About this catalogue

A changing company

Ottobock develops medical technology products and high quality fitting concepts for people with limited mobility. Driven by a decisive, pioneering spirit, prosthetist Otto Bock founded the Orthopädische Industrie GmbH company in Berlin in 1919. He had the courage to break new ground and set higher standards that would ultimately revolutionise an entire industry. Under the leadership of his son-in-law, Dr. Max Näder, Ottobock grew from a national to an international company. Thanks to his creativity and inventive talent, Max Näder continued to set standards in orthopaedic technology with the development of products such as the modular leg prosthesis system and the myoelectrically-controlled upper limb prosthesis. The company began to establish an international network in 1958, when the first foreign branch was founded in the US. Professor Hans Georg Näder has pursued a consistent, dynamic approach to continue driving this growth, with the result that Ottobock is now a global player and a strong corporate brand. In all aspects of our business, people are always our number one priority: we are committed to helping everyone achieve maximum mobility, independence and quality of life.

"Our objective is to offer maximum mobility, independence and normality to people with physical disabilities. This means all our products have to be judged by the functionality they offer users."

Prof. Hans Georg Näder,
Chairperson of the Management Board,
Ottobock SE & Co. KGaA

Ottobock SE & Co. KGaA is simultaneously a family business and a modern, customer and success-oriented company. A network of sales and service companies in 59 countries ensures that we are close to our customers. This helps us understand user needs and customer requirements and integrate these aspects into the products we develop. With the business areas of Prosthetics, Orthotics, NeuroRehabilitation, Human Mobility (wheelchairs and rehabilitation devices), MedicalCare and Industrials, the broad-based company is capable of offering its customers a nearly unparalleled range of products, coordinated system solutions and extensive services.

We take responsibility for improving the quality of life of people with disabilities by creating solutions that are functionally and technologically outstanding – both now and into the future. The role played by high-quality materials is just as essential as expert craftsmanship when it comes to providing treatment for people with physical limitations. We continuously enhance our materials in order to improve the quality of treatment for patients and make the work of the O&P professional easier. Current legal requirements are always taken into account in this process. In addition to mechanical and chemical characteristics, the biological compatibility of materials is especially important. The quality and safety of materials is the top priority. Based on our practical treatment experience, we have compiled a portfolio of innovative and proven materials to offer you ideal solutions for a wide variety of orthopaedic technology applications.

Always at your service!

At Ottobock, we place great emphasis on CUSTOMER SERVICE. Our highly experienced representatives are standing by – ready to assist you with their comprehensive expertise, inform you about the latest developments and advise you on every aspect of our products. If you have a complex enquiry, our product experts and specialists from Fabrication will be delighted to help you. Our highly qualified sales team can assist with special technical solutions and their on-site implementation. We also offer end-to-end service plans.

About this catalogue

Explanation of symbols

	Two components: A-component, B-component
	Self-adhesive
	Adhesive on both sides
	Washable at 30 °C, gentle cycle
	Washable at 40 °C, gentle cycle
	Washable at 40 °C
	Washable at 60 °C
	Dry flat

Explanations of hazardous substance symbols

Hazard pictogram	Hazard class and hazard category
 GHS01 Exploding bomb	Explosive substances/mixtures and products with explosive materials: - Unstable, explosive - Subclasses 1.1, 1.2, 1.3, 1.4 Self-reactive substances and mixtures, type A Self-reactive substances and mixtures, type B (+ pictogram GHS02) Organic peroxides, type A Organic peroxides, type B (+ pictogram GHS02)
 GHS02 Flame	Flammable gases, hazard category 1 Aerosols, hazard categories 1, 2 Flammable liquids, hazard categories 1, 2, 3 Flammable solids, hazard categories 1, 2 Self-reactive substances and mixtures, types B (+ pictogram GHS01), C, D, E, F Pyrophoric liquids, hazard category 1 Pyrophoric solids, hazard category 1 Substances and mixtures capable of self-heating, hazard categories 1, 2 Substances and mixtures that release inflammable gases in combination with water, categories 1, 2, 3 Organic peroxides, types B (+ pictogram GHS01), C, D, E, F Substances and mixtures that release inflammable gases in combination with water, hazard categories 1, 2, 3
 GHS03 Flame over circle	Oxidising gases, category 1 Oxidising liquids, categories 1, 2, 3 Oxidising solids, categories 1, 2, 3
 GHS04 Gas cylinder	Gases under pressure: - compressed gases - liquefied gases - frozen liquefied gases - dissolved gases
 GHS05 Corrosion	Corrosive to metals, category 1 Corrosive/irritating effect on the skin, categories 1A, 1B, 1C Severe eye damage/eye irritation, category 1
 GHS06 Skull and crossbones	Acute toxicity (oral, dermal, inhalation), categories 1, 2, 3
 GHS07 Exclamation mark	Acute toxicity (oral, dermal, inhalation), category 4 Irritating to skin, category 2 Severe eye irritation, category 2 Skin sensitisation, categories 1, 1A und 1B Specific target organ toxicity (one-time exposure), category 3 Respiratory sensitisation, category 3 narcotic effect Hazardous to the ozone layer, category 1
 GHS08 Health hazard	Respiratory sensitisation, categories 1, 1A und 1B Germ cell mutagenicity, categories 1A, 1B, 2 Carcinogenicity, categories 1A, 1B, 2 Reproductive toxicity, categories 1A, 1B, 2 Specific target organ toxicity (one-time exposure), categories 1, 2 Specific target organ toxicity (repeated exposure), categories 1, 2 Aspiration hazard, category 1
 GHS09 Environment	Hazardous to water - acutely hazardous to water: category acute 1 - hazardous to water, long term: categories chronic 1, 2

The hazard pictograms and the hazard class and hazard category codes printed in the catalogue correspond to the labelling requirements for hazardous substances at the time of printing. They refer to the raw materials in their unprocessed state and give notice of products classified as hazardous. Changes reserved. For further information on the hazard statements, please see the corresponding Ottobock safety data sheet, which is available on request.

otto bock.

Quality for life

For more information on custom solutions for specialist orthopaedic technology operations, please see the 646K10 Consulting, Planning & Equipping catalogue.

Prosthetics

Lower limbs

otto bock.

Quality for life

Information about products in the lower limb prosthetics field is found in the corresponding 646K2 catalogue.

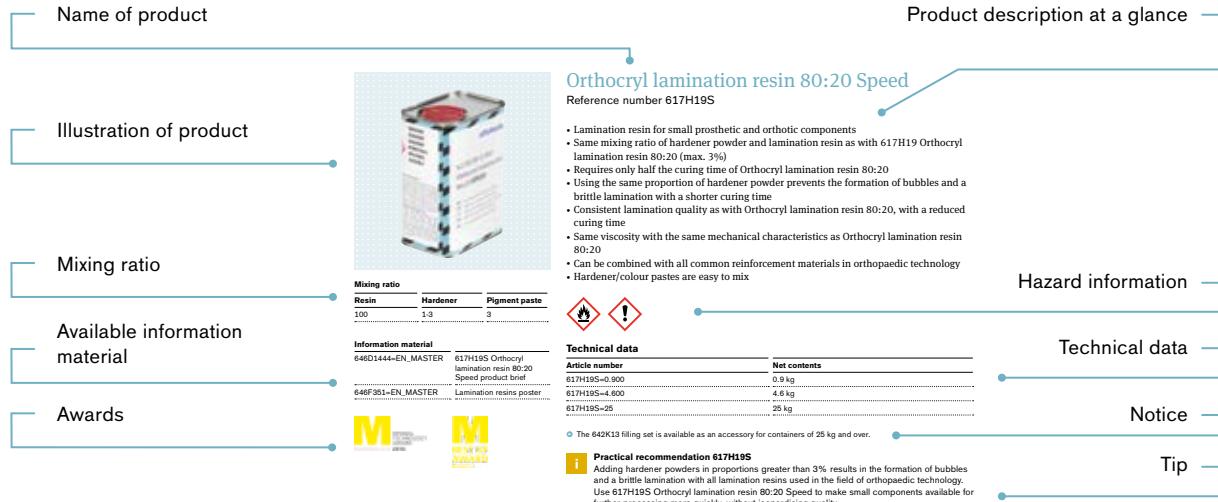

NeuroOrthopaedics

otto bock.

Quality for life

Further information about solutions in the field of NeuroOrthopaedics is found in the 646K4 catalogue.

About this catalogue

Please note that the basic colours listed in the catalogue do not necessarily match the actual colour effect.

Plaster and forming technology

A plaster cast fabricated according to functional aspects is a prerequisite for good contact between the prosthetic socket and the residual limb.

Aside from skilled craftsmanship, the plaster casting technology – from taking impressions on the patient to practical positive modelling – also requires materials of high quality. The plaster used should have a porous structure and yet still be fine-grained. Once final corrections have been made, the plaster positive is sanded down to a smooth finish and thoroughly dried. Only then can the process of preparing a prosthetic socket using the plaster model be started.

Pedilen duplicating foams have proven excellent for precise forming of prosthetic sockets. The hardened, formed part is flexible and can easily be removed from the socket. It retains its shape and dimensions. These characteristics ensure precise and reliable finishing.

Visit www.pem.ottobock.com to obtain up-to-date product information at any time.

Plaster and forming technology

Plaster casting technology

Plaster insulating cream

Reference number 640Z5

- Separating layer for isolating the skin during plaster casting
- Readily visible transfer of markings to the negative with an indelible pencil or grease pencil
- Applied to the skin, an even insulating film forms immediately due to body heat
- Does not smear, drip or stick

Technical data

Article number	Net contents
640Z5=1	1 kg
640Z5=5	5 kg

Plaster parting agent

Reference number 85F1

- For isolating plaster from plaster
- For isolating plaster from thermoplastics

Technical data

Article number	Net contents
85F1	1 l

Processing and usage examples for 85F1

Immerse stockinette directly in 85F1 plaster parting agent and allow to soak, or fill plaster parting agent into a 642B2 measuring cup and immerse stockinette.

Take the stockinette impregnated with plaster parting agent out of the bottle or measuring cup and pull it directly over the model.

Immediately before vacuum forming, impregnate the stockinette with plaster parting agent again and rub it in.

Plaster and forming technology

Plaster casting technology

Biplatix® quick plaster bandage

Reference number 699G*

- For taking a plaster cast
- Consists of a cotton substrate coated with a special natural plaster blend
- Latex-free
- Very good modelling properties
- Minimised dipping losses
- Easy to process
- Ensures high final strength, even with few layers
- Also available as 699G21 longuette for individual cutting
- Dipping water temperature: 20 °C to 25 °C
- Working time: approx. 2 minutes
- Load bearing capacity: partial load after 30 minutes, full load after 48 hours

Technical data

Article number	Length	Width	Order unit	Package contents
699G19=2X6	2 m	6 cm	Package	Package of 20, sealed in packs of 2 bandages

Biplatix® quick plaster bandage

Reference number 699G21

- For taking a plaster cast
- Consists of a cotton substrate coated with a special natural plaster blend
- Latex-free
- Very easy moulding
- Minimised dipping losses
- Easy to process
- Ensures high final strength, even with few layers
- Longuette for individual cutting
- Dipping water temperature: 20 °C to 25 °C
- Working time: approx. 2 minutes
- Load bearing capacity: partial load after 30 minutes, full load after 48 hours

Plaster and forming technology

Plaster casting technology

Elastic plaster bandages

Reference number 699G1

- For taking a plaster cast
- Compression of the elastic bandage begins as the plaster cures
- Curing time adapted to the application
- Coated plaster bandage that leads to less plaster waste, is easier and faster to work with, can take loads earlier and results in a higher final strength of the bandage

Technical data

Article number	Length	Width	Order unit	Package contents
699G1=10-12	3.6 m	10 cm	Package	12 piece(s)
699G1=12-12	3.6 m	12 cm	Package	12 piece(s)

Cellona® plaster bandages

Reference number 699G*

- For taking a plaster cast
- Easy moulding
- The bandage is ready for loading or transportation after only approx. 30 minutes and fully cured after approx. 24 hours
- Coated plaster bandage that leads to less plaster waste, is easier and faster to work with, can take loads earlier and results in a higher final strength of the bandage

Technical data

Article number	Length	Width	Order unit	Package contents
699G3=6-10	2 m	6 cm	Package	10 piece(s)

Cellona® is a registered trademark of Lohmann.

Plaster and forming technology

Plaster casting technology

Information material

646D369=EN_INT

699C6 Dauerbinde® K
product brief

Dauerbinde® K

Reference number 699C6

- For compression after amputation
- To support and relieve the supporting apparatus and locomotor system
- For the fixation of bandages
- For the immobilisation of body parts
- For the reduction of haematomas
- 58% cotton, 24% polyamide, 8% spandex, 10% viscose
- Elasticity approx. 175%
- Easy handling for application of the long stretch bandage
- Strong fabric structure
- High permanent elasticity
- High restoring force
- Washable (can be washed 10 times at 95 °C with mild detergent, dry flat)

Technical data

Article number	Length	Width	Colour	Order unit	Package contents
699C6=10	7 m	10 cm	Beige	Package	10 piece(s)
699C6=12	7 m	12 cm	Beige	Package	10 piece(s)

Stucco plaster

Reference number 699G2

- For fabricating positive moulds for orthopaedic technology
- Coarser grain than alabaster modelling plaster
- Quick hardening
- High strength

Technical data

Article number	Net contents
699G2=25	25 kg

Alabaster modelling plaster

Reference number 699G4

- For fabricating positive moulds for orthopaedic technology
- Made of select raw stones, finely ground and very pure with a high index of whiteness
- After hardening, the surface is smooth and very well suited for modelling

Technical data

Article number	Net contents
699G4=25	25 kg

Plaster and forming technology

Plaster casting technology

Synthetic plaster

Reference number 87G1

- For accurate visual models and mould construction
- Especially pure raw material
- Good water squeeze-out ability and high absorption capacity
- Above average hardness

Technical data

Article number	Net contents
87G1	25 kg

Mixing ratio

Water	Synthetic plaster 87G1
1	3

Porous plaster

Reference number 87G4

- Special plaster for direct contact with silicones in vacuum technology for Pastasil and Chlorosil
- Porous plaster for silicone technology
- Harder than modelling plaster
- Very good stability
- Low water consumption

Technical data

Article number	Net contents
87G4=25	25 kg

Mixing ratio

Water	Porous plaster 87G4
1	1.6

Practical recommendation 87G4

- Mixing time approx. 2–4 minutes.
- To protect the product during use, open or partly used bags should be carefully folded and sealed.

Plaster and forming technology

Plaster casting technology

Information material

646F297=GB

Adhesives, putties,
varnishes and thinners
poster

Orthocryl varnish

Reference number 635L12

- For isolating damp plaster models
- High quality 1-component acrylic-based topcoat for metals, wood and various plastics
- For varnishing sanded laminate surfaces
- Base: synthetic adhesive agent and solvent
- Resistant to touch after approx. 1 hour and fully cured after approx. 24 hours
- Can be coloured with Ottobock pigment pastes
- 634A1 suitable as a thinner

Technical data

Article number	Net contents	Colour
635L12	0.95 kg	Transparent

Thinner and solvent

Reference number 634A1

- For thinning and as a cleaning agent, among other things for 635L8 socket interior varnish and 635L12 Orthocryl varnish
- For washing varnishes
- For cleaning and degreasing, e.g. metals, wood, parchment
- Excellent thinner and solvent

Technical data

Article number	Net contents
634A1=0.950	0.95 kg
634A1=5	5 kg
634A1=10	10 kg

Plaster and forming technology

Plaster casting technology

Copying pens

Reference number 645C1

- For marking on plaster casts and models
- Waterborne paint base

Technical data

Article number	Colour	Order unit	Package contents
645C1	Blue	Package	12 piece(s)

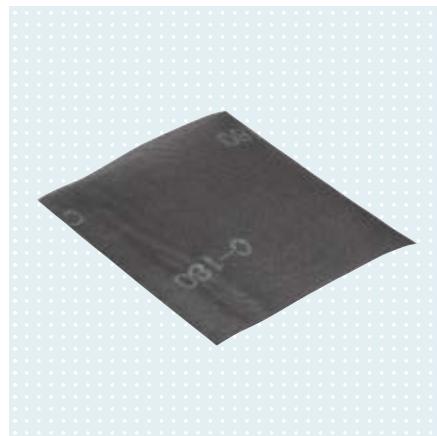

Grease pens

Reference number 645C2

- For marking on damp plaster casts and models
- For marking, e.g. on thermoplastic materials
- For paper, glass, plastic, metal
- Good alternative to permanent makers, since easily removable
- Lead made of high-quality pigments
- Paintable with water

Technical data

Article number	Colour	Order unit	Package contents
645C2=2	Red	Package	12 piece(s)
645C2=3	Green	Package	12 piece(s)
645C2=5	Blue	Package	12 piece(s)

Grit cloth

Reference number 649G22

- Facilitates the simplified surface treatment of plaster models
- Adapts to curvatures during the sanding process

Technical data

Article number	Length	Width	Grain
649G22=100	280 mm	230 mm	100
649G22=180	280 mm	230 mm	180

Plaster and forming technology

Plaster casting technology

Soft Pad sanding paper

Reference number 649G26

- For manual finish grinding of contours, curvatures and hard to reach areas
- Polyurethane foam with aluminium oxide
- Can be used wet and dry
- Highly flexible, does not buckle
- Does not form sharp edges
- Adapts to any contour
- Does not slip in the hand
- Produces a very fine and even finish

Technical data

Article number	Version	Length	Width	Grain	Height	Order unit	Package contents
649G26=320	320	115 mm	140 mm	320 – 400 (fine)	5 mm	Package	20 piece(s)
649G26=400	400	115 mm	140 mm	400 – 500 (super fine)	5 mm	Package	20 piece(s)

Processing and usage examples for 649G26

Compress 649G26 Soft Pad sanding paper and submerge it in water until fully soaked.

With the soaked Soft Pad sanding paper, sand the plaster model using the abrasive side with circular movements and low pressure. (Do not rinse sanding residue under running water!) Soft pad sanding paper can be folded centrally, so that small radii can be worked without damaging the brim.

Soak Soft Pad sanding paper with water again and use the foam side to hone the plaster model in order to close fine pores with the accumulated plaster residue.

Plaster and forming technology

Plaster casting technology

Product example

Cellacast Xtra® synthetic casting tapes

Reference number 699G30

- For immobilisation after fractures, operations and orthopaedic corrections; for treatment of joint and bone disorders and for promoting mobilisation as well as for bandaging child patients
- For making temporary fastenings in prosthetics (socket protection/adapter securing, e.g. check sockets)
- For producing negative casts (orthotics)
- Alternative to the conventional plaster bandage
- Lightweight, permeable to air, X-ray transparent, waterproof and very stable once hardened
- Good adhesion to various materials, e.g. wood, lamination resin, foam, thermoplastic materials

Technical data

699G30=12.5-13-10	3.6 m	12.5 cm	Orange	Package	10 piece(s)

Practical recommendation 699G30

- We recommend using 641H9=2 latex-free examination gloves for processing.
- The bandage can be prevented from sticking to the skin by enveloping all surfaces that come into contact with the synthetic bandage in a body protection stockinette (e.g. 81A1 nylon stockinette) before applying the bandage.

Plaster and forming technology

Plaster casting technology

Plaster sock

Reference number 641T9

- Device to protect the body during plastering
- For forearm fittings
- 88% polyamide and 12% spandex
- Prevents skin stressing
- Suitable for surfaces

Technical data

Article number	For size	Length	Width
641T9=M	M	350 mm	75 mm

Plaster shirt

Reference number 641T10

- Device to protect the body during plastering
- For upper arm residual limbs and shoulder disarticulation
- 88% polyamide and 12% spandex
- Prevents skin stressing
- Suitable for surfaces

Technical data

Article number	For size	Length	Width
641T10=M	M	665 mm	370 mm

Body protection stockinette kit

Reference number 641T3

- Device to protect the body during plastering
- Body protection stockinette and residual limb protection stockinette for transfemoral amputations
- 100% cotton
- Prevents skin stressing
- Suitable for surfaces

Technical data

Article number	Version	Length	Width	Order unit	Package contents
641T3=1	1	16 cm	30 cm	Package	6 piece(s)
641T3=2	2	32 cm	30 cm	Package	6 piece(s)

641T3=4	4	32 cm	38 cm	Package	6 piece(s)

Plaster and forming technology

Plaster casting technology

Body protection stockinette

Reference number 641T2

- Device to protect the body during plastering
- Body protection stockinette for hip disarticulation
- 100% cotton
- Prevents skin stressing
- Suitable for surfaces

Technical data

Article number	Version	Width	Order unit	Package contents
641T2=1	1	Approx. 30 cm	Package	6 piece(s)
641T2=2	2	Approx. 38 cm	Package	6 piece(s)

Stockinette straps

Reference number 21B34

- Attaching the stockinette during plaster casting
- Suspenders, narrow, with clip fasteners
- Nickel-free metal parts
- Washable
- Reusable

Technical data

Article number	Version	Length	Weight
21B34	Rubber strap with clips	120 cm	0.09 kg

Cellona® skin protection cream

Reference number 640Z10

- Protection and care cream for use during plastering work
- Easy dosing
- Penetrates quickly
- The skin is covered by a permeable protective care film
- Ideal for highly stressed skin

Technical data

Article number	Net contents	Order unit
640Z10	0.1 l	Tube

Cellona® is a registered trademark of Lohmann.

Nylon stockinette

Reference number 99B25

- For plaster casting, e.g. for KAFOs
- Suitable as filter tube for vacuum forming
- Polyamide
- Pre-impregnated

Technical data

Article number	Length	Order unit	Package contents
99B25	Approx. 50 cm	Package	10 piece(s)

i Practical recommendation 99B25
Can be individually shortened and welded.

Processing and usage examples for 99B25

Pre-tension the 99B25 nylon stockinette, twist it and then secure it with combination pliers. Using a pair of scissors, cut off the end of the seam.

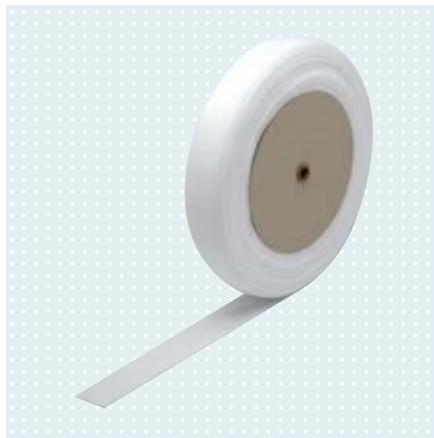

Using the flame of a cigarette lighter, weld the cut surface and then immediately smoothen the weld seam.

With the welded seam turned inwards, pull the sock over the model.

Plaster and forming technology

Plaster casting technology

Nylon stockinette

Reference number 81A1

- For plaster casting, e.g. for KAFOs
- Suitable as a filter and final layer for laminating
- For reinforcing Pastasil
- For vacuum technique with Chlorosil
- Polyamide
- Especially elastic
- Not pre-impregnated

Technical data

Article number	Length	Width	Weight
81A1=8	101.5 m	8 cm	1 kg
81A1=10	84.6 m	10 cm	1 kg
81A1=12	67.8 m	12 cm	1 kg
81A1=15	52.5 m	15 cm	1 kg
81A1=20	48 m	20 cm	1 kg

Practical recommendation 81A1

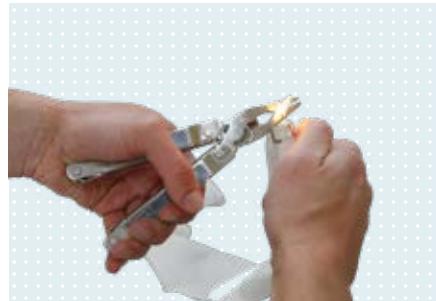

Individually adaptable and weldable.

Processing and usage examples for 81A1

Application example – vacuum forming in orthotics

Pull 81A1 nylon stockinette over the plaster model, cut to length so it is twice the size of the model, twist off and fold back again.

Application example – vacuum forming in prosthetics

Pre-tension the 81A1 nylon stockinette, twist it and then secure it with combination pliers. Using a pair of scissors, cut off the end of the seam. Using the flame of a cigarette lighter, weld the cut surface and then immediately smoothen the weld seam.

