**

Article number	Description	Net contents
617H19S=0.900	Orthocryl lamination resin 80:20 Speed	0.9 kg
617H19S=4.600	Orthocryl lamination resin 80:20 Speed	4.6 kg
617H19S=25	Orthocryl lamination resin 80:20 Speed	25 kg

i **Practical recommendation**

- Adding hardener powders in proportions greater than 3% results in the formation of bubbles and a brittle lamination with all lamination resins used in the field of orthopaedic technology. Use 617H19S Orthocryl lamination resin 80:20 Speed to make small components available for further processing more quickly, without jeopardising quality.

**Mixing ratio**

Resin	Hardener	Pigment paste
100	1-3	3

Information material

646F351=EN_MASTER	Lamination resins poster
-------------------	--------------------------

617H19 Orthocryl lamination resin 80:20

- The proven classic material for laminating
- Optimum 80:20 ratio for fabricating stiff laminates (with 20% 617H17 Orthocryl, soft)
- Can be combined with all common reinforcement materials in orthopaedic technology
- 617H19=25 P supplied in plastic canister (filling set included)

**Technical data**

Article number	Description	Material	Net contents
617H19=0.900 E	Orthocryl Lamination Resin 80:20	Acrylic	0.9 kg

617H19=25 E	Orthocryl lamination resin 80:20	Acrylic	25 kg
617H19=25 P	Orthocryl lamination resin 80:20	Acrylic	25 kg

- 642K13 filling set is available for containers of 25 kg and over.

i **Practical recommendation**

- For sheet casting, use only 616F4 PVA film or 99B81 PVA bags.

617H55 C-Orthocryl

- Lamination resin for carbon fibre technique
- Facilitates fabricating components with a low proportion of resin
- Optimum ratio of matrix to reinforcing materials

Technical data

Article number	Description	Net contents
617H55=0.900	C-Orthocryl	0.9 kg
617H55=4.600	C-Orthocryl	4.6 kg
617H55=25	C-Orthocryl	25 kg

• The 642K13 filling set is available as an accessory for containers of 25 kg and over.

i Practical recommendation

- No filter layers are required when casting carbon on carbon.
- For sheet casting, use only 616F4 PVA film or 99B81 PVA bags.

Mixing ratio

Resin	Hardener	Pigment paste
100	1-3	3

646F351=EN_MASTER	Lamination resins poster
-------------------	--------------------------

617H119 Orthocryl lamination resin 80:20 PRO

- Lamination resin for the fabrication of components with a low proportion of resin
- Lower viscosity with the same mechanical characteristics as 617H19
- Better penetration of the reinforcement
- Faster evacuation of air from the reinforcement
- The air that is evacuated and subsequently rises can escape from the resin during lamination and is not locked into the resin. This increases the quality and stability of the end result
- Hardener/colour pastes are easier to mix

Technical data

Article number	Description	Net contents
617H119=0.900	Orthocryl lamination resin 80:20 PRO	0.9 kg

634A28 Thinner for Orthocryl resins

- For thinning, especially of Orthocryl resins
- For cleaning
- For altering the viscosity of the resin, particularly for swashing out open-pored Pedilen sockets
- Can also be used for working the edges of check sockets such as ThermoLyn clear, ThermoLyn rigid, ThermoLyn PETG clear

**Technical data**

Article number	Net contents
634A28	0.8 kg

617H500 Orthovinyl

- Lamination resin for high-strength components
- Laminating resin on vinyl ester basis
- The laminate achieves a verified biocompatible state following sufficient tempering (see processing instructions)
- The resin exhibits a slightly yellow tinge in the liquid state which is not, however, visible in the laminate
- As with an acrylic resin, the curing time can be reliably determined based on the added hardener and the temperature
- Higher degree of stability than an acrylic resin due to better bonding to the reinforcement fibres
- High stiffness of the laminate with low wall thickness
- Bonds to carbon fibre more effectively than an acrylic resin
- Very easy to sand
- Excellent balance between matrix and reinforcement material
- Can be coloured with Ottobock pigment pastes
- Small number of layers possible
- Very good impregnation, especially of carbon fibres
- Can be combined with all common Ottobock carbon and glass fibres

Mixing ratio

Resin	Hard-ener	Pigment paste	Pot life	Setting time
100	1	max. 3	34 minutes	75 minutes
100	2	max. 3	20 minutes	50 minutes

Information material

-------------------	--------------------------

617H5 Orthopox

- For lightweight, thin-walled, yet sturdy laminates
- Transparent, epoxy-based resin
- Optimum resin content is easily adjusted
- Small number of layers possible
- Optimum ratio of matrix to reinforcing materials
- Optimum impregnation, especially of carbon fibres
- Good bonding to the reinforcement fibres
- Higher structural strength compared to acrylic resins
- Produces a very smooth surface
- Can be coloured with Ottobock pigment pastes
- Curing time can be controlled by temperature

Mixing ratio

Resin	Hardener	Pigment paste
100	26	max. 3

**Information material**

646D1477=EN_MASTER	616B60 resin film product brief
--------------------	---------------------------------

616B60 Resin film

- Developed especially for fabricating exceptionally sturdy and lightweight prostheses and orthoses
- Lighter, thinner components with rigidity equal to that of components on acrylic resin basis
- On epoxy resin basis
- Clean and easy processing
- Excellent draping characteristics
- Resin quantity can be applied precisely
- Adjustable resin content
- Cut pieces of resin film can be stored in a conventional freezer
- Smaller storage volumes in freezer compared to prepreg
- Saves auxiliary materials (e.g. no additional fixing of reinforcing materials required)
- Can be combined with Ottobock reinforcement materials and prepregs

**Technical data**

Article number	Packaging	Package	Weight per unit area
616B60=2	23 foils at 300 x 300 mm per foil	2 m ²	340 g/m ²
616B60=5	56 foils at 300 x 300 mm per foil	5 m ²	340 g/m ²
616B60=10	112 foils at 300 x 300 mm per foil	10 m ²	340 g/m ²

- When stored at a temperature of -18 °C, the resin film can be processed for approximately 12 months; at room temperature, a maximum of 21 days. Freeze in moisture-proof sealed packaging; in order to avoid condensation, thaw to room temperature in moisture-proof sealed packaging. Each thawing and freezing cycle reduces the storage stability and degrades the quality significantly.
- Shipping days: Monday, Tuesday, Wednesday

**Practical recommendation**

- The optimal processing temperature is between 20 °C and 23 °C.
- Make sure the processing area is dry and free of dust, talcum and grease.
- The resin content of the laminate should be at least 50% by weight. For this reason, please pay attention to the weight per unit area of your reinforcement material.
- We recommend using the 633T18 cooling spray to make it easier to remove the protective film from the resin film. Spray the edge of the protective film lightly for this purpose.
- For the first layer, apply spray adhesive to the laminating tool.
- Cure for 4 h under vacuum in a 130 °C oven.

633T18 Cooling spray

- Device for loosening the covering film on prepregs
- Device for loosening the covering film on 616B60 resin film
- Useful for demoulding components
- For immediate cooling of smaller areas or parts
- Possible temperature as low as -48 °C depending on spray duration
- Very rapid evaporation with no residue
- Good cleaning effect
- No detrimental influences on plastics or insulating materials

**Technical data**

Article number	Net contents
633T18	400 ml

616G12 Orthopox woven carbon fibre

- Reinforcement fibres for 617H5 Orthopox epoxy resin and 616B60 resin film
- Not for use with acrylic resins
- No fraying of the fibres
- No double-sided adhesive tape required

i Practical recommendation
 • Thermoformable.

616B16 Peel ply fabric with marker threads

- Processing aid for TPC
- Surface protection during lamination work
- Leads to rough, clean surface that is optimally suited for further coating, bonding or painting
- Facilitates optimum strength values
- Excessive resin can escape via the peel ply fabric during the curing phase
- The peel ply fabric can be easily peeled off after curing

646T757=EN	Technical information TPC and TPC Textil

Technical data

Article number	Length	Width	Weight per unit area	Weave type
616B16=2	2 m	0.5 m	83 g/m ²	Plain weave

81A1 Nylon stockinette

- For plaster casting, e.g. for KAFOs
- Suitable as a filter and final layer for laminating
- For reinforcing Pastasil
- For vacuum technique with Chlorosil
- Polyamide
- Especially elastic
- Not pre-impregnated

Technical data

Article number	Length	Width	Weight
81A1=8	101.5 m	8 cm	1 kg
81A1=10	84.6 m	10 cm	1 kg
81A1=12	67.8 m	12 cm	1 kg
81A1=15	52.5 m	15 cm	1 kg
81A1=20	48 m	20 cm	1 kg

Practical recommendation

- Individually adaptable and weldable.

Processing and usage examples

Application example – vacuum forming in orthotics

Pull 81A1 nylon stockinette over the plaster model, cut to length so it is twice the size of the model, twist off and fold back again.

Application example – vacuum forming in prosthetics

Pre-tension the 81A1 nylon stockinette, twist it and then secure it with combination pliers. Using a pair of scissors, cut off the end of the seam. Using the flame of a cigarette lighter, weld the cut surface and then immediately smoothen the weld seam.

With the welded seam turned inwards, pull the sock over the model.

623T3 Perlon® stockinette, white

- For fabricating laminates
- Knitted fabric
- Finely meshed
- Good stretching properties
- Good shaping
- Smooth surface after laminating
- Suitable for surfaces

617Z4	0.25 kg	White	
617Z5	0.25 kg	Yellow	
617Z6	0.2 kg	Red	
617Z7	0.25 kg	Blue	
617Z9	0.25 kg	Black	
617Z58=3	0.25 kg	Green	

- i Practical recommendation**
 • Mix pigment paste and lamination resin well. Once mixing is complete, add hardener.

**Information material**

646F265=EN_INT Thermoplastics poster

616T3 ThermoLyn trolene

- Flexible polyethylene
- Used as a forming and parting material
- For orthotic components that require little stiffness but high flexibility
- For fabricating flaps in socket technology
- Individually cut to size, it can be used as a device for filling work
- Reusable and easy to clean due to its smooth surface
- Opaque
- Good transparency
- Low molecular weight
- Good thermoplastic formability
- High flexibility
- Temperature recommendation: processing temperature 125 °C (convection oven, infrared oven)

Technical data

Article number	Length	Width	Thickness	Colour
616T3=1	1,000 mm	500 mm	1 mm	Natural colour
616T3=2	1,000 mm	500 mm	2 mm	Natural colour
616T3=2000X1000X2	2000 mm	1,000 mm	2 mm	Natural colour
616T3=2000X1000X3	2000 mm	1,000 mm	3 mm	Natural colour
616T3=40X32X2	40 mm	33 mm	2 mm	Natural colour

**Practical recommendation**

- Can also be used as a dummy material, e.g. with lamination technique.

642B2 Measuring cup

- Polypropylene measuring cup
- Scaling facilitates a precise mixing ratio
- The 1000 g cup is especially well suited for laminating pelvic sockets and orthoses, and for taking impressions and foaming with large volumes.
- Reusable

Technical data

Article number	Volume	Minimum order quantity
642B2=50	50 g	100 piece(s)
642B2=100	100 g	100 piece(s)
642B2=200	200 g	100 piece(s)
642B2=400	400 g	100 piece(s)
642B2=1000	1,000 g	100 piece(s)

**Practical recommendation**

- The varying density of the foam and hardener results in a precise mixing ratio of 1:1. We recommend using a measuring cup to ensure this mixing ratio.
- Add slightly more than the required amount of liquid foam, since a small amount often remains in the measuring cup.

699Y3 Wooden spatula

- Versatile measuring tool
- Imprint in mm and inch
- Rectangular shape facilitates thorough mixing in the bottom and edge areas, for example with lamination resins

Technical data

Article number	Length	Width	Height	Minimum order quantity
699Y3	270 mm	18 mm	2.7 mm	100 piece(s)

**Practical recommendation**

- Add slightly more than the required amount of liquid foam since a small amount always remains on the wooden spatula.

616F4 PVA film

- For working with lamination resins as well as prepreg and resin film
- Film adapts to contours extremely well
- Easy to weld with the 756E1 hand sealing iron
- Good stretching properties
- High resistance to tearing

Technical data

Article number	Length	Width	Thickness

633F11 Silicone grease 400, medium

- As corrosion protection for plug connections, e.g. Myo, E-MAG Active (cable connectors)
- As corrosion protection, e.g. for drive units
- For the planetary gear train of the drive unit in upper limb prosthetics
- For isolating components in the lamination technique
- Very good resistance to heat and cold
- High resistance to ageing
- Good film forming capacity

Technical data

Article image	Article number	Net contents	Packaging
	633F11	0.1 kg	Tube
	633F11=1	1 kg	Can

85F3 Parting agent

- Parting agent for mould construction and silicone fabrication
- Wax in solvent
- Each application can be polished after 10-15 minutes to produce a glossy surface

Technical data

Article number	Net contents	Packaging
85F3	1 l	Bottle

636K8 Plastaband

- For sealing, filling and protection in conjunction with lamination technique
- Ideal for isolating e.g. orthotic joints while laminating
- Base: synthetic rubber
- Easy to remove from mould
- Temperature resistant

Technical data

Article number	Length	Width	Thickness	Colour
636K8=20X2X10	10 m	20 mm	2 mm	Grey

Processing and usage examples

Cut 636K8 Plastaband to the required length.

Detach the blue separating film from the Plastaband and pre-form the Plastaband.

Isolate the corresponding areas of the objects that will be included in the laminate (e.g. screw heads, bare threads, joint surfaces) using the pre-formed Plastaband.

636K38 Vacuum sealing tape

- For adhering vacuum sheeting of all types to the edge of a mould
- Permanently elastic, heat-resistant sealing tape (to 205 °C) made of synthetic rubber
- Basis for a stable vacuum
- Can be easily removed from the mould

Technical data

Article number	Length	Width	Colour
636K38	9 m	12 mm	Yellow

Neoprene® is a registered trademark of DuPont.

616F10 Double-sided PVC adhesive tape

- For double-sided bonding of PVC films
- Application of reinforcement materials such as carbon
- Without base material
- Double-sided acrylic adhesive material
- Transparent (covered with greaseproof paper)
- Conforms to contours extremely well
- Highly effective with low material usage

Technical data

Article number	Length	Width	Colour	Order unit
616F10=6	55 m	6 mm	Transparent	Roll
616F10=9	55 m	9 mm	Transparent	Roll
616F10=19	55 m	19 mm	Transparent	Roll

Processing and usage examples

Check that the weft thread of the 616G12 woven carbon fibre is running a straight course by pulling out a weft thread running close to the cut edge.

Pull the woven carbon fibre straight to such a degree that the resulting mesh loop runs 90° to the warp. Using 616F10 double-sided PVC adhesive tape, tape over the resulting mesh loop and cut through the middle of the woven carbon fibre along the adhesive tape. After these preparations have been completed, tailored carbon fibre sections can be made that have a 90° alignment between the warp and the weft. In this way the carbon fibres are not only aligned in accordance with the arising forces, they can also absorb these optimally.

Position the tailored carbon fibre sections on those parts of the reinforcements that are to be strengthened while pre-tensioning them in the fibre directions.

627B40 Polyethylene adhesive tape

- For sealing damaged PVA film The proven classic material
- Wide range of applications
- Base material: PE sheeting
- Acrylic adhesive material
- High elasticity
- High resistance to tearing
- Thermally stable

Technical data

Article number	Length	Width	Colour	Order unit
627B40	33 m	25 mm	Transparent	Roll

- Apply 627B40 polyethylene adhesive tape around the areas that are to be opened after laminating; while doing so, excessive resin in these areas can be reduced with the pre-tensioned adhesive tape. With a given pre-tensioning, the adhesive tape can be twisted to a cord so that excess resin can also be reduced in areas that are difficult to access.

