

Literacy Partners empowers low-income and immigrant parents and caregivers to thrive in today's world through literacy and language skill development. Our two-generation approach, free classes, community workshops, and educational media, fosters family strength and success.

The Science of Reading parent workshop is designed to empower parents of elementary school children to support their child's reading development at home, fostering a lifelong love of reading and academic success.

Over the course of five comprehensive sessions, parents will engage in an in-depth exploration of essential components of the science of reading, phonics, vocabulary enrichment, fluency, comprehension, and advocacy.

"This has been very important because I know that reading not only exercises the brain but also allows you to learn a lot. I have as a gift all the strategies I learned to help my son develop his vocabulary."

- Parent participant

Our workshop equips parents with a robust toolkit of practical strategies designed to cultivate a nurturing home environment, elevate their child's literacy proficiency, and actively participate in their child's educational journey.

- ✔ Workshops provided virtually and in-person
- ✔ 100+ parents served
- ✔ 5 lessons developed in English and Spanish
- ✔ 6 school partners in New York
- ✔ 150+ children impacted
- ✔ Families receive five books after completion