With the welded seam turned inwards, pull the sock over the model.

Plaster and forming technology

Plaster casting technology

Alginate

Reference number 87A1

- For detailed impressions of hands, fingers, feet, for epitheses and scar fittings
- Higher accuracy and level of detail than plaster
- Remains elastic after curing

Mixing ratio

Water	Alginate 87A1
1	1

Technical data

Article number	Net contents
87A1	0.45 kg

Practical recommendation 87A1

Mix in 1:1 ratio with cold water and apply as a layer of approx. 1 cm. Reinforce the exterior with a plaster bandage. Once hardened, promptly fill with 87G1/G4 plaster. Immediately after making the Alginate impression, prepare the plaster positive.

Vaseline

Reference number 84V1

- For isolating the skin for plaster casts
- High melting temperature, more effectively keeping the Vaseline in the areas to be isolated
- Especially well suited for taking impressions in warm environments due to the high melting temperature, remaining on the skin for a longer period of time
- Very high purity
- Pasty consistency
- Easy to spread

Technical data

Article number	Net contents	Colour
84V1	0.225 kg	White

Plaster and forming technology

Taking impressions

Information material

647G363

642V15=1/87A5 Impresil
instructions for use

Impresil kit with case

Reference number 642V15

- For producing flexible and clean impressions
- Can be used for taking impressions and correcting trial fittings on the patient in many areas, including finger prostheses, partial hand prostheses, scar compression masks and gloves, forefoot prostheses, transfemoral and transtibial prostheses, liners as well as orthoses
- Enables taking a highly detailed impression of the area in question
- Clean processing under all ambient conditions
- Does not adhere to skin and hair, therefore easy to demould
- Unlike plaster bandages, does not leave residues on the skin
- Can be finished
- Can be sanded
- Saves time and material
- Refillable
- No irritants or allergens, therefore suitable for use on unbroken skin (no open wounds)

Technical data

Article number	Shore hardness	Package contents
642V15=1	30° Shore A	1 dispenser, 5 cartridges, 75 ml each (component A and component B), 20 static mixers

Practical recommendation 642V15

- To prevent the material from dripping, apply a maximum of 5 mm to vertical surfaces during each process step.
- The processing time can be extended by cool storage.

Processing and usage examples for 642V15

Compensation of shape and volume differences in the trial phase of scar compression fittings.

Compensation of shape and volume differences in the trial phase of prosthetic sockets for the upper and lower limbs and in orthotics.

For taking impressions on the patient, e.g. partial hand/forefoot prostheses.

Impresil refill set

Plaster and forming technology

Forming technology

HS parting agent

Reference number 617F8

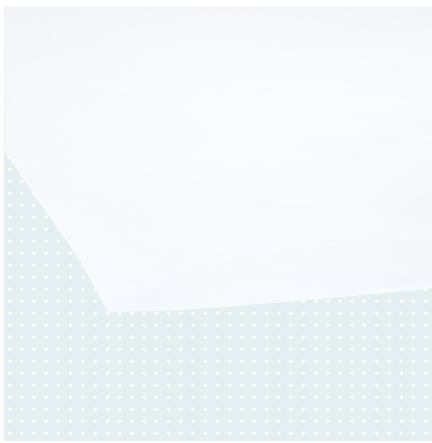

- For isolating the residual limb socket before taking a cast
- Solvent-free

Technical data

Article number	Net contents
617F8=0.150	0.15 kg
617F8=1	0.865 kg
617F8=5	4.6 kg

i Practical recommendation 617F8

- Before taking impressions, the residual limb socket should be dry and free of grease and oil.
- In order to achieve optimum isolation, the residual limb socket should be thinly swashed out with the parting agent or the parting agent should be applied thinly with a cloth and then dried with cold air.

ThermoLyn trolene

Reference number 616T3

- Flexible polyethylene
- Used as a forming and parting material
- For orthotic components that require little stiffness but high flexibility
- For fabricating flaps in socket technology
- Individually cut to size, it can be used as a device for filling work
- Reusable and easy to clean due to its smooth surface
- Opaque
- Good transparency
- Low molecular weight
- Good thermoplastic formability
- High flexibility
- Temperature recommendation: processing temperature 125 °C (convection oven, infrared oven)

Information material

646F265=EN_INT

Thermoplastics poster

Technical data

Article number	Length	Width	Thickness	Colour
616T3=1	1000 mm	500 mm	1 mm	Natural colour
616T3=2	1000 mm	500 mm	2 mm	Natural colour

616T3=2000X1000X3	2000 mm	1000 mm	3 mm	Natural colour
616T3=40X32X2	40 mm	32 mm	2 mm	Natural colour

i Practical recommendation 616T3

Can also be used as a dummy material, e.g. with lamination technique.

Pedilen duplicating foam

Reference number 617H37

- Two-component synthetic material, excellent for quickly taking impressions of prosthetic sockets
- Undercuts are transferred exactly and can be demoulded easily
- Can be finished, for example by sanding, application of 636K17 lightweight putty
- Sensitive to moisture

Technical data

Article number	Net contents
617H37=0.865	0.865 kg
617H37=4.600	4.6 kg
617H37=9.320	9.32 kg

i Practical recommendation 617H37

Immediately after the Pedilen duplicating foam has hardened and cooled, line the cast with an adequately stable layer of plaster. Let this layer harden and fill the model with plaster.

Hardener for Pedilen rigid foams

Reference number 617P21

- Hardener for all Pedilen rigid foams and Pedilen duplicating foams
- Hardener has no influence on the swelling factor, foam determines the swelling factor

Product example

Technical data

Article number	Net contents
617P21=0.865	0.865 kg
617P21=2.300	2.3 kg
617P21=4.600	4.6 kg
617P21=9.320	9.32 kg

See the table below for further mixing ratios. (Duplicating Foam:Hardener; quantities in g)

Residual limb length	Circumference of residual limb (centre)				
	20 cm	30 cm	40 cm	50 cm	60 cm
10 cm	50 : 20	100 : 40	150 : 60	200 : 80	200 : 80
20 cm	100 : 40	150 : 60	200 : 80	300 : 120	400 : 80
30 cm	100 : 40	200 : 80	250 : 100	350 : 140	400 : 160
40 cm	150 : 60	200 : 80	350 : 140	400 : 160	500 : 200

i Practical recommendation 617P21

- Shake for 30 seconds before use.
- For the exact mixing ratio, we recommend the 642B2 measuring cup.

Plaster and forming technology

Forming technology

Pedilen impression foam

Reference number 699S1

- Foamed synthetic material for taking foot impressions in orthopaedic technology, e.g. for insole fabrication
- For making plaster positives from a three-dimensional imprint
- Quick impression taking and easy removal of plaster positives

Technical data

Article number	Length	Width	Thickness	Order unit	Package contents
699S1=25	305 mm	140 mm	4 cm	Package	25 pair
699S1=25-5	305 mm	140 mm	5 cm	Package	25 pair

Thermoplastics

2

Thermoplastics are being used for more and more applications in orthopaedic technology. We offer a wide variety of thermoplastics from polyethylene (PE) and polypropylene (PP) to copolyester (PETG). The polyethylene (PE) and polypropylene (PP) synthetic material groups are particularly well suited for the fabrication of prostheses and orthoses. These materials are particularly lightweight and suitable for functional use in orthopaedic technology. Copolyester (PETG) is also used, for example in the fabrication of self-supporting check sockets.

In this context the Skinguard technology also stands out as one of the highlights in our selection of thermoplastics. Skinguard is an umbrella brand representing technologies with various antibacterial substances based on different active principles. Ottobock Skinguard technology protects the product against a broad spectrum of different microorganisms. The benefit for the user is that odours caused by microbes are considerably reduced and discolouration is decreased. Thus, this technology ensures the extended durability of the product. These additives also enhance the wearing characteristics and skin comfort.

Visit www.pem.ottobock.com to obtain up-to-date product information at any time.

Thermoplastic prepgs

Information material

646F265=EN_INT	Thermoplastics poster
646A174=GB	Prepreg technology product information
646T757=EN	617R15 TP.C and 617R18 TP.C textile technical information

TP.C woven carbon fibre

Reference number 617R15

- For high-strength, very thin orthoses on a thermoplastic material basis
- Matrix: TPU
- Type of fibre: carbon
- Can be thermoformed under pressure
- High tensile strength
- Suitable for surfaces
- Suitable for painting
- Potentially adhesive
- Can be welded with components of the same matrix
- Clean processing
- No special storage requirements (e.g. no cooling)
- Moderate thermoforming temperature: approx. 220 °C

Technical data

Article number	Thickness	Packaging	Area	Fibre weight per unit area	Weave type	Fibre content	Resin content
617R15=1	Approx. 0.25 mm	3 sheets at 1000 x 430 mm per sheet	1.29 m ²	200 g/m ²	Twill 2/2	60 % by weight	40 % by weight
617R15=2	Approx. 0.25 mm	6 sheets at 1000 x 430 mm per sheet	2.58 m ²	200 g/m ²	Twill 2/2	60 % by weight	40 % by weight
617R15=5	Approx. 0.25 mm	12 sheets at 1,000 x 430 mm per sheet	5.16 m ²	200 g/m ²	Twill 2/2	60 % by weight	40 % by weight

TP.C textile

Reference number 617R18

- For prostheses and orthoses on a PP thermoplastic material basis
- Can be used as reinforcement for ThermoLyn PP-H (article no. 616T20=*)
- Matrix: polypropylene
- Type of fibre: aramid
- Can be thermoformed under pressure
- High tensile strength
- Suitable for surfaces
- Can be welded with components of the same matrix
- Clean processing
- No cooling required, but store UV protected
- Moderate thermoforming temperature: approx. 220 °C

Information material

646D1446=EN_INT	617R18 TP.C textile product brief
646F265=EN_INT	Thermoplastics poster
646T757=EN	617R15 TP.C and 617R18 TP.C textile technical information

Technical data

Article number	Length	Width	Fibre weight per unit area	Weave type
617R18=50X2	2 m	50 mm	400 g/m ²	Twill 2/2
617R18=100X2	2 m	100 mm	400 g/m ²	Twill 2/2
617R18=190X2	2 m	190 mm	400 g/m ²	Twill 2/2

Practical recommendation 617R18

The 617R18 TP.C textile is particularly easy to process with the 755E62 and 755E5 Ottobock vacuum forming devices.

Silicone film

Reference number 616F27

- Processing aid for T.P.C
- Generation of a prevacuum between an upper and lower film
- For fixing during heating and forming
- Thermally stable
- Highly elastic
- Processing temperature: max. 240 °C

Technical data

Article number	Length	Width	Thickness	Colour
616F27=5000X1000	5000 mm	1000 mm	1 mm	Transparent

- Temperature-stable adhesive tape (to 200 °C) for vacuum technology
- Base material: polyester
- Water-resistant bonding
- Can be peeled off any time

Technical data

Article number	Length	Width	Thickness	Colour
636D14	66 m	25 mm	50 µm	Red

Information material

646A174=GB

Prepreg technology
product information

647H23

617H46 bonding agent
instructions for use

Bonding agent

Reference number 617H46

- Universally applicable for sealants, adhesives, coatings
- For bonding and repairing vulcanised silicone rubber
- For sealing valves
- For making a vacuum bag out of 616F26 or 616F27 silicone film
- Pasty consistency
- Outstanding adhesive properties

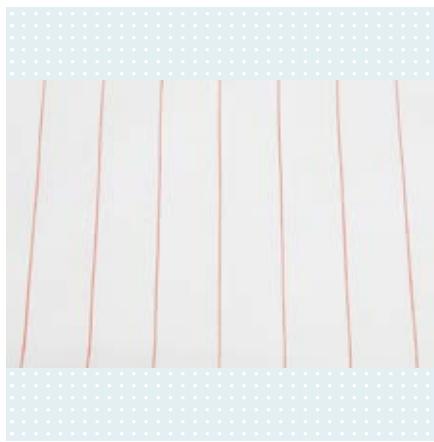

Technical data

Article number	Net contents	Colour
617H46	90 ml	Transparent

Practical recommendation 617H46

During processing, a thin skin will form on the surface of the adhesive after one minute. Any shaping of the silicone adhesive must be completed before this skin starts to form. A wetted modelling instrument or an ice cube have proven useful in shaping transitions.

Peel ply fabric with marker threads

Reference number 616B16

- Processing aid for T.P.C
- Surface protection during lamination work
- Leads to rough, clean surface that is optimally suited for further coating, bonding or painting
- Facilitates optimum strength values
- Excessive resin can escape via the peel ply fabric during the curing phase
- The peel ply fabric can be easily peeled off after curing

ThermoLyn Pedilon

Reference number 616T73

- Low-temperature polyester
- For the fabrication of orthoses without preparing a plaster cast or model
- Mobile applications, making it ideal for hospital use and immediate treatment of patients
- Thermoformable at low temperatures
- Eliminates the time-consuming tasks of fabricating casts and models
- Very high adhesive strength
- High resilience when reheated
- Temperature recommendation: heat in water bath at 60 °C

Processing and usage examples for 616T73

Place the pre-cut ThermoLyn Pedilon into warm water at approx. 60 °C in the 759P1=220 water pan. The material becomes transparent when it reaches its moulding temperature. Remove the pre-cut material with a wood spatula and allow the water to drip off.

Moisten hand and forearm thoroughly with cold water. Place the warm ThermoLyn Pedilon over the hand and forearm.

Final product: hand positioning orthosis

ThermoLyn trolene

Reference number 616T3

- Flexible polyethylene
- Used as a forming and parting material
- For orthotic components that require little stiffness but high flexibility
- For fabricating flaps in socket technology
- Individually cut to size, it can be used as a device for filling work
- Reusable and easy to clean due to its smooth surface
- Opaque
- Good transparency
- Low molecular weight
- Good thermoplastic formability
- High flexibility
- Temperature recommendation: processing temperature 125 °C (convection oven, infrared oven)

Product example

ThermoLyn PP-C

Reference number 616T120

- Polypropylene copolymer
- Possible applications: AFOs, KAFOs, FOs, TLSOs
- Wide range of applications
- Lightweight
- Good rigidity
- High impact strength
- Low tendency to white crack
- Good thermoforming properties
- Good shaping to orthotic joints
- Good welding characteristics
- Minor shrinkage: approx. 5%
- Easy to dye with Ottobock thermopapers
- Temperature recommendation: 185 °C (convection oven, infrared oven)

Technical data

616T183 ThermoLyn
PETG clear technical
information

ThermoLyn PETG clear

Reference number 616T183

- Copolyester
- For all liner fittings with/without distal connection
- Used as the first layer in definitive sockets, e.g. for Harmony fittings
- For transfemoral fittings with/without liners
- Highly transparent
- Shatterproof
- High impact strength
- Minor shrinkage: approx. 1%
- After transfer of the check socket, no drying of the plaster is required
- Moist plaster requires no isolation for laminating
- PETG replaces the inside sheeting
- Very smooth inner surface
- Makes donning easier and increases the service life of the liner/soft socket/sealing sleeve
- Temperature recommendation: 170 °C (convection oven), 160 °C (infrared oven)

Technical data

Article number	Length	Width	Thickness	Colour
616T183-3	400 mm	400 mm	3 mm	Clear
616T183-5	400 mm	400 mm	5 mm	Clear

i Practical recommendation 616T183

- Store in a dry place, protect from moisture. Pre-dry at 55 °C in a convection oven prior to processing if necessary.
- Coat the model with 633F50 silicone grease.
- We recommend hot air for working edges.

Processing and usage examples for 616T183

Infrared oven

(e.g. 701E40=S) Preheat to 160 °C:

a) For residual limbs up to 21 cm in length:

Clamp 3 mm PETG in smaller 755X84=260x8 frame (diameter 260) in combination with 755T4=360 and heat 2:45 min

b) For residual limbs over 21 cm in length:

Clamp 5 mm PETG in 755T4=360 vacuum forming frame (diameter 360) and heat 4:10 min

Convection oven

(e.g. 701E7=2) Preheat to 170 °C:

a) For residual limbs up to 21 cm in length:

Clamp 3 mm PETG in small 755X84=260x8 frame (diameter 260) in combination with 755T4=360 and heat 12 min

b) For residual limbs over 21 cm in length:

Clamp 5 mm PETG in small 755T4=360 vacuum forming frame (diameter 360) and heat 13 min

Select smallest possible vacuum forming plate.

We recommend using the following device:

Vacuum pipe with two exchangeable 755X220 vacuum forming plates (diameter 260 mm and 360 mm)

Remove the PETG sheet from the oven very quickly and immediately vacuum form with a high vacuum (if necessary, shape undercuts using a hot air gun, e.g. 756E9).

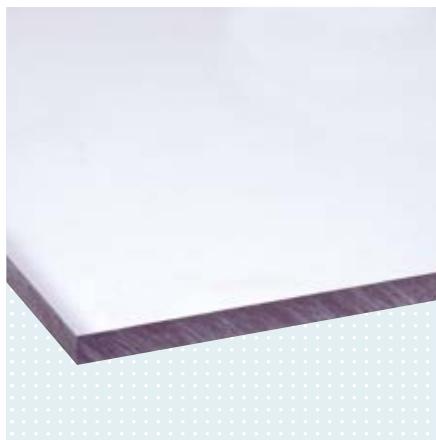

Equipment:

755E80 Mobile vacuum pump with tank

641H13 Heat protection glove

- For fabricating highly flexible soft-walled inner sockets for the thigh
- Very high flexibility
- For more comfortable socket brims
- Minor shrinkage: approx. 1.6%
- High surface quality
- Comfortable to wear
- Easy to sand
- Washable
- Temperature recommendation: 150 °C (convection oven, infrared oven)

ThermoLyn supra flexible

Reference number 616T*

- Ethylene vinyl acetate
- Insoles
- Flexible diagnostic and definitive sockets for foot prostheses
- Flexible diagnostic and definitive sockets for lower and upper limb prostheses
- Waterproof splints and crutches
- Flaps and fasteners for orthoses
- Flexible socket brim design for orthoses
- Permanently elastic
- Shape-retentive
- High friction
- More comfortable socket edge design
- Comfortable to wear
- Large choice of colours
- Washable
- Subsequent welding possible
- Can be bonded to itself when heated
- Temperature recommendation: 80–100 °C (infrared oven), 100–120 °C (convection oven)

Practical recommendation 616T*

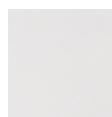

- Plaster model: smooth.
- Do not isolate the plaster model (e.g. with silicone grease).
- Short transport distances from oven to model.
- Do not use talcum powder.
- Use clean and smooth Teflon foil as underlay when heating in oven.
- When lamination discs, reinforcement strips etc. are subsequently welded to the model, keep model in vacuum conditions to ensure dimensional stability.
- Avoid air pockets when welding the material.

Polyester knit fabric

Reference number 616G26

- For reinforcing Orthocryl soft resins, silicones and flexible thermoplastics
- Stretchable in one direction
- Stable in one direction
- High resistance to tearing

Technical data

Article number	Length	Width
616G26=150-1	1100 mm	1500 mm

Silicone film

Reference number 616F26

- Processing aid for T.P.C
- Generation of a prevacuum between an upper and lower film
- For fixing during heating and forming
- As separating film for the controlled partial welding of thermoplastics
- Thermally stable
- Limited elasticity
- Processing temperature: max. 240 °C

Technical data

Article number	Length	Width	Thickness	Colour
616F26=5000X1200	5000 mm	1200 mm	0.5 mm	Red-brown

Thermoplastics

Thermoplastics

Double-sided adhesive tape

Reference number 633D5

- For inner socket – outer frame connection, for example
- Not suitable for reinforcement materials
- Base material: PE sheeting
- Double-sided acrylic adhesive material
- Transparent (covered with red separating film)
- Good frame fixation (no hook-and-loop closure required)
- High adhesive strength on various materials, such as plastics
- Good temperature resistance

Technical data

Article number	Length	Width	Colour	Order unit
633D5=19	50 m	19 mm	Transparent	Roll
633D5=50	50 m	50 mm	Transparent	Roll

Processing and usage examples for 633D5

Clean the surfaces that are to be bonded (here the inner socket and the frame) with 634A58 isopropyl alcohol. Cut 633D5 double-sided adhesive tape to the required length.

Position precut adhesive tape in the corresponding locations and press into place.

Join and position the frame and inner socket. Compress the inner socket and remove the red protective film from the double-sided adhesive tape. Firmly press the two components together at the locations being bonded.

Plaster parting agent

Reference number 85F1

- For isolating plaster from plaster
- For isolating plaster from thermoplastics

Technical data

Article number	Net contents
85F1	1 l

Processing and usage examples for 85F1

Immerse stockinette directly in 85F1 plaster parting agent and allow to soak, or fill plaster parting agent into a 642B2 measuring cup and immerse stockinette.

Take the stockinette impregnated with plaster parting agent out of the bottle or measuring cup and pull it directly over the model.

Immediately before vacuum forming, impregnate the stockinette with plaster parting agent again and rub it in.

Thermoplastics

Thermoplastics

Nylon stockinette

Reference number 99B25

- For plaster casting, e.g. for KAFOs
- Suitable as filter tube for vacuum forming
- Polyamide
- Pre-impregnated

Technical data

Article number	Length	Order unit	Package contents
99B25	Approx. 50 cm	Package	10 piece(s)

i Practical recommendation 99B25
Can be individually shortened and welded.

Processing and usage examples 99B25

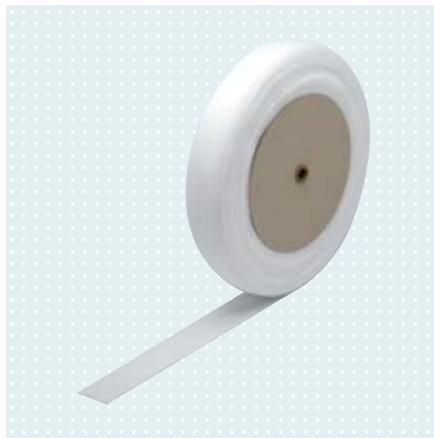

Pre-tension the 99B25 nylon stockinette, twist it and then secure it with combination pliers. Using a pair of scissors, cut off the end of the seam.

Using the flame of a cigarette lighter, weld the cut surface and then immediately smoothen the weld seam.

With the welded seam turned inwards, pull the sock over the model.

Nylon stockinette

Reference number 81A1

- For plaster casting, e.g. for KAFOs
- Suitable as a filter and final layer for laminating
- For reinforcing Pastasil
- For vacuum technique with Chlorosil
- Polyamide
- Especially elastic
- Not pre-impregnated

Technical data

Article number	Length	Width	Weight
81A1=8	101.5 m	8 cm	1 kg
81A1=10	84.6 m	10 cm	1 kg
81A1=12	67.8 m	12 cm	1 kg
81A1=15	52.5 m	15 cm	1 kg
81A1=20	48 m	20 cm	1 kg

Practical recommendation 81A1

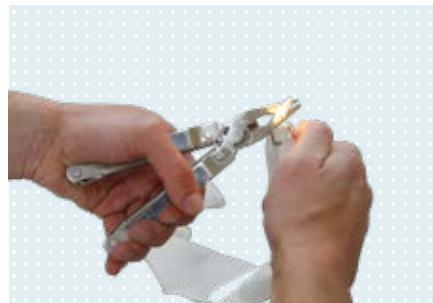

Individually adaptable and weldable.

Processing and usage examples for 81A1

Application example – vacuum forming in orthotics

Pull 81A1 nylon stockinette over the plaster model, cut to length so it is twice the size of the model, twist off and fold back again.

Application example – vacuum forming in prosthetics

Pre-tension the 81A1 nylon stockinette, twist it and then secure it with combination pliers. Using a pair of scissors, cut off the end of the seam. Using the flame of a cigarette lighter, weld the cut surface and then immediately smoothen the weld seam.

With the welded seam turned inwards, pull the sock over the model.