Processing and usage examples

Apply 627B40 polyethylene adhesive tape around the areas that are to be opened after laminating; while doing so, excessive resin in these areas can be reduced with the pre-tensioned adhesive tape. With a given pre-tensioning, the adhesive tape can be twisted to a cord so that excess resin can also be reduced in areas that are difficult to access.

627B4 Polyethylene adhesive tape

- For sealing damaged PVA film
- Base material: PE sheeting
- Rubber adhesive
- High abrasion resistance
- Good resistance to chemicals

Technical data

Article number	Length	Width	Colour	Order unit
627B4	50 m	25 mm	Transparent	Roll

616F8 PVC adhesive tape (Coroplast)

- For taping off PVC films
- Suitable for trial fitting
- The proven classic material
- Wide range of applications
- Base material: soft PVC film
- Acrylic adhesive material
- Thermally stable

Technical data

Article number	Length	Width	Colour	Order unit
616F8	10 m	50 mm	Transparent	Roll

636D3 Adhesive tape for vacuum technique

- For fixation in conjunction with the lamination technique
- Used in the prepreg technique
- Wide range of applications
- Base material: PE sheeting
- Silicone adhesive agent
- Temperature-stable up to approx. 200 °C

Technical data

Article number	Length	Width	Colour	Order unit
636D3	66 m	25 mm	Blue	Roll

627B1 Linen adhesive tape

- For sealing, closing and reinforcing with the lamination technique
- Wide range of applications
- Base material: open weave
- Rubber adhesive
- High tear resistance
- High adhesive strength

Technical data

Article number	Length	Width	Colour	Order unit
627B1=19	50 m	19 mm	Raw white	Roll
627B1=25	50 m	25 mm	Raw white	Roll
627B1=50	50 m	50 mm	Raw white	Roll

Practical recommendation

- Subsequent inscription on 627B1 linen adhesive tape is possible, so that it is suitable for labelling.

627B2 Monofilament adhesive tape

- For securing prosthetic sockets
- Fibreglass-reinforced PP adhesive tape
- Rubber adhesive
- Extremely high resistance to tearing

Technical data

Article number	Length	Width	Colour	Order unit
627B2=19	50 m	19 mm	Transparent	Roll
627B2=25	50 m	25 mm	Transparent	Roll

627B6 Crepe adhesive tape

- For taping off specific areas in order to isolate them during coating and isolation tasks, e.g. SuperSkin
- For temporary fixation
- Base material: special paper
- Rubber adhesive
- Good adhesion on various surfaces
- Easy to tear by hand
- Markable

Technical data

Article number	Length	Width	Colour	Order unit
627B6=15	50 m	15 mm	Chamois	Roll
627B6=30	50 m	30 mm	Chamois	Roll

633D5 Double-sided adhesive tape

- For inner socket – outer frame connection, for example
- Not suitable for reinforcement materials
- Base material: PE sheeting
- Double-sided acrylic adhesive material
- Transparent (covered with red separating film)
- Good frame fixation (no hook-and-loop closure required)
- High adhesive strength on various materials, such as plastics
- Good temperature resistance

Technical data

Article number	Length	Width	Colour	Order unit
633D5=19	50 m	19 mm	Transparent	Roll
633D5=50	50 m	50 mm	Transparent	Roll

Processing and usage examples

Clean the surfaces that are to be bonded (here the inner socket and the frame) with 634A58 isopropyl alcohol. Cut 633D5 double-sided adhesive tape to the required length.

Position precut adhesive tape in the corresponding locations and press into place.

Join and position the frame and inner socket. Compress the inner socket and remove the red protective film from the double-sided adhesive tape. Firmly press the two components together at the locations being bonded.

646F351 Lamination resins poster

Prepreg technology

The term “prepreg” is derived from the word “pre-impregnated”. Prepreg incorporates the processing of pre-impregnated base materials, such as carbon fibres impregnated with epoxy resin. In orthopaedic technology, prepreg is suitable for the fabrication of high-strength, lightweight orthotic and prosthetic components. Thanks to an optimal balance of base materials and resin content as well as accelerated handling processes using special curing temperatures, our prepreg materials ensure increased workflow efficiency.

In addition to thermoset prepreps, Ottobock offers thermoplastic prepreps (T.P.C) for high-strength, very thin orthoses on a thermoplastic material basis. They are subsequently thermoformable under pressure, weldable with components having the same matrix and have no special storage requirements (e.g. no cooling).

The Ottobock prepreg line also includes numerous raw and auxiliary materials required for processing.

646M39 Sample set of carbon profile bars

- 3 carbon profile bars (0°, 45° und 90°)
- The mechanical properties of the carbon fabric are dependent on the direction in which a force is applied. Under tensile load in the warp or weft direction, woven fabrics stretch only slightly. But if the tensile load is applied diagonally, e.g. at an angle under 45°, woven carbon fabrics are highly stretchable. The direction of the fibres should be adjusted according to the load.

Technical data

Article number
646M39

Information material

646A174=GB	prepreg technology product information
------------	---

616B10 Carbon fibre cloth prepreg

- For fabricating lightweight and dynamic carbon components, such as orthoses
- Problem-free fabrication of flexible to rigid orthosis designs
- Impregnated with epoxy resin
- High tensile strength and compressive strength
- Suitable for surfaces

Information material

646A174=GB	Prepreg technology product information
------------	---

Technical data

Article number	Length	Width	Fibre weight per unit area	Weave type	Resin content
616B10=5	5 m	1.25 m	280 g/m ²	Twill 4/4	49 % by weight

- When stored at a temperature of -18 °C, prepregs can be processed for approximately 12 months; at room temperature, a maximum of 21 days. Freeze in moisture-proof sealed packaging; in order to avoid condensation, thaw to room temperature in moisture-proof sealed packaging. Each thawing and freezing cycle reduces the storage stability and degrades the quality significantly.
- Please note that this article must be cooled continuously at -18 °C. Due to the cold chain that must be maintained, the product may not be returned or exchanged.
- Shipping days: Monday, Tuesday, Wednesday

**Information material**

646A174=GB	Prepreg technology product information
------------	--

616B11 Carbon fibre prepreg, unidirectional

- For fabricating lightweight and dynamic carbon components, such as orthoses
- For increasing bending rigidity
- Problem-free fabrication of flexible to rigid orthosis designs
- Impregnated with epoxy resin
- High tensile strength and compressive strength
- Always embed in between webbings

**Technical data**

Article number	Length	Width	Fibre weight per unit area	Weave type	Resin content
616B11=5	5 m	0.3 m	300 g/m ²	UD	37 % by weight

- When stored at a temperature of -18 °C, prepregs can be processed for approximately 12 months; at room temperature, a maximum of 21 days. Freeze in moisture-proof sealed packaging; in order to avoid condensation, thaw to room temperature in moisture-proof sealed packaging. Each thawing and freezing cycle reduces the storage stability and degrades the quality significantly.
- Please note that this article must be cooled continuously at -18 °C. Due to the cold chain that must be maintained, the product may not be returned or exchanged.
- Shipping days: Monday, Tuesday, Wednesday

**Information material**

646A174=GB	Prepreg technology product information
------------	--

616B13 Woven Aramid fibre prepreg

- For fabricating orthoses in prepreg technology
- For flexible seating tape
- Impregnated with epoxy resin
- Flexible and shape-retentive

**Technical data**

Article number	Length	Width	Weight per unit area	Weave type	Resin content
616B13=1	1 m	1.2 m	170 g/m ²	Satin 1/3	50 % by weight

- When stored at a temperature of -18 °C, prepregs can be processed for approximately 12 months; at room temperature, a maximum of 21 days. Freeze in moisture-proof sealed packaging; in order to avoid condensation, thaw to room temperature in moisture-proof sealed packaging. Each thawing and freezing cycle reduces the storage stability and degrades the quality significantly.
- Shipping days: Monday, Tuesday, Wednesday

616B15 Woven Dyneema fibre prepreg

- For fabricating orthoses in prepreg technology
- For flaps and fasteners
- For flexible edge areas
- Impregnated with epoxy resin
- Highly flexible and strain-free

Information material

Technical data

Article number	Length	Width	Weight per unit area	Weave type	Resin content
616B15=1	1 m	1.25 m	160 g/m ²	Twill 2/2	50 % by weight

- When stored at a temperature of -18 °C, prepregs can be processed for approximately 12 months; at room temperature, a maximum of 21 days. Freeze in moisture-proof sealed packaging; in order to avoid condensation, thaw to room temperature in moisture-proof sealed packaging. Each thawing and freezing cycle reduces the storage stability and degrades the quality significantly.
- Shipping days: Monday, Tuesday, Wednesday

616B65 Kraibon rubber

- For the fabrication of soft edges on orthoses
- Processing in combination with prepreg – no adhesive or mechanical joint required for a flexible edge
- Flowing transition between hard and soft material
- Excellent draping characteristics for easy moulding to the component
- Various materials thicknesses can be obtained with multiple layers
- Cut pieces of Kraibon rubber can be stored in the supplied pressure lock bag in a conventional freezer
- Can be combined with Ottobock reinforcement materials and prepregs

Information material

646D1535=EN_INT	616B65 Kraibon rubber product brief
-----------------	-------------------------------------

Product example

Technical data

Article number	Packaging	Thickness of each blank	Package	Weight per unit area
616B65=2	28 blanks, 250 mm x 300 mm	0.5 mm	2 m ²	520 g/m ²

- When stored at a temperature of -18 °C, the Kraibon rubber can be processed for approximately 6 months; at room temperature, a maximum of 21 days. Freeze in moisture-proof sealed packaging; in order to avoid condensation, thaw to room temperature in moisture-proof sealed packaging. Each thawing and freezing cycle reduces the storage stability and degrades the quality significantly.
- Shipping days: Monday, Tuesday, Wednesday

Practical recommendation

- Cures only at temperature and in a vacuum
- No formation of sharp prepreg edges
- Not for processing with peel ply (low tear propagation strength)

**Information material**

646D1477=EN_MASTER	616B60 resin film product brief
--------------------	---------------------------------

616B60 Resin film

- Developed especially for fabricating exceptionally sturdy and lightweight prostheses and orthoses
- Lighter, thinner components with rigidity equal to that of components on acrylic resin basis
- On epoxy resin basis
- Clean and easy processing
- Excellent draping characteristics
- Resin quantity can be applied precisely
- Adjustable resin content
- Cut pieces of resin film can be stored in a conventional freezer
- Smaller storage volumes in freezer compared to prepreg
- Saves auxiliary materials (e.g. no additional fixing of reinforcing materials required)
- Can be combined with Ottobock reinforcement materials and prepregs

**Technical data**

Article number	Packaging	Package	Weight per unit area
616B60=2	23 foils at 300 x 300 mm per foil	2 m ²	340 g/m ²
616B60=5	56 foils at 300 x 300 mm per foil	5 m ²	340 g/m ²
616B60=10	112 foils at 300 x 300 mm per foil	10 m ²	340 g/m ²

- When stored at a temperature of -18 °C, the resin film can be processed for approximately 12 months; at room temperature, a maximum of 21 days. Freeze in moisture-proof sealed packaging; in order to avoid condensation, thaw to room temperature in moisture-proof sealed packaging. Each thawing and freezing cycle reduces the storage stability and degrades the quality significantly.
- Shipping days: Monday, Tuesday, Wednesday

i **Practical recommendation**

- The optimal processing temperature is between 20 °C and 23 °C.
- Make sure the processing area is dry and free of dust, talcum and grease.
- The resin content of the laminate should be at least 50% by weight. For this reason, please pay attention to the weight per unit area of your reinforcement material.
- We recommend using the 633T18 cooling spray to make it easier to remove the protective film from the resin film. Spray the edge of the protective film lightly for this purpose.
- For the first layer, apply spray adhesive to the laminating tool.
- Cure for 4 h under vacuum in a 130 °C oven.

633T18 Cooling spray

- Device for loosening the covering film on prepregs
- Device for loosening the covering film on 616B60 resin film
- Useful for demoulding components
- For immediate cooling of smaller areas or parts
- Possible temperature as low as -48 °C depending on spray duration
- Very rapid evaporation with no residue
- Good cleaning effect
- No detrimental influences on plastics or insulating materials

**Technical data**

Article number	Net contents
633T18	400 ml

81A1=15	52.5 m	15 cm	1 kg
81A1=20	48 m	20 cm	1 kg

i Practical recommendation
 • Individually adaptable and weldable.

Processing and usage examples

Application example – vacuum forming in orthotics

Pull 81A1 nylon stockinette over the plaster model, cut to length so it is twice the size of the model, twist off and fold back again.

Application example – vacuum forming in prosthetics

Pre-tension the 81A1 nylon stockinette, twist it and then secure it with combination pliers. Using a pair of scissors, cut off the end of the seam. Using the flame of a cigarette lighter, weld the cut surface and then immediately smoothen the weld seam.

With the welded seam turned inwards, pull the sock over the model.

623T3 Perlon® stockinette, white

- For fabricating laminates
- Knitted fabric
- Finely meshed
- Good stretching properties
- Good shaping
- Smooth surface after laminating
- Suitable for surfaces

620P3=6	1,000 mm	500 mm	6 mm
620P3=8	1,000 mm	500 mm	8 mm

Practical recommendation

- Suitable for prepreg technology as a separating layer for padding.

Information material

646F297=GB	Adhesives, putties, varnishes and thinners poster
646A174=GB	Prepreg technology product information

636N9 Contact adhesive

- For adhering flexible materials
- Especially for bonding profiled rubber, wooden materials, laminated boards, veneer and plastic edges, rubber, leather, felt, fabric, cork, flexible foam, hard PVC, metal and ceramics
- The proven classic for the workshop
- Wide range of applications
- Not suitable for Styrofoam and soft PVC
- 634A6 suitable as a thinner
- Base: methyl acetate
- Short drying time
- Good resistance to ageing
- Temperature-resistant to approx. 100 °C

Technical data

Article number	Net contents	Colour
636N9=0.660	0.66 kg	Yellowish
636N9=4.500	4.5 kg	Yellowish

i Practical recommendation

- Stir before use. The surfaces/components that are to be adhered to one another must be dry and free of dust, oil and grease.
- We recommend roughening the surface of rubber, thermosets and similar materials.
- Apply contact adhesive to both surfaces that are to be bonded. After a drying time of 5–20 minutes (depending on the thickness of the adhesive and the temperature), press the parts together briefly and firmly.
- Contact adhesive may not be stored below +10 °C or above +25 °C. The containers must be protected from direct sunlight and heat. When kept in a cool, dry place, the unopened original containers can be stored for at least 1 year.

617R15 T.P.C woven carbon fibre

- For high-strength, very thin orthoses on a thermoplastic material basis
- Matrix: TPU
- Type of fibre: carbon
- Can be thermoformed under pressure
- High tensile strength
- Suitable for surfaces
- Suitable for painting
- Potentially adhesive
- Can be welded with components of the same matrix
- Clean processing
- No special storage requirements (e.g. no cooling)
- Moderate thermoforming temperature: approx. 220 °C

Technical data

Article number	Thickness	Packaging	Area	Fibre weight per unit area	Weave type	Fibre content	Resin content
617R15=2	Approx. 0.25 mm	6 Sheets at 1000 x 430 mm per sheet	2.58 m ²	200 g/m ²	Twill 2/2	60 % by weight	40 % by weight

646T757=EN	Technical information T.P.C and T.P.C Textil

617R18 T.P.C textile

- For prostheses and orthoses on a PP thermoplastic material basis
- Can be used as reinforcement for ThermoLyn PP-H (article number 616T20=*) as well as in the orthopaedic footwear specialism
- Matrix: polypropylene
- Type of fibre: aramid
- Can be thermoformed under pressure
- High tensile strength
- Suitable for surfaces
- Can be welded with components of the same matrix
- Clean processing
- No cooling required, but store UV protected
- Moderate thermoforming temperature: approx. 220 °C

Technical data

Article number	Length	Width	Fibre weight per unit area	Weave type
617R18=50X2	2 m	50 mm	400 g/m ²	Twill 2/2
617R18=100X2	2 m	100 mm	400 g/m ²	Twill 2/2

Practical recommendation

- The 617R18 T.P.C textile is particularly easy to process with the 755E62 and 755E5 Ottobock vacuum forming devices.

