

Discover Peephole Cam.

Think smart security is only for homeowners? Think again.

With Peephole Cam, there's finally a solution for apartments and condos.

What's Peephole Cam?

Peephole Cam gives you all the benefits of a Ring Video Doorbell – HD video, two-way talk and motion-activated notifications – in a sleek, compact form that easily replaces the peephole at your door.

How does it work?

Peephole Cam lets you watch over your door and answer it from anywhere. You can see who's there in HD video, talk to delivery drivers and watch over your packages right from your phone or tablet.

How do I install it?

Peephole Cam works on any door with a compatible peephole*. You can unscrew the peephole and put Peephole Cam in its place, and your landlord and HOAs won't have to worry about permanent home alterations.

What if I need to move?

You can easily remove Peephole Cam just as quickly as you set it up. Simply remove Peephole Cam from your door and reinstall your peephole by screwing it in place.

Can I control what it captures on video?

Peephole Cam lets you create and customize privacy zones in the Ring app. These zones black out areas in your camera's field of view during Live View and video recording, which can help you control what you want to see and what you don't.

What about audio?

You can also use the Ring app to disable audio with the tap of a button. When you disable audio, you won't hear sound during Live View or record sound in your video recordings.

*Peephole Cam is compatible only with standard size peepholes 12mm (~1/2") to 14mm (~9/16") and door thickness ranging from 34mm (~1.3") to 55mm (~2.2").