Silicone grease

Reference number 633F50

- Ideal lubricating layer during vacuum forming on all plaster models (also possible without sock)
- Simplifies the fabrication of consistent wall thicknesses
- Thixotropic
- Air permeable
- Not hardening

Technical data

Article number	Net contents
633F50=1	1 kg
633F50=10	10 kg

Processing and usage examples for 633F50

Remove a quantity of 633F50 silicone grease that is sufficient for the model and apply a thin, even layer to the model.

Silicone parting agent

Reference number 519L5

- For parting, gliding and lubricating
- Protects rubber, plastics and elastomers from becoming brittle
- Compact and solvent-free
- CFC-free

Technical data

Article number	Net contents
519L5	0.4 l

Lamination technology

3

From traditional stockinette to modern carbon and fibreglass materials for lamination to proven and innovative lamination resins, we offer everything from a single source.

Reinforcement materials such as fibre composites are of special interest, since considerable weight reductions can be realised through their use with simultaneous high strength and stiffness.

Ottobock lamination resins were developed especially for the lamination technique and, in combination with our proven reinforcement materials, facilitate treatments of the highest quality in prosthetics and orthotics. Lamination resins feature high strength with low weight and dimensional stability with low wall thickness. Acrylic, epoxy and vinyl ester resins are particularly well suited for use in orthopaedic technology. Orthocryl acrylic resins are easy to mix, only require a short setting time and can be processed quickly. Orthopox epoxy resins on the other hand have to be mixed exactly and ensure the best bond with reinforcement materials. As a complement to our Orthopox liquid resin, the Ottobock resin film simplifies the lamination process and facilitates a more efficient flow of work, since the required component characteristics are guaranteed thanks to a precise and adjustable resin content. Orthovinyl vinyl ester resins bond to carbon fibres more effectively than an acrylic resin due to the structure. This achieves a high degree of stiffness at a low laminate wall thickness, which falls between that of an acrylic resin and that of an epoxy resin. Orthovinyl can also be processed as quickly and easily as an acrylic resin.

Visit www.pem.ottobock.com to obtain up-to-date product information at any time.

Lamination technology

Reinforcement materials

Sample set of carbon profile bars

Reference number 646M39

- 3 carbon profile bars (0°, 45° und 90°)
- The mechanical properties of the carbon fabric are dependent on the direction in which a force is applied. Under tensile load in the warp or weft direction, woven fabrics stretch only slightly. But if the tensile load is applied diagonally, e.g. at an angle under 45°, woven carbon fabrics are highly stretchable. The direction of the fibres should be adjusted according to the load.

Technical data

646M39

Information material

646A174=GB

Prepreg technology
product information

Fibreglass roving

Reference number 699B1

- For reinforcement in lamination work
- Unidirectional
- High strength and stiffness in the longitudinal direction of the fibres

Technical data

Article number

699B1

Length

200 m

Weight

0.5 kg

Practical recommendation 699B1

Suitable for the fixation of components such as adapters in the laminate, e.g. by sewing.

Product example

Carbon UD stockinette

Reference number 616H20

- For axial reinforcement (bending forces) of thin-walled, high-strength laminates
- Designed especially for use with acrylic resins (e.g. 617H55 C-Orthocryl)
- The elastic weft thread allows the carbon threads to maintain their 0° orientation, regardless of the diameter
- No elaborate cutting or forming work is necessary with formed models
- The elastic weft thread facilitates forming the stockinette to the model and saves valuable working time
- Not suitable for surfaces

Technical data

Article number	Length	Width
616H20=20X5	5 m	20 mm
616H20=40X5	5 m	40 mm
616H20=70X5	5 m	70 mm
616H20=100X5	5 m	100 mm
616H20=150X5	5 m	150 mm

Practical recommendation 616H20

If the laminate is to have radial strength (torsional forces), additional reinforcement materials are required. In this case we recommend using our 616G15 woven carbon fibre stockinette.

Lamination technology

Reinforcement materials

Woven fibreglass stockinette

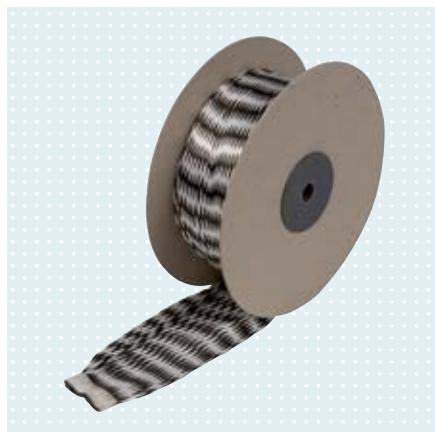

Reference number 616G13

- For fabricating thin-walled laminates
- Braid
- High torsional strength in laminates
- Torsion can be influenced by different circumferences (ideal angle: 45°)
- Good draping characteristics

Technical data

Article number	Length	Width	Weight
616G13=6	12.5 m	6 cm	1 kg
616G13=8	8 m	8 cm	1 kg
616G13=10	7 m	10 cm	1 kg

Woven carbon fibreglass stockinette

Reference number 616G14

- For fabricating thin-walled laminates
- Braid
- Combines the properties of carbon and glass fibres
- Increased torsional strength in laminates
- Torsion can be influenced by different circumferences (ideal angle: 45°)

Technical data

Article number	Length	Width	Weight
616G14=8	11 m	8 cm	1 kg
616G14=10	10 m	10 cm	1 kg

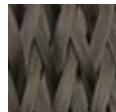

All Ottobock reinforcement materials are photographed from top to bottom. Lengthwise (warp), crosswise (weft)

Woven carbon fibre stockinette

Reference number 616G15

- For fabricating rigid lamination resin side struts, clasps and connectors
- For fabricating thin-walled, high-strength laminates
- Braid
- Very high torsional strength in laminates
- Torsion can be influenced by different circumferences (ideal angle: 45°)

Information material

647G51	616G12 woven carbon fibre processing instructions
--------	---

Processing and usage examples for 616G12

Check that the weft thread of the 616G12 woven carbon fibre is running a straight course by pulling out a weft thread running close to the cut edge.

Pull the woven carbon fibre straight to such a degree that the resulting mesh loop runs 90° to the warp. Using 616F10 double-sided PVC adhesive tape, tape over the resulting mesh loop and cut the woven carbon fibre centrally along the adhesive tape. After these preparations have been completed, tailored carbon fibre sections can be made that have a 90° alignment between the warp and the weft. In this way the carbon fibres are not only aligned in accordance with the arising forces, they can also absorb these optimally.

Position the tailored carbon fibre sections on those parts of the reinforcements that are to be strengthened while pre-tensioning them in the fibre directions.

Lamination technology

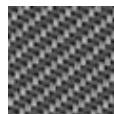

Reinforcement materials

Woven carbon fibre

Reference number 616G12

- For partial high-strength laminate reinforcements
- Processability including the woven edge is advantageous (edges are not sewn), because masking is not necessary
- Good absorption of all Ottobock lamination resins
- Good draping characteristics

Technical data

Article number	Length	Width	Weight per unit area	Weave type

Anchor preform

Reference number 5Z15

- For reinforcement of the socket adapter
- Can be combined with 4R41, 4R42, 4R42=1, 4R43, 4R89, 4R111, 4R111=T, 4R111=N, 4R116, 4R116=T, 4R117, 4R117=T, 4R119=NT, 4R119=T, 4R119, 4R119=N, 4WR95=1, 4WR95=2
- Quick, clean and easy reinforcement
- Preform with optimal fibre orientation in the direction of force
- Load-bearing fibre strands stay in place
- Saves time during the reinforcement process
- Very low material waste
- Good draping characteristics
- Simplified quantity control in comparison to rolled goods
- Good absorption of Ottobock lamination resins
- Can be combined with all Ottobock reinforcement materials

Technical data

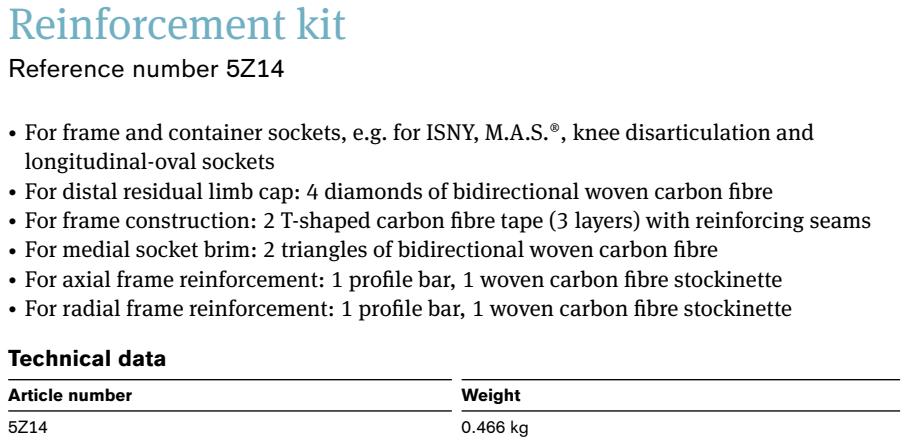

Article number	Order unit	Package contents
5Z15	Package	2 x anchor preform

- Please note that the 5R2, 5R2=C, 4R63, 4R68 and 4R100 socket adapters may not be used with the 5Z15 anchor preform.

container preform product
brief

Frame preform

Reference number 5Z16

- For use in socket fabrication
- Can be combined with 4R41, 4R42, 4R42=1, 4R43, 4R89, 4R111, 4R111=T, 4R111=N, 4R116, 4R116=T, 4R117, 4R117=T, 4R119=NT, 4R119=T, 4R119, 4R119=N, 4WR95=1, 4WR95=2
- Tested for users up to 150 kg
- Clean and easy processing
- Pre-determined layer structure
- Simplified fabrication and less time to fabricate a socket
- Minimises waste of expensive reinforcement materials
- Simplified quantity control in comparison to rolled and sheet goods

Technical data

	Article number	Dimension A	Dimension B	Dimension C	Package contents	Quantity unit
	5Z16=280X700X150	280 mm	370 mm	700 mm	Three preforms for fabricating a prosthetic socket	Set
	5Z16=350X700X150	350 mm	500 mm	700 mm	Three preforms for fabricating a prosthetic socket	Set

- Apply the M/L section with the short side oriented medially. Round the edges when shortening to the correct length.
- Wrap around the radial section: position the reinforcement triangle medially in the perineum with the point towards the end of the residual limb. The radial section can be used for left-hand (carbon on the outside) and right-hand (carbon on the inside) sockets. Perform the first casting with the M/L section and the radial section.
- Attach the anchor and position the faces of the star so they are centred over the anchor arms. Perform the second casting with the anchor and star.

Practical recommendation 5Z16

- Use 636K40 spray adhesive for easy handling and fast adhesion to the plaster model.
- When positioning the star, pull the rounded corners laterally in the medial direction so they lie horizontally against the residual limb model.
- Trim the ends of the M/L section and the radial section using sharp scissors so they fit onto the residual limb model.

Pedilen duplicating foam

Reference number 617H37

- Two-component synthetic material, excellent for quickly taking impressions of prosthetic sockets
- Undercuts are transferred exactly and can be demoulded easily
- Can be finished, for example by sanding, application of 636K17 lightweight putty
- Sensitive to moisture

Technical data

Article number	Net contents
617H37=0.865	0.865 kg
617H37=4.600	4.6 kg
617H37=9.320	9.32 kg

i Practical recommendation 617H37

Immediately after the Pedilen duplicating foam has hardened and cooled, line the cast with an adequately stable layer of plaster. Let this layer harden and fill the model with plaster.

Pedilen rigid foam 100

Reference number 617H11

- For fabricating rehabilitation seating systems and for functional cosmeses
- Fast and safe processing with hand mixing procedure
- Precise taking of impressions
- Indentation hardness (at 10% compression): approx. 0.63 N/mm²
- No shrinkage
- Easy to refinish in cured condition, e.g. through sanding, lamination
- Sensitive to moisture

Pedilen foams

Mixing ratio	
Pedilen flexible foam 300 617H42	Hardener for Pedilen flexible foams 617P32
100	50

Pedilen flexible foam 300

Reference number 617H42

- For making flexible body compensations with high mechanical strength, e.g. for partial hand replacements
- Fast and safe processing with hand mixing procedure
- Precise taking of impressions
- Indentation hardness (at 10% compression): approx. 0.08 N/mm²
- No shrinkage
- Easy to refinish in cured condition, e.g. through sanding
- Sensitive to moisture

Technical data

Article number	Net contents	Expansion factor	Weight per unit volume
617H42=0.865	0.865 kg	4.7	approx. 300 kg/m ³
617H42=4.600	4.6 kg	4.7	approx. 300 kg/m ³

i Practical recommendation 617H42

- Shake for 30 seconds before use.
- Bonds well with 636W71 CP contact adhesive.

Hardener for Pedilen flexible foams

Reference number 617P32

- Hardener for 617H35 Pedilen flexible foam 150 and 617H42 Pedilen flexible foam 300
- Hardener has no influence on the swelling factor, foam determines the swelling factor

Technical data

Article number	Net contents
617P32=0.865	0.865 kg

i Practical recommendation 617P32

- Shake for 30 seconds before use.
- Mixing ratio hardener: A-component varies. For the exact mixing ratio, we recommend the 642B2 measuring cup.

Mixing ratio

Flexible foam, component A 617D50	Flexible foam, component B 617D51
100	40

Flexible foam, component A

Reference number 617D50

- For the production of 2-component PUR foam
- For custom orthopaedic components made to measure
- Fast and safe processing with hand mixing procedure
- Low weight
- Precise taking of impressions
- Indentation hardness (at 10% compression): approx. 0.01 N/mm²
- No shrinkage
- Easy to refinish in cured condition, e.g. through sanding
- Sensitive to moisture

Technical data

Article number	Net contents	Expansion factor	Weight per unit volume
617D50	0.865 kg	10	approx. 120 kg/m ³

i Practical recommendation 617D50

- Shake for 30 seconds before use.
- Bonds well with 636W71 CP contact adhesive.

Mixing ratio

Flexible foam, component A 617D50	Flexible foam, component B 617D51
100	40

Flexible foam, component B

Reference number 617D51

- For the production of 2-component PUR foam
- For custom orthopaedic components made to measure
- Fast and safe processing with hand mixing procedure
- Low weight
- Precise taking of impressions
- Indentation hardness (at 10% compression): approx. 0.01 N/mm²
- No shrinkage
- Easy to refinish in cured condition, e.g. through sanding
- Sensitive to moisture

Technical data

Article number	Net contents	Expansion factor	Weight per unit volume
617D51	0.865 kg	10	approx. 120 kg/m ³

i Practical recommendation 617D51

- Shake for 30 seconds before use.
- Bonds well with 636W71 CP contact adhesive.

Lamination technology

Pedilen foams

Information material

646F265=EN_INT

Thermoplastics poster

ThermoLyn trolene

Reference number 616T3

- Flexible polyethylene
- Used as a forming and parting material
- For orthotic components that require little stiffness but high flexibility
- For fabricating flaps in socket technology
- Individually cut to size, it can be used as a device for filling work
- Reusable and easy to clean due to its smooth surface
- Opaque
- Good transparency
- Low molecular weight
- Good thermoplastic formability
- High flexibility
- Temperature recommendation: processing temperature 125 °C (convection oven, infrared oven)

Technical data

Article number	Length	Width	Thickness	Colour
616T3=1	1000 mm	500 mm	1 mm	Natural colour
616T3=2	1000 mm	500 mm	2 mm	Natural colour
616T3=2000X1000X2	2000 mm	1000 mm	2 mm	Natural colour
616T3=2000X1000X3	2000 mm	1000 mm	3 mm	Natural colour
616T3=40X32X2	40 mm	32 mm	2 mm	Natural colour

Practical recommendation 616T3

Can also be used as a dummy material, e.g. with lamination technique.

Measuring cup

Reference number 642B2

- Polypropylene measuring cup
- Scaling facilitates a precise mixing ratio
- The 1000-g cup is especially well suited for laminating pelvic sockets and orthoses, and for taking impressions and foaming with large volumes
- Reusable

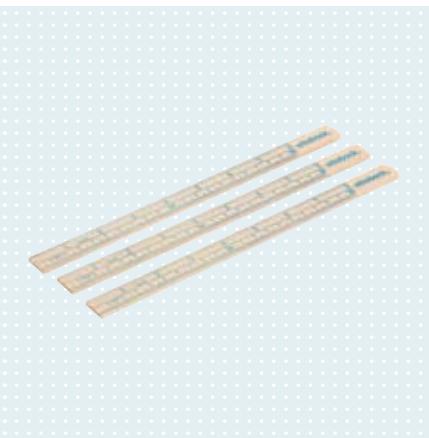

Technical data

Article number	Volume	Minimum order quantity
642B2=50	50 g	100 pieces
642B2=100	100 g	100 pieces
642B2=200	200 g	100 pieces
642B2=400	400 g	100 pieces
642B2=1000	1000 g	100 pieces

Practical recommendation 642B2

- The varying density of the foam and hardener results in a precise mixing ratio of 1:1. We recommend using a measuring cup to ensure this mixing ratio.
- Add slightly more than the required amount of liquid foam, since a small amount often remains in the measuring cup.

Wooden spatula

Reference number 699Y3

- Versatile measuring tool
- Imprint in mm and inch
- Rectangular shape facilitates thorough mixing in the bottom and edge areas, for example with lamination resins

Technical data

Article number	Length	Width	Height	Minimum order quantity
699Y3	270 mm	18 mm	2.7 mm	100 pieces

Practical recommendation 699Y3

Add slightly more than the required amount of liquid foam since a small amount always remains on the wooden spatula.

Lamination technology

Hardening powder

Reference number 617P37

- For Orthocryl resins and 617H500 Orthovinyl resin as well as 636K18 Orthocryl sealing resin compact adhesive
- Includes 1 g measuring spoon
- Mixes well with Orthocryl and Orthovinyl resins
- Easy dosing
- Reduces the flow properties of Orthocryl and Orthovinyl resins

Technical data

Article number	Net contents
617P37=0.150	0.15 kg

i Practical recommendation 617P37

Applies to all Orthocryl resins: add max. 3% 617P37 hardening powder.

Lamination technology

Acrylic sealing resins

Talcum powder pharma

Reference number 639A1

- Lightweight filler for sealing resin
- For powdering plaster models
- Pharmaceutical quality
- Powder form

Technical data

Article number	Net contents
639A1=1	1 kg

Microballoon

Reference number 617Z8

- Very lightweight filler for sealing resin
- Powder form
- Density reduction and therefore weight reduction of the end product

Technical data

Article number	Net contents	Colour
617Z8=1	1 kg	White

Mixing ratio

Resin	Hardener	Pigment paste
100	1-3	3

Information material

646D1444=EN_MASTER	617H19S Orthocryl lamination resin 80:20 Speed product brief
646F351=EN_MASTER	Lamination resins poster

Orthocryl lamination resin 80:20 Speed

Reference number 617H19S

- Lamination resin for small prosthetic and orthotic components
- Same mixing ratio of hardener powder and lamination resin as with 617H19 Orthocryl lamination resin 80:20 (max. 3%)
- Requires only half the curing time of Orthocryl lamination resin 80:20
- Using the same proportion of hardener powder prevents the formation of bubbles and a brittle lamination with a shorter curing time
- Consistent lamination quality as with Orthocryl lamination resin 80:20, with a reduced curing time
- Same viscosity with the same mechanical characteristics as Orthocryl lamination resin 80:20
- Can be combined with all common reinforcement materials in orthopaedic technology
- Hardener/colour pastes are easy to mix

Technical data

Article number	Net contents
617H19S=0.900	0.9 kg
617H19S=4.600	4.6 kg
617H19S=25	25 kg

- The 642K13 filling set is available as an accessory for containers of 25 kg and over.

i Practical recommendation 617H19S

Adding hardener powders in proportions greater than 3% results in the formation of bubbles and a brittle lamination with all lamination resins used in the field of orthopaedic technology. Use 617H19S Orthocryl lamination resin 80:20 Speed to make small components available for further processing more quickly, without jeopardising quality.

646F351=EN_MASTER	Lamination resins poster

Orthocryl lamination resin 80:20 PRO

Reference number 617H119

- Lamination resin for the fabrication of components with a low proportion of resin
- Lower viscosity with the same mechanical characteristics as 617H19
- Better penetration of the reinforcement
- Faster evacuation of air from the reinforcement
- The air that is evacuated and subsequently rises can escape from the resin during lamination and is not locked into the resin. This increases the quality and stability of the end result
- Hardener/colour pastes are easier to mix

Technical data

Article number	Net contents
617H119=0.900	0.9 kg
617H119=4.600	4.6 kg

646F351=EN_MASTER	Lamination resins poster

Orthovinyl lamination resin

Reference number 617H500

- Lamination resin for high-strength components
- Laminating resin on vinyl ester basis
- The laminate achieves a verified biocompatible state following sufficient tempering (see processing instructions)
- The resin exhibits a slightly yellow tinge in the liquid state which is not, however, visible in the laminate
- As with an acrylic resin, the curing time can be reliably determined based on the added hardener and the temperature
- Higher degree of stability than an acrylic resin due to better bonding to the reinforcement fibres
- High stiffness of the laminate with low wall thickness
- Bonds to carbon fibre more effectively than an acrylic resin
- Very easy to sand
- Excellent balance between matrix and reinforcement material
- Can be coloured with Ottobock pigment pastes
- Small number of layers possible
- Very good impregnation, especially of carbon fibres
- Can be combined with all common Ottobock carbon and glass fibres

Technical data

Article number	Net contents
617H500=0.900	0.9 kg
617H500=4.600	4.6 kg

i Practical recommendation 617H500

- For sheet casting, use only 616F4 PVA film or 99B81 PVA bags.
- Use 617P37=0.150 hardening powder.
- Do not use thinners.
- Final annealing: one hour per 1 mm laminate thickness at 80 °C.
- Use 636K8 Plastaband to seal the joints.
- Can be processed as quickly and easily as an acrylic resin.

Hardening powder

Reference number 617P37

- For Orthocryl resins and 617H500 Orthovinyl resin as well as 636K18 Orthocryl sealing resin compact adhesive
- Includes 1 g measuring spoon
- Mixes well with Orthocryl and Orthovinyl resins
- Easy dosing
- Reduces the flow properties of Orthocryl and Orthovinyl resins

Technical data

Article number	Net contents
617P37=0.150	0.15 kg

Information material

646D1445=EN_MASTER	617H5 Orthopox epoxy resin product brief
646F351=EN_MASTER	Lamination resins poster

Orthopox epoxy resin

Reference number 617H5

- For lightweight, thin-walled, yet sturdy laminates
- Transparent, epoxy-based resin
- Optimum resin content is easily adjusted
- Small number of layers possible
- Optimum ratio of matrix to reinforcing materials
- Optimum impregnation, especially of carbon fibres
- Good bonding to the reinforcement fibres
- Higher structural strength compared to acrylic resins
- Produces a very smooth surface
- Can be coloured with Ottobock pigment pastes
- Curing time can be controlled by temperature

Technical data

Article number	Net contents
617H5=1	1 kg
617H5=5	5 kg

Practical recommendation 617H5

- Can be demoulded after 10 hours at 23 °C ambient temperature under a vacuum.
- Interim annealing for 1 hour at 60 °C for optimal processing.
- Final annealing for tension-free final hardness, 1 hour at 100 °C.
- Optional: for permanent skin contact, 10 hours at 80 °C.

616B60 resin film product brief

Resin film

Reference number 616B60

- Developed especially for fabricating exceptionally sturdy and lightweight prostheses and orthoses
- Lighter, thinner components with rigidity equal to that of components on acrylic resin basis
- On epoxy resin basis
- Clean and easy processing
- Excellent draping characteristics
- Resin quantity can be applied precisely
- Adjustable resin content
- Cut pieces of resin film can be stored in a conventional freezer
- Smaller storage volumes in freezer compared to prepreg
- Saves auxiliary materials (e.g. no additional fixing of reinforcing materials required)
- Can be combined with Ottobock reinforcement materials and preps

Technical data

Article number	Packaging	Package	Weight per unit area
616B60=2	23 foils at 300 x 300 mm per foil	2 m ²	340 g/m ²
616B60=5	56 foils at 300 x 300 mm per foil	5 m ²	340 g/m ²
616B60=10	112 foils at 300 x 300 mm per foil	10 m ²	340 g/m ²

- Shipping days: Monday, Tuesday, Wednesday
- When stored at a temperature of -18 °C, the resin film can be processed for approximately 12 months; at room temperature, a maximum of 21 days. Freeze in moisture-proof sealed packaging; in order to avoid condensation, thaw to room temperature in moisture-proof sealed packaging. Each thawing and freezing cycle reduces the storage stability and degrades the quality significantly.