616F26 Silicone film

- Processing aid for T.P.C
- Generation of a prevacuum between an upper and lower film
- For fixing during heating and forming
- As separating film for the controlled partial welding of thermoplastics
- Thermally stable
- Limited elasticity
- Processing temperature: max. 240 °C

Technical data

Article number	Length	Width	Thickness	Colour
616F26=5000X1200	5,000 mm	1,200 mm	0.5 mm	Red-brown

636D3 Adhesive tape for vacuum technique

- For fixation in conjunction with the lamination technique
- Used in the prepreg technique
- Wide range of applications
- Base material: PE sheeting
- Silicone adhesive agent
- Temperature-stable up to approx. 200 °C

Technical data

Article number	Length	Width	Colour	Order unit
636D3	66 m	25 mm	Blue	Roll

636D14 Polyester adhesive tape

- Temperature-stable adhesive tape (to 200 °C) for vacuum technology
- Base material: polyester
- Water-resistant bonding
- Can be peeled off any time

Technical data

Article number	Length	Width	Thickness	Colour
636D14	66 m	25 mm	50 µm	Red

Information material

646A174=GB	Prepreg technology product information
------------	--

617H46 Bonding agent

- Universally applicable for sealants, adhesives, coatings
- For bonding and repairing vulcanised silicone rubber
- For sealing valves
- For making a vacuum bag out of 616F26 or 616F27 silicone film
- Pasty consistency
- Outstanding adhesive properties

Technical data

Article number	Net contents	Colour
617H46	90 ml	Transparent

Practical recommendation

- During processing, a thin skin will form on the surface of the adhesive after one minute. Any shaping of the silicone adhesive must be completed before this skin starts to form. A wetted modelling instrument or an ice cube have proven useful in shaping transitions.

Information material

646A174=GB	Prepreg technology product information

Elastomers

The use of silicones in orthopaedic technology has now reached a comprehensive stage. Applications range from the fabrication of high-quality, aesthetic finger and hand prostheses to functional, cosmetic partial foot prostheses to the manufacture of hygienic orthoses and perfectly fitting facial masks for scar compression fittings. Silicones can also be used for liners and socket comfort.

Ottobock uses silicone in its compression products, thus combining outstanding material properties with targeted pressure application. By individually adapting the compression product to the patient's unique anatomy, even concave parts such as the palm of the hand can be modelled with silicone without overtensioning. Silicone also maintains the moisture in the skin. Irritated scar tissue areas can regain their elasticity and flexibility without the use of additional creams. The material also retains its form and flexibility independent of any strain placed on it. As a result, consistently high pressure is generated and maximum compression benefits are assured, even during extended application.

In addition to the various treatment options, Ottobock also offers all the other materials required for professionally processing silicones.

617H43 Silicone rubber

- For fabricating soft-walled sockets
- Hardness approx. 25° Shore A
- The Shore hardness can be varied by mixing with 617H44 silicone rubber
- Rapid vulcanisation at room temperature (about 1 hour at 20 °C)
- Resistant to detergent and temperatures up to 180 °C
- Hygienic

Technical data

Article number	Net contents
617H43=0.900	0.9 kg
617H43=4.600	4.6 kg

617H44 Silicone rubber

- For fabricating pads and end bearing cushions
- Hardness approx. 5° Shore A
- The Shore hardness can be varied by mixing with 617H43 silicone rubber
- Rapid vulcanisation at room temperature (about 1 hour at 20 °C)
- Resistant to detergent and temperatures up to 180 °C
- Hygienic

Technical data

Article number	Net contents
617H44=0.900	0.9 kg
617H44=4.600	4.6 kg

Practical recommendation

- Because of its silicone structure, the mixture can be applied partially elevated, e.g. as padding over bony prominences.

617H45 Catalyst

- Catalyst for 617H43 silicone rubber and 617H44 silicone rubber

Technical data

647G363	Instructions for use 642V15=1, 87A5
---------	---------------------------------------

642V15 Impresil kit with case

- For producing flexible and clean impressions
- Can be used for taking impressions and correcting trial fittings on the patient in many areas, including finger prostheses, partial hand prostheses, scar compression masks and gloves, forefoot prostheses, transfemoral and transtibial prostheses, liners as well as orthoses
- Enables taking a highly detailed impression of the area in question
- Clean processing under all ambient conditions
- Does not adhere to skin and hair, therefore easy to demould
- Unlike plaster bandages, does not leave residues on the skin
- Can be finished
- Can be sanded
- Saves time and material
- Refillable
- No irritants or allergens, therefore suitable for use on unbroken skin (no open wounds)

**Technical data**

Article number	Shore hardness	Package contents
642V15=1	30° Shore A	1 dispenser, 5 cartridges, 75 ml each (component A and component B), 20 static mixers

i **Practical recommendation**

- To prevent the material from dripping, apply a maximum of 5 mm to vertical surfaces during each process step.
- The processing time can be extended by cool storage.

Processing and usage examples

Compensation of shape and volume differences in the trial phase of scar compression fittings.

Compensation of shape and volume differences in the trial phase of prosthetic sockets for the upper and lower limbs and in orthotics.

For taking impressions on the patient, e.g. partial hand/forefoot prostheses.

---------	---------------------------------------

85H11 Pastasil

- For impressions on the patient, for copying models and fabricating trial prostheses
- Two-component RTV silicone material
- Medical grade silicone
- Fast-curing, processing time 2-5 minutes depending on room temperature
- Easy to sand
- Subsequent application on cured Pastasil is possible

Technical data

Article number	Shore hardness	Net contents	Colour	Packaging
85H11=1	35° Shore A	2 × 0.5 kg	Beige	2 plastic containers
85H11=5	35° Shore A	2 × 2.5 kg	Beige	2 plastic containers

Mixing ratio

Component A	Component B
1	1

Processing and usage examples

Before processing 85H11 Pastasil, thoroughly wash and dry hands. Using protective gloves can impair the vulcanisation of silicones. Weigh Pastasil (equal parts of component A and B).

Stretch and fold both Pastasil components between the fingers several times until the two components form a mass of uniform colour.

Apply the mixed Pastasil in the corresponding places. Roughen these areas in advance and clean thoroughly with 634A58 isopropyl alcohol.

**Mixing ratio**

Component A	Component B
1	1

85P11 Chlorosil/Chlorosil catalyst

- For fabricating compression gloves, liners and other elastic fittings
- HTV silicone
- Components A + B (as a set)
- Rollable
- Heat-resistant
- High robustness of the hardened material
- Subsequent combination of Pastasil and Chlorosil is possible

**Technical data**

Article number	Shore hardness	Net contents
85P11=2	20° Shore A	2 × 1 kg
85P11=9.6	20° Shore A	2 × 4.8 kg

i **Practical recommendation**

- Both materials must be carefully weighed and mixed with each other. The resulting mass is repeatedly rolled in a silicone roller until a high level of intermixture has been reached. At the same time the roller gap is used to determine the thickness of the material.

**Mixing ratio**

Component A	Component B
1	1

85P21 Chlorosil/Chlorosil catalyst

- For fabricating forefoot prostheses, finger and partial hand prostheses and cosmetic covers
- HTV silicone
- Components A + B (as a set)
- Rollable
- Heat-resistant
- High robustness of the hardened material
- Subsequent combination of Pastasil and Chlorosil is possible

**Technical data**

Article number	Shore hardness	Net contents
85P21=2	35° Shore A	2 × 1 kg
85P21=9.6	35° Shore A	2 × 4.8 kg

i **Practical recommendation**

- Both materials must be carefully weighed and mixed with each other. The resulting mass is repeatedly rolled in a silicone roller until a high level of intermixture has been reached. At the same time the roller gap is used to determine the thickness of the material.

**Mixing ratio**

Component A	Component B
1	1

85P31 Chlorosil/Chlorosil catalyst

- For fabricating orthoses and scar treatment aids as well as reinforcements
- HTV silicone
- Components A + B (as a set)
- Rollable
- Heat-resistant
- High robustness of the hardened material
- Subsequent combination of Pastasil and Chlorosil is possible

**Technical data**

Article number	Shore hardness	Net contents
85P31=2	65° Shore A	2 × 1 kg
85P31=9.6	65° Shore A	2 × 4.8 kg

i **Practical recommendation**

- Both materials must be carefully weighed and mixed with each other. The resulting mass is repeatedly rolled in a silicone roller until a high level of intermixture has been reached. At the same time the roller gap is used to determine the thickness of the material.

616S5 BetaSil kit with case

- For customising a standard liner made of silicone
- For fabricating silicone pads
- Bonds with other silicones (85H11 Pastasil or 85P31 Chlorosil) and adheres to other plastics, provided these have a rough surface
- Two-component silicone
- Ready to use
- Clean processing under all ambient conditions
- Curing time is about 5 minutes so that sufficient processing time remains even on elaborate casts

material
award

2011 gold

Technical data

Article number	Shore hardness	Package contents
616S5=1	10° Shore A	1 dispenser, 3 cartridges (component A and component B), 15 static mixers

Processing and usage examples

Reinforce the socket as usual, only leave out the area in question and reinforce with 616G26=150 polyester knit fabric, and laminate.

Apply 85H11 Pastasil dummy in the designated location. After curing, trim, sand and roughen on the outside. Also roughen the first cast and clean with 634A58 isopropyl alcohol. Position the Pastasil dummy and reinforce and over-laminate in the usual manner.

Remove the Pastasil dummy, cut the recess free and sand the socket brim. Position the socket on the plaster model or duplicating foam. Fill the resulting pocket with 616S5 BetaSil from the distal side to the proximal side, by introducing the static mixer into the pocket at the beginning all the way to the lower end of the pocket. After vulcanisation of the BetaSil insert, sand it and position it at the intended point in the socket.

- 150 mm x 210 mm

Technical data

Article number	Weight	Order unit
89M2	0.24 kg	Piece

81A1 Nylon stockinette

- For plaster casting, e.g. for KAFOs
- Suitable as a filter and final layer for laminating
- For reinforcing Pastasil
- For vacuum technique with Chlorosil
- Polyamide
- Especially elastic
- Not pre-impregnated

Technical data

Article number	Length	Width	Weight
81A1=8	101.5 m	8 cm	1 kg
81A1=10	84.6 m	10 cm	1 kg
81A1=12	67.8 m	12 cm	1 kg
81A1=15	52.5 m	15 cm	1 kg
81A1=20	48 m	20 cm	1 kg

Practical recommendation

- Individually adaptable and weldable.

Processing and usage examples

Application example – vacuum forming in orthotics

Pull 81A1 nylon stockinette over the plaster model, cut to length so it is twice the size of the model, twist off and fold back again.

Application example – vacuum forming in prosthetics

Pre-tension the 81A1 nylon stockinette, twist it and then secure it with combination pliers. Using a pair of scissors, cut off the end of the seam. Using the flame of a cigarette lighter, weld the cut surface and then immediately smoothen the weld seam.

With the welded seam turned inwards, pull the sock over the model.

87Z* Fibersil

- For the three-dimensional colouring of silicones
- Coloured viscose fibres
- Intensive colours
- Large choice of colours

Putties, adhesives, adhesive tapes and varnishes

The range of adhesives for use in orthopaedic technology has become so varied that it has become quite difficult for technicians to make the right choice of adhesives for their working methods and application. Take advantage of our experience and expertise in the use of adhesives.

Modern adhesives result in a considerable quality improvement, especially in regards to the adhesive binding. Various characteristics can be achieved depending on the composition of the raw materials. In order to bond the greatest possible range of materials, Ottobock offers a large number of adhesives for all types of applications.

636K7 Orthocryl putty

- For fixing and filling a variety of materials
- For embedding bars in wood and plastic sockets
- In conjunction with 617P14 hardener paste
- Basis: solution of polyester resin in methyl methacrylate
- Easy to sand
- Rapid curing
- Good elasticity

636N9 Contact adhesive

- For adhering flexible materials
- Especially for bonding profiled rubber, wooden materials, laminated boards, veneer and plastic edges, rubber, leather, felt, fabric, cork, flexible foam, hard PVC, metal and ceramics
- The proven classic for the workshop
- Wide range of applications
- Not suitable for Styrofoam and soft PVC
- 634A6 suitable as a thinner
- Base: methyl acetate
- Short drying time
- Good resistance to ageing
- Temperature-resistant to approx. 100 °C

**Technical data**

Article number	Net contents	Colour
636N9=0.660	0.66 kg	Yellowish
636N9=4.500	4.5 kg	Yellowish

**Practical recommendation**

- Stir before use. The surfaces/components that are to be adhered to one another must be dry and free of dust, oil and grease.
- We recommend roughening the surface of rubber, thermosets and similar materials.
- Apply contact adhesive to both surfaces that are to be bonded. After a drying time of 5–20 minutes (depending on the thickness of the adhesive and the temperature), press the parts together briefly and firmly.
- Contact adhesive may not be stored below +10 °C or above +25 °C. The containers must be protected from direct sunlight and heat. When kept in a cool, dry place, the unopened original containers can be stored for at least 1 year.

634A6 Thinner for 636N9 contact adhesive

- For thinning and as a cleaning agent for 636N9 contact adhesive

634A6	0.8 kg

636W71 CP contact adhesive

- For flexible bonding, especially in orthopaedic technology
- 634A71 suitable as a thinner
- Basis: polychloroprene, colophonium
- Toluene-free
- Bonds common materials in orthopaedic technology
- Bonded joints are more flexible than with 636W72 CR contact adhesive
- Also suitable as a two-component system to increase resistance to thermal distortion

Technical data

Article number	Net contents
636W71=4	4 kg

Information material

646F297=GB Adhesives, putties, varnishes and thinners poster

i Practical recommendation

- Lightly sand or roughen the materials; the surface must be free of grease and parting agents.
- Heavily brush the materials so a strong adhesive film can form.
- The drying process can be accelerated with heat.
- Depending on the material combination, the drying time is 10 – 60 minutes.
- After joining and pressing together the components, let them rest for a few hours.

636W72 CR contact adhesive

- For bonding, especially in orthopaedic footwear specialism and for industrial use
- Contact adhesive for leather, EVA, PUR, foams, wood
- 634A71 suitable as a thinner
- Basis: polychloroprene
- Toluene-free
- Also suitable as a two-component system to increase resistance to thermal distortion
- Processing in large series is possible due to long drying time

Technical data

Article number	Net contents	Colour
636W72=4	4 kg	Transparent

i Practical recommendation

- Similar to 636W71 CP contact adhesive; however, thin foams should be rubbed down with 634A71 universal thinner for CP/CR contact adhesive.
- Depending on the material combination, the drying time is 15 – 120 minutes.

