

There are places where the future of stone processing comes to life. At Marmomac, Biesse presents a complete range of lines, machines and components.

22–25 September 2026

Marmomac, the world's leading exhibition for the stone industry, is the natural stage where Biesse showcases its comprehensive portfolio of solutions for stone processing.

Biesse positions itself as a single partner for the entire production process, **offering machines, lines and components for processing natural and engineered stone**, integrating the technologies of Biesse Machinery Stone and GMM Technology.

Machines

The **Biesse Machinery Stone and GMM Technology** offering includes key new developments and a broad selection of technologies, designed to meet specific production needs and united by the same goals: greater flexibility, productivity, ease of use and advanced process control.

Visitors can see CNC machining centres, 5-axis bridge saws, waterjet cutting systems, solutions for integrated processing and edge polishing on the stand, offering a solution for every stone processing requirement.

Lines

In today's market, productivity is no longer defined solely by the performance of a single machine. It is determined by the efficiency of the entire process, from the moment a slab enters the factory to when the finished piece is ready for delivery.

This is the concept behind the integrated line presented by **Biesse Technic**, connecting automated slab storage, loading, cutting and unloading in a coordinated process designed to increase productivity, flexibility and efficiency. A single solution to **transform every stage of processing** into a fully integrated and highly automated workflow.

B/On Digital Ecosystem

At Marmomac, B/On is presented as the digital ecosystem that **connects machines, people, processes and data** within a single intelligent production platform, **simplifying our customers' production processes.**

The B/On ecosystem will be progressively introduced over the coming months, marking a new chapter in Biesse's digital transformation journey.

This important milestone is made possible by the company's strong commitment to digital innovation, further accelerated by the **recent acquisition of Orchestra Srl**, an Italian software company specialising in the development of digital solutions for production processes.

Customer Care

Within the Biesse stand at Marmomac, an area is dedicated to Customer Care, designed to present services and activities dedicated to customers throughout the machine lifecycle, with the aim of **ensuring the value of their investment over time.**

Biesse Customer Care provides technical assistance, specialist expertise and continuous support, from installation and commissioning through to maintenance, technology upgrades and the management of operational needs.

A global network of technical teams, centres of excellence and local organisations operates in a coordinated manner to provide effective and timely support, fostering the sharing of expertise and knowledge. Direct interaction with customers also enables Biesse to gather feedback, understand the needs of different markets and develop increasingly targeted services.

Diamut

In the area dedicated to Diamut, visitors can discover a complete portfolio of diamond tools designed to meet the different requirements of stone processing and advanced materials.

The range includes solutions for the main cutting, drilling, milling, shaping, profiling and polishing applications, developed to deliver high performance, machining precision and consistent results. Tool selection is a key element in optimising every stage of the production process. For this reason, Diamut solutions are designed according to the characteristics of the material, the processing technology and the required final result, helping to maximise finishing quality, optimise machining times and reduce consumption and waste.

With Diamut, the tool becomes an integral part of the processing technology, helping to enhance machine performance and transform every slab into a high-quality finished product.

22–25 September 2026 – Hall 5

Biesse S.p.A. - We manufacture lines, machinery and components for making products, enhancing the potential of the wide range of materials processed by our customers. We simplify the production processes of customers working in the furniture, construction, automotive and aerospace sectors, courtesy of the skill of the people who work in our production sites around the world. Founded in Italy in 1969 and now listed on the Italian Stock Exchange, we are driven by our international calling, which is manifested through a global network of showrooms, where customers can enjoy a multi-material experience.