Practical recommendation 616B60

- The optimal processing temperature is between 20 °C and 23 °C.
- Make sure the processing area is dry and free of dust, talcum and grease.
- The resin content of the laminate should be at least 50% by weight. For this reason, please pay attention to the weight per unit area of your reinforcement material.
- We recommend using the 633T18 cooling spray to make it easier to remove the protective film from the resin film. Spray the edge of the protective film lightly for this purpose.
- For the first layer, apply spray adhesive to the laminating tool.
- Cure for 4 h under vacuum in a 130 °C oven.

Lamination technology

Epoxy lamination resin film

Cooling spray

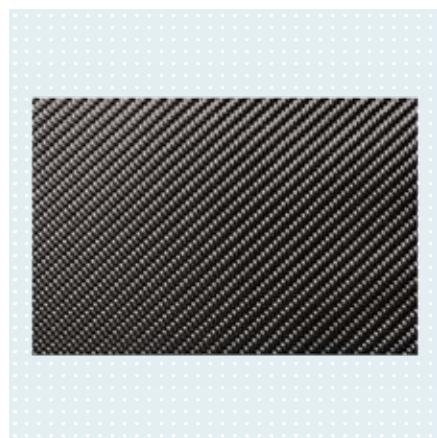

Reference number 633T18

- Device for loosening the covering film on pre-peggs
- Device for loosening the covering film on 616B60 resin film
- Useful for demoulding components
- For immediate cooling of smaller areas or parts
- Possible temperature as low as -48 °C depending on spray duration
- Very rapid evaporation with no residue
- Good cleaning effect
- No detrimental influences on plastics or insulating materials

616B16=2	2 m	0.5 m	83 g/m ²	Plain weave

Lamination technology

Epoxy lamination resin film

Nylon stockinette

Reference number 81A1

- For plaster casting, e.g. for KAFOs
- Suitable as a filter and final layer for laminating
- For reinforcing Pastasil
- For vacuum technique with Chlorosil
- Polyamide
- Especially elastic
- Not pre-impregnated

Technical data

Article number	Length	Width	Weight
81A1=8	101.5 m	8 cm	1 kg
81A1=10	84.6 m	10 cm	1 kg
81A1=12	67.8 m	12 cm	1 kg
81A1=15	52.5 m	15 cm	1 kg
81A1=20	48 m	20 cm	1 kg

Practical recommendation 81A1

Individually adaptable and weldable.

Processing and usage examples for 81A1

Application example – vacuum forming in orthotics

Pull 81A1 nylon stockinette over the plaster model, cut to length so it is twice the size of the model, twist off and fold back again.

Application example – vacuum forming in prosthetics

Pre-tension the 81A1 nylon stockinette, twist it and then secure it with combination pliers. Using a pair of scissors, cut off the end of the seam. Using the flame of a cigarette lighter, weld the cut surface and then immediately smoothen the weld seam.

With the welded seam turned inwards, pull the sock over the model.

Perlon® stockinette, white

Reference number 623T3

- For fabricating laminates
- Knitted fabric
- Finely meshed
- Good stretching properties
- Good shaping
- Smooth surface after laminating
- Suitable for surfaces

Pigment paste

Reference number 617Z2

- For lamination resins and putties
- For sealing resin and sealing resin compact adhesive
- For a natural look
- Mixes well
- Good surface coverage

Technical data

Article image	Article number	Net contents	Packaging	Colour
	617Z2=0.180	0.18 kg	Tube	Beige (light)
	617Z2=1	1 kg	Can	Beige (light)

i Practical recommendation 617Z2

Mix pigment paste and lamination resin well. Once mixing is complete, add hardener.

Pigment paste

Reference number 617Z*

- For lamination resins and putties
- For sealing resin and sealing resin compact adhesive
- Large choice of colours
- High luminosity
- Mixes well
- Good surface coverage

Technical data

Article number	Net contents	Colour
617Z3	0.25 kg	Tan beige
617Z4	0.25 kg	White
617Z5	0.25 kg	Yellow
617Z6	0.2 kg	Red
617Z7	0.25 kg	Blue
617Z9	0.25 kg	Black
617Z58=3	0.25 kg	Green

i Practical recommendation 617Z*

Mix pigment paste and lamination resin well. Once mixing is complete, add hardener.

ThermoLyn trolene

Reference number 616T3

- Flexible polyethylene
- Used as a forming and parting material
- For orthotic components that require little stiffness but high flexibility
- For fabricating flaps in socket technology
- Individually cut to size, it can be used as a device for filling work
- Reusable and easy to clean due to its smooth surface
- Opaque
- Good transparency
- Low molecular weight
- Good thermoplastic formability
- High flexibility
- Temperature recommendation: processing temperature 125 °C (convection oven, infrared oven)

Information material

646F265=EN_INT

Thermoplastics poster

Technical data

Article number	Length	Width	Thickness	Colour
616T3=1	1000 mm	500 mm	1 mm	Natural colour
616T3=2	1000 mm	500 mm	2 mm	Natural colour
616T3=2000X1000X2	2000 mm	1000 mm	2 mm	Natural colour
616T3=2000X1000X3	2000 mm	1000 mm	3 mm	Natural colour
616T3=40X32X2	40 mm	32 mm	2 mm	Natural colour

Practical recommendation 616T3

Can also be used as a dummy material, e.g. with lamination technique.

Measuring cup

Reference number 642B2

- Polypropylene measuring cup
- Scaling facilitates a precise mixing ratio
- The 1000-g cup is especially well suited for laminating pelvic sockets and orthoses, and for taking impressions and foaming with large volumes
- Reusable

Technical data

Article number	Volume	Minimum order quantity
642B2=50	50 g	100 pieces
642B2=100	100 g	100 pieces
642B2=200	200 g	100 pieces
642B2=400	400 g	100 pieces
642B2=1000	1000 g	100 pieces

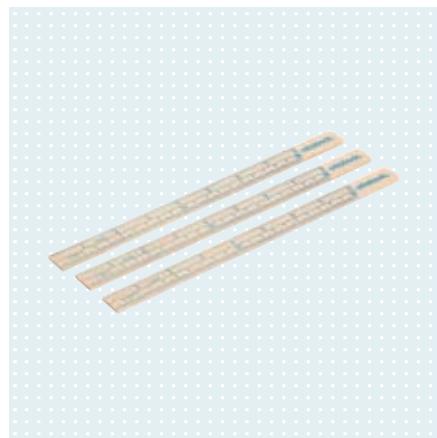

Practical recommendation 642B2

- The varying density of the foam and hardener results in a precise mixing ratio of 1:1. We recommend using a measuring cup to ensure this mixing ratio.
- Add slightly more than the required amount of liquid foam, since a small amount often remains in the measuring cup.

Lamination technology

Accessories

Wooden spatula

Reference number 699Y3

- Versatile measuring tool
- Imprint in mm and inch
- Rectangular shape facilitates thorough mixing in the bottom and edge areas, for example with lamination resins

Technical data

Article number	Length	Width	Height	Minimum order quantity
699Y3	270 mm	18 mm	2.7 mm	100 pieces

Practical recommendation 699Y3

Add slightly more than the required amount of liquid foam since a small amount always remains on the wooden spatula.

PVA film

Reference number 616F4

- For working with lamination resins as well as prepreg and resin film
- Film adapts to contours extremely well
- Easy to weld with the 756E1 hand sealing iron
- Good stretching properties
- High resistance to tearing

Neoprene® is a registered trademark of DuPont.

Double-sided PVC adhesive tape

Reference number 616F10

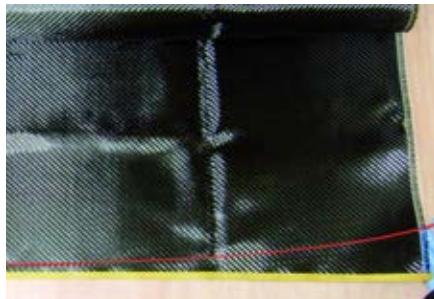

- For double-sided bonding of PVC films
- Application of reinforcement materials such as carbon
- Without base material
- Double-sided acrylic adhesive material
- Transparent (covered with greaseproof paper)
- Conforms to contours extremely well
- Highly effective with low material usage

Technical data

Article number	Length	Width	Colour	Order unit
616F10-6	55 m	6 mm	Transparent	Roll
616F10-9	55 m	9 mm	Transparent	Roll
616F10-19	55 m	19 mm	Transparent	Roll

Processing and usage examples for 616F10

Check that the weft thread of the 616G12 woven carbon fibre is running a straight course by pulling out a weft thread running close to the cut edge.

Pull the woven carbon fibre straight to such a degree that the resulting mesh loop runs 90° to the warp. Using 616F10 double-sided PVC adhesive tape, tape over the resulting mesh loop and cut through the middle of the woven carbon fibre along the adhesive tape. After these preparations have been completed, tailored carbon fibre sections can be made that have a 90° alignment between the warp and the weft. In this way the carbon fibres are not only aligned in accordance with the arising forces, they can also absorb these optimally.

Position the tailored carbon fibre sections on those parts of the reinforcements that are to be strengthened while pre-tensioning them in the fibre directions.

Lamination technology

Adhesive tapes

Polyethylene adhesive tape

Reference number 627B40

- For sealing damaged PVA film
- The proven classic material
- Wide range of applications
- Base material: PE sheeting
- Acrylic adhesive material
- High elasticity
- High resistance to tearing
- Thermally stable

Technical data

Article number	Length	Width	Colour	Order unit
627B40	33 m	25 mm	Transparent	Roll

Processing and usage examples for 627B40

Apply 627B40 polyethylene adhesive tape around the areas that are to be opened after laminating; while doing so, excessive resin in these areas can be reduced with the pre-tensioned adhesive tape. With a given pre-tensioning, the adhesive tape can be twisted to a cord so that excess resin can also be reduced in areas that are difficult to access.

Polyethylene adhesive tape

Reference number 627B4

- For sealing damaged PVA film
- Base material: PE sheeting
- Rubber adhesive
- High abrasion resistance
- Good resistance to chemicals

Technical data

Article number	Length	Width	Colour	Order unit
627B4	50 m	25 mm	Transparent	Roll

PVC adhesive tape (Coroplast)

Reference number 616F8

- For taping off PVC films
- Suitable for trial fitting
- The proven classic material
- Wide range of applications
- Base material: soft PVC film
- Acrylic adhesive material
- Thermally stable

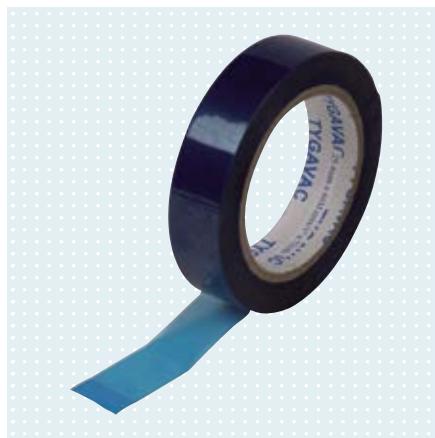

Technical data

Article number	Length	Width	Colour	Order unit
616F8	10 m	50 mm	Transparent	Roll

Lamination technology

Adhesive tapes

Adhesive tape for vacuum technique

Reference number 636D3

- For fixation in conjunction with the lamination technique
- Used in the prepreg technique
- Wide range of applications
- Base material: PE sheeting
- Silicone adhesive agent
- Temperature-stable up to approx. 200 °C

627B6=30	50 m	30 mm	Chamois	Roll

Lamination technology

Adhesive tapes

Double-sided adhesive tape

Reference number 633D5

- For inner socket – outer frame connection, for example
- Not suitable for reinforcement materials
- Base material: PE sheeting
- Double-sided acrylic adhesive material
- Transparent (covered with red separating film)
- Good frame fixation (no hook-and-loop closure required)
- High adhesive strength on various materials, such as plastics
- Good temperature resistance

Technical data

Article number	Length	Width	Colour	Order unit
633D5=19	50 m	19 mm	Transparent	Roll
633D5=50	50 m	50 mm	Transparent	Roll

Processing and usage examples for 633D5

Clean the surfaces that are to be bonded (here the inner socket and the frame) with 634A58 isopropyl alcohol. Cut 633D5 double-sided adhesive tape to the required length.

Position precut adhesive tape in the corresponding locations and press into place.

Join and position the frame and inner socket. Compress the inner socket and remove the red protective film from the double-sided adhesive tape. Firmly press the two components together at the locations being bonded.

Notes

3

Prepreg technology

4

The term “prepreg” is derived from the word “pre-impregnated”. Prepreg incorporates the processing of pre-impregnated base materials, such as carbon fibres impregnated with epoxy resin. In orthopaedic technology, prepreg is suitable for the fabrication of high-strength, lightweight orthotic and prosthetic components. Thanks to an optimal balance of base materials and resin content as well as accelerated handling processes using special curing temperatures, our prepreg materials ensure increased workflow efficiency.

In addition to thermoset prepregs, Ottobock offers thermoplastic prepregs (TP.C) for high-strength, very thin orthoses on a thermoplastic material basis. They are subsequently thermoformable under pressure, weldable with components having the same matrix and have no special storage requirements (e.g. no cooling).

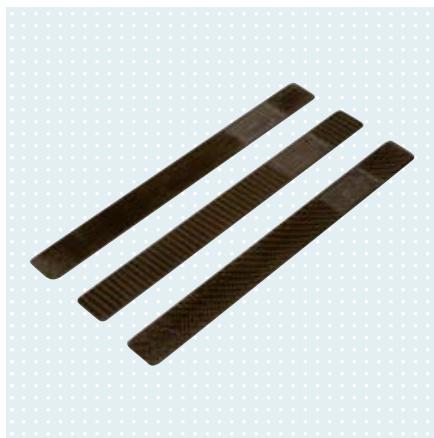

The Ottobock prepreg line also includes numerous raw and auxiliary materials required for processing.

Visit www.pem.ottobock.com to obtain up-to-date product information at any time.

Sample set of carbon profile bars

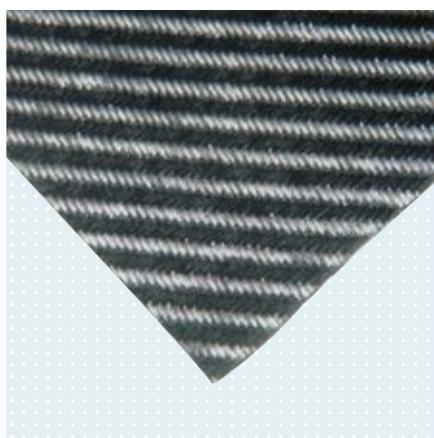

Reference number 646M39

- 3 carbon profile bars (0°, 45° und 90°)
- The mechanical properties of the carbon fabric are dependent on the direction in which a force is applied. Under tensile load in the warp or weft direction, woven fabrics stretch only slightly. But if the tensile load is applied diagonally, e.g. at an angle under 45°, woven carbon fabrics are highly stretchable. The direction of the fibres should be adjusted according to the load.

Woven carbon fibre prepreg

Reference number 616B10

- For fabricating lightweight and dynamic carbon components, such as orthoses
- Problem-free fabrication of flexible to rigid orthosis designs
- Impregnated with epoxy resin
- High tensile strength and compressive strength
- Suitable for surfaces

Technical data

Article number	Length	Width	Fibre weight per unit area	Weave type	Resin content
616B10=5	5 m	1.25 m	280 g/m²	Twill 4/4	49 % by weight

- Shipping days: Monday, Tuesday, Wednesday
- When stored at a temperature of -18 °C, prepgs can be processed for approximately 12 months; at room temperature, a maximum of 21 days. Freeze in moisture-proof sealed packaging; in order to avoid condensation, thaw to room temperature in moisture-proof sealed packaging. Each thawing and freezing cycle reduces the storage stability and degrades the quality significantly.

Carbon fibre prepreg, unidirectional

Reference number 616B11

- For fabricating lightweight and dynamic carbon components, such as orthoses
- For increasing bending rigidity
- Problem-free fabrication of flexible to rigid orthosis designs
- Impregnated with epoxy resin
- High tensile strength and compressive strength
- Always embed in between webbings

616B65 Kraibon rubber
product brief

Kraibon rubber

Reference number 616B65

- For the fabrication of soft edges on orthoses
- Processing in combination with prepreg – no adhesive or mechanical joint required for a flexible edge
- Flowing transition between hard and soft material
- Excellent draping characteristics for easy moulding to the component
- Various materials thicknesses can be obtained with multiple layers
- Cut pieces of Kraibon rubber can be stored in the supplied pressure lock bag in a conventional freezer
- Can be combined with Ottobock reinforcement materials and prepgs

Technical data

Article number	Packaging	Thickness of each blank	Package	Weight per unit area
616B65=2	28 blanks, 250 mm x 300 mm	0,5 mm	2 m ²	520 g/m ²

- Shipping days: Monday, Tuesday, Wednesday
- When stored at a temperature of -18 °C, the Kraibon rubber can be processed for approximately 6 months; at room temperature, a maximum of 21 days. Freeze in moisture-proof sealed packaging; in order to avoid condensation, thaw to room temperature in moisture-proof sealed packaging. Each thawing and freezing cycle reduces the storage stability and degrades the quality significantly.

Practical recommendation 616B65

- Cures only at temperature and in a vacuum
- No formation of sharp prepreg edges
- Not for processing with peel ply (low tear propagation strength)

Information material

646D1477=EN_MASTER

616B60 resin film product brief

Resin film

Reference number 616B60

- Developed especially for fabricating exceptionally sturdy and lightweight prostheses and orthoses
- Lighter, thinner components with rigidity equal to that of components on acrylic resin basis
- On epoxy resin basis
- Clean and easy processing
- Excellent draping characteristics
- Resin quantity can be applied precisely
- Adjustable resin content
- Cut pieces of resin film can be stored in a conventional freezer
- Smaller storage volumes in freezer compared to prepreg
- Saves auxiliary materials (e.g. no additional fixing of reinforcing materials required)
- Can be combined with Ottobock reinforcement materials and prepgs

Technical data

Article number	Packaging	Package	Weight per unit area
616B60=2	23 foils at 300 x 300 mm per foil	2 m ²	340 g/m ²
616B60=5	56 foils at 300 x 300 mm per foil	5 m ²	340 g/m ²
616B60=10	112 foils at 300 x 300 mm per foil	10 m ²	340 g/m ²

- Shipping days: Monday, Tuesday, Wednesday
- When stored at a temperature of -18 °C, the resin film can be processed for approximately 12 months; at room temperature, a maximum of 21 days. Freeze in moisture-proof sealed packaging; in order to avoid condensation, thaw to room temperature in moisture-proof sealed packaging. Each thawing and freezing cycle reduces the storage stability and degrades the quality significantly.

Practical recommendation 616B60

- The optimal processing temperature is between 20 °C and 23 °C.
- Make sure the processing area is dry and free of dust, talcum and grease.
- The resin content of the laminate should be at least 50% by weight. For this reason, please pay attention to the weight per unit area of your reinforcement material.
- We recommend using the 633T18 cooling spray to make it easier to remove the protective film from the resin film. Spray the edge of the protective film lightly for this purpose.
- For the first layer, apply spray adhesive to the laminating tool.
- Cure for 4 h under vacuum in a 130 °C oven.

Prepreg technology

Thermoset prepregs

Cooling spray

Reference number 633T18

- Device for loosening the covering film on prepregs
- Device for loosening the covering film on 616B60 resin film
- Useful for demoulding components
- For immediate cooling of smaller areas or parts
- Possible temperature as low as -48 °C depending on spray duration
- Very rapid evaporation with no residue
- Good cleaning effect
- No detrimental influences on plastics or insulating materials

Technical data

Article number	Net contents
633T18	400 ml

Orthopox woven carbon fibre

Reference number 616G12

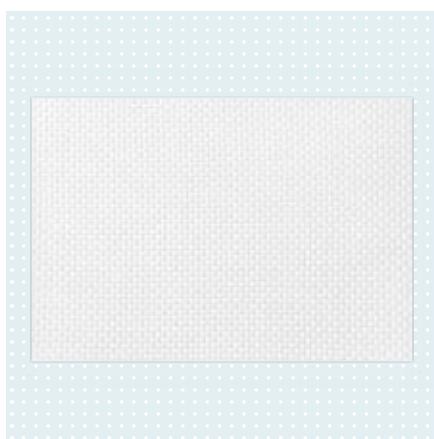

- Reinforcement fibres for 617H5 Orthopox epoxy resin and 616B60 resin film
- Not for use with acrylic resins
- No fraying of the fibres
- No double-sided adhesive tape required

Technical data

Nylon stockinette

Reference number 81A1

- For plaster casting, e.g. for KAFOs
- Suitable as a filter and final layer for laminating
- For reinforcing Pastasil
- For vacuum technique with Chlorosil
- Polyamide
- Especially elastic
- Not pre-impregnated

Technical data

Article number	Length	Width	Weight
81A1=8	101.5 m	8 cm	1 kg
81A1=10	84.6 m	10 cm	1 kg
81A1=12	67.8 m	12 cm	1 kg
81A1=15	52.5 m	15 cm	1 kg
81A1=20	48 m	20 cm	1 kg

Practical recommendation 81A1

Individually adaptable and weldable.

Processing and usage examples for 81A1

Application example – vacuum forming in orthotics

Pull 81A1 nylon stockinette over the plaster model, cut to length so it is twice the size of the model, twist off and fold back again.

Application example – vacuum forming in prosthetics

Pre-tension the 81A1 nylon stockinette, twist it and then secure it with combination pliers. Using a pair of scissors, cut off the end of the seam. Using the flame of a cigarette lighter, weld the cut surface and then immediately smoothen the weld seam.

With the welded seam turned inwards, pull the sock over the model.

Perlon® stockinette, white

Reference number 623T3

- For fabricating laminates
- Knitted fabric
- Finely meshed
- Good stretching properties
- Good shaping
- Smooth surface after laminating

Contact adhesive

Reference number 636N9

- For adhering flexible materials
- Especially for bonding profiled rubber, wooden materials, laminated boards, veneer and plastic edges, rubber, leather, felt, fabric, cork, flexible foam, hard PVC, metal and ceramics
- The proven classic for the workshop
- Wide range of applications
- Not suitable for Styrofoam and soft PVC
- 634A6 suitable as a thinner
- Base: methyl acetate
- Short drying time
- Good resistance to ageing
- Temperature-resistant to approx. 100 °C

Technical data

Article number	Net contents	Colour
636N9=0.660	0.66 kg	Yellowish
636N9=4.500	4.5 kg	Yellowish

i Practical recommendation 636N9

- Stir before use. The surfaces/components that are to be adhered to one another must be dry and free of dust, oil and grease.
- We recommend roughening the surface of rubber, thermosets and similar materials.
- Apply contact adhesive to both surfaces that are to be bonded. After a drying time of 5–20 minutes (depending on the thickness of the adhesive and the temperature), press the parts together briefly and firmly.
- Contact adhesive may not be stored below +10 °C or above +25 °C. The containers must be protected from direct sunlight and heat. When kept in a cool, dry place, the unopened original containers can be stored for at least 1 year.

646A174=GB

Prepreg technology
product information

647H23

617H46 bonding agent
instructions for use

Bonding agent

Reference number 617H46

- Universally applicable for sealants, adhesives, coatings
- For bonding and repairing vulcanised silicone rubber
- For sealing valves
- For making a vacuum bag out of 616F26 or 616F27 silicone film
- Pasty consistency
- Outstanding adhesive properties

Technical data

Article number	Net contents	Colour
617H46	90 ml	Transparent

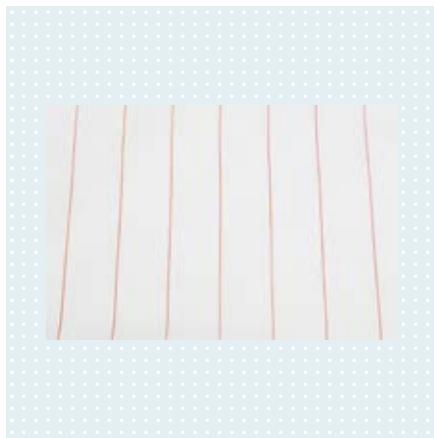

Practical recommendation 617H46

During processing, a thin skin will form on the surface of the adhesive after one minute. Any shaping of the silicone adhesive must be completed before this skin starts to form. A wetted modelling instrument or an ice cube have proven useful in shaping transitions.