634A71 Thinner for CP/CR contact adhesive

- For thinning CP/CR contact adhesive
- Universal thinner
- For cleaning, e.g. application devices, brushes etc.
- Optimum control of the viscosity of contact adhesives
- Strongly penetrating solvent
- Good mixing behaviour

Technical data

Article number	Net contents
634A71=0.8	0.8 kg
634A71=4	4 kg

636W1 Universal adhesive

- For inflexible bonded joints
- For use with the contact adhesion method for closed-cell materials
- Developed especially for orthopaedics and footwear specialism
- 634A1 suitable as a thinner
- Basis: cellulose
- Resistant to water and perspiration

Technical data

Article number	Net contents	Colour
636W1=4.540	4.54 kg	Transparent

Information material

646F297=GB Adhesives, putties, varnishes and thinners poster

634A1 Thinner and solvent

- For thinning and as a cleaning agent, among other things for 635L8 socket interior varnish and 635L12 Orthocryl varnish
- For washing varnishes
- For cleaning and degreasing, e.g. metals, wood, parchment
- Excellent thinner and solvent

Technical data

Article number	Net contents
634A1=0.950	0.95 kg
634A1=5	5 kg

636W58 PUR foam adhesive

- For bonding PUR foams, PUR-EVA bonds and other materials (e.g. connection caps for prosthetic feet, foam connecting caps)
- Ready for spraying
- Highly elastic

Technical data

636W17 Plastic adhesive

- For extremely robust and also flexible bonding
- In combination with 636W26 cross-linking agent for waterproof bonding of wood, felt, cork, Pedilen, Pedilan and lamination resins with and among each other
- 634A20 suitable as a thinner
- Base: polyurethane synthetic solution
- Heat-resistant to 120 °C when used with 5% 636W26 cross-linking agent
- Heat activation possible (+80 °C)
- Sensitive to moisture

Technical data

Article number	Net contents	Colour
636W17	0.8 kg	Transparent

Practical recommendation

- Roughen and remove sanding dust from the bonding surfaces before applying adhesive. Stir the adhesive well before applying. Apply to both bonding surfaces and allow to evaporate for about 5 to 8 minutes. Set bonding surfaces against each other (a distinct fastening torque has to be felt) press for about 15 minutes.
- To stiffen foam covers, thin the adhesive with 634A20 thinner for 636W17 plastic adhesive until it is easy to spread with a brush, and use a fine brush to apply it on the foam. Clean equipment with 634A23 thinner.

Mixing ratio

646F297=GB	Adhesives, putties, varnishes and thinners poster
------------	---

636W22 UHU hard

- Fast-drying solvent borne adhesive
- Good adhesion on balsa, wood and wooden materials, also in combination with metals and other siliceous materials, and on many plastics
- Basis: nitrocellulose
- Low stringing tendency during processing
- Rapid setting of the bonded joint
- Soluble with 634A3 acetone

Technical data

Article number	Net contents	Colour
636W22	35 ml	Clear

636W23 UHU Plus glue

- For strong bonded joints
- Two-component adhesive
- Basis: epoxy resin (binder), aliphatic amines (hardener)
- Varying the amount of hardener results in a harder or softer end product (normal mixing ratio 1:1 by volume, that is strands of equal length from the tubes)
- Also hardens under the exclusion of air

Technical data

Article number	Net contents	Colour
636W23	18 g binder and 15 g hardener	Honey coloured

Components

636W23	Uhu Plus bonding agent	
636W23	Uhu Plus hardener	

Information material

646F297=GB	Adhesives, putties, varnishes and thinners poster
------------	---

Practical recommendation

- The higher the curing temperature (up to approximately +180 °C), the higher the strength of the adhesion.

636W28 Special adhesive cartridge A and B

- For adhering foot adaptersFor adhering metal to woodFor gluing unilateral bar systems and E-MAG knee joints
- Base: epoxy resin and pigments (A), polyaminoamide (B)
- Pasty consistency
- Dispensing gun for 636W28=0.050 special adhesive cartridge A and B, available under 756K30 (not required for 636W28 special adhesive cartridge A and B)

Technical data

Article image	Article number	Net contents	Package contents
	636W28	12.5 ml adhesive and 12.5 ml hardener	1 cartridge, 1 plunger and 5 static mixers
	636W28=0.050	25 ml adhesive and 25 ml hardener	1 cartridge and 5 static mixers

- For easier handling, we recommend using the 636W28=0.050 cartridge together with the 756K30 dispensing gun.

756K30 Dispensing gun for special adhesive cartridge A and B

- For 636W28=0.050 special adhesive cartridge A and B (not required for 636W28 special adhesive cartridge A and B)

Technical data

Article number	Package contents
756K30	1 dispensing gun

617H46 Bonding agent

- Universally applicable for sealants, adhesives, coatings
- For bonding and repairing vulcanised silicone rubber
- For sealing valves
- For making a vacuum bag out of 616F26 or 616F27 silicone film
- Pasty consistency
- Outstanding adhesive properties

Technical data

Article number	Net contents	Colour
617H46	90 ml	Transparent

Practical recommendation

- During processing, a thin skin will form on the surface of the adhesive after one minute. Any shaping of the silicone adhesive must be completed before this skin starts to form. A wetted modelling instrument or an ice cube have proven useful in shaping transitions.

636K44 Loctite® 3090

- For various applications
- Excellent adhesive characteristics on many different materials (e.g. metal, PVC, ABS, PC, PBT, rubber, wood, paper, cardboard, leather and textiles)
- For filling large gaps up to 5 mm
- Innovative two-component technology
- Activator enables maximum control of the curing speed, so that curing is independent of the temperature, humidity etc.
- High adhesive strength
- Rapid curing
- Viscosity is a gel consistency and therefore thixotropic
- Makes work faster, easier and more effective
- Practical syringe packaging enables precise and clean application
- Static mixers ensure a controlled mixing ratio

Technical data

Article number	Net contents	Package contents	Colour
636K44	10 g	1 cartridge, 1 plunger, 7 static mixers	Clear

Components

636K44	Loctite® 3090 part A	
636K44	Loctite® 3090 part B	

Practical recommendation

- Processing time 90 – 180 sec.
- Functional strength 2 – 4 min.
- Initial strength 3 – 5 min.
- Final strength 24 h
- Temperature stability -20 °C to +80 °C
- (short-term up to +100 °C)
- Discard the first 2 – 3 drops from the mixer.
- Hold the joined components in position until they are secured.
- The adhesive develops intense heat briefly while curing.

Loctite® is a registered trademark of Loctite.

636K49 SuperGlue

- For gluing metals, duroplastics and thermoplastics
- 2-component adhesive based on methyl methacrylate with very high adhesive strength
- Primerless gluing
- Fast gluing, for example of socket adapters
- Processing time: 4 to 7 minutes
- Curing time: approx. 15 minutes
- Gel/highly viscous
- Fills gaps from 0.5 to 12 mm
- High tensile strength along with excellent peel strength
- High temperature resistance
- Lasting strength and flexibility
- Dispensing gun for 636K49 SuperGlue available under 756K31 (not required for 636K49=0.010 SuperGlue)
- Refill pack for 636K49 SuperGlue with 20 static mixers available under 756Y76

Information material

646D1466=EN_MASTER	636K49 SuperGlue product brief
--------------------	--------------------------------

Consisting of product

636K49=A	SuperGlue Part A
636K49=B	SuperGlue Part B

Technical data

Article image	Article number	Net contents	Package contents	Colour
	636K49	50 ml	1 cartridge and 6 static mixers	Black

Components

636K49	SuperGlue Part A	
636K49	SuperGlue Part B	

Practical recommendation

- To improve the hold of the bond, first bend the anchor arms in such a way that they lie as closely against the socket as possible. Then remove any grease with 634A58 isopropyl alcohol.
- Clean the socket with 634A58 isopropyl alcohol as well.
- Loosen the screw on the anchor before gluing, otherwise the adapter thread connection may become stuck after gluing.
- Re-tighten the loosened screw with the corresponding Nm for the relevant adapter prior to the fitting.

636K8 Plastaband

- For sealing, filling and protection in conjunction with lamination technique
- Ideal for isolating e.g. orthotic joints while laminating
- Base: synthetic rubber
- Easy to remove from mould
- Temperature resistant

Technical data

Article number	Length	Width	Thickness	Colour
636K8=20X2X10	10 m	20 mm	2 mm	Grey

Processing and usage examples

Cut 636K8 Plastaband to the required length.

Detach the blue separating film from the Plastaband and pre-form the Plastaband.

Isolate the corresponding areas of the objects that will be included in the laminate (e.g. screw heads, bare threads, joint surfaces) using the pre-formed Plastaband.

636K38 Vacuum sealing tape

- For adhering vacuum sheeting of all types to the edge of a mould
- Permanently elastic, heat-resistant sealing tape (to 205 °C) made of synthetic rubber
- Basis for a stable vacuum
- Can be easily removed from the mould

Technical data

Article number	Length	Width	Colour
636K38	9 m	12 mm	Yellow

616F10 Double-sided PVC adhesive tape

- For double-sided bonding of PVC films
- Application of reinforcement materials such as carbon
- Without base material
- Double-sided acrylic adhesive material
- Transparent (covered with greaseproof paper)
- Conforms to contours extremely well
- Highly effective with low material usage

Technical data

Article number	Length	Width	Colour	Order unit
616F10=6	55 m	6 mm	Transparent	Roll
616F10=9	55 m	9 mm	Transparent	Roll
616F10=19	55 m	19 mm	Transparent	Roll

Processing and usage examples

Check that the weft thread of the 616G12 woven carbon fibre is running a straight course by pulling out a weft thread running close to the cut edge.

Pull the woven carbon fibre straight to such a degree that the resulting mesh loop runs 90° to the warp. Using 616F10 double-sided PVC adhesive tape, tape over the resulting mesh loop and cut through the middle of the woven carbon fibre along the adhesive tape. After these preparations have been completed, tailored carbon fibre sections can be made that have a 90° alignment between the warp and the weft. In this way the carbon fibres are not only aligned in accordance with the arising forces, they can also absorb these optimally.

Position the tailored carbon fibre sections on those parts of the reinforcements that are to be strengthened while pre-tensioning them in the fibre directions.

627B40 Polyethylene adhesive tape

- For sealing damaged PVA film
- The proven classic material
- Wide range of applications
- Base material: PE sheeting
- Acrylic adhesive material
- High elasticity
- High resistance to tearing
- Thermally stable

Technical data

Article number	Length	Width	Colour	Order unit
627B40	33 m	25 mm	Transparent	Roll

- Apply 627B40 polyethylene adhesive tape around the areas that are to be opened after laminating; while doing so, excessive resin in these areas can be reduced with the pre-tensioned adhesive tape. With a given pre-tensioning, the adhesive tape can be twisted to a cord so that excess resin can also be reduced in areas that are difficult to access.

Processing and usage examples

Apply 627B40 polyethylene adhesive tape around the areas that are to be opened after laminating; while doing so, excessive resin in these areas can be reduced with the pre-tensioned adhesive tape. With a given pre-tensioning, the adhesive tape can be twisted to a cord so that excess resin can also be reduced in areas that are difficult to access.

627B4 Polyethylene adhesive tape

- For sealing damaged PVA film
- Base material: PE sheeting

Padding

For prosthesis and orthosis fabrication, we offer padding materials of various Shore hardnesses and degrees of damping. Padding materials are usually based on polyethylene (e.g. Pedilin, Plastazote®), copolymers of polyethylene such as EVA (e.g. Evazote®) or polyurethane (e.g. PPT).

Thermoplastic PE and EVA foams are the materials of choice and are versatile in application. Pedilin can be used to manufacture soft sockets in prosthesis fabrication and as padding in classic orthosis fabrication. Plastazote® is primarily used for the fabrication of body jackets and positioning orthoses.

Our ComforTex product line is valued in orthosis fabrication for its padding properties. ComforTex is available in soft, smooth, slip-resistant and breathable versions, and is very comfortable for the user to wear.

646M2 Padding materials sample kit

- For the visual and haptic demonstration of the various padding materials
- Aids in selecting the corresponding padding materials

617S203 Pedilin SilverShield®

- Highly recommended for fabricating soft sockets and as a padding material for prosthetic sockets
- The proven classic material for soft sockets
- 617S203=10 is suitable for fabricating redression helmets
- Antibacterial effect
- PE foam, closed-cell
- Hardness approx. Shore A 35 (proven Shore hardness for fabricating soft sockets)
- Density: approx. 140 kg/m³
- High resilience
- Good thermoforming properties
- Good adhesive characteristics
- Good sanding characteristics
- Washable
- Temperature recommendation: 130 °C (convection oven, infrared oven)

617S3 Pedilin

- Highly recommended for fabricating soft sockets and as a padding material for prosthetic sockets
- The proven classic material for soft sockets
- Also available with antibacterial effect (617S203)
- PE foam, closed-cell
- Hardness approx. Shore A 35 (proven Shore hardness for fabricating soft sockets)
- Density: approx. 140 kg/m³
- High resilience
- Good thermoforming properties
- Good adhesive characteristics
- Good sanding characteristics
- Washable

6T2 Pedilin cone for soft socket

- Prefabricated cones made of Pedilin, for fabricating soft sockets
- Three different circumferences available
- Cones with precise and stable bonded edge
- Thermoforming is possible immediately
- Saves gluing and sanding work
- Good shape retention
- Hygienic
- Washable
- Temperature recommendation: 130 °C (convection oven)

617S7 Plastazote®

- Highly recommended for the padding of orthoses
- PE foam, closed-cell
- Hardness approx. Shore A 15-20
- Low density: approx. 45 kg/m³
- Good resilience
- Good thermoforming properties
- Good bonding and welding characteristics
- Weldable with PE
- Good sanding characteristics
- Temperature recommendation: 110 °C (convection oven, infrared oven)

Product example

617S174 Nora® Aero sorb, medium

- Highly recommended for butterfly rolls, heel and forefoot padding, footbed adapted for diabetes, heel spur recesses in heel spur insoles
- Light cellular rubber, closed-cell
- Hardness approx. Shore A 12; Shore A zero 26
- Density: approx. 160 kg/m³
- Delayed restoring capacity
- Good thermoforming properties
- Good adhesive characteristics
- Good sanding characteristics
- Washable
- Hygienic, can be disinfected
- Bedding and damping characteristics, point pressure redistribution
- Shock absorbent
- Temperature recommendation: 110 °C – 130 °C (convection oven, infrared oven)

617S187 Nora® Lunatec Combi 7

- For insoles and soft sockets
- EVA copolymer, closed-cell
- Hardness approx. Shore A 30 (beige)
- Hardness approx. Shore A 40 (grey)
- One-step processing
- No bonding required and no displacement of the various materials during processing
- High volume retention, since the material is only compressed in the required areas and a vacuum forming process is eliminated
- Good padding characteristics
- Good thermoplastic properties
- Well suited for bonding and sanding
- Washable
- Temperature recommendation: 130 °C – 150 °C (convection oven)

617S70 Dynoform

- For padding in orthotics and prosthetics
- For fabricating soft inner sockets
- PE foam, closed-cell
- Various colours available
- Hardness approx. Shore A 30
- Resilient
- Good thermoforming properties
- Non-shrinking
- Good adhesive characteristics
- Good sanding characteristics
- Washable
- Resistant to saliva and perspiration, harmless according to food law
- Free of AZO and PCP substances
- Temperature recommendation: 110 °C – 130 °C (convection oven, infrared oven)

617S71 Dynoform, perforated

- For padding in orthotics and prosthetics
- For fabricating soft inner sockets PE foam, closed-cell
- Various colours available
- Perforated
- Hardness approx. Shore A 30
- Resilient
- Good thermoforming properties
- Non-shrinking
- Good adhesive characteristics
- Good sanding characteristics
- Washable
- Resistant to saliva and perspiration, harmless according to food law
- Free of AZO and PCP substances
- Temperature recommendation: 110 °C – 130 °C (convection oven, infrared oven)

617S92 Multicolour OD

- Highly recommended for the padding of foot orthoses
- PE foam, closed-cell
- Hardness approx. Shore A 27
- High resilience
- Pressure-resistant
- Good thermoforming properties
- Good adhesive characteristics
- Good sanding characteristics
- Washable
- Temperature recommendation: 100 °C – 140 °C (convection oven, infrared oven)

617S* Dino foam

- For padding in orthotics, in particular for FOs
- EVA copolymer, closed-cell
- Marbled in two colours, various colours available
- Hardness approx. Shore A 40
- Density: approx. 200 kg/m³
- Elastic
- High resilience
- Pressure-resistant
- Good thermoforming properties
- Good adhesive characteristics
- Good sanding characteristics
- Washable
- Temperature recommendation: 100 °C (convection oven, infrared oven)

617S68 PPT

- Highly recommended for the padding of foot orthoses
- For fitting diabetics
- PU flexible foam
- Breathable foam
- Hardness approx. Shore A 15
- Almost 100% resilience
- Pressure and impact absorbing
- Long service life
- Washable
- Not thermoformable

Technical data

Article number	Version	Length	Width	Thickness	Colour
617S68=1.6-0	Roughened on both sides	1,520 mm	650 mm	1.6 mm	Beige
617S68=3.2-0	Roughened on both sides	1,520 mm	650 mm	3.2 mm	Beige
617S68=6.4-0	Roughened on one side	1,520 mm	650 mm	6.4 mm	Beige

Practical recommendation

- Bonds well with 636W71 CP contact adhesive.