All Ottobock reinforcement materials are photographed from top to bottom. Lengthwise (warp), crosswise (weft)

Elastomers

The use of silicones in orthopaedic technology has now reached a comprehensive stage. Applications range from the fabrication of high-quality, aesthetic finger and hand prostheses to functional, cosmetic partial foot prostheses to the manufacture of hygienic orthoses and perfectly fitting facial masks for scar compression fittings. Silicones can also be used for liners and socket comfort.

Ottobock uses silicone in its compression products, thus combining outstanding material properties with targeted pressure application. By individually adapting the compression product to the patient's unique anatomy, even concave parts such as the palm of the hand can be modelled with silicone without overtensioning. Silicone also maintains the moisture in the skin. Irritated scar tissue areas can regain their elasticity and flexibility without the use of additional creams. The material also retains its form and flexibility independent of any strain placed on it. As a result, consistently high pressure is generated and maximum compression benefits are assured, even during extended application.

In addition to the various treatment options, Ottobock also offers all the other materials required for professionally processing silicones.

Visit www.pem.ottobock.com to obtain up-to-date product information at any time.

Elastomers

Silicone rubbers

Silicone rubber

Reference number 617H43

- For fabricating soft-walled sockets
- Hardness approx. 25° Shore A
- The Shore hardness can be varied by mixing with 617H44 silicone rubber
- Rapid vulcanisation at room temperature (about 1 hour at 20 °C)
- Resistant to detergent and temperatures up to 180 °C
- Hygienic

Technical data

Article number	Net contents
617H43=0.900	0.9 kg
617H43=4.600	4.6 kg

Silicone rubber

Reference number 617H44

- For fabricating pads and end bearing cushions
- Hardness approx. 5° Shore A
- The Shore hardness can be varied by mixing with 617H43 silicone rubber
- Rapid vulcanisation at room temperature (about 1 hour at 20 °C)
- Resistant to detergent and temperatures up to 180 °C
- Hygienic

Technical data

Article number	Net contents
617H44=0.900	0.9 kg
617H44=4.600	4.6 kg

Practical recommendation 617H44

Because of its silicone structure, the mixture can be applied partially elevated, e.g. as padding over bony prominences.

Catalyst

Reference number 617H45

- Catalyst for 617H43 silicone rubber and 617H44 silicone rubber

Technical data

Article number	Net contents
617H45=0.100	0.1 kg
617H45=1	1 kg

- ½ - 1 parts resin colour paste, as necessary

Mixing ratio

Silicone rubber	Catalyst 617H45
90	10

Stabiliser

Reference number 617H47

- Stabiliser for 617H43 silicone rubber and 617H44 silicone rubber

Technical data

Article number	Net contents
617H47=0.100	0.1 kg
617H47=5	5 kg

PVA bags

Reference number 99B81

- For working with lamination resins as well as prepreg and resin film
- Sizes available for all amputation and orthosis types
- Film adapts to contours extremely well
- Easy to weld with the 756E1 hand sealing iron
- Good stretching properties
- High resistance to tearing

647H23

617H46 bonding agent
instructions for use

Bonding agent

Reference number 617H46

- Universally applicable for sealants, adhesives, coatings
- For bonding and repairing vulcanised silicone rubber
- For sealing valves
- For making a vacuum bag out of 616F26 or 616F27 silicone film
- Pasty consistency
- Outstanding adhesive properties

Technical data

Article number	Net contents	Colour
617H46	90 ml	Transparent

Practical recommendation 617H46

During processing, a thin skin will form on the surface of the adhesive after one minute. Any shaping of the silicone adhesive must be completed before this skin starts to form. A wetted modelling instrument or an ice cube have proven useful in shaping transitions.

Silicone parting agent

Reference number 519L5

- For parting, gliding and lubricating
- Protects rubber, plastics and elastomers from becoming brittle
- Compact and solvent-free
- CFC-free

Technical data

Article number	Net contents
519L5	0.4 l

Cyamet quick-drying adhesive (super glue)

Reference number 636K11

- For various applications
- Possible material combinations that can be bonded among each other: polyethylene, polypropylene, rubber, leather, cork and metal
- For bonding silicone rubber with acrylic resin laminates
- Basis: ethyl
- Short curing time
- Moisture speeds up curing
- High mechanical strength

642V15=1/87A5 Impresil
instructions for use

Impresil kit with case

Reference number 642V15

- For producing flexible and clean impressions
- Can be used for taking impressions and correcting trial fittings on the patient in many areas, including finger prostheses, partial hand prostheses, scar compression masks and gloves, forefoot prostheses, transfemoral and transtibial prostheses, liners as well as orthoses
- Enables taking a highly detailed impression of the area in question
- Clean processing under all ambient conditions
- Does not adhere to skin and hair, therefore easy to demould
- Unlike plaster bandages, does not leave residues on the skin
- Can be finished
- Can be sanded
- Saves time and material
- Refillable
- No irritants or allergens, therefore suitable for use on unbroken skin (no open wounds)

Technical data

Article number	Shore hardness	Package contents
642V15=1	30° Shore A	1 dispenser, 5 cartridges, 75 ml each (component A and component B), 20 static mixers

i Practical recommendation 642V15

- To prevent the material from dripping, apply a maximum of 5 mm to vertical surfaces during each process step.
- The processing time can be extended by cool storage.

Processing and usage examples for 642V15

Compensation of shape and volume differences in the trial phase of scar compression fittings.

Compensation of shape and volume differences in the trial phase of prosthetic sockets for the upper and lower limbs and in orthotics.

For taking impressions on the patient, e.g. partial hand/forefoot prostheses.

Elastomers

Silicones

Mixing ratio	
Component A	Component B
1	1

Pastasil

Reference number 85H11

- For impressions on the patient, for copying models and fabricating trial prostheses
- Two-component RTV silicone material
- Medical grade silicone
- Fast-curing, processing time 2-5 minutes depending on room temperature
- Easy to sand
- Subsequent application on cured Pastasil is possible

Technical data

Article number	Shore hardness	Net contents	Colour	Packaging
85H11=1	35° Shore A	2 x 0.5 kg	Beige	2 plastic containers
85H11=5	35° Shore A	2 x 2.5 kg	Beige	2 plastic containers

Processing and usage examples for 85H11

Before processing 85H11 Pastasil, thoroughly wash and dry hands. Using protective gloves can impair the vulcanisation of silicones. Weigh Pastasil (equal parts of component A and B).

Stretch and fold both Pastasil components between the fingers several times until the two components form a mass of uniform colour.

Apply the mixed Pastasil in the corresponding places. Roughen these areas in advance and clean thoroughly with 634A58 isopropyl alcohol.

**Mixing ratio**

Component A	Component B
1	1

Chlorosil/Chlorosil catalyst

Reference number 85P11

- For fabricating compression gloves, liners and other elastic fittings
- HTV silicone
- Components A + B (as a set)
- Rollable
- Heat-resistant
- High robustness of the hardened material
- Subsequent combination of Pastasil and Chlorosil is possible

**Technical data**

Article number	Shore hardness	Net contents
85P11=2	20° Shore A	2 x 1 kg
85P11=9.6	20° Shore A	2 x 4.8 kg

i Practical recommendation 85P11

Both materials must be carefully weighed and mixed with each other. The resulting mass is repeatedly rolled in a silicone roller until a high level of intermixture has been reached. At the same time the roller gap is used to determine the thickness of the material.

**Mixing ratio**

Component A	Component B
1	1

Chlorosil/Chlorosil catalyst

Reference number 85P21

- For fabricating forefoot prostheses, finger and partial hand prostheses and cosmetic covers
- HTV silicone
- Components A + B (as a set)
- Rollable
- Heat-resistant
- High robustness of the hardened material
- Subsequent combination of Pastasil and Chlorosil is possible

**Technical data**

Article number	Shore hardness	Net contents
85P21=2	35° Shore A	2 x 1 kg
85P21=9.6	35° Shore A	2 x 4.8 kg

i Practical recommendation 85P21

Both materials must be carefully weighed and mixed with each other. The resulting mass is repeatedly rolled in a silicone roller until a high level of intermixture has been reached. At the same time the roller gap is used to determine the thickness of the material.

616S5/616S6 BetaSil
instructions for use

gold

BetaSil kit with case

Reference number 616S5

- For customising a standard liner made of silicone
- For fabricating silicone pads
- Bonds with other silicones (85H11 Pastasil or 85P31 Chlorosil) and adheres to other plastics, provided these have a rough surface
- Two-component silicone
- Ready to use
- Clean processing under all ambient conditions
- Curing time is about 5 minutes so that sufficient processing time remains even on elaborate casts

Technical data

Article number	Shore hardness	Package contents
616S5=1	10° Shore A	1 dispenser, 3 cartridges (component A and component B), 15 static mixers

Processing and usage examples for 616S5

Reinforce the socket as usual, only leave out the area in question and reinforce with 616G26=150 polyester knit fabric, and laminate.

Apply 85H11 Pastasil dummy in the designated location. After curing, trim, sand and roughen on the outside. Also roughen the first cast and clean with 634A58 isopropyl alcohol. Position the Pastasil dummy and reinforce and over-laminate in the usual manner.

Remove the Pastasil dummy, cut the recess free and sand the socket brim. Position the socket on the plaster model or duplicating foam. Fill the resulting pocket with 616S5 BetaSil from the distal side to the proximal side, by introducing the static mixer into the pocket at the beginning all the way to the lower end of the pocket. After vulcanisation of the BetaSil insert, sand it and position it at the intended point in the socket.

81A1=10	84.6 m	10 cm	1 kg
81A1=12	67.8 m	12 cm	1 kg
81A1=15	52.5 m	15 cm	1 kg
81A1=20	48 m	20 cm	1 kg

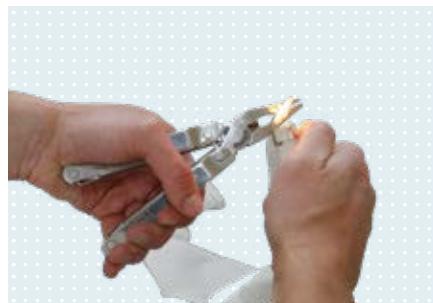

Practical recommendation 81A1

Individually adaptable and weldable.

5

Processing and usage examples for 81A1

Application example – vacuum forming in orthotics

Pull 81A1 nylon stockinette over the plaster model, cut to length so it is twice the size of the model, twist off and fold back again.

Application example – vacuum forming in prosthetics

Pre-tension the 81A1 nylon stockinette, twist it and then secure it with combination pliers. Using a pair of scissors, cut off the end of the seam. Using the flame of a cigarette lighter, weld the cut surface and then immediately smoothen the weld seam.

With the welded seam turned inwards, pull the sock over the model.

Putties, adhesives, adhesive tapes and varnishes

The range of adhesives for use in orthopaedic technology has become so varied that it has become quite difficult for technicians to make the right choice of adhesives for their working methods and application. Take advantage of our experience and expertise in the use of adhesives.

Modern adhesives result in a considerable quality improvement, especially in regards to the adhesive binding. Various characteristics can be achieved depending on the composition of the raw materials. In order to bond the greatest possible range of materials, Ottobock offers a large number of adhesives for all types of applications.

Putties, adhesives, adhesive tapes and varnishes

Plastic putties

Orthocryl putty

Reference number 636K7

- For fixing and filling a variety of materials
- For embedding bars in wood and plastic sockets
- In conjunction with 617P14 hardener paste
- Basis: solution of polyester resin in methyl methacrylate
- Easy to sand
- Rapid curing
- Good elasticity

Contact adhesive

Reference number 636N9

- For adhering flexible materials
- Especially for bonding profiled rubber, wooden materials, laminated boards, veneer and plastic edges, rubber, leather, felt, fabric, cork, flexible foam, hard PVC, metal and ceramics
- The proven classic for the workshop
- Wide range of applications
- Not suitable for Styrofoam and soft PVC
- 634A6 suitable as a thinner
- Base: methyl acetate
- Short drying time
- Good resistance to ageing
- Temperature-resistant to approx. 100 °C

Technical data

Article number	Net contents	Colour
636N9=0.660	0.66 kg	Yellowish
636N9=4.500	4.5 kg	Yellowish

i Practical recommendation 636N9

- Stir before use. The surfaces/components that are to be adhered to one another must be dry and free of dust, oil and grease.
- We recommend roughening the surface of rubber, thermosets and similar materials.
- Apply contact adhesive to both surfaces that are to be bonded. After a drying time of 5–20 minutes (depending on the thickness of the adhesive and the temperature), press the parts together briefly and firmly.
- Contact adhesive may not be stored below +10 °C or above +25 °C. The containers must be protected from direct sunlight and heat. When kept in a cool, dry place, the unopened original containers can be stored for at least 1 year.

Thinner for 636N9 contact adhesive

poster

CP contact adhesive

Reference number 636W71

- For flexible bonding, especially in orthopaedic technology
- 634A71 suitable as a thinner
- Basis: polychloroprene, colophonium
- Toluene-free
- Bonds common materials in orthopaedic technology
- Bonded joints are more flexible than with 636W72 CR contact adhesive
- Also suitable as a two-component system to increase resistance to thermal distortion

Technical data

Article number	Net contents
636W71=4	4 kg

i Practical recommendation 636W71

- Lightly sand or roughen the materials; the surface must be free of grease and parting agents.
- Heavily brush the materials so a strong adhesive film can form.
- The drying process can be accelerated with heat.
- Depending on the material combination, the drying time is 10 – 60 minutes.
- After joining and pressing together the components, let them rest for a few hours.

CR contact adhesive

Reference number 636W72

- For bonding, especially in orthopaedic footwear specialism and for industrial use
- Contact adhesive for leather, EVA, PUR, foams, wood
- 634A71 suitable as a thinner
- Basis: polychloroprene
- Toluene-free
- Also suitable as a two-component system to increase resistance to thermal distortion
- Processing in large series is possible due to long drying time

Technical data

Article number	Net contents	Colour
636W72=4	4 kg	Transparent

i Practical recommendation 636W72

- Similar to 636W71 CP contact adhesive, however, thin foams should be wiped with 634A71 universal thinner.
- Depending on the material combination, the drying time is 15 – 120 minutes.

Putties, adhesives, adhesive tapes and varnishes

Adhesives

Thinner for CP/CR contact adhesive

Reference number 634A71

- For thinning CP/CR contact adhesive
- Universal thinner
- For cleaning, e.g. application devices, brushes etc.
- Optimum control of the viscosity of contact adhesives
- Strongly penetrating solvent
- Good mixing behaviour

Plastic adhesive

Reference number 636W17

- For extremely robust and also flexible bonding
- In combination with 636W26 cross-linking agent for waterproof bonding of wood, felt, cork, Pedilen, Pedilan and lamination resins with and among each other
- 634A20 suitable as a thinner
- Base: polyurethane synthetic solution
- Heat-resistant to 120 °C when used with 5% 636W26 cross-linking agent
- Heat activation possible (+80 °C)
- Sensitive to moisture

Technical data

Article number	Net contents	Colour
636W17	0.8 kg	Transparent

i Practical recommendation 636W17

- Roughen and remove sanding dust from the bonding surfaces before applying adhesive. Stir the adhesive well before applying. Apply to both bonding surfaces and allow to evaporate for about 5 to 8 minutes. Set bonding surfaces against each other (a distinct fastening torque has to be felt) press for about 15 minutes.
- To stiffen foam covers, thin the adhesive with 634A20 thinner for 636W17 plastic adhesive until it is easy to spread with a brush, and use a fine brush to apply it on the foam. Clean equipment with 634A23 thinner.

Putties, adhesives, adhesive tapes and varnishes

Adhesives

UHU hard

Reference number 636W22

- Fast-drying solvent borne adhesive
- Good adhesion on balsa, wood and wooden materials, also in combination with metals and other siliceous materials, and on many plastics
- Basis: nitrocellulose
- Low stringing tendency during processing
- Rapid setting of the bonded joint
- Soluble with 634A3 acetone

Technical data

Article number	Net contents	Colour
636W22	35 ml	Clear

UHU Plus glue

Reference number 636W23

- For strong bonded joints
- Two-component adhesive
- Basis: epoxy resin (binder), aliphatic amines (hardener)
- Varying the amount of hardener results in a harder or softer end product (normal mixing ratio 1:1 by volume, that is strands of equal length from the tubes)
- Also hardens under the exclusion of air

Technical data

Article number	Net contents	Colour
636W23	18 g binder and 15 g hardener	Honey coloured

Components

636W23	Uhu Plus bonding agent		
636W23	Uhu Plus hardener		

Practical recommendation 636W23

- The higher the curing temperature (up to approximately +180 °C), the higher the strength of the adhesion.

Putties, adhesives, adhesive tapes and varnishes

Adhesives

Loctite® 3090

Reference number 636K44

- For various applications
- Excellent adhesive characteristics on many different materials (e.g. metal, PVC, ABS, PC, PBT, rubber, wood, paper, cardboard, leather and textiles)
- For filling large gaps up to 5 mm
- Innovative two-component technology
- Activator enables maximum control of the curing speed, so that curing is independent of the temperature, humidity etc.
- High adhesive strength
- Rapid curing
- Viscosity is a gel consistency and therefore thixotropic
- Makes work faster, easier and more effective
- Practical syringe packaging enables precise and clean application
- Static mixers ensure a controlled mixing ratio

Technical data

Article number	Net contents	Package contents	Colour
636K44	10 g	1 cartridge, 1 plunger, 7 static mixers	Clear

Components

636K44 Loctite® 3090 part A

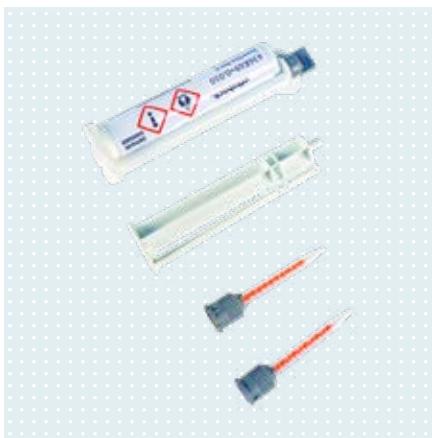

636K44 Loctite® 3090 part B

i Practical recommendation 636K44

- Processing time 90 – 180 sec.
- Functional strength 2 – 4 min.
- Initial strength 3 – 5 min.
- Final strength 24 h
- Temperature stability -20 °C to +80 °C (short-term up to +100 °C)
- Discard the first 2 – 3 drops from the mixer.
- Hold the joined components in position until they are secured.
- The adhesive develops intense heat briefly while curing.

636K49 SuperGlue
product brief

SuperGlue

Reference number 636K49

- For gluing metals, duroplastics and thermoplastics
- 2-component adhesive based on methyl methacrylate with very high adhesive strength
- Primerless gluing
- Fast gluing, for example of socket adapters
- Processing time: 4 to 7 minutes
- Curing time: approx. 15 minutes
- Gel/highly viscous
- Fills gaps from 0.5 to 12 mm
- High tensile strength along with excellent peel strength
- High temperature resistance
- Lasting strength and flexibility
- Dispensing gun for 636K49 SuperGlue available under 756K31 (not required for 636K49=0.010 SuperGlue)
- Refill pack for 636K49 SuperGlue with 20 static mixers available under 756Y76

Technical data

Article image	Article number	Net contents	Package contents	Colour
	636K49=0.010	10 ml	1 cartridge with tappet and 2 static mixers	Black
	636K49	50 ml	1 cartridge and 6 static mixers	Black

Components

636K49 SuperGlue Part A

636K49 SuperGlue Part B

Practical recommendation 636K49

- To improve the hold of the bond, first bend the anchor arms in such a way that they lie as closely against the socket as possible. Then remove any grease with 634A58 isopropyl alcohol.
- Clean the socket with 634A58 isopropyl alcohol as well.
- Loosen the screw on the anchor before gluing, otherwise the adapter thread connection may become stuck after gluing.
- Re-tighten the loosened screw with the corresponding Nm for the relevant adapter prior to the fitting.

627B5=25	10 m	25 mm	4 mm	Black	Roll

Neoprene® is a registered trademark of DuPont.

Double-sided PVC adhesive tape

Reference number 616F10

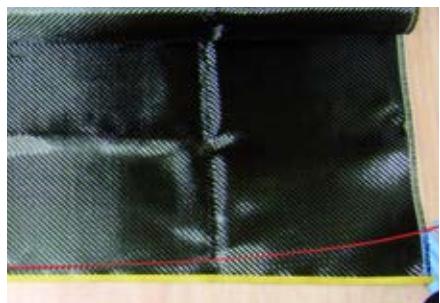

- For double-sided bonding of PVC films
- Application of reinforcement materials such as carbon
- Without base material
- Double-sided acrylic adhesive material
- Transparent (covered with greaseproof paper)
- Conforms to contours extremely well
- Highly effective with low material usage

Technical data

Article number	Length	Width	Colour	Order unit
616F10-6	55 m	6 mm	Transparent	Roll
616F10-9	55 m	9 mm	Transparent	Roll
616F10-19	55 m	19 mm	Transparent	Roll

Processing and usage examples for 616F10

Check that the weft thread of the 616G12 woven carbon fibre is running a straight course by pulling out a weft thread running close to the cut edge.

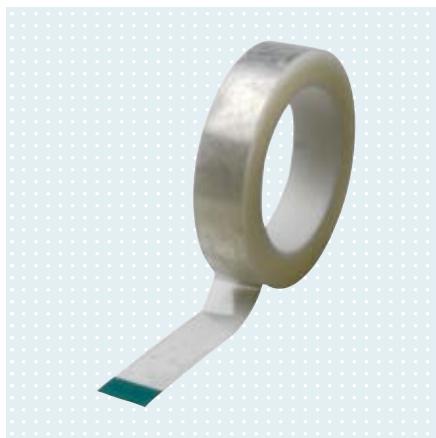

Pull the woven carbon fibre straight to such a degree that the resulting mesh loop runs 90° to the warp. Using 616F10 double-sided PVC adhesive tape, tape over the resulting mesh loop and cut through the middle of the woven carbon fibre along the adhesive tape. After these preparations have been completed, tailored carbon fibre sections can be made that have a 90° alignment between the warp and the weft. In this way the carbon fibres are not only aligned in accordance with the arising forces, they can also absorb these optimally.

Position the tailored carbon fibre sections on those parts of the reinforcements that are to be strengthened while pre-tensioning them in the fibre directions.

Putties, adhesives, adhesive tapes and varnishes

Adhesive tapes

Polyethylene adhesive tape

Reference number 627B40

- For sealing damaged PVA film
- The proven classic material
- Wide range of applications
- Base material: PE sheeting
- Acrylic adhesive material
- High elasticity
- High resistance to tearing
- Thermally stable

Technical data

Article number	Length	Width	Colour	Order unit
627B40	33 m	25 mm	Transparent	Roll

Processing and usage examples for 627B40

Apply 627B40 polyethylene adhesive tape around the areas that are to be opened after laminating; while doing so, excessive resin in these areas can be reduced with the pre-tensioned adhesive tape. With a given pre-tensioning, the adhesive tape can be twisted to a cord so that excess resin can also be reduced in areas that are difficult to access.

Putties, adhesives, adhesive tapes and varnishes

Orthocryl varnish

Reference number 635L12

- For isolating damp plaster models
- High quality 1-component acrylic-based topcoat for metals, wood and various plastics
- For varnishing sanded laminate surfaces
- Base: synthetic adhesive agent and solvent
- Resistant to touch after approx. 1 hour and fully cured after approx. 24 hours
- Can be coloured with Ottobock pigment pastes
- 634A1 suitable as a thinner

Padding

For prosthesis and orthosis fabrication, we offer padding materials of various Shore hardnesses and degrees of damping. Padding materials are usually based on polyethylene (e.g. Pedilin, Plastazote[®]), copolymers of polyethylene such as EVA (e.g. Evazote[®]) or polyurethane (e.g. PPT).