Information material

646F295=EN_INT Padding materials poster

617S119 Dyatec

- Highly recommended for the padding of foot orthoses
- Optimal for diabetic and rheumatic fittings, for pressure redistribution in soft footbeds
- PU flexible foam, open-cell
- Hardness approx. Shore A 10
- Delayed resilience
- Soft
- Good adhesive characteristics
- Good sanding characteristics
- Washable
- Not thermoformable

Technical data

Article number	Length	Width	Thickness	Colour
617S119=3.2-19	1,370 mm	730 mm	3.2 mm	Salmon
617S119=4.8-19	1,370 mm	730 mm	4.8 mm	Salmon
617S119=6.4-19	1,370 mm	730 mm	6.4 mm	Salmon

Practical recommendation

- Bonds well with 636W71 CP contact adhesive.

619M5 Cellular unvulcanized rubber

- For fabricating soft sockets and as a padding material for prosthetic sockets
- Wide range of applications
- Can be used with other materials such as leather
- Open pores on both sides
- Hardness approx. Shore A 10
- Density: approx. 220 kg/m³
- High resilience
- Good adhesive characteristics
- Good sanding characteristics
- Not thermoformable

619M3 Rubber padding

- For the fabrication of soft sockets
- Wide range of applications
- Both sides with skin and fine material pattern
- Hardness approx. Shore A 25
- Density: approx. 500 kg/m³
- Good resilience
- High elasticity of compression
- Good adhesive characteristics
- Good sanding characteristics
- Washable
- Not thermoformable

616T* Relax foam

- For the padding of positioning splints
- For the padding of seating shells in rehabilitation
- For integration into padded surfaces in areas particularly prone to pressure
- Open-cell
- Low density: approx. 60 kg/m³ (616T92) or approx. 65 kg/m³ (616T93)
- Slow restoring behaviour
- Good damping characteristics
- Not thermoformable

Technical data

Article image	Article number	Length	Width	Thickness	Colour

616T25 PVC foam, self-adhesive

- For padding applications in orthotics
- Suitable for trial fitting
- PVC foam
- Self-adhesive
- Washable

Technical data

Article number	Length	Width	Thickness	Colour
616T25	1,000 mm	500 mm	3 mm	White

623P2 Terry cloth padding fabric, self-adhesive

- For padding applications in orthotics
- Ideal for everyday clinical use, e.g. also in temporary fittings
- Upper material terry cloth, underside adhesive film
- Self-adhesive
- Very good adhesive characteristics
- High wearer comfort
- Washable

Information material

646F295=EN_INT Padding materials poster

Technical data

Article number	Length	Width	Colour
623P2	1,000 mm	500 mm	Beige

623P3 Terry cloth padding

- For padding applications in orthotics
- Upper material: terry cloth, underside: loop material
- Compatible with hook-and-loop
- Good padding characteristics
- Comfortable to wear
- Individual shaping possible
- Washable

	623P3=H10	10 m	1,460 mm	4 mm	Beige

Information material

646F295=EN_INT Padding materials poster

Practical recommendation

- Can be combined with 623Z4 and 623Z200 micro hook-and-loop. Apply 636W71 CP contact adhesive to the micro hook-and-loop and fasten it to the surface to be padded.

623F109 ComforTex soft

- For padding applications in orthotics
- 100% polyamide, first side
- 16% spandex and 84% polyamide, second side
- Compatible with hook-and-loop, first side
- Especially soft surface
- Excellent padding characteristics
- High resilience
- Very comfortable to wear
- Individual shaping possible
- HF and ultrasound weldable

Information material

623F109=2-7	2 m	1,400 mm	4 mm	Black/black
623F109=5-7	5 m	1,400 mm	4 mm	Black/black

Practical recommendation

- Can be combined with 623Z4 and 623Z200 micro hook-and-loop. Apply 636W71 CP contact adhesive to the micro hook-and-loop and fasten it to the surface to be padded.

623F110 ComforTex smooth

- For padding applications in orthotics
- 100% polyamide, first side
- 80% polyamide and 20% spandex, second side
- Compatible with hook-and-loop, first side
- Very smooth surface
- Excellent padding characteristics
- High resilience
- Very comfortable to wear
- Individual shaping possible
- HF and ultrasound weldable

623F110=5-7	5 m	1,400 mm	4 mm	Black/black

Practical recommendation

- Can be combined with 623Z4 and 623Z200 micro hook-and-loop. Apply 636W71 CP contact adhesive to the micro hook-and-loop and fasten it to the surface to be padded.

623F112 ComforTex grippy

- For padding applications in orthotics
- 100% polyamide, first side
- 84% polyamide and 16% spandex, second side
- Compatible with hook-and-loop, first side
- Special knitting technique prevents slipping in the nap direction
- Excellent padding characteristics
- High resilience
- Very comfortable to wear
- Individual shaping possible
- HF and ultrasound weldable

616S116 Technogel® sheet

- For padding in orthotics, in particular for FOs
- As a padding material for prosthetic sockets
- For the padding of seating shells in rehabilitation
- PU gel
- With bi-elastic blue Lycra® fabric and PE film on one side
- Hardness approx. Shore A 2.5
- Density: approx. 1006 kg/m³
- Shape-retentive
- Good dissipation of shear forces
- Very good damping and good pressure redistribution
- High elongation
- High shock absorption
- Good bonding characteristics with 636W71 CP contact adhesive
- Washable
- Not thermoformable

Article number	Length	Width	Thickness
620P3=2	1,000 mm	500 mm	2 mm
620P3=3	1,000 mm	500 mm	3 mm
620P3=4	1,000 mm	500 mm	4 mm
620P3=5	1,000 mm	500 mm	5 mm
620P3=6	1,000 mm	500 mm	6 mm
620P3=8	1,000 mm	500 mm	8 mm

Practical recommendation

- Suitable for prepreg technology as a separating layer for padding.

621J2 Chrome kid leather

- For linings in orthopaedics and footwear specialism
- As upholstery leather for insoles
- Fine, soft leather

Technical data

Article number	Thickness
621J2	0.6-0.8 mm

621S4 Plain chamois sheep leather

- For linings in orthopaedics and footwear specialism
- Soft, supple lining leather
- Good stretching properties

Technical data

Article number
621S4

· Sheepskin with grain (e.g. for sockets) = grain chamois leather

621R1 Blank calf leather

- For use in orthopaedics and footwear specialism
- Ooze leather
- Lighter weight category
- Moderately greased
- Sometimes waxed
- Good carrying properties
- Good grip
- Supple
- Resistant to tearing
- Very good resistance to perspiration
- Waterproof
- Air permeable

Technical data

Article number	Version	Thickness
621R1=1-1.5	Side	1-1.5 mm

621R4 Orthopaedic chrome-tanned leather

- For straps and buckles
- Chrome tanned calf leather
- Tough
- Resistant to tearing
- Resistant to repeated flexural stress and abrasion

Technical data

Article number	Version	Thickness
621R4=1.5-2	Side	1.5-2 mm

621W2 Orthopaedic leather

- For sockets and sleeves in prosthetics and orthotics
- Partially tanned
- From cowhide
- Vegetable tanned
- Very good forming properties
- Good absorption of perspiration

Technical data

Article number	Version	Thickness
621W2=1.8-2	Side	1.8-2.0 mm
621W2=2-2.75	Side	2.0-2.75 mm
621W2=3-3.5	Side	3.0-3.5 mm

623T1 Cotton stockinette

- As body protection stockinette for the plaster and casting technique
- As a spacer layer in vacuum forming or laminating
- Can be worn directly on the skin, e.g. in case of body jacket fittings
- Wide range of applications
- 100% cotton
- Good stretching properties

Technical data

Article number	Length	Width	Weight	Colour
623T1=4	33 m	4 cm	0.5 kg	Raw white
623T1=6	23.8 m	6 cm	0.5 kg	Raw white
623T1=8	17.2 m	8 cm	0.5 kg	Raw white
623T1=10	27.7 m	10 cm	1 kg	Raw white
623T1=12	25.6 m	12 cm	1 kg	Raw white
623T1=15	19.2 m	15 cm	1 kg	Raw white
623T1=20	14.9 m	20 cm	1 kg	Raw white
623T1=25	12.5 m	25 cm	1 kg	Raw white
623T1=30	10 m	30 cm	1 kg	Raw white
623T1=35	9.1 m	35 cm	1 kg	Raw white
623T1=40	7.7 m	40 cm	1 kg	Raw white

622P4 Felt cloth

- For linings, e.g. in leather sleeves
- Density: approx. 190 kg/m³
- Good padding characteristics

Technical data

Article number	Width	Thickness	Weight	Colour
622P4=2	1,800 mm	2 mm	0.6 kg	White

623M8 Velvetone

- As a cover fabric in orthotics, e.g. for insoles
- 100% cotton
- One side roughened, the other side sunk
- Strong, satin-woven moleskin fabric
- Very thin

Technical data

Article number	Width	Colour
623M8	1,500 mm	Beige

621X* Helanca double-stretch synthetic leather

- For padding and upholstery
- Especially well suited for areas subject to high stress, for example in rehabilitation
- Pleasantly soft
- Good grip
- Elastic
- Abrasion-resistant
- Resistant to tearing
- Easy to clean
- Resistant to urine and blood
- Resistant to disinfectants

Technical data

Article image	Article number	Length	Width	Colour
	621X2=1	1 m	1,370 mm	White
	621X2=2	2 m	1,370 mm	White
	621X2=5	5 m	1,370 mm	White
	621X3=1	1 m	1,370 mm	Beige
	621X3=2	2 m	1,370 mm	Beige
	621X3=5	5 m	1,370 mm	Beige

621X9 Carbon synthetic leather

- Cover for orthoses, prostheses, wheelchairs and closures
- As an underlay for insoles
- 50% polyurethane, 50% polyamide
- High abrasion resistance
- Resistant to tearing
- Colour-fast
- Light-fast
- Suitable for cutting
- Suitable for punching
- Easy to sand
- Clean cut edges without fraying
- Well suited for bonding
- Can be thermoformed at 90 – 120 °C
- Minimal shrinkage

Product example

Technical data

Article number	Length	Width	Colour
621X9=1-7	1 m	1.46 m	Black
621X9=10-7	10 m	1.46 m	Black

Practical recommendation

- Prepare a template using 616F1 PVC film.
- Transfer the shape to 621X9 carbon synthetic leather. In doing so, make sure the carbon pattern is consistently aligned to obtain a uniform overall appearance and to conceal joints.
- Use 636N9 contact adhesive for fixing. The surfaces to be glued must be dry and free of dust, oil and grease.
- For better draping characteristics, warm 621X9 carbon synthetic leather slightly with hot air.

646F295 Padding materials poster

Finishing

Thermopapers, socket decors, CarbonTEX and SuperSkin offer the opportunity to upgrade surfaces with new designs. Ottobock offers various individual finishing options that allow the look of prostheses and orthoses to be changed and adapted to the user's taste.

Our thermopapers are suitable for giving plastics such as ThermoLyn PE 200, ThermoLyn PP-C and ThermoLyn PP-H an attractive, designer look. Socket decors permit individual colouration with applications of the lamination technique.

With CarbonTEX, Ottobock offers a carbon look in various colours which is easy to realise as part of the regular lamination process.

With a SuperSkin coating, a foam cover for example can be spray coated with a liquid polyurethane plastic (PUR). The applied coating is elastic, water-repellent, UV-resistant and can be coloured according to the skin tone. Prostheses coated with Ottobock SuperSkin have an even more natural appearance and are for example more resistant against dirt.

Processing and usage examples

Warm the synthetic material until it becomes completely transparent. Cut the thermopaper to size and apply it, with the design facing down, onto the precut component.

Carefully smooth the thermopaper from the middle towards the outside edges.

After approx. 20 seconds, pull the thermopaper off the material.

623P95 “Uni, black” thermopaper

- For custom colouring of synthetic materials such as ThermoLyn PE 200, ThermoLyn PP-C and ThermoLyn PP-H
- Large selection of unique designs
- Environmentally friendly paper
- Tear-proof paper
- No additional workshop equipment or special technical knowledge required

Technical data

Article number	Length	Width	Colour
623P95=2	2 m	75 cm	Black
623P95=5	5 m	75 cm	Black
623P95=10	10 m	75 cm	Black

Information material

646D550=EN_INT	Thermopapers & socket decors product information
646D696=EN	Finishing product information
646M70=ALL_INT	Thermopapers & socket decors collection

Processing and usage examples

Warm the synthetic material until it becomes completely transparent. Cut the thermopaper to size and apply it, with the design facing down, onto the pre-cut component.

Carefully smooth the thermopaper from the middle towards the outside edges.

After approx. 20 seconds, pull the thermopaper off the material.

Processing and usage examples

Pull the decorative fabric around the socket model with the design facing inwards. Using your hand to hold the decorative fabric taut, trace along the contour of the socket using a pencil. Do not use permanent markers, ball-point pens, etc., because these could cause discolouration during the laminating process.

Take in the decorative fabric, leaving 5 mm between the stitches and the inside of the marked line. Allow the distal seam to taper off. This means the seam can be seen only on the medial side. Using scissors, trim the decorative fabric along the seam to a maximum of 2 mm.

Turn the decorative fabric inside out so that the design is facing outwards, and then pull it over the socket model. Place the seam in an inconspicuous position on the socket (e.g. medially).

Information material

646D696=EN Finishing product information

616G180 CarbonTEX - fibreglass cloth

- For custom colouring with lamination technique
- Good absorption of all Ottobock lamination resins
- Good draping characteristics
- Conventional lamination process
- No additional technical knowledge or workshop facilities required

Technical data

Article image	Article number	Length	Width	Colour
	616G180=2-16	2 m	1 m	Silver
	616G180=5-16	5 m	1 m	Silver
	616G180=2-16.4	2 m	1 m	Light silver
	616G180=5-16.4	5 m	1 m	Light silver

i Practical recommendation

- Can be used with acrylic, vinyl, epoxy and polyester resin systems.
- Suitable for decorative purposes but not as a structural laminate component.
- Laminate without colour paste to prevent distortion of the colour result.
- Directly after cutting to size/sanding the socket, apply a transparent acrylic coating to the proximal edge. We recommend applying at least two layers and using wet/dry fine sandpaper between the layers. This approach is particularly well suited for sealing the upper socket brim. The external appearance of the upgraded socket is also optimised as a result.

i Practical recommendation

- Can be used with acrylic, vinyl, epoxy and polyester resin systems.
- Suitable for decorative purposes but not as a structural laminate component.
- Laminate without colour paste to prevent distortion of the colour result.
- Directly after cutting to size/sanding the socket, apply a transparent acrylic coating to the proximal edge. We recommend applying at least two layers and using wet/dry fine sandpaper between the layers. This approach is particularly well suited for sealing the upper socket brim. The external appearance of the upgraded socket is also optimised as a result.