Thermoplastic PE and EVA foams are the materials of choice and are versatile in application. Pedilin can be used to manufacture soft sockets in prosthesis fabrication and as padding in classic orthosis fabrication. Plastazote[®] is primarily used for the fabrication of body jackets and positioning orthoses.

Our ComforTex product line is valued in orthosis fabrication for its padding properties. ComforTex is available in soft, smooth, grippy and air versions, and is very comfortable for the user to wear.

Visit www.pem.ottobock.com to obtain up-to-date product information at any time.

Pedilin SilverShield®

Reference number 617S203

- Highly recommended for fabricating soft sockets and as a padding material for prosthetic sockets
- The proven classic material for soft sockets
- 617S203=10 is suitable for fabricating redression helmets
- Antibacterial effect
- PE foam, closed-cell
- Hardness approx. Shore A 35 (proven Shore hardness for fabricating soft sockets)
- Density: approx. 140 kg/m³
- High resilience
- Good thermoforming properties
- Good adhesive characteristics
- Good sanding characteristics
- Washable
- Temperature recommendation: 130 °C (convection oven, infrared oven)

- Hardness approx. Shore A 25
- Density: approx. 230 kg/m³
- Highly elastic
- High resilience
- Very good resistance to tearing
- Good bonding characteristics – combines well with other padding materials!
- Good sanding characteristics
- Washable
- Temperature recommendation: 110 °C – 130 °C (convection oven, infrared oven)

Dynoform

Reference number 617S70

- For padding in orthotics and prosthetics
- For fabricating soft inner sockets
- PE foam, closed-cell
- Various colours available
- Hardness approx. Shore A 30
- Resilient
- Good thermoforming properties
- Non-shrinking
- Good adhesive characteristics
- Good sanding characteristics
- Washable
- Resistant to saliva and perspiration, harmless according to food law
- Free of AZO and PCP substances
- Temperature recommendation: 110 °C – 130 °C (convection oven, infrared oven)

620P4=25	1100 mm	850 mm	25 mm

Rubber cork

Reference number 620P3

- For applications in orthopaedics and shoe technology
- Heat-resistant
- Elastic
- High resilience
- Resistant against frictional wear
- Impermeable to liquids
- Not thermoformable

Information material

646A174=GB

Prepreg technology product information

Technical data

Article number	Length	Width	Thickness
620P3=2	1000 mm	500 mm	2 mm
620P3=3	1000 mm	500 mm	3 mm
620P3=4	1000 mm	500 mm	4 mm
620P3=5	1000 mm	500 mm	5 mm
620P3=6	1000 mm	500 mm	6 mm
620P3=8	1000 mm	500 mm	8 mm

Practical recommendation 620P3

Suitable for prepreg technology as a separating layer for padding.

Chrome kid leather

Reference number 621J2

- For linings in orthopaedics and footwear specialism
- As upholstery leather for insoles
- Fine, soft leather

Technical data

Article number	Thickness
621J2	0.6-0.8 mm

Plain chamois sheep leather

Reference number 621S4

- For linings in orthopaedics and footwear specialism
- Soft, supple lining leather
- Good stretching properties

Technical data

Article number
621S4

● Sheepskin with grain (e.g. for sockets) = grain chamois leather

Blank calf leather

Reference number 621R1

- For use in orthopaedics and footwear specialism
- Ooze leather
- Lighter weight category
- Moderately greased
- Sometimes waxed
- Good carrying properties
- Good grip
- Supple
- Resistant to tearing
- Very good resistance to perspiration
- Waterproof
- Air permeable

Technical data

Article number	Version	Thickness
621R1=1-1.5	Side	1-1.5 mm

Padding

Leather

Orthopaedic chrome-tanned leather

Reference number 621R4

- For straps and buckles
- Chrome tanned calf leather
- Tough
- Resistant to tearing
- Resistant to repeated flexural stress and abrasion

Technical data

Article number	Version	Thickness
621R4=1.5-2	Side	1.5-2 mm

Orthopaedic leather

Reference number 621W2

- For sockets and sleeves in prosthetics and orthotics
- Partially tanned
- From cowhide
- Vegetable tanned
- Very good forming properties
- Good absorption of perspiration

Technical data

Article number	Version	Thickness
621W2=1.8-2	Side	1.8-2.0 mm
621W2=2-2.75	Side	2.0-2.75 mm
621W2=3-3.5	Side	3.0-3.5 mm

Cotton stockinette

Reference number 623T1

- As body protection stockinette for the plaster and casting technique
- As a spacer layer in vacuum forming or laminating
- Can be worn directly on the skin, e.g. in case of body jacket fittings
- Wide range of applications
- 100% cotton
- Good stretching properties

Technical data

Article number	Length	Width	Weight	Colour
623T1=4	32 m	4 cm	0.5 kg	Raw white
623T1=6	23.8 m	6 cm	0.5 kg	Raw white
623T1=8	17.2 m	8 cm	0.5 kg	Raw white
623T1=10	27.7 m	10 cm	1 kg	Raw white
623T1=12	25.6 m	12 cm	1 kg	Raw white
623T1=15	19.2 m	15 cm	1 kg	Raw white
623T1=20	14.9 m	20 cm	1 kg	Raw white
623T1=25	12.5 m	25 cm	1 kg	Raw white
623T1=30	10 m	30 cm	1 kg	Raw white
623T1=35	9.1 m	35 cm	1 kg	Raw white
623T1=40	7.7 m	40 cm	1 kg	Raw white

Felt cloth

Reference number 622P4

- For linings, e.g. in leather sleeves
- Density: approx. 190 kg/m³
- Good padding characteristics

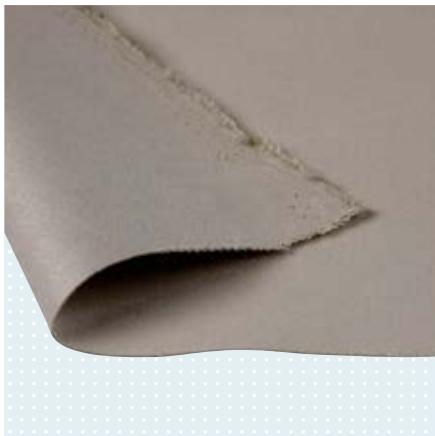

Technical data

Article number	Width	Thickness	Weight	Colour
622P4=2	1800 mm	2 mm	0.6 kg	White

Padding

Cover fabrics

Velvetone

Reference number 623M8

- As a cover fabric in orthotics, e.g. for insoles
- 100% cotton
- One side roughened, the other side sunk
- Strong, satin-woven moleskin fabric
- Very thin

Technical data

Article number	Width	Colour
623M8	1500 mm	Beige

● Please indicate the required length in metres when ordering.

Helanca double-stretch synthetic leather

Reference number 621X*

- For padding and upholstery
- Especially well suited for areas subject to high stress, for example in rehabilitation
- Pleasantly soft
- Good grip
- Elastic
- Abrasion-resistant
- Resistant to tearing
- Easy to clean
- Resistant to urine and blood
- Resistant to disinfectants

Technical data

Article image	Article number	Length	Width	Colour
	621X2=1	1 m	1370 mm	White
	621X2=2	2 m	1370 mm	White
	621X2=5	5 m	1370 mm	White
	621X3=1	1 m	1370 mm	Beige
	621X3=2	2 m	1370 mm	Beige
	621X3=5	5 m	1370 mm	Beige

Product example

Carbon synthetic leather

Reference number 621X9

- Cover for orthoses, prostheses, wheelchairs and closures
- As an underlay for insoles
- 50% polyurethane, 50% polyamide
- High abrasion resistance
- Resistant to tearing
- Colour-fast
- Light-fast
- Suitable for cutting
- Suitable for punching
- Easy to sand
- Clean cut edges without fraying
- Well suited for bonding
- Can be thermoformed at 90 – 120 °C
- Minimal shrinkage

Technical data

Article number	Length	Width	Colour
621X9=1-7	1 m	1.46 m	Black
621X9=10-7	10 m	1.46 m	Black

Practical recommendation 621X9

- Prepare a template using 616F1 PVC film.
- Transfer the shape to 621X9 carbon synthetic leather. In doing so, make sure the carbon pattern is consistently aligned to obtain a uniform overall appearance and to conceal joints.
- Use 636N9 contact adhesive for fixing. The surfaces to be glued must be dry and free of dust, oil and grease.
- For better draping characteristics, warm 621X9 carbon synthetic leather slightly with hot air.

ottobock.

QUALITY FOR LIFE

Finishing

Thermopapers, socket decors, CarbonTEX and SuperSkin offer the opportunity to upgrade surfaces with new designs. Ottobock offers various individual finishing options that allow the look of prostheses and orthoses to be changed and adapted to the user's taste.

Our thermopapers are suitable for giving plastics such as ThermoLyn PE 200, ThermoLyn PP-C and ThermoLyn PP-H an attractive, designer look. Socket decors permit individual colouration with applications of the lamination technique. With CarbonTEX, Ottobock offers a carbon look in various colours which is easy to realise as part of the regular lamination process.

With a SuperSkin coating, a foam cover for example can be spray coated with a liquid polyurethane plastic (PUR). The applied coating is elastic, water-repellent, UV-resistant and can be coloured according to the skin tone. Prostheses coated with Ottobock SuperSkin have an even more natural appearance and are for example more resistant against dirt.

Visit www.pem.ottobock.com to obtain up-to-date product information at any time.

646M70=ALL_INT	Thermopapers & socket decors collection

Processing and usage examples for 623P*

Warm the synthetic material until it becomes completely transparent. Cut the thermopaper to size and apply it, with the design facing down, onto the precut component.

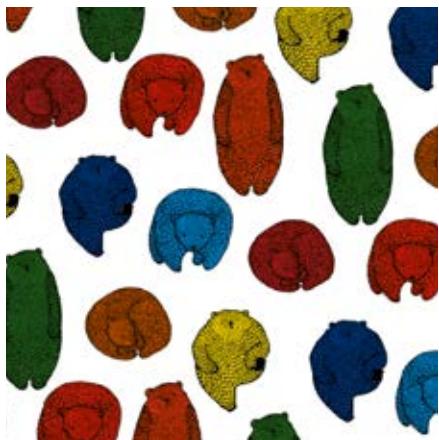

Carefully smooth the thermopaper from the middle towards the outside edges.

After approx. 20 seconds, pull the thermopaper off the material.

646D696=EN	Finishing product information
646M70=ALL_INT	Thermopapers & socket decors collection

Processing and usage examples for 623P*

Warm the synthetic material until it becomes completely transparent. Cut the thermopaper to size and apply it, with the design facing down, onto the precut component.

Carefully smooth the thermopaper from the middle towards the outside edges.

After approx. 20 seconds, pull the thermopaper off the material.

646D696=EN	Finishing product information
646M70=ALL_INT	Thermopapers & socket decors collection

Processing and usage examples for 623S*

Pull the decorative fabric around the socket model with the design facing inwards. Using your hand to hold the decorative fabric taut, trace along the contour of the socket using a pencil. Do not use permanent markers, ball-point pens, etc., because these could cause discolouration during the laminating process.

Take in the decorative fabric, leaving 5 mm between the stitches and the inside of the marked line. Allow the distal seam to taper off. This means the seam can be seen only on the medial side. Using scissors, trim the decorative fabric along the seam to a maximum of 2 mm.

Turn the decorative fabric inside out so that the design is facing outwards, and then pull it over the socket model. Place the seam in an inconspicuous position on the socket (e.g. medially).

Processing and usage examples for 623S*

Pull the decorative fabric around the socket model with the design facing inwards. Using your hand to hold the decorative fabric taut, trace along the contour of the socket using a pencil. Do not use permanent markers, ball-point pens, etc., because these could cause discolouration during the laminating process.

Take in the decorative fabric, leaving 5 mm between the stitches and the inside of the marked line. Allow the distal seam to taper off. This means the seam can be seen only on the medial side. Using scissors, trim the decorative fabric along the seam to a maximum of 2 mm.

Turn the decorative fabric inside out so that the design is facing outwards, and then pull it over the socket model. Place the seam in an inconspicuous position on the socket (e.g. medially).

Information material

646D718=EN	617H119 Orthocryl lamination resin 80:20 PRO product information
646D696=EN	Finishing product information

Practical recommendation 616G180

- Can be used with acrylic, vinyl, epoxy and polyester resin systems.
- Suitable for decorative purposes but not as a structural laminate component.
- Laminate without colour paste to prevent distortion of the colour result.
- Directly after cutting to size/sanding the socket, apply a transparent acrylic coating to the proximal edge. We recommend applying at least two layers and using wet/dry fine sandpaper between the layers. This approach is particularly well suited for sealing the upper socket brim. The external appearance of the upgraded socket is also optimised as a result.

	616G128=3-16	3 m	1 m	Silver

Practical recommendation 616G128

- Can be used with acrylic, vinyl, epoxy and polyester resin systems.
- Suitable for decorative purposes but not as a structural laminate component.
- Laminate without colour paste to prevent distortion of the colour result.
- Directly after cutting to size/sanding the socket, apply a transparent acrylic coating to the proximal edge. We recommend applying at least two layers and using wet/dry fine sandpaper between the layers. This approach is particularly well suited for sealing the upper socket brim. The external appearance of the upgraded socket is also optimised as a result.

Processing and usage examples for 616G*

641H17 chemical protection gloves, protective goggles and a breathing mask should be worn for occupational safety reasons. Perform all process steps under an extractor hood.

Sand the surface of the socket to be laminated, clean with 634A58 isopropyl alcohol and mark the position of the subsequent CarbonTEX PRO seam on the socket with a pencil.

Measure the socket length and circumference. Cut a corresponding piece of CarbonTEX PRO with a width and length that is 10 cm larger than the respective measurement. To prevent the fibres from fraying, tape off the outside of the cut edge. Apply 636K40 removable spray adhesive to the socket, starting on the side opposite the marked CarbonTEX PRO seam. Then continue wetting the socket gradually, applying the layer of CarbonTEX PRO around the socket without wrinkles and pressing it into place in the direction of the seam.

Attach one end of the CarbonTEX PRO to the previously marked seam with 616F10-6 double-sided PVC adhesive tape and trim the excess material with the 719S21 carbon scissors. Then press any protruding fibres in place again. Repeat this procedure on the opposite side. To do so, apply a new strip of PVC adhesive tape to the cut edge of the CarbonTEX PRO side. Overlap and attach the second end of the layer of CarbonTEX PRO, trim the excess material and press any protruding fibres in place.

Use paper towels to clean the soaked 616F4 PVA bag on both sides and pull it over the model with the desired side (matte or gloss) facing outward. Tie off the PVA bag on the proximal end. Tie off temporarily in the distal region and create a vacuum.

Mix the desired quantity of 617H119 Orthocryl lamination resin 80:20 PRO, without adding colour paste, with 2% hardener and fill into the PVA bag. Then tie off above the resin filling, without any air inclusions.

Align the model as shown in Fig. 3. Undo the temporary tie in the distal area between the resin and socket, and extract rising air bubbles with the vacuum. Then laminate the socket, with an even penetration of resin running at a 90° angle to the socket axis.

After hardening, cut the socket and sand it down.

Notes

Small parts and auxiliary materials

This section contains a broad selection of metal, small and accessory parts that are needed for the fabrication of prostheses and orthoses. Proven materials such as steel, light metal, aluminium alloys and plastics are traditionally used here. Auxiliary materials include those that are used up during processing of the main materials, such as lubricating agents.

While donning a transfemoral prosthesis is a daily routine for many prosthesis wearers, the procedure is nevertheless very cumbersome and may even be painful. EasyFit, a very effective tool for easily donning transfemoral prostheses with a valve opening, was developed in cooperation with prosthesis wearers in order to solve this problem. The EasyFit is also available for arm prostheses with a valve opening.

Thanks to ongoing further development, most patients today can be fitted with ready-made supports, the goal being to treat patients according to their specific indications, provide early mobilisation, assist and accelerate the healing process and to prevent new injuries.

Visit www.pem.ottobock.com to obtain up-to-date product information at any time.

Small parts and auxiliary materials

EasyFit

Easy Fit donning aid

Reference number OC1560

- For transfemoral prostheses with valve opening
- Easy donning that saves time and energy
- Comfortable feeling when donning
- Pull-through aid for additional help
- High-quality, durable material
- Suitable for machine washing
- Lightweight and foldable, includes a sealable bag for easy transportation

Technical data

Article number	Size	Proximal residual limb circumference	Distal residual limb circumference	Sock length	Colour	Colour seam
OC1560=XS	XS	39 cm	25 cm	40 cm	Blue	Yellow
OC1560=S	S	43 cm	27 cm	43 cm	Blue	Red
OC1560=M	M	56 cm	29 cm	43 cm	Blue	Lilac
OC1560=L	L	68 cm	36 cm	43 cm	Blue	Green
OC1560=XL	XL	78 cm	36 cm	43 cm	Blue	Light blue
OC1560=XXL	XXL	80 cm	36 cm	60 cm	Blue	Pink

Practical recommendation OC1560

Using the EasyFit donning aid in combination with the threadless 21Y14 PushValve one-way valve makes prosthesis donning even easier.

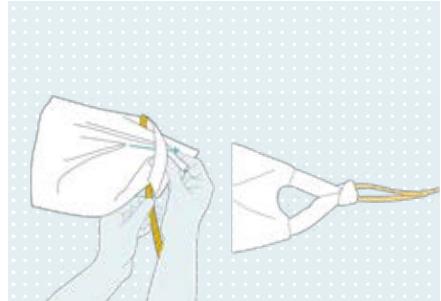

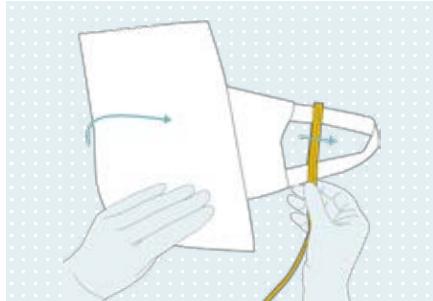

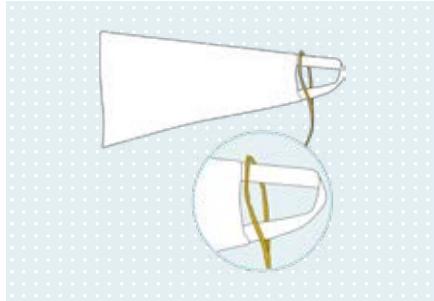

Information material

647G970	OC1560 EasyFit donning aid instructions for use

Small parts and auxiliary materials

EasyFit

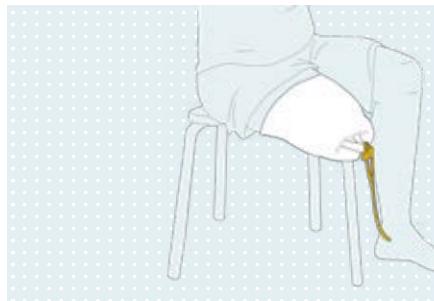

Processing and usage examples for OC1560

1. Spread out the EasyFit donning aid and the included pull-through aid.
2. Turn the halves of the EasyFit donning aid in to each other to the lower seam.
The loop should face outwards.
3. Attach the pull-through aid for additional help:
Pull the strap on the donning aid through the loop on the pull-through aid.

4. Pull the top half of the donning aid through the lower gap between the strap and the loop.

5. The pull-through aid and the strap of the donning aid are now tied to each other.

6. Now use both hands to pull the EasyFit donning aid over the transfemoral residual limb like a sock, avoiding any wrinkles. Position the socket over the residual limb so the strap of the EasyFit donning aid or the pull-through aid can be put through the socket's valve opening after getting into the socket.

7. Finally, use the strap to slowly pull the EasyFit donning aid out of the prosthetic socket through the valve opening.

EasyFit Arm donning aid

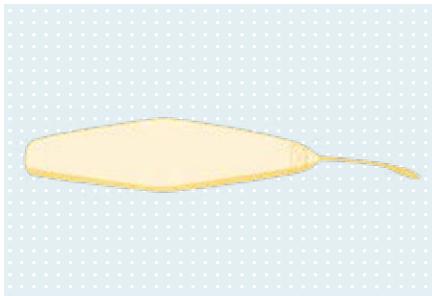

Reference number OC1560

- For arm prostheses with a valve opening
- Kids' size available
- Easy donning that saves time and energy
- Comfortable feeling when donning
- High-quality, durable material
- Suitable for machine washing
- Foldable and lightweight

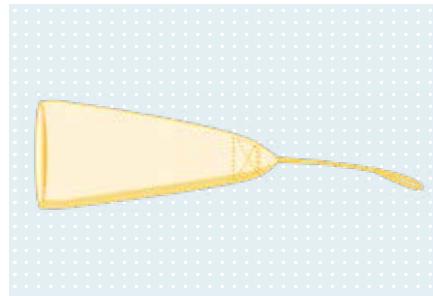

Technical data

Article number	Size	Proximal residual limb circumference	Distal residual limb circumference	Sock length	Colour	Colour seam
OC1560=KIDS	KIDS	29 cm	15 cm	21 cm	Green	Multi-coloured
OC1560=TR	TR	42 cm	22 cm	25 cm	Green	Orange
OC1560=TH	TH	47 cm	28 cm	34 cm	Green	Dark green

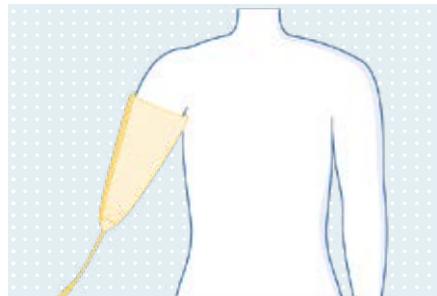

Processing and usage examples for OC1560

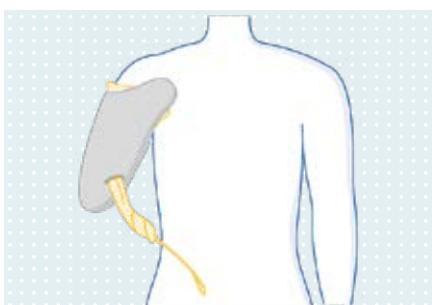

1. Fully spread out the EasyFit Arm donning aid before using it.

2. Turn half the length of the EasyFit Arm donning aid into the other half up to the lower seam (loop facing out).

3. Pull the EasyFit Arm donning aid like a sock over the residual limb with as few wrinkles as possible. Guide the socket over the residual limb so that the loop of the EasyFit Arm donning aid can be pulled through the socket valve opening after applying the socket.