Processing and usage examples

For occupational safety reasons, 641H17 chemical protection gloves should be worn. Perform all steps of the process under an extractor hood. Sand the surface of the socket to be laminated, clean with 634A58 isopropyl alcohol and mark the position of the subsequent CarbonTEX seam on the socket with a pencil. Measure the socket length and circumference. Cut a corresponding piece of CarbonTEX with a width and length that is 10 cm more than the respective measurement. To prevent the fibres from fraying, tape off the outside of the cut edges. Apply 636K40 removable spray adhesive to the socket, starting on the side opposite the marked CarbonTEX seam. Then continue wetting the socket gradually, applying the layer of CarbonTEX around the socket without wrinkles and pressing it into place in the direction of the seam.

Attach one end of the CarbonTEX layer to the previously marked seam with 616F10=6 double-sided PVC adhesive tape and trim the excess material with the 719S21 carbon scissors. Then press any protruding fibres in place again. Repeat this procedure on the opposite side. To do so, apply a new strip of PVC adhesive tape to the cut edge of the CarbonTEX side. Overlap and attach the second end of the layer of CarbonTEX, trim the excess material and press any protruding fibres into place.

Use paper towels to clean the soaked 616F4 PVA bag on both sides and pull it over the model with the desired side (matte or gloss) facing outward. Tie off the PVA bag on the proximal end. Tie off temporarily in the distal region and create a vacuum. Mix the desired quantity of 617H119 Orthocryl lamination resin 80:20 PRO, without adding colour paste, with 2% hardener and fill into the PVA bag. Then tie off above the resin filling, without any air inclusions. Align the model as shown in Fig. 3. Undo the temporary tie in the distal area between the resin and socket, and extract rising air bubbles with the vacuum. Then laminate the socket, with an even penetration of resin running at a 90° angle to the socket axis. After curing, cut the socket and sand it down.

646M85 SuperSkin sampler ring

- For the visual and haptic demonstration of the various colour samples (skin tones)
- Aids in selecting the desired hue

Technical data

Article number
646M85

- i Practical recommendation**
 - The colour results provided in the 646M85 SuperSkin sampler ring can be obtained by using different mixing ratios of the SuperSkin colours listed in the colour table.
 - For details on the mixture ratios, please see the 646T7=4.8D SuperSkin technical information.

646M18 SuperSkin sampler ring

- For the visual and haptic demonstration of the various colour samples (RAL colours)
- Aids in selecting the desired hue

Small parts and auxiliary materials

This section contains a large selection of accessories for prostheses and orthoses. Materials such as steel, light metal, aluminium alloys and plastics as well as parting agents and lubricants or screws. Donning a transfemoral prosthesis is a daily routine for many prosthesis wearers. The procedure is still very cumbersome and can even be painful. Our EasyFit donning aid makes the prosthetic socket comfortable for wearers of a transfemoral or arm prosthesis with a valve opening. The Arion Proth-Pro is also a good way to make it even easier to put on. It features a low-friction material that reduces friction between the residual limb and socket. Sophisticated closure and adjustment mechanisms of the Revo products with Click Reel® technology offer a better fit and optimised comfort of the prosthesis or enable an easily adjustable liner fixation in the socket. Thanks to ongoing further development, most patients today can be fitted with ready-made supports, the goal being to treat patients according to their specific indications, provide early mobilisation, assist and accelerate the healing process and to prevent new injuries.

OC1560 Easy Fit donning aid

- For transfemoral prostheses with valve opening
- Easy donning that saves time and energy
- Comfortable feeling when donning
- Pull-through aid for additional help
- High-quality, durable material
- Suitable for machine washing
- Lightweight and foldable, includes a sealable bag for easy transportation

Technical data

Article number	Size	Proximal residual limb circumference	Distal residual limb circumference	Residual limb length	Colour	Colour seam
OC1560=XS	XS	39 cm	25 cm	40 cm	Blue	Yellow

Information material

646D386=GB	OC1560 EasyFit donning sheath product information
647G970	Instructions for use OC1560 EasyFit
647G969	Instructions for use OC1560 EasyFit Arm

Practical recommendation

- Using the EasyFit donning aid in combination with the threadless 21Y14 PushValve one-way valve makes prosthesis donning even easier.

Processing and usage examples

1. Spread out the EasyFit donning aid and the included pull-through aid.
2. Turn the halves of the EasyFit donning aid in to each other to the lower seam. The loop should face outwards.
3. Attach the pull-through aid for additional help: Pull the strap on the donning aid through the loop on the pull-through aid.

4. Pull the top half of the donning aid through the lower gap between the strap and the loop.

5. The pull-through aid and the strap of the donning aid are now tied to each other.

6. Now use both hands to pull the EasyFit donning aid over the transfemoral residual limb like a sock, avoiding any wrinkles. Position the socket over the residual limb so the strap of the EasyFit donning aid or the pull-through aid can be put through the socket's valve opening after getting into the socket.

7. Finally, use the strap to slowly pull the EasyFit donning aid out of the prosthetic socket through the valve opening.

OC1560 EasyFit Arm donning aid

- For arm prostheses with a valve opening
- Kids' size available
- Easy donning that saves time and energy
- Comfortable feeling when donning
- High-quality, durable material
- Suitable for machine washing
- Foldable and lightweight

Technical data

OC1560=TH	TH	47 cm	28 cm	34 cm	Green	Dark green

Information material

646D536=EN OC1560 EasyFit Arm donning aid product information

Processing and usage examples

1. Fully spread out the EasyFit Arm donning aid before using it.

2. Turn half the length of the EasyFit Arm donning aid into the other half up to the lower seam (loop facing out).

3. Pull the EasyFit Arm donning aid like a sock over the residual limb with as few wrinkles as possible. Guide the socket over the residual limb so that the loop of the EasyFit Arm donning aid can be pulled through the socket valve opening after applying the socket.

4. Finally, use the loop to slowly pull the EasyFit Arm donning aid out of the prosthetic socket through the valve opening. If the residual limb is not properly positioned in the prosthetic socket, repeat the process.

OC1570 Arion Proth-Pro

623H29 Belting

- Especially well suited for 514Z8 SafeLock buckle and 514Z9 SafeLock slider
- 100% polypropylene
- Individually adaptable length
- Soft, rounded outer edge
- High strength
- Inelastic

Technical data

Article number	Width	Colour	Minimum order quantity
623H29=20-7	20 mm	Black	1 m
623H29=30-7	30 mm	Black	1 m
623H29=40-7	40 mm	Black	1 m
623H29=50-7	50 mm	Black	1 m

• Please indicate the required length in metres when ordering.

623G60 Elastic strap

- 62% polyamide, 38% spandex
- Soft, rounded outer edge
- Individually adaptable length

Technical data

Article number	Width	Colour	Original roll	Minimum order quantity
623G60=20-9	20 mm	Beige	25 m	1 m
623G60=25-9	25 mm	Beige	25 m	1 m
623G60=33-9	33 mm	Beige	25 m	1 m
623G60=48-9	48 mm	Beige	25 m	1 m

• Please indicate the required length in metres when ordering.

623G1 Elastic strap

- 82% viscose and 18% spandex
- Individually adaptable length
- Soft, rounded outer edge
- Glossy terrycloth texture
- Longitudinal elongation approx. 70%

Technical data

Article number	Width	Original roll	Colour
623G1=20	20 mm	25 m	Beige/white

623G3=45	45 mm	25 m	1 metre and up	Grey/white

• Please specify length when ordering!

623G4 Elastic double strap

- For 29R127 clip closure
- 42% viscose, 37% cotton and 21% spandex
- Individually adaptable length
- Soft, rounded outer edge

Technical data

Article number	Length	Width	Colour
623G4=1	1 m	30 mm	Grey/white
623G4=5	5 m	30 mm	Grey/white

623Z1 Hook-and-loop closure strap

- For fast, detachable connections
- Hook-and-loop strap
- 100% polyamide
- Individually adaptable length
- Can be refastened many times
- Flexible
- High wearer comfort

Technical data

Article number	Width	Colour	Original roll	Minimum order quantity
623Z1=20	20 mm	White	25 m	1 m

623Z1=30	30 mm	White	25 m	1 m
623Z1=50	50 mm	White	25 m	1 m

• Please indicate the required length in metres when ordering.

Practical recommendation

- Close before washing to protect the closure and/or other items in the wash.

623Z12 Hook-and-loop closure strap

- For fast, detachable connections
- Hook-and-loop strap
- 100% polyamide
- Individually adaptable length
- Can be refastened many times
- Flexible
- High wearer comfort

Technical data

Article number	Width	Colour	Original roll	Minimum order quantity
623Z12=50	50 mm	Salmon	25 m	1 m
623Z12=30	30 mm	Salmon	25 m	1 m

• Please indicate the required length in metres when ordering.

Practical recommendation

- Close before washing to protect the closure and/or other items in the wash.

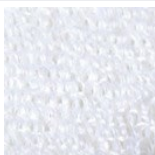

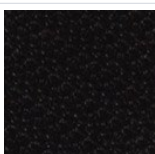

623Z2 Elastogrip closure

- Hook-and-loop strap
- Polyamide/spandex
- Individually adaptable length
- Longitudinally elastic
- Can be refastened many times
- Flexible
- High wearer comfort

Technical data

Article image	Article number	Width	Colour	Original roll	Minimum order quantity
	623Z2=30-5	30 mm	Blue	25 m	25 m
	623Z2=50-5	50 mm	Blue	25 m	25 m
	623Z2=30-6	30 mm	White	25 m	25 m
	623Z2=50-6	50 mm	White	25 m	25 m

• Please indicate the required length in metres when ordering.

Practical recommendation

- Close before washing to protect the closure and/or other items in the wash.

623Z8 Hook-and-loop hook strap, self-adhesive

- For fast, detachable connections
- 100% polyamide
- Individually adaptable length
- Can be refastened many times
- High adhesive strength
- Flexible
- High wearer comfort

Technical data

Article number	Width	Colour	Original roll	Minimum order quantity
623Z8=W25	25 mm	White	25 m	1 m
623Z8=W50	50 mm	White	25 m	1 m

· Please indicate the required length in metres when ordering.

623Z96 Loop-velour strap

- Ideal for orthosis straps
- For closure types with higher loads, e.g. walking orthoses
- For fast, detachable connections
- Woven polyamide bordered in velour
- Various widths and colours available
- Individually adaptable length
- Both sides compatible with hook-and-loop
- Can be refastened many times
- Flexible
- High wearer comfort

Technical data

Article number	Width	Colour	Original roll	Minimum order quantity
623Z96=30-0	30 mm	Beige	25 m	1 m
623Z96=38-0	38 mm	Beige	25 m	1 m
623Z96=50-0	50 mm	Beige	25 m	1 m
623Z96=30-7	30 mm	Black	25 m	1 m
623Z96=38-7	38 mm	Black	25 m	1 m
623Z96=50-7	50 mm	Black	25 m	1 m

· Please indicate the required length in metres when ordering.

Practical recommendation

- We recommend using micro hook-and-loop on velour and hooks on fleece.

170Z4 Hook-and-loop strap

- Ideal for FreeWalk orthosis
- For fast, detachable connections
- 100% polyamide
- Can be refastened many times
- Flexible
- High level of wearer comfort

Technical data

Article number	Spare part for	Length	Width	Colour	Quantity unit
170Z4=400-0	170K1=R-80-0 170K1=L-120-0 170K1=L-80-0 170K1=R-120-0	400 mm	40 mm	Beige	Piece

170Z4=600-7	170K1=R-80-7 170K1=L-120-7 170K1=L-80-7 170K1=R-120-7	600 mm	40 mm	Black	Piece

Practical recommendation

- Close before washing to protect the closure and/or other items in the wash.

623Z4 “2-in-1” hook-and-loop closure strap

- For fast, detachable connections
- Simplifies closure system zoning
- Mix of hook and loop strap
- 100% polyamide
- Individually adaptable length
- Can be refastened many times
- Flexible
- High wearer comfort

Technical data

Article number	Width	Colour	Original roll	Minimum order quantity
623Z4=30-7	30 mm	Black	25 m	25 m
623Z4=38-7	38 mm	Black	25 m	25 m
623Z4=50-7	50 mm	Black	25 m	25 m

- Please indicate the required length in metres when ordering.

Practical recommendation

- Close before washing to protect the closure and/or other items in the wash.

Information material

------------	--

623Z* Micro hook-and-loop, self-adhesive

- Recommended especially in combination with 623P3 terry cloth padding fabric and with 623F* ComforTex
- Individually adaptable length
- Self-adhesive
- Very high hook-and-loop strength
- No additional bulk when fastening textile padding fabrics
- Facilitates very flexible connections

Technical data

Article image	Article number	Width	Colour	Minimum order quantity
	623Z4=50-6	50 mm	White	10 m
	623Z200=100-7	100 mm	Black	10 m

· Please indicate the required length in metres when ordering.

170D29 Y-hook-and-loop with PU coating

- For adapting straps, e.g. directly on the patient
- Particularly suitable for 623Z96 loop-velour strap
- For closure types with higher loads, e.g. walking orthoses
- For fast, detachable connections
- Polyester with PU coating
- Micro hook-and-loop/micro hook-and-loop (single side: heavy hook-and-loop)
- Various widths available
- Low bulk due to use of micro hook-and-loop only
- User-friendly design with “Open” embossing
- Easy to clean thanks to PU coating
- Washable with a damp cloth
- Can be refastened many times
- Flexible
- High level of wearer comfort

Technical data

Article number	Width	Colour
170D29=30-0	30 mm	Beige
170D29=38-0	38 mm	Beige
170D29=50-0	50 mm	Beige
170D29=30-7	30 mm	Black
170D29=38-7	38 mm	Black
170D29=50-7	50 mm	Black

Practical recommendation

- We recommend using micro hook-and-loop on velour and hooks on fleece.

170D21 Y-hook-and-loop

- For adapting straps, e.g. directly on the patient
- For loop straps of the FreeWalk orthosis
- For fast, detachable connections
- 100% polyamide
- Can be refastened many times
- Flexible
- High wearer comfort

Technical data

Article number	Width	Colour
170D21=38-0	38 mm	Beige
170D21=38-7	38 mm	Black

Practical recommendation

- Close before washing to protect the closure and/or other items in the wash.

29Y63 Hook-and-loop strap with pad

- Orthotics: leg, torso, arm orthotics
- Prosthetics: lower limb, upper limb prosthetics
- Pad with guide loops: stable positioning of the pad on the hook-and-loop strap using the four guide loops, good padding properties, extremely resilient, material: polyamide, polyurethane foam with microfibre film
- Hook-and-loop strap and strap guide loop: sturdy strap guide loop with long loop strap, very good surface stability, soft hook-and-loop strap, no sharp outside edges, can be re-closed multiple times, very high closing force, very good tensile strength, material: polyamide
- Strap and pad can be individually cut to length
- Individual positioning is possible
- Comfortable on the skin
- Quick-drying

29Z63 Pad for hook-and-loop strap

- Orthotics: leg, torso, arm orthotics
- Prosthetics: lower limb, upper limb prosthetics
- Polyamide
- PU flexible foam
- Stable positioning of the pad on the hook-and-loop strap using the four guide loops
- Good padding characteristics
- Extremely resilient
- Pad can be individually cut to length
- Individual positioning is possible
- Comfortable on the skin
- Quick-drying

21Y122 Hook-and-loop closure

- For fast, detachable connections
- 21Y122=38-7: with reinforced strap guide loop
- 21Y122=50-7: both sides with hook strip and two strap guide loops
- 100% polyamide
- Can be refastened many times
- Flexible
- High level of wearer comfort

Technical data

Article image	Article number	Width	Colour
	21Y122=38-7	38 mm	Black
	21Y122=50-7	50 mm	Black

Practical recommendation

- Close before washing to protect the closure and/or other items in the wash.

21Y75N PU hook-and-loop closure

- Closure technology for orthopaedic technology
- Especially for closure types with higher loads, e.g. walking orthoses
- Polyamide with PU coating
- Heavy-duty hook-and-loop
- With strap guide loop and flap
- Can be refastened many times
- User-friendly thanks to the absence of hooks at the beginning of the closure
- Very high hook-and-loop strength
- Individually adaptable length
- Abrasion-proof, smooth surface
- Easy to clean thanks to PU coating
- Not bulky
- Washable with a damp cloth
- Attractive design

Information material

646D1471=EN_INT

21Y75N PU hook-and-loop closure product brief

Product example

Technical data

Article number	Length	Width	Colour

21Y75N=680X50-7	680 mm	50 mm	Black

21Y78 Hook-and-loop closure with weld seams

- For fast, detachable connections
- With strap guide loop
- Hook-and-loop strap
- 100% polyamide
- Individually adaptable length due to welding seam
- Can be refastened many times
- High hook-and-loop strength
- Very good inherent stiffness
- Flexible
- Skin-friendly thanks to velour

Technical data

21Y78=50-7	350 mm	50 mm	Black

Practical recommendation

- Close before washing to protect the closure and/or other items in the wash.

623Z3 Hook-and-loop closure

- For 28U9 lower leg orthoses
- For fast, detachable connections
- With strap guide loop and flap
- 100% polyamide
- Can be refastened many times
- Flexible
- High level of wearer comfort

Technical data

Article number	Length	Width	Colour
623Z3=38X270	270 mm	38 mm	Beige
623Z3=38X310	310 mm	38 mm	Beige

Practical recommendation

- Close before washing to protect the closure and/or other items in the wash.

29Y57 Lamination disc

- For fabricating sockets
- Can be used in combination with Ottobock Orthocryl resins and silicones
- Facilitates good absorption of resin, particularly by the underlying reinforcement materials
- “Invisible” frame fixation
- No corrosion

Technical data

Article number	Thread
29Y57	M4

29C3 Setting nut/insert nut

- Stainless steel
- With knurled shoulder
- Secure support

- Stainless steel, nickel-plated

Technical data

Article number	Thread	Thread length	Head Ø	Head height	Base Ø
516S3	M4	5.5 mm	6 mm	6.5 mm	8 mm

516N8 Pad screw head

- For the attachment of belts and straps
- Plexidur

Technical data

Article number	Head height	Stud Ø	Stud length	Shoulder height
516N8=9	9 mm	4 mm	10 mm	3 mm
516N8=12	12 mm	5 mm	10 mm	4 mm

503L1 Countersunk head wood screw, slotted

- For screwing wood
- Steel, nickel-plated
- Oval head
- Countersunk screw, flush with material surface after mounting

Technical data

Article number	Diameter	Length
503L1=3X20	3 mm	20 mm

506A1 Brass pins

- For fastening, e.g. brass plates
- With round head and screw thread

Technical data

Article number	Head Ø	Length	Minimum order quantity
506A1=1.3X13	1.3 mm	13 mm	0.25 kg

507U3 Washer / lamination disk

- For distributing a screw force on a larger surface area
- Prevents the screw head from sinking in or digging into the material
- Brass

Technical data

Article number	Outside Ø	Borehole Ø	Thickness
507U3=8X3X0.5	8 mm	3 mm	0.5 mm
507U3=10X3X0.5	10 mm	3 mm	0.5 mm
507U3=12X3X0.5	12 mm	3 mm	0.5 mm
507U3=14X3.2X2	14 mm	3.2 mm	2 mm
507U3=14X4X0.5	14 mm	4 mm	0.5 mm
507U3=18X4X0.5	18 mm	4 mm	0.5 mm

504H1 Double hollow rivet

- For permanent connections
- Open lower part, closed upper part
- Iron, nickel-plated
- No thread necessary

Technical data

Article number	Head Ø	Length	Minimum order quantity
504H1=7-100	7 mm	8.3 mm	100 piece(s)
504H1=10-100	10 mm	9.5 mm	100 piece(s)
504H1=12-100	12 mm	11.7 mm	100 piece(s)
504H1=7-1000	7 mm	8.3 mm	1,000 piece(s)
504H1=10-1000	10 mm	9.5 mm	1,000 piece(s)
504H1=12-1000	12 mm	11.7 mm	1,000 piece(s)

504H3 Hollow rivet

- Can be used for the attachment of, for example, straps and flaps
- For permanent connections
- Closed lower part, open upper part
- Brass, nickel-plated
- No thread necessary

Technical data

Article number	Head Ø	Minimum order quantity
504H3=7-100	7 mm	100 piece(s)
504H3=11-100	11 mm	100 piece(s)
504H3=13-100	13 mm	100 piece(s)
504H3=7-1000	7 mm	1,000 piece(s)
504H3=11-1000	11 mm	1,000 piece(s)
504H3=13-1000	13 mm	1,000 piece(s)

515A1 Eyelet

- For fabric corsets
- Iron, nickel-plated

Technical data

Article number	Hole Ø	Length	Fits insertion plunger
515A1	4 mm	4 mm	702A1=2

504F1 Iron rivet

- For permanent connections
- With flat head
- Iron, galvanised
- No thread necessary

Technical data

Article number	Diameter	Length	Minimum order quantity
504F1=3X10	3 mm	10 mm	1,000 piece(s)
504F1=3X12	3 mm	12 mm	1,000 piece(s)
504F1=3X15	3 mm	15 mm	1,000 piece(s)
504F1=3X25	3 mm	25 mm	1,000 piece(s)
504F1=3X30	3 mm	30 mm	1,000 piece(s)
504F1=4X20	4 mm	20 mm	1,000 piece(s)
504F1=4X25	4 mm	25 mm	1,000 piece(s)

504F2 Copper rivet

- For permanent connections
- With flat head
- Copper
- No thread necessary

Technical data

Article number	Diameter	Length	Minimum order quantity
504F2=3X6	3 mm	6 mm	1,000 piece(s)

504F3 Light metal rivet

- For permanent connections
- With flat head
- Aluminium
- No thread necessary

Technical data

Article number	Diameter	Length	Minimum order quantity
504F3=3X6	3 mm	6 mm	1,000 piece(s)
504F3=3X12	3 mm	12 mm	1,000 piece(s)

633F11 Silicone grease 400, medium

- As corrosion protection for plug connections, e.g. Myo, E-MAG Active (cable connectors)
- As corrosion protection, e.g. for drive units
- For the planetary gear train of the drive unit in upper limb prosthetics
- For isolating components in the lamination technique
- Very good resistance to heat and cold
- High resistance to ageing
- Good film forming capacity

Technical data

Article image	Article number	Net contents	Packaging
	633F11	0.1 kg	Tube
	633F11=1	1 kg	Can

633F50 Silicone grease

- Ideal lubricating layer during vacuum forming on all plaster models (also possible without sock)
- Simplifies the fabrication of consistent wall thicknesses
- Thixotrope
- Air permeable
- Not hardening

Technical data

Article number	Net contents
633F50=1	1 kg

Processing and usage examples

Remove a quantity of 633F50 silicone grease that is sufficient for the model and apply a thin, even layer to the model.

519L5 Silicone parting agent

- For parting, gliding and lubricating
- Protects rubber, plastics and elastomers from becoming brittle
- Compact and solvent-free
- CFC-free

Technical data

Article number	Net contents
519L5	0.4 l

633X35 Silicone oil

- For silicone brake segments of the Jüpa knee joints
- Parting agent for rubber and plastics
- Lubricant
- Water repellent
- Temperature resistant

Technical data

Article number	Net contents
633X35=0.010	0.01 kg
633X35=5	5 kg

Workshop oil

- Cleaning agent for casting tables
- Cleans soiled, oil-soaked metal components
- Easily removes rust film
- Removes foreign particles
- Silicone, PTFE, acid and resin free and does not resinify

Technical data

Article number	Net contents
633X89=0.500	500 ml
633X89=5	5 l

633T2 Teflon® spray

- For parting, gliding and lubricating
- Excellent anti-adhesive properties
- Without grease

Technical data

Article number	Net contents
633T2	300 ml

Practical recommendation

- With a pendulum-like movement, apply thin and even coats, allowing each coat to dry separately. Polishing with a cloth enhances the repelling characteristics.

Teflon® is a registered trademark of DuPont.

633F16 Gliding paste, white

- For machine elements of all kinds that are subject to simultaneous impact stresses and shaking and/or oscillating movements
- Especially well suited for modular knee joints
- Also suitable as a general assembly paste
- High-performance lubricant for steel (stainless steel, titanium, brass) – also in combination among each other
- For long-term lubrication under extreme conditions
- High resistance to water
- Good adhesion
- Excellent protection against wear and tear
- Good corrosion protection

Technical data

Article number	Net contents	Packaging
633F16=1	1 kg	Can

633W8 Wax

- For insulating joints, components and dummies
- Excellent separating effect
- Easy to process

Technical data

Article image	Article number	Net contents
	633W8=12.2	12.2 g
	633W8	425 g

Information material

646A174=GB	Prepreg technology product information
------------	--

633F7 Special lubricant

- For all bar joints (stainless steel), also in combination with plastic, and for steel joints
- In particular for steel on steel lubrication
- High resistance to water
- Excellent protection against wear and tear
- Good corrosion protection

Technical data

Article number	Net contents	Packaging
633F7=1	1 kg	Can

633G6 Special lubricant

- For prosthetic joints
- For the following material combinations: metal on plastic, leather on plastic and plastic on plastic
- Excellent temperature stability (from -25 °C to +120 °C)
- High resistance to cold and hot water
- Excellent flexing resistance
- Excellent protection against wear and tear
- Good corrosion protection

Technical data

Article number	Net contents	Packaging
633G6	0.25 kg	Tube

633F14 Special lubricant

- For gliding surfaces and frictional contacts that are subject to high loads and simultaneously require “non-contaminating” lubrication, particularly at low to medium speeds
- For all accessible gear wheels and axes in System Electric Hands and System Electric Greifers
- Good water resistance
- High load-bearing capacity
- Excellent protection against wear and tear
- Good corrosion protection

Technical data

Article image	Article number	Net contents	Packaging
	633F14=0.050	0.05 kg	Tube
	633F14=1	1 kg	Can

605P8 Light metal profile bar

- For fabricating system bars
- Aluminium
- Strength: approx. 400 N/mm²
- Round edges
- Good malleability by bending

Technical data

Article number	Length	Width	Thickness	Material	Order unit
605P8=14	1000 mm	14 mm	5 mm	Aluminium	Piece
605P8=16	2000 mm	16 mm	5 mm	Aluminium	Piece
605P8=20	2000 mm	20 mm	5 mm	Aluminium	Piece
605P8=20-12	305 mm	20 mm	5 mm	Aluminium	Piece

651P4 Stainless steel profile bar

- For fabricating system bars
- High strength: approx. 800–950 N/mm²
- Round edges
- Spot weldable
- Good malleability by bending

Technical data

Article number	Length	Width	Thickness	Material	Order unit
651P4=16	2000 mm	16 mm	4 mm	Stainless steel	Piece
651P4=20	2000 mm	20 mm	4 mm	Stainless steel	Piece

651B1 Spring band steel profile bar

- Stainless steel
- High strength: approx. 1400 N/mm²
- Round edges
- Cold-rolled

Technical data

Article number	Length	Width	Thickness
651B1=12	2000 mm	12 mm	2 mm

603F1 Flat steel

- Flat steel
- High strength: approx. 600–700 N/mm²
- Hot-rolled
- Uncoated surface
- Etched
- Oil-free

Technical data

Article number	Length	Width	Thickness
603F1=24X8	3000 mm	24 mm	8 mm

17Z* Straps

- For structural and conventional orthosis fabrication
- For modular joint systems (orthoses)
- Different versions (sheet steel, aluminium plate, stainless steel and titanium) available

Technical data

Article number	Length	Width	Thickness	Material
17Z5=192	192 mm	30 mm	2 mm	Aluminium sheet metal
17Z5=235	235 mm	30 mm	2 mm	Aluminium sheet metal
17Z5=280	280 mm	30 mm	2 mm	Aluminium sheet metal
17Z5=325	325 mm	30 mm	2 mm	Aluminium sheet metal
17Z9=192	192 mm	30 mm	1.5 mm	Stainless steel
17Z9=235	235 mm	30 mm	1.5 mm	Stainless steel
17Z9=280	280 mm	30 mm	2 mm	Stainless steel
17Z9=325	325 mm	30 mm	2 mm	Stainless steel
17Z10=192	192 mm	30 mm	1.6 mm	Titanium
17Z10=235	235 mm	30 mm	1.6 mm	Titanium
17Z10=280	280 mm	30 mm	2 mm	Titanium
17Z10=325	325 mm	30 mm	2 mm	Titanium

17Z2 Seating tape

- For structural and conventional orthosis fabrication
- For modular joint systems (orthoses)
- In particular as proximal reinforcement band
- Available in stainless steel

Technical data

Article number	Length	Width	Thickness	Material
17Z2	320 mm	35 mm	2 mm	Stainless steel

605T1 Dur aluminum sheet metal

- For fabricating bands and FOs
- The proven classic material
- Aluminium: approx. 95%; copper, magnesium, manganese: approx. 5%
- Strength: approx. 400 N/mm²
- Good malleability by beating and bending

Technical data

Article number	Length	Width	Thickness
605T1=1.5	1,000 mm	500 mm	1.5 mm
605T1=2	1,000 mm	500 mm	2 mm
605T1=2.25	1,000 mm	500 mm	2.25 mm
605T1=2.5	1,000 mm	500 mm	2.5 mm
605T1=3	1,000 mm	500 mm	3 mm
605T1=4	1,000 mm	500 mm	4 mm
605T1=5	1,000 mm	500 mm	5 mm

608T1 Brass sheet (Durana)

- For fabricating bands and FOs
- Copper: approx. 63%; zinc: approx. 37%
- Strength: approx. 440 N/mm²
- Cold-rolled

Technical data

Article number	Length	Width	Thickness
608T1=1.5	1,000 mm	600 mm	1.5 mm
608T1=2	1,000 mm	600 mm	2 mm

651T1 Sheet steel

- For fabricating bands and FOs
- Stainless steel (V2A)
- High strength: approx. 900–1100 N/mm²
- Uncoated surface
- Cold-rolled

Technical data

Article number	Length	Width	Thickness
651T1=1000X1	1,000 mm	1000 mm	1 mm

649P7 White corundum sanding paper

- For groundwood
- Excellent sanding performance

Technical data

Article number	Width	Grain
649P7=40	600 mm	40
649P7=60	600 mm	60
649P7=80	600 mm	80
649P7=100	600 mm	100

• Please indicate the required length in metres when ordering.