4. Finally, use the loop to slowly pull the EasyFit Arm donning aid out of the prosthetic socket through the valve opening. If the residual limb is not properly positioned in the prosthetic socket, repeat the process.

suspension sleeve
instructions for use

Transtibial suspension sleeve

Reference number 21B4

- To reduce rotation movements and pistoning in transtibial prostheses
- For the transfer of force and fixation of the prosthesis on the body
- To improve guiding and control of the prosthesis
- Universal application for the left and right sides; available in various sizes
- Loops make it easy to put on the suspension sleeve with minimal effort
- Incl. hook-and-loop-compatible closure for an adjustable fit
- High hook-and-loop strength
- The breathable, thin strap made of polyamide and spandex is very comfortable to wear
- Low weight makes body perception and control possible
- High abrasion resistance of the strap
- Secure hold of the prosthesis due to Neopren® anti-slip strip at the distal end of the suspension sleeve
- Latex-free
- Robust and durable
- Good shape retention

product brief

Product example

RevoFit2 diagnostics

Reference number 514Z13

- Closure and adjustment mechanism for prosthetic sockets
- Set for check socket
- Flexible positioning of the reel housing via individual selection of the course of the pull cord (straight or parallel)
- Pull cord length supports various design possibilities
- Small housing footprint for individual positioning
- Offers an improved fit and optimises the comfort of the prosthesis
- Minute adjustments can be made on the go
- Easy, one-handed operation by turning the BOA® reel
- Quick opening and closing
- Robust and durable
- Lightweight

-----------------	--

QuickFit strap

Reference number 514Z20

- Closure and adjustment mechanism for orthoses
- Individual adaptation of the compression and support provided by the orthosis
- Length can be individually shortened
- Minute adjustments can be made on the go
- Easy, one-handed operation by turning the BOA® reel
- Quick opening and closing
- Robust and durable
- Lightweight material
- Can be combined with 514Z21 QuickFit buckle

Technical data

Article number	Length	Width	Colour
514Z20=25-7	Approx. 73–63 cm	Approx. 25 mm	Black
514Z20=38-7	Approx. 73–63 cm	Approx. 38 mm	Black

SafeLock buckle

Reference number 514Z8

- Magnetic closure that engages mechanically for use in orthosis fabrication
- Suitable for hand, shoulder, torso, knee and ankle orthoses depending on the size
- Plastic
- Self-actuating, secure closing via magnetic pull
- Easy, intuitive opening with one hand by pushing sideways
- Different sizes for strap widths of 20, 30 and 40 mm
- Robust and durable
- High load capacity (max. 55 kg)

Technical data

Article number	Length	Width	Clear width	Height	Colour	Order unit
514Z8=20-7	46 mm	22 mm	20 mm	12 mm	Black	Piece

● Please indicate the required length in metres when ordering.

Practical recommendation 623Z2

Close before washing to protect the closure and/or other items in the wash.

Small parts and auxiliary materials

Closure technology

Hook-and-loop hook strap, self-adhesive

Reference number 623Z8

- For fast, detachable connections
- 100% polyamide
- Individually adaptable length
- Can be refastened many times
- High adhesive strength
- Flexible
- High wearer comfort

Technical data

Article number	Width	Colour	Original roll	Minimum order quantity
623Z8=W25	25 mm	White	25 m	1 m
623Z8=W50	50 mm	White	25 m	1 m

● Please indicate the required length in metres when ordering.

Loop-velour strap

Reference number 623Z96

- Ideal for orthosis straps
- For closure types with higher loads, e.g. walking orthoses
- For fast, detachable connections
- Woven polyamide bordered in velour
- Various widths and colours available
- Individually adaptable length
- Both sides compatible with hook-and-loop
- Can be refastened many times
- Flexible
- High wearer comfort

Technical data

Article number	Width	Colour	Original roll	Minimum order quantity
623Z96=30-0	30 mm	Beige	25 m	1 m
623Z96=38-0	38 mm	Beige	25 m	1 m
623Z96=50-0	50 mm	Beige	25 m	1 m
623Z96=30-7	30 mm	Black	25 m	1 m
623Z96=38-7	38 mm	Black	25 m	1 m
623Z96=50-7	50 mm	Black	25 m	1 m

● Please indicate the required length in metres when ordering.

Practical recommendation 623Z96

We recommend using micro hook-and-loop on velour and hook on loop.

Small parts and auxiliary materials

Closure technology

Hook-and-loop strap

Reference number 170Z4

- Ideal for FreeWalk orthosis
- For fast, detachable connections
- 100% polyamide
- Can be refastened many times
- Flexible
- High level of wearer comfort

Technical data

i Practical recommendation 170Z4

Close before washing to protect the closure and/or other items in the wash.

"2-in-1" hook-and-loop closure strap

Reference number 623Z4

- For fast, detachable connections
- Simplifies closure system zoning
- Mix of hook and loop strap
- 100% polyamide
- Individually adaptable length
- Can be refastened many times
- Flexible
- High wearer comfort

Technical data

Article number	Width	Colour	Original roll	Minimum order quantity
623Z4=30-7	30 mm	Black	25 m	25 m
623Z4=38-7	38 mm	Black	25 m	25 m
623Z4=50-7	50 mm	Black	25 m	25 m

● Please indicate the required length in metres when ordering.

i Practical recommendation 623Z4

Close before washing to protect the closure and/or other items in the wash.

Small parts and auxiliary materials

Closure technology

Micro hook-and-loop, self-adhesive

Reference number 623Z*

- Recommended especially in combination with 623P3 terry cloth padding fabric and with 623F* ComforTex
- Individually adaptable length
- Self-adhesive
- Very high hook-and-loop strength
- No additional bulk when fastening textile padding fabrics
- Facilitates very flexible connections

Technical data

Article image	Article number	Width	Colour	Minimum order quantity
	623Z4=50-6	50 mm	White	10 m
	623Z200=100-7	100 mm	Black	10 m

● Please indicate the required length in metres when ordering.

Small parts and auxiliary materials

Closure technology

Y-hook-and-loop with PU coating

Reference number 170D29

- For adapting straps, e.g. directly on the patient
- Particularly suitable for 623Z96 loop-velour strap
- For closure types with higher loads, e.g. walking orthoses
- For fast, detachable connections
- Polyester with PU coating
- Micro hook-and-loop/micro hook-and-loop (single side: heavy hook-and-loop)
- Various widths available
- Low bulk due to use of micro hook-and-loop only
- User-friendly design with "Open" embossing
- Easy to clean thanks to PU coating
- Washable with a damp cloth
- Can be refastened many times
- Flexible
- High level of wearer comfort

Technical data

Article number	Width	Colour
170D29=30-0	30 mm	Beige
170D29=38-0	38 mm	Beige
170D29=50-0	50 mm	Beige
170D29=30-7	30 mm	Black
170D29=38-7	38 mm	Black
170D29=50-7	50 mm	Black

i Practical recommendation 170D29

We recommend using micro hook-and-loop on velour and hook on loop.

Y-hook-and-loop

Reference number 170D21

- For adapting straps, e.g. directly on the patient
- For loop straps of the FreeWalk orthosis
- For fast, detachable connections
- 100% polyamide
- Can be refastened many times
- Flexible
- High wearer comfort

Technical data

Article number	Width	Colour
170D21=38-0	38 mm	Beige
170D21=38-7	38 mm	Black

Closure technology

Information material

646D1475=EN_INT 29Y63/29Z63 hook-and-loop strap with pad product brief

Hook-and-loop strap with pad

Reference number 29Y63

- Orthotics: leg, torso, arm orthotics
- Prosthetics: lower limb, upper limb prosthetics
- Pad with guide loops: stable positioning of the pad on the hook-and-loop strap using the four guide loops, good padding properties, extremely resilient, material: polyamide, polyurethane foam with microfibre film
- Hook-and-loop strap and strap guide loop: sturdy strap guide loop with long loop strap, very good surface stability, soft hook-and-loop strap, no sharp outside edges, can be re-closed multiple times, very high closing force, very good tensile strength, material: polyamide
- Strap and pad can be individually cut to length
- Individual positioning is possible
- Comfortable on the skin
- Quick-drying

Technical data

Article number	Width	Length	Colour
29Y63=20-7	20 mm	365 mm	Black
29Y63=30-7	30 mm	410 mm	Black
29Y63=40-7	40 mm	440 mm	Black

21Y75N PU hook-and-loop closure product brief

PU hook-and-loop closure

Reference number 21Y75N

- Closure technology for orthopaedic technology
- Especially for closure types with higher loads, e.g. walking orthoses
- Polyamide with PU coating
- Heavy-duty hook-and-loop
- With strap guide loop and flap
- Can be refastened many times
- User-friendly thanks to the absence of hooks at the beginning of the closure
- Very high hook-and-loop strength
- Individually adaptable length
- Abrasion-proof, smooth surface
- Easy to clean thanks to PU coating
- Not bulky
- Washable with a damp cloth
- Attractive design

Technical data

Article number	Length	Width	Colour
21Y75N=280X16-7	280 mm	16 mm	Black
21Y75N=280X25-7	280 mm	25 mm	Black

29Y57	M4

Setting nut/insert nut

Reference number 29C3

- Stainless steel
- With knurled shoulder
- Secure support

Technical data

Article number	Thread	Head Ø	Shoulder Ø	Length	Order unit
29C3=M4	M4	10 mm	5 mm	3.6 mm	Piece

Setting nut

Reference number 29C5

- For thin laminates in orthotics
- Stainless steel
- Flat
- With knurled shoulder
- Secure support

Technical data

Article number	Thread	Head Ø	Shoulder Ø	Length
29C5=M4X7X2.4	M4	7 mm	5.5 mm	2.4 mm
29C5=M4X7	M4	7 mm	5.5 mm	3.6 mm
29C5=M4X9	M4	9 mm	5.5 mm	3.6 mm
29C5=M5X9	M5	9 mm	6.5 mm	9 mm
29C5=M5X18	M5	18 mm	6.5 mm	3.6 mm

Small parts and auxiliary materials

Setting nuts, screws and rivets

Lamination disk, serrated

Reference number 507S15

- For laminating
- For the attachment of straps and pull cables, e.g. for orthotic joints
- Subsequently cutting an M4 thread is possible.
- Stainless steel
- With external teeth

Technical data

Article number	Accessories for	Outside Ø	Borehole Ø	Thickness
507S15	743A18	13.8 mm	3 mm	1.5 mm

Setting nut

Reference number 29C6

- Stainless steel
- With large shoulder

Technical data

Article number	Thread	Head Ø	Shoulder Ø	Length
29C6	M4	20 mm	8 mm	7.5 mm

Bandage rosette

Reference number 21Y5

- For attaching straps and belts in the lamination technique or with rivets
- With 3 rivet holes

Technical data

Article number	Thread	Washer Ø
21Y5=M4	M4	21.5 mm
21Y5=M5	M5	21.5 mm

Small parts and auxiliary materials

Setting nuts, screws and rivets

Carrying strap rosette

Reference number 21Y27

- For attaching straps and belts in the lamination technique or with rivets
- With 3 rivet holes
- Free-cutting steel

Technical data

Article number	Thread	Washer Ø
21Y27	M4	27 mm

Bandage rosette

Reference number 21Y6

- For attaching straps with screw connections
- With nuts

Technical data

Article number	Thread
21Y6	M4

T-nut

Reference number 502E1

- For SACH feet
- Galvanised

Technical data

Article number	Thread	Length
502E1=M4X8	M4	8 mm
502E1=M5X8	M5	8 mm
502E1=M6	M6	9 mm
502E1=M6X12	M6	12 mm
502E1=M8X17	M8	17 mm
502E1=M10X16	M10	16 mm

Small parts and auxiliary materials

Setting nuts, screws and rivets

Attachment plate

Reference number 21Y17

- For Silesian belt
- With riveted pad button
- Very sturdy means of fastening

Technical data

Article number	Head Ø
21Y17	5.5 mm

Attachment plate

Reference number 21Y31

- For Silesian belt
- With riveted pad button
- Very sturdy means of fastening

Technical data

Article number	Head Ø
21Y31	10 mm

Socket screw with Allen head

Reference number 503F3

- For universal fastening applications
- Stainless steel
- Flat head so there is little bulging
- Allen head ensures that there are no sharp edges as is the case with slotted screws

Technical data

Article number	Thread	Thread length	Head Ø	Minimum order quantity
503F3	M4	7 mm	8 mm	1 piece(s)
503F3=M4X8-20	M4	7 mm	8 mm	20 piece(s)
503F3=M4X8-100	M4	7 mm	8 mm	100 piece(s)

Small parts and auxiliary materials

Setting nuts, screws and rivets

Phillips countersunk head screw

Reference number 501T19

- For universal fastening applications
- Stainless steel
- Countersunk screw, flush with material surface after mounting

Technical data

Article number	Thread	Length
501T19=M3X12-1	M3	12 mm
501T19=M4X6	M4	6 mm
501T19=M4X8	M4	8 mm
501T19=M4X10	M4	10 mm
501T19=M4X12	M4	12 mm
501T19=M4X14-1	M4	14 mm
501T19=M4X16-1	M4	16 mm
501T19=M4X20	M4	20 mm
501T19=M5X10	M5	10 mm
501T19=M5X18	M5	18 mm

Slotted truss head screw/Hessing screw

Reference number 501S16

- For universal fastening applications, e.g. wood to metal
- Stainless steel

Technical data

Article number	Thread	Thread length	Head Ø
501S16=M4X8X10	M4	8 mm	10 mm
501S16=M4X10X10	M4	10 mm	10 mm

Socket screw with slot

Reference number 501S33

- For universal fastening applications, e.g. wood to metal
- Stainless steel
- DIN 85-A2

Technical data

Article number	Thread	Thread length	Head Ø
501S33=M4X12X8	M4	12 mm	8 mm

Small parts and auxiliary materials

Setting nuts, screws and rivets

Phillips head screw

Reference number 29Y27

- For belt attachments
- Available with white or black plastic head

Technical data

Article number	Thread	Length	Colour
29Y27=M4X6-6	M4	6 mm	White
29Y27=M4X8-6	M4	8 mm	White
29Y27=M4X10-6	M4	10 mm	White
29Y27=M4X12-6	M4	12 mm	White
29Y27=M4X20-6	M4	20 mm	White
29Y27=M4X6-7	M4	6 mm	Black
29Y27=M4X8-7	M4	8 mm	Black
29Y27=M4X12-7	M4	12 mm	Black
29Y27=M4X20-7	M4	20 mm	Black

Rosette screw

Reference number 501S3

- Nickel-plated

Technical data

Article number	Thread	Thread length	Head Ø
501S3=M4	M4	8 mm	15 mm
501S3=M5	M5	8 mm	15 mm

Two hole joint nut

Reference number 502R1

- With metric thread

Technical data

Article number	Thread	Head Ø
502R1=M4X14	M4	14 mm
502R1=M5X16	M5	16 mm
502R1=M5X18	M5	18 mm
502R1=M6X20	M6	20 mm
502R1=M8X18	M8	18 mm

Small parts and auxiliary materials

Setting nuts, screws and rivets

Carrying strap screw head

Reference number 516S5

- For the attachment of belts and straps
- Stainless steel

Technical data

Article number	Thread	Thread length	Head Ø	Head height
516S5	M4	6.5 mm	14 mm	7 mm

Pad screw head

Reference number 516S3

- For the attachment of belts and straps
- Stainless steel, nickel-plated

Technical data

Article number	Thread	Thread length	Head Ø	Head height	Base Ø
516S3	M4	5.5 mm	6 mm	6.5 mm	8 mm

Pad screw head

Reference number 516N8

- For the attachment of belts and straps
- Plexidur

Technical data

Article number	Head height	Stud Ø	Stud length	Shoulder height
516N8=9	9 mm	4 mm	10 mm	3 mm
516N8=12	200 mm	5 mm	10 mm	4 mm

Small parts and auxiliary materials

Setting nuts, screws and rivets

Countersunk head wood screw, slotted

Reference number 503L1

- For screwing wood
- Steel, nickel-plated
- Oval head
- Countersunk screw, flush with material surface after mounting

Technical data

Article number	Diameter	Length
503L1=3X20	3 mm	20 mm

Brass pins

Reference number 506A1

- For fastening, e.g. brass plates
- With round head and screw thread

Technical data

Article number	Head Ø	Length	Minimum order quantity
506A1=1.3X13	1.3 mm	13 mm	0.25 kg

Washer / lamination disk

Reference number 507U3

- For distributing a screw force on a larger surface area
- Prevents the screw head from sinking in or digging into the material
- Brass

Technical data

Article number	Outside Ø	Borehole Ø	Thickness
507U3=8X3X0.5	8 mm	3 mm	0.5 mm
507U3=10X3X0.5	10 mm	3 mm	0.5 mm

507U3=14X3.2X2	14 mm	3.2 mm	2 mm
507U3=14X4X0.5	14 mm	4 mm	0.5 mm
507U3=18X4X0.5	18 mm	4 mm	0.5 mm

Small parts and auxiliary materials

Setting nuts, screws and rivets

Double hollow rivet

Reference number 504H1

- For permanent connections
- Open lower part, closed upper part
- Iron, nickel-plated
- No thread necessary

Technical data

Article number	Head Ø	Length	Minimum order quantity
504H1=7-100	7 mm	8.3 mm	100 pieces
504H1=10-100	10 mm	9.5 mm	100 pieces
504H1=12-100	12 mm	11.7 mm	100 pieces
504H1=7-1000	7 mm	8.3 mm	1000 pieces
504H1=10-1000	10 mm	9.5 mm	1000 pieces
504H1=12-1000	12 mm	11.7 mm	1000 pieces

Hollow rivet

Reference number 504H3

- Can be used for the attachment of, for example, straps and flaps
- For permanent connections
- Open lower part, open upper part
- Brass, nickel-plated
- No thread necessary

Technical data

Article number	Head Ø	Minimum order quantity
504H3=7-100	7 mm	100 pieces
504H3=11-100	11 mm	100 pieces
504H3=13-100	13 mm	100 pieces
504H3=7-1000	7 mm	1000 pieces
504H3=11-1000	11 mm	1000 pieces
504H3=13-1000	13 mm	1000 pieces

Eyelet

Reference number 515A1

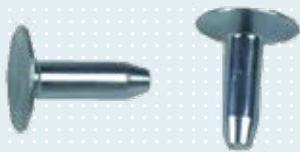

- For fabric corsets
- Iron, nickel-plated

Technical data

Article number	Hole Ø	Length	Fits insertion plunger
515A1	4 mm	4 mm	702A1=2

Small parts and auxiliary materials

Setting nuts, screws and rivets

Iron rivet

Reference number 504F1

- For permanent connections
- With flat head
- Iron, galvanised
- No thread necessary

Technical data

Article number	Diameter	Length	Minimum order quantity
504F1=3X10	3 mm	10 mm	1000 pieces
504F1=3X12	3 mm	12 mm	1000 pieces
504F1=3X15	3 mm	15 mm	1000 pieces
504F1=3X25	3 mm	25 mm	1000 pieces
504F1=3X30	3 mm	30 mm	1000 pieces
504F1=4X20	4 mm	20 mm	1000 pieces
504F1=4X25	4 mm	25 mm	1000 pieces

Copper rivet

Reference number 504F2

- For permanent connections
- With flat head
- Copper
- No thread necessary

Technical data

Article number	Diameter	Length	Minimum order quantity
504F2=3X6	3 mm	6 mm	1000 pieces
504F2=3X8	3 mm	8 mm	1000 pieces

Light metal rivet

Reference number 504F3

- For permanent connections
- With flat head
- Aluminium
- No thread necessary

Technical data

Article number	Diameter	Length	Minimum order quantity
504F3=3X6	3 mm	6 mm	1000 pieces
504F3=3X12	3 mm	12 mm	1000 pieces

Small parts and auxiliary materials

Parting agents and lubricants

Silicone grease 400, medium

Reference number 633F11

- As corrosion protection for plug connections, e.g. Myo, E-MAG Active (cable connectors)
- As corrosion protection, e.g. for drive units
- For the planetary gear train of the drive unit in upper limb prosthetics
- For isolating components in the lamination technique
- Very good resistance to heat and cold
- High resistance to ageing
- Good film forming capacity

Technical data

Article image	Article number	Net contents	Packaging
	633F11	0.1 kg	Tube
	633F11=1	1 kg	Can

Silicone grease

Reference number 633F50

- Ideal lubricating layer during vacuum forming on all plaster models (also possible without sock)
- Simplifies the fabrication of consistent wall thicknesses
- Thixotropic
- Air permeable
- Not hardening

Technical data

Article number	Net contents
633F50=1	1 kg
633F50=10	10 kg

Processing and usage examples for 633F50

Remove a quantity of 633F50 silicone grease that is sufficient for the model and apply a thin, even layer to the model.

Small parts and auxiliary materials

Parting agents and lubricants

Silicone parting agent

Reference number 519L5

- For parting, gliding and lubricating
- Protects rubber, plastics and elastomers from becoming brittle
- Compact and solvent-free
- CFC-free

Technical data

Article number	Net contents
519L5	0.4 l

Silicone oil

Reference number 633X35

- For silicone brake segments of the Jüpa knee joints
- Parting agent for rubber and plastics
- Lubricant
- Water repellent
- Temperature resistant

Technical data

Article number	Net contents
633X35=0.010	0.01 kg
633X35=5	5 kg

Workshop oil

Reference number 633X89

- Cleaning agent for casting tables
- Cleans soiled, oil-soaked metal components
- Easily removes rust film
- Removes foreign particles
- Silicone, PTFE, acid and resin free and does not resinify

Technical data

Article number	Net contents
633X89=0.500	500 ml
633X89=5	5 l

Small parts and auxiliary materials

Parting agents and lubricants

Teflon® spray

Reference number 633T2

- For parting, gliding and lubricating
- Excellent anti-adhesive properties
- Without grease

Technical data

Article number	Net contents
633T2	300 ml

i Practical recommendation 633T2

With a pendulum-like movement, apply thin and even coats, allowing each coat to dry separately. Polishing with a cloth enhances the repelling characteristics.

Gliding paste, white

Reference number 633F16

- For machine elements of all kinds that are subject to simultaneous impact stresses and shaking and/or oscillating movements
- Especially well suited for modular knee joints
- Also suitable as a general assembly paste
- High-performance lubricant for steel (stainless steel, titanium, brass) – also in combination among each other
- For long-term lubrication under extreme conditions
- High resistance to water
- Good adhesion
- Excellent protection against wear and tear
- Good corrosion protection

Technical data

Article number	Net contents	Packaging
633F16=1	1 kg	Can

Small parts and auxiliary materials

Parting agents and lubricants

Information material

646A174=GB

Prepreg technology
product information

Wax

Reference number 633W8

- For insulating joints, components and dummies
- Excellent separating effect
- Easy to process

Technical data

Article image	Article number	Net contents
	633W8=12.2	12.2 g
	633W8	425 g

Special lubricant

Reference number 633F7

- For all bar joints (stainless steel), also in combination with plastic, and for steel joints
- In particular for steel on steel lubrication
- High resistance to water
- Excellent protection against wear and tear
- Good corrosion protection

Technical data

Article number	Net contents	Packaging
633F7=1	1 kg	Can

Special lubricant

Reference number 633G6

- For prosthetic joints
- For the following material combinations: metal on plastic, leather on plastic and plastic on plastic
- Excellent temperature stability (from -25 °C to +120 °C)
- High resistance to cold and hot water
- Excellent flexing resistance
- Excellent protection against wear and tear
- Good corrosion protection

Technical data

Article number	Net contents	Packaging
633G6	0.25 kg	Tube

Small parts and auxiliary materials

Parting agents and lubricants

Special lubricant

Reference number 633F14

- For gliding surfaces and frictional contacts that are subject to high loads and simultaneously require “non-contaminating” lubrication, particularly at low to medium speeds
- For all accessible gear wheels and axes in System Electric Hands and System Electric Greifers
- Good water resistance
- High load-bearing capacity
- Excellent protection against wear and tear
- Good corrosion protection

Technical data

Article image	Article number	Net contents	Packaging
	633F14=0.050	0.05 kg	Tube
	633F14=1	1 kg	Can

Small parts and auxiliary materials

Profiles and metal sheets

Light metal profile bar

Reference number 605P8

- For fabricating system bars
- Aluminium
- Strength: approx. 400 N/mm²
- Round edges
- Good malleability by bending

Technical data

Article number	Length	Width	Thickness	Material	Order unit
605P8=14	1000 mm	14 mm	5 mm	Aluminium	Piece
605P8=16	2000 mm	16 mm	5 mm	Aluminium	Piece
605P8=20	2000 mm	20 mm	5 mm	Aluminium	Piece
605P8=20-12	305 mm	20 mm	5 mm	Aluminium	Piece

Stainless steel profile bar

Reference number 651P4

- For fabricating system bars
- High strength: approx. 800–950 N/mm²
- Round edges
- Spot weldable
- Good malleability by bending

Technical data

Article number	Length	Width	Thickness	Material	Order unit
651P4=16	2000 mm	16 mm	4 mm	Stainless steel	Piece
651P4=20	2000 mm	20 mm	4 mm	Stainless steel	Piece

Spring band steel profile bar

Reference number 651B1

- Stainless steel
- High strength: approx. 1400 N/mm²
- Round edges
- Cold-rolled

Technical data

Article number	Length	Width	Thickness
651B1=12	2000 mm	12 mm	2 mm

Small parts and auxiliary materials

Profiles and metal sheets

Flat steel

Reference number 603F1

- Flat steel
- High strength: approx. 600–700 N/mm²
- Hot-rolled
- Uncoated surface
- Etched
- Oil-free

Technical data

Article number	Length	Width	Thickness
603F1=24X8	3000 mm	24 mm	8 mm

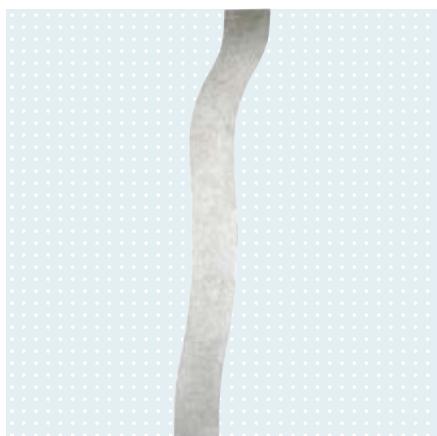

Straps

Reference number 17Z*

- For structural and conventional orthosis fabrication
- For modular joint systems (orthoses)
- Different versions (sheet steel, aluminium plate, stainless steel and titanium) available

Technical data

Article number	Length	Width	Thickness	Material
17Z5=192	192 mm	30 mm	2 mm	Aluminium sheet metal
17Z5=235	235 mm	30 mm	2 mm	Aluminium sheet metal

17Z10=325	325 mm	30 mm	2 mm	Titanium

Seating tape

Reference number 17Z2

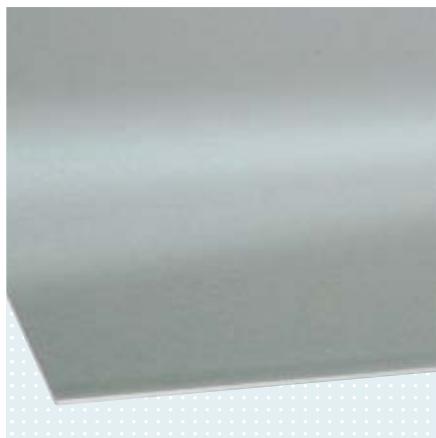

- For structural and conventional orthosis fabrication
- For modular joint systems (orthoses)
- In particular as proximal reinforcement band
- Available in stainless steel

Technical data

Article number	Length	Width	Thickness	Material
17Z2	320 mm	35 mm	2 mm	Stainless steel

Small parts and auxiliary materials

Profiles and metal sheets

Dur aluminum sheet metal

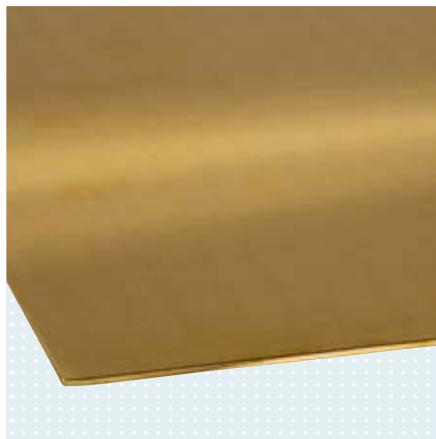

Reference number 605T1

- For fabricating bands and FOs
- The proven classic material
- Aluminium: approx. 95%; copper, magnesium, manganese: approx. 5%
- Strength: approx. 400 N/mm²
- Good malleability by beating and bending

Technical data

Article number	Length	Width	Thickness
605T1=1.5	1000 mm	500 mm	1.5 mm
605T1=2	1000 mm	500 mm	2 mm

Small parts and auxiliary materials

Sanding and polishing

Grit cloth

Reference number 649G22

- Facilitates the simplified surface treatment of plaster models
- Adapts to curvatures during the sanding process

Technical data

Article number	Length	Width	Grain
649G22=100	280 mm	230 mm	100
649G22=180	280 mm	230 mm	205

Soft Pad sanding paper

Reference number 649G26

- For manual finish grinding of contours, curvatures and hard to reach areas
- Polyurethane foam with aluminium oxide
- Can be used wet and dry
- Highly flexible, does not buckle
- Does not form sharp edges
- Adapts to any contour
- Does not slip in the hand
- Produces a very fine and even finish

Technical data

Article number	Version	Length	Width	Grain	Height	Order unit	Package contents
649G26=320	320	115 mm	140 mm	320 – 400 (fine)	5 mm	Package	20 pieces
649G26=400	400	115 mm	140 mm	400 – 500 (super fine)	5 mm	Package	20 pieces

Processing and usage examples for 649G26

Compress 649G26 Soft Pad sanding paper and submerge it in water until fully soaked.

With the soaked Soft Pad sanding paper, sand the plaster model using the abrasive side with circular movements and low pressure. (Do not rinse sanding residue under running water!) Soft pad sanding paper can be folded centrally, so that small radii can be worked without damaging the brim.

Soak Soft Pad sanding paper with water again and use the foam side to hone the plaster model in order to close fine pores with the accumulated plaster residue.

Small parts and auxiliary materials

Soldering and welding materials

Silver solder

Reference number 637L8

- For soldering stainless steel, e.g. for soldering all Ottobock bars made of stainless steel
- Melting temperature: 595–630 °C
- Excellent flow characteristics
- Soldered joints are durable up to an operating temperature of 200 °C

Technical data

Article number	Diameter	Length
637L8=1.5X500	1.5 mm	500 mm

Fluxing agent

Reference number 637F1

- For soldering with 637L8=1.5x500 silver solder
- For soldering steel, stainless steel and other metals, except light metals
- Pasty consistency

Technical data

Article number	Weight
637F1=0.100	0.1 kg
637F1=0.500	0.5 kg

i Practical recommendation 637F1

- If the paste is too thick for certain applications, it can be thinned with water.
- Flux residue can be removed with water or etching agent.

Uncoated wire

Reference number 637D1

- For autogenous welding
- Low-alloy steel
- Low viscosity
- Suitable for operating temperatures up to 350 °C

Technical data

Article number	Diameter	Length
637D1=2	2 mm	1000 mm
637D1=3	3 mm	1000 mm
637D1=4	4 mm	1000 mm

Small parts and auxiliary materials

Soldering and welding materials

Welding electrode

Reference number 637E1

- For welding stainless steel, e.g. for welding all Ottobock bars made of stainless steel
- For base materials that are hard to weld, e.g. tool steel
- Good corrosion protection
- Suitable for operating temperatures up to 300 °C

Technical data

Article number	Diameter	Length
637E1=2X300	2 mm	300 mm

Small parts and auxiliary materials

Coating materials

Sintering powder

Reference number 618T40

- For coating metal parts in a sintering bath, e.g. orthotic bars
- For a smooth surface
- Ionomer
- Thermoplastic powder
- Melting temperature: 93 °C
- Welding temperature: 105–108 °C
- Good corrosion protection
- Good UV protection

Technical data

Article number	Net contents	Colour
618T40=H	4 kg	Beige
618T40=W	4 kg	White
618T40=S	4 kg	Black

Shrinkable tubing

Reference number 616Z9

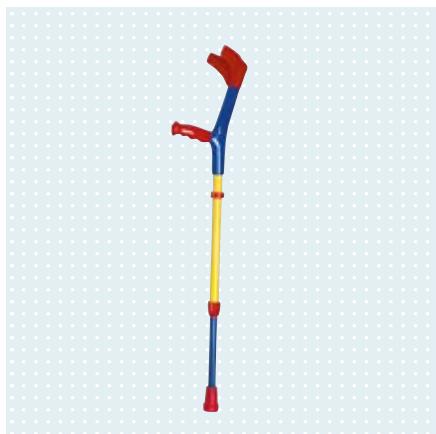

- For covering devices, e.g. orthotic joints or orthotic bars
- Plastic hose with rounded edges
- Good insulation protection
- Good corrosion protection
- Good resistance to liquids

Technical data

Article number	Diameter	Length	Colour
616Z9=19X61	19 mm	50 m	Black
616Z9=25.4X30	25.4 mm	50 m	Black

Anatomical softgrip handles

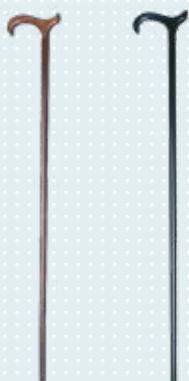

Reference number 23K77

- For 22K7 forearm crutches
- 1 pair – for left and right
- Anatomical shape
- Protection against pressure points even after extended use
- Pleasantly soft and comfortable feel
- Reduces symptoms of fatigue

Technical data

Article number
23K77

● Please order separately as required!

Support cane

Reference number 22S2

- For safety when walking
- Without rubber cap
- Wood
- Anatomical shape of the handle

Technical data

Article number	Fits capsules	Colour
22S2=S	23K1=2	Black
22S2=B	23K1=2	Brown

Small parts and auxiliary materials

Forearm crutches and canes

Rubber capsule

Reference number 23K1

- For 22S2 support cane
- Ensures good grip while walking

Technical data

Protective equipment

Ottobock offers protective equipment for products that are hazardous pursuant to the Ordinance on Hazardous Substances. This includes products to protect the hands, face, eyes, respiratory tract and other parts of the body. See our safety data sheets for the required information about protective equipment suitable for the product.

Products for first aid treatment in case of accidents are offered as well.

Visit www.pem.ottobock.com to obtain up-to-date product information at any time.

Protective equipment

Heat protection gloves

Reference number 641H13

- For use with plastics
- With cuff
- Cotton jersey
- Roughened on the inside
- Loosely woven
- Good fit
- Breathable
- Flame retardant impregnation

Technical data

Article number	Length	Weight	Colour	Order unit
641H13	240 mm	0.110 kg	Sand/beige	Pair

Heat protection gloves

Reference number 641H3

- For use with plastics
- With cuff
- Cotton terrycloth
- Good fit
- Flame retardant impregnation

Technical data

Article number	Length	Weight	Colour	Order unit
641H3	280 mm	0.17 kg	Raw white	Pair

Mechanical protection gloves

Reference number 641H15

- Alternative to leather glove
- With canvas cuff
- Protects against oil, grease and moisture
- Nitrile-coated fabric with cotton jersey
- Good grip
- High mechanical load capacity
- Excellent fit
- High wearer comfort
- Elastic strap on back of hand

Technical data

Article number	Size	Colour	Order unit
641H15=9	9	Grey/brown	Pair
641H15=10	10	Grey/brown	Pair

Protective gloves

Reference number 756Y8

- Protective glove for welding work
- Chrome split leather
- With long cuffs
- Robust and soft

Technical data

Article number	Length	Weight	Order unit
756Y8	350 mm	0.18 kg	Pair

Cut-resistant protective gloves

Reference number 641H14

- Against cuts
- With cuff
- Very good protection against cuts
- Good fit
- Good grip
- Protection against moisture
- Breathable

Technical data

Article number	Size	Colour	Order unit
641H14=7	7	Grey	Pair
641H14=8	8	Grey	Pair
641H14=9	9	Grey	Pair
641H14=10	10	Grey	Pair

Disposable gloves

Reference number 641H1

- For single use
- PVC

Technical data

Article number	Weight	Order unit
641H1	0.338 kg	Pair

Protective equipment

Latex glove for plastering work

Reference number 641H12

- For plastering work
- Powder-free
- One size fits all
- Highly elastic
- High touch sensitivity and secure grip
- Not sterile

Technical data

Article number	Size	Order unit	Package contents
641H12	7 ½	Package	100 pieces

Information material

646A174=GB

Prepreg technology
product information

Latex-free examination glove

Reference number 641H9

- Wide range of applications
- 100% nitrile
- Latex-free
- Powder-free
- One size fits all
- Highly elastic
- High touch sensitivity and secure grip
- Not sterile

Technical data

Article number	Size	Colour	Order unit	Package contents
641H9=2	8	Blue	Package	100 pieces
641H9=3	9	Blue	Package	100 pieces

Chemical protection glove

Reference number 641H17

- Against numerous chemicals
- Nitrile-coated fabric
- Excellent fit permits working for long periods without fatigue
- Good grip thanks to roughened fingertips, even with wet components

Technical data

Article number	Size	Colour	Order unit	Package contents
641H17=7	7	Blue	Package	100 pieces
641H17=8	8	Blue	Package	100 pieces

641H17=10	10	Blue	Package	100 pieces
641H17=11	11	Blue	Package	100 pieces

Chemical protection gloves

Reference number 641H16

- Against numerous chemicals
- Nitrile-coated fabric
- Flexible in order to adapt to the hand
- Thanks to the length of 300 mm, a large part of the forearm is protected against contact with chemicals
- Reduced perspiration through light velour

Technical data

Article number	Size	Colour	Order unit
641H16=8	8	Green	Pair
641H16=9	9	Green	Pair
641H16=10	10	Green	Pair

Chemical protection gloves

Reference number 641H18

- Against numerous chemicals
- Butyl rubber
- Lightly powdered on the inside to make putting on and taking off easier
- Very high impermeability to gas
- High resistance to chemicals

Technical data

Article number	Size	Colour	Order unit
641H18=8	8	Black	Pair
641H18=9	9	Black	Pair
641H18=10	10	Black	Pair

Protective goggles

Reference number 756Y6

- Protects the eyes against harmful influences such as chemicals, dust and splinters
- Adjustable earpieces

Technical data

Article image	Article number	Version
	756Y6=1	Plastic lenses, colourless
	756Y6=2	Grey polycarbonate lenses, for welding work (protection level: 5)

Protective equipment

Protective goggles

Reference number 756Y64

- Protects the eyes against harmful influences such as chemicals, dust and splinters
- 100% UV protection
- One-piece lens with side guard and eyebrow protection
- Individually adjustable lens angle and earpiece length
- DX coating = antifog, antistatic, scratch-proof

Technical data

Article number	Version
756Y64=1	Colourless acrylic glass

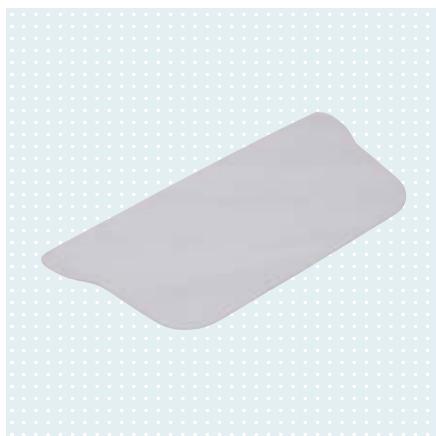

Face guard

Reference number 756Y15

- Protects the face against harmful influences such as dust and splinters
- Plastic
- With non-fogging 1 mm thick plastic lens, 540 x 195 mm
- A twist fastener allows for adjustment to different head sizes

Technical data

Article number	Weight
756Y15	0.25 kg

Replacement screen for face guard

Reference number 756Y16

- Non-fogging, 1 mm thick, 540 x 195 mm plastic lens

Technical data

Article number	Spare part for	Weight
756Y16	756Y15	0.125 kg

● Please order separately as required.

Electric welder safety shield

Reference number 756Y7

- Protects the eyes and face during arc welding
- Synthetic fibres
- Athermal glass (protection class: 9A DIN) and colourless front glass (replaceable)
- With handle

Technical data

Article number	Weight
756Y7	0.39 kg

Hearing protection

Reference number 756Y17

- Earmuffs for loud environments
- Excellent insulating properties
- Wide, soft padded liners
- Perfect adaptation to the shape of the head
- Variably adjustable

Technical data

Article number	Weight	Colour
756Y17	0.21 kg	Green

Protective equipment

Disposable particle filter masks

Reference number 756Y22

- For dusty work in industry and trades
- Protection against solid and damp particles
- Protection levels and certifications compliant with EN 149:2001
- Synsafe material for minimum breathing resistance and maximum filter performance
- Lightweight and user-friendly
- Exhalation valve for longer periods of use and increased breathing comfort
- High intake capacity
- High wearer comfort
- Hygienic, individual packaging, thus providing protection against contamination and ensuring availability of clean respiratory protection at all times
- Folded design allows for easy carrying in pockets

Technical data

Article number	Pollutant class	Valves	Weight	Colour
756Y22=1	FFP1(1)	without valve (-)	12 g	Dark blue
756Y22=1V	FFP1(1)	with valve (V)	18 g	Dark blue
756Y22=2	FFP2 (2)	without valve (-)	22 g	Light blue
756Y22=2V	FFP2 (2)	with valve (V)	28 g	Light blue
756Y22=3V	FFP3 (3)	with valve (V)	28 g	White

i Practical recommendation 756Y22

Application

FFP1:	Up to four times the limit value	Against solid and liquid particles	Milling, grinding, sawing, sweeping floors
FFP2:	Up to 10 times the limit value	Against solid and liquid particles	Woodworking with oak, welding, spraying emulsions with low vapour pressure, coating work, processing carbon fibre and fibreglass materials (e.g. cutting)
FFP3:	Up to 30 times the limit value	Against solid and liquid particles	Spraying varnishes, sanding cured carbon fibre and fibreglass materials

FFF = filtering face pieceolspan

Respiratory protection half-mask

Reference number 756Y80

- As breathing protection
- For use with particle filters or gas filters and combination filters with a round thread Rd 91
- Does not include filter
- Good fit
- Impermeability of a full mask
- Material of the mask body is comfortable to wear
- Easy to put on and take off thanks to head piece with anti-slip harness
- Doesn't exert pressure when worn under a safety helmet
- Tested in compliance with EN 140, with CE marking

Technical data

Article number	Size	Weight (without filter)
756Y80	Medium/large	0.19 kg

Coarse dust filter

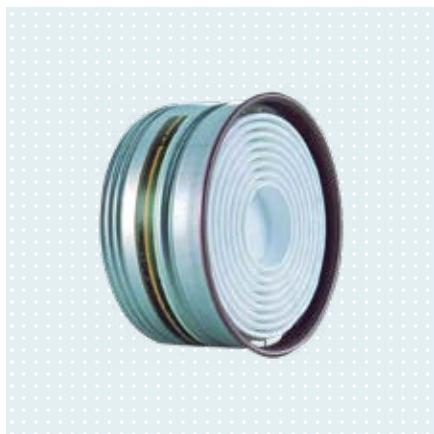

Reference number 756Z5

- Pre-filter for filters with Rd 91 thread

Technical data

Article number	Accessory for	Weight	Order unit	Package contents
756Z5	756Y80	0.15 kg	Package	50 pieces

● Please order separately as required.

Combination filter

Reference number 756Z4

- Screw filter with Rd 91 thread for 756Y80 respiratory protection half-mask
- Particle filter class A1-P2: A = organic gases, 1 = low retention characteristics, P = particles, 2 = medium retention characteristics
- Tested in compliance with EN 141, with CE marking

Technical data

Article number	Accessory for	Weight	Order unit	Package contents
756Z4	756Y80	0.55 kg	Package	5 pieces

● Please order separately as required.

Carrying case

Reference number 754T3

- Used to securely store the 756Y80 respiratory protection half-mask
- Sturdy design, with shoulder strap

Technical data

Article number	Accessory for	Weight
754T3	756Y80	0.38 kg

● Please order separately as required.

Protective equipment

Plastering apron

Reference number 641S1

- For plastering work
- With fabric reinforcement
- Resistant to many acids

Technical data

Article number	Length	Width	Weight	Colour
641S1	100 cm	80 cm	0.75 kg	White

Disposable aprons

Reference number 641S5

- For single use
- Environmentally friendly
- Ultra-light yet extremely strong
- Wrought
- Impermeable to moisture
- Hygienic

Technical data

Article number	Length	Width	Order unit	Package contents
641S5	140 cm	80 cm	Package	100 piece(s)

Protective smock

Reference number 641S6

- For protection, ideal for decanting and filling tasks
- Protects against particles and splashed liquids
- TYVEK-PRACTIK material
- 5 snap fasteners, 2 pockets
- Custom sizes available
- Low-lint
- Ultra light
- High tear and abrasion resistance
- Antistatic
- Breathable

Technical data

Article number	Size	Colour
641S6=M	M	White
641S6=L	L	White
641S6=XL	XL	White
641S6=XXL	XXL	White

Welder's apron

Reference number 756Y14

- Offers protection during welding
- Chrome split leather
- Two adjustable straps

Technical data

Article number	Length	Width	Weight
756Y14	100 cm	80 cm	1.2 kg

Boot cover

Reference number 641S7

- For protecting shoes/boots
- Heavy PE film
- With rectangular pattern
- Elastic strap
- Ankle tie
- Reinforced outsole

Technical data

Article number	Height	Thickness	Order unit
641S7	56 cm	150 µm	Pair

Hand disinfectant

Reference number 640Z19

- For hygienic and surgical hand disinfection and for rubbing in
- Comprehensive effectiveness against bacteria, fungi and enveloped viruses
- Also effective against adenovirus, papovavirus and rotavirus
- Excellent immediate effect
- Moisturising
- Very well tolerated even with continuous use
- Ready to use – no wash basin and water required

Technical data

Article number	Net contents
640Z19	500 ml

Protective equipment

Room disinfectant

Reference number 640Z40

- For combination with the 758E1 room disinfection unit
- For the elimination of bacteria, viruses and fungi
- 3% hydrogen peroxide with silver complex
- Good material compatibility, including sensitive electronics
- Cleans without residues

Technical data

Article number	Accessory for	Contents
640Z40	758E1	5 l

Information material

646D708=EN

758E1 room disinfection
unit product information

Washing lotion

Reference number 640F23

- For thorough and gentle hand and body hygiene
- Advanced, skin-friendly surfactants
- pH of approximately 5.5, ideal for skin
- Free of soap and alkali
- Free of perfume and colorants
- Fast and drip-free dispensing right from the bottle

Technical data

Article number	Net contents
640F23	500 ml

Cellona® skin protection cream

Reference number 640Z10

- Protection and care cream for use during plastering work
- Easy dosing
- Penetrates quickly
- The skin is covered by a permeable protective care film
- Ideal for highly stressed skin

Technical data

Article number	Net contents	Order unit
640Z10	0.1 l	Tube

Protective equipment

Skin protection 1-2-3 plus

Reference number 640Z18

- Care cream and skin protection before and after work
- Effective protection against water-soluble and oil-soluble foreign substances as well as changing agents
- Blocks potential allergens
- Boosts the skin's natural protective functions
- Improves the condition of the skin
- Effective skin care

Technical data

Article number	Net contents
640Z18=0.1	1 l

Bandages

Reference number 627B18

- 627B18=1: For dressing injuries and wounds on the fingers
- Made of lengthwise and crosswise elastic textile fabric
- Ready to use blanks for immediate application
- Time-saving and hygienic
- Good permanent adhesion
- Secure and firm hold, even under severe strain
- Air permeable
- 627B18=2: For dressing injuries and wounds
- Hygienic box for partial removal
- Reliable adhesion
- Wound pad designed not to stick to the wound
- Perforations for wound aeration

Technical data

Article image	Article number	Description	Length	Width	Order unit	Package contents
	627B18=1	Finger bandage	120 mm	20 mm	Package	100 piece(s)
	627B18=2	Quick wound dressing	5 m	80 mm	Package	1 piece(s)

Protective equipment

First-aid kit

Reference number 758X5

- For operations and shelters in compliance with Section 39
- DIN 13157 C
- With wall mount

Technical data

Article number	Width	Depth	Height	Weight
758X5	260 mm	160 mm	80 mm	1.8 kg

Eyewash station

Reference number 758X11

- As a first-aid station for flushing eyes to remove foreign substances such as dust and chemicals
- Stationary wall cabinet made of sheet steel
- With special holder for two eye flushing bottles
- Always at hand and ready for use

Technical data

Article number	Length	Width	Depth	Weight	Scope of delivery	Colour
758X11	350 mm	260 mm	100 mm	2.3 kg	Without eyewash bottles	9016 Traffic white

Eyewash bottle set

Reference number 758Y100

- In case of danger to eyesight due to harmful substances
- Two eye flushing bottles
- Filled with 1,000 ml sterile, physiological, isotonic saline solution (0.9%)
- In accordance with DIN 12930, CE 0562
- Flushes foreign substances from the eye
- Can be used for approx. three years in an unopened condition

Technical data

Article number	Accessory for	Diameter	Height	Weight
758Y100	758X11	80 mm	305 mm	2.3 kg

● Please order separately as required.