649G4 Linen sanding belt

- For groundwood
- For machine sanding
- Fast sanding and dispersion

Technical data

Article number	Width	Grain
649G4=55XK40	55 mm	40
649G4=55XK100	55 mm	100
649G4=55XK180	55 mm	180
649G4=100XK40	100 mm	40
649G4=100XK60	100 mm	60
649G4=100XK80	100 mm	80
649G4=100XK100	100 mm	100
649G4=100XK120	100 mm	120

• Please indicate the required length in metres when ordering.

649G26 Soft Pad sanding paper

- For manual finish grinding of contours, curvatures and hard to reach areas
- Polyurethane foam with aluminium oxide
- Can be used wet and dry
- Highly flexible, does not buckle
- Does not form sharp edges
- Adapts to any contour
- Does not slip in the hand
- Produces a very fine and even finish

Technical data

Article number	Version	Length	Width	Grain	Height	Order unit	Package contents
649G26=320	320	115 mm	140 mm	320 – 400 (fine)	5 mm	Package	20 piece(s)
649G26=400	400	115 mm	140 mm	400 – 500 (super fine)	5 mm	Package	20 piece(s)

Processing and usage examples

Compress 649G26 Soft Pad sanding paper and submerge it in water until fully soaked.

With the soaked Soft Pad sanding paper, sand the plaster model using the abrasive side with circular movements and low pressure. (Do not rinse sanding residue under running water!) Soft pad sanding paper can be folded centrally, so that small radii can be worked without damaging the brim.

Soak Soft Pad sanding paper with water again and use the foam side to hone the plaster model in order to close fine pores with the accumulated plaster residue.

637L8 Silver solder

- For soldering stainless steel, e.g. for soldering all Ottobock bars made of stainless steel
- Melting temperature: 595–630 °C
- Excellent flow characteristics
- Soldered joints are durable up to an operating temperature of 200 °C

Technical data

Article number	Diameter	Length
637L8=1.5X500	1.5 mm	500 mm

637F1 Fluxing agent

- For soldering with 637L8=1.5x500 silver solder
- For soldering steel, stainless steel and other metals, except light metals
- Pasty consistency

Technical data

Article number	Weight
637F1=0.100	0.1 kg
637F1=0.500	0.5 kg

Practical recommendation

- If the paste is too thick for certain applications, it can be thinned with water.
- Flux residue can be removed with water or etching agent.

637D1 Uncoated wire

- For autogenous welding
- Low-alloy steel
- Low viscosity
- Suitable for operating temperatures up to 350 °C

Technical data

Article number	Diameter	Length
637D1=2	2 mm	1000 mm
637D1=3	3 mm	1000 mm
637D1=4	4 mm	1000 mm

637E1 Welding electrode

- For welding stainless steel, e.g. for welding all Ottobock bars made of stainless steel
- For base materials that are hard to weld, e.g. tool steel
- Good corrosion protection
- Suitable for operating temperatures up to 300 °C

Technical data

Article number	Diameter	Length
637E1=2X300	2 mm	300 mm

618T40 Sintering powder

- For coating metal parts in a sintering bath, e.g. orthotic bars
- For a smooth surface
- Ionomer
- Thermoplastic powder
- Melting temperature: 93 °C
- Welding temperature: 105–108 °C
- Good corrosion protection
- Good UV protection

Technical data

Article number	Net contents	Colour
618T40=H	4 kg	Beige
618T40=W	4 kg	White
618T40=S	4 kg	Black

616Z9 Shrinkable tubing

- For covering devices, e.g. orthotic joints or orthotic bars
- Plastic hose with rounded edges
- Good insulation protection
- Good corrosion protection
- Good resistance to liquids

Technical data

Article number	Diameter	Length	Colour
616Z9=19X61	19 mm	50 m	Black
616Z9=25.4X30	25.4 mm	50 m	Black

22K10 Forearm crutches for children

- Forearm crutch
- Ideal for children's hands
- For safety when walking
- Cushioned with a rubber cap to ensure a good grip when walking
- Secure and comfortable grip
- Attractive design for children

Technical data

Article number	Fits capsules	Colour
22K10	23K12=B 23K12=R	Multi-coloured

22K5 Forearm crutches for children

- Forearm crutch
- Ideal for children's hands
- For safety when walking
- With plastic grip
- Cushioned with a rubber cap to ensure a good grip when walking
- Light metal
- Height-adjustable in 25 mm increments, from 660 to 860 mm (floor to grip)
- Secure and comfortable grip
- Weight: 0.880 kg/pair

Technical data

Article number	Fits capsules	Colour
22K5	23K2=16 23K6=16	Blue Silver anodized

22K* Forearm crutches

- Forearm crutch
- For safety when walking
- With plastic grip
- Cushioned with a rubber capsule, ensures good grip when walking
- Light metal
- Height-adjustable in 25 mm increments from 780 to 980 mm (floor to grip)
- Secure and comfortable grip
- Weight: 1.140 kg/pair
- Maximum load capacity: 140 kg/each

Technical data

Article number	Fits capsules	Colour
22K2	23K2=16 23K6=16	Silver anodized

· Forearm crutch approved for integration of the E-MAG Control remote control

22K7 Forearm crutches

- Forearm crutch
- For safety when walking
- With softgrip
- Cushioned with a rubber capsule, ensures good grip when walking
- Light metal
- Height-adjustable in 25 mm increments from 780 to 980 mm (floor to grip)
- Safe and pleasant softgrip handle
- Weight: 1.260 kg/pair
- Maximum load capacity: 140 kg/each

Technical data

Article number	Fits capsules	Colour
22K7	23K11	Blue Silver anodized

23K77 Anatomical softgrip handles

- For 22K7 forearm crutches
- 1 pair – for left and right
- Anatomical shape
- Protection against pressure points even after extended use
- Pleasantly soft and comfortable feel
- Reduces symptoms of fatigue

Technical data

Article number
23K77

· Please order separately as required!

22S2 Support cane

- For safety when walking
- Without rubber cap
- Wood
- Anatomical shape of the handle

Technical data

Article number	Fits capsules	Colour
22S2=S	23K1=2	Black
22S2=B	23K1=2	Brown

23K1 Rubber capsule

- For 22S2 support cane
- Ensures good grip while walking

Technical data

Article number	Hole Ø	Size	Colour
23K1=00	14 mm	00	Black
23K1=0	16 mm	0	Black

23K1=2	20 mm	2	Black
23K1=3	22 mm	3	Black

23K2 Rubber capsule, elastic

- For 22K2 and 22K5 forearm crutches
- Ensures good grip while walking

Technical data

Article number	Hole Ø	Colour
23K2=16	16 mm	Grey
23K2=21	21 mm	Grey

23K6 Rubber capsule, elastic

- For 22K2 and 22K5 forearm crutches
- Ensures good grip while walking

Technical data

Article number	Hole Ø	Colour
23K6=16	16 mm	Black
23K6=21	21 mm	Black

23K11 Rubber capsule

- For 22K7 forearm crutch
- Ensures good grip while walking

Technical data

Article number	Hole Ø	Colour
23K11	16 mm	Blue

23K12 Rubber capsule

- For 22K10 forearm crutches for children
- Ensures good grip while walking

Technical data

Article number	Hole Ø	Colour
23K12=R	16 mm	Red
23K12=B	16 mm	Blue

Protective equipment

Ottobock offers protective equipment for products that are hazardous pursuant to the Hazardous Substances Ordinance. This includes products to protect the hands, face, eyes, respiratory tract and other parts of the body. See our safety data sheets for necessary information about suitable protective equipment for each product.

We also offer first-aid equipment for accidents such as an eye flushing station and a first aid kit.

641H1 Disposable gloves

- For single use
- PVC

Technical data

Article number	Weight	Order unit
641H1	0.338 kg	Pair

641H12 Latex gloves for plastering work

- For plastering work
- Powder-free
- One size fits all
- Highly elastic
- High touch sensitivity and secure grip
- Not sterile

Technical data

Article number	Size	Order unit	Package contents
641H12	7 ½	Package	100 piece(s)

641H9 Latex-free examination glove

- Wide range of applications
- 100% nitrile
- Latex-free
- Powder-free
- One size fits all
- Highly elastic
- High touch sensitivity and secure grip
- Not sterile

Technical data

641H18=8	8	Black	Pair
641H18=9	9	Black	Pair
641H18=10	10	Black	Pair

756Y22 Disposable particle filter masks

- For dusty work in industry and trades
- Protection against solid and damp particles
- Protection levels and certifications compliant with EN 149:2001
- Synsafe material for minimum breathing resistance and maximum filter performance
- Lightweight and user-friendly
- Exhalation valve for longer periods of use and increased breathing comfort
- High intake capacity
- High wearer comfort
- Hygienic, individual packaging, thus providing protection against contamination and ensuring availability of clean respiratory protection at all times
- Folded design allows for easy carrying in pockets

Technical data

Article number	Pollutant class	Valves	Weight	Colour
756Y22=1	FFP1(1)	without valve (-)	12 g	Dark blue
756Y22=1V	FFP1(1)	with valve (V)	18 g	Dark blue
756Y22=2	FFP2 (2)	without valve (-)	22 g	Light blue
756Y22=2V	FFP2 (2)	with valve (V)	28 g	Light blue
756Y22=3V	FFP3 (3)	with valve (V)	28 g	White

Practical recommendation

Application			
FFP1:	Up to four times the limit value	Against solid and liquid particles	Milling, grinding, sawing, sweeping floors
FFP2:	Up to 10 times the limit value	Against solid and liquid particles	Woodworking with oak, welding, spraying emulsions with low vapour pressure, coating work, processing carbon fibre and fibreglass materials (e.g. cutting)
FFP3:	Up to 30 times the limit value	Against solid and liquid particles	Spraying varnishes, sanding cured carbon fibre and fibreglass materials

- FFP = filtering face piece

756Y80 Respiratory protection half-mask

- As breathing protection
- For use with particle filters or gas filters and combination filters with a round thread Rd 91
- Does not include filter
- Good fit
- Impermeability of a full mask
- Material of the mask body is comfortable to wear
- Easy to put on and take off thanks to head piece with anti-slip harness
- Doesn't exert pressure when worn under a safety helmet
- Tested in compliance with EN 140, with CE marking

Technical data

Article number	Size	Weight (without filter)
756Y80	Medium/large	0.19 kg

756Z5 Coarse dust filter

- Pre-filter for filters with Rd 91 thread

Technical data

Article number	Accessory for	Weight	Order unit	Package contents
756Z5	756Y80	0.15 kg	Package	50 piece(s)

- Please order separately as required.

756Z4 Combination filter

- Screw filter with Rd 91 thread for 756Y80 respiratory protection half-mask
- Particle filter class A1-P2: A = organic gases, 1 = low retention characteristics, P = particles, 2 = medium retention characteristics
- Tested in compliance with EN 141, with CE marking

Technical data

Article number	Accessory for	Weight	Order unit	Package contents
756Z4	756Y80	0.55 kg	Package	5 piece(s)

- Please order separately as required.

754T3 Carrying case

- Used to securely store the 756Y80 respiratory protection half-mask
- Sturdy design, with shoulder strap

Technical data

Article number	Accessory for	Weight
754T3	756Y80	0.38 kg

- Please order separately as required.

641S5 Disposable aprons

- For single use
- Environmentally friendly
- Ultra-light yet extremely strong
- Wrought
- Impermeable to moisture
- Hygienic

Technical data

Article number	Length	Width	Order unit	Package contents
641S5	140 cm	80 cm	Package	100 piece(s)

641S6 Protective smock

- For protection, ideal for decanting and filling tasks
- Protects against particles and splashed liquids
- TYVEK-PRACTIK material
- 5 snap fasteners, 2 pockets
- Custom sizes available
- Low-lint
- Ultra light
- High tear and abrasion resistance
- Antistatic
- Breathable

Technical data

Article number	Size	Colour
641S6=M	M	White
641S6=L	L	White
641S6=XL	XL	White
641S6=XXL	XXL	White

641S7 Boot cover

- For protecting shoes/boots
- Heavy PE film
- With rectangular pattern
- Elastic strap
- Ankle tie
- Reinforced outsole

Technical data

Article number	Height	Thickness	Order unit
641S7	56 cm	150 µm	Pair

640Z40 Room disinfectant

- For combination with the 758E1 room disinfection unit
- For the elimination of bacteria, viruses and fungi
- 3% hydrogen peroxide with silver complex
- Good material compatibility, including sensitive electronics
- Cleans without residues

Technical data

Article number	Accessory for	Contents
640Z40	758E1	5 l

Information material

646D708=EN	758E1 room disinfection unit product information
------------	--

640Z19 Hand disinfectant

- For hygienic and surgical hand disinfection and for rubbing in
- Comprehensive effectiveness against bacteria, fungi and enveloped viruses
- Also effective against adenovirus, papovavirus and rotavirus
- Excellent immediate effect
- Moisturising
- Very well tolerated even with continuous use
- Ready to use – no wash basin and water required

Technical data

Article number	Net contents
640Z19	500 ml

640F23 Washing lotion

- For thorough and gentle hand and body hygiene
- Advanced, skin-friendly surfactants
- pH of approximately 5.5, ideal for skin
- Free of soap and alkali
- Free of perfume and colorants
- Fast and drip-free dispensing right from the bottle

Technical data

Article number	Net contents
640F23	500 ml

640Z10 Cellona® skin protection cream

- Protection and care cream for use during plastering work
- Easy dosing
- Penetrates quickly
- The skin is covered by a permeable protective care film
- Ideal for highly stressed skin

Technical data

Article number	Net contents	Order unit
640Z10	0.1 l	Tube

Cellona® is a registered trademark of Lohmann.

640Z18 Skin protection 1-2-3 plus

- Care cream and skin protection before and after work
- Effective protection against water-soluble and oil-soluble foreign substances as well as changing agents
- Blocks potential allergens
- Boosts the skin's natural protective functions
- Improves the condition of the skin
- Effective skin care

Technical data

Article number	Net contents
640Z18=0.1	1 l

627B18 Bandages

- 627B18=1: For dressing injuries and wounds on the fingers
- Made of lengthwise and crosswise elastic textile fabric
- Ready to use blanks for immediate application
- Time-saving and hygienic
- Good permanent adhesion
- Secure and firm hold, even under severe strain
- Air permeable
- 627B18=2: For dressing injuries and wounds
- Hygienic box for partial removal
- Reliable adhesion
- Wound pad designed not to stick to the wound
- Perforations for wound aeration

Technical data

Article image	Article number	Description	Length	Width	Order unit	Package contents
	627B18=1	Finger bandage	120 mm	20 mm	Package	50 piece(s)
	627B18=2	Quick wound dressing	5 m	80 mm	Package	1 piece(s)

758X5 First-aid kit

- DIN 13157 C
- With wall mount

Technical data

Article number	Width	Depth	Height	Weight
758X5	260 mm	160 mm	80 mm	1.8 kg

758X11 Eyewash station

- As a first-aid station for flushing eyes to remove foreign substances such as dust and chemicals
- Stationary wall cabinet made of sheet steel
- With special holder for two eye flushing bottles
- Always at hand and ready for use

Technical data

Article number	Length	Width	Depth	Weight	Scope of delivery	Colour
758X11	350	260 mm	100 mm	2.3 kg	Without eyewash bottles	9016 Traffic white

758Y100 Eyewash bottle set

- In case of danger to eyesight due to harmful substances
- Two eye flushing bottles
- Filled with 1,000 ml sterile, physiological, isotonic saline solution (0.9%)
- In accordance with DIN 12930, CE 0562
- Flushes foreign substances from the eye
- Can be used for approx. three years in an unopened condition

Technical data

Article number	Accessory for	Diameter	Height	Weight
758Y100	758X11	80 mm	305 mm	2.3 kg

· Please order separately as required.
