

# Hardie® Architectural Panels

## Multifamily / Commercial Installation Requirements

EFFECTIVE SEPTEMBER 2024

**IMPORTANT: FAILURE TO FOLLOW JAMES HARDIE WRITTEN INSTALLATION INSTRUCTIONS AND COMPLY WITH APPLICABLE BUILDING CODES MAY VIOLATE LOCAL LAWS, AFFECT BUILDING ENVELOPE PERFORMANCE AND MAY AFFECT WARRANTY COVERAGE. FAILURE TO COMPLY WITH ALL HEALTH AND SAFETY REGULATIONS WHEN CUTTING AND INSTALLING THIS PRODUCT MAY RESULT IN PERSONAL INJURY. BEFORE INSTALLATION, CONFIRM YOU ARE USING THE CORRECT HARDIE® ZONE PRODUCT INSTRUCTIONS BY VISITING [HARDIEZONE.COM](https://www.hardiezone.com) OR CALL 1-866-942-7343 (866-9-HARDIE).**

## 1 Introduction

The material contained herein provides installation guidelines for the Hardie® Architectural Panel System by James Hardie. This document is intended for use by builders, cladding installers, and other contractors who may be involved with the installation of the Hardie® Architectural Panel System.

**Before you begin** your siding project read the instruction manual completely and thoroughly. This document describes and illustrates the minimum steps required to install the Hardie® Architectural Panel System. No instruction manual can anticipate every condition, circumstance, or situation that might arise during installation over the course of the project. When in doubt about assembly details, contact the architect, specifier, or a building official. Contact your James Hardie Sales and Install Representative for product support 1-800-9HARDIE (1- 800-942-7343).

### PREPARATION

Ensure the drainage plane is intact and all penetrations are sealed. Plan your work, use the proper tools, techniques, and follow installation procedures as covered in this installation manual. It is important that builders, specifiers, and installers recognize requirements and information pertaining to:

- Safety
- Storage and Handling
- Cutting
- Wall Preparation
- Fastening

For best results, before installation, ensure your panels are clean and free of dirt, dust, chalking, oil, grease, organic contaminants, or mold. Dust from cutting and construction should be removed immediately upon installation.

### PRACTICE INSTALLING MATERIAL

Utilize a mock-up to evaluate installation and finishing techniques, with a focus on specific applications designed by a design professional or engineer. The fastening practice and/or fastening tools shall be properly adjusted to avoid overdriving. Do not proceed with remaining work until workmanship, color, and sheen are approved. Repeat mock-up area as required to produce acceptable work.

## 2 Safe Working Practices

### STORAGE & HANDLING

Store flat and keep dry and covered prior to installation. Installing siding wet or saturated may result in shrinkage. Protect edges and corners from breakage. James Hardie is not responsible for damage caused by improper storage and handling of the product.

### CUTTING INSTRUCTIONS

#### OUTDOORS

1. Position cutting station so that airflow blows dust away from the user and others near the cutting area.
2. Cut using one of the following methods based on jobsite requirements:
  - a. **Best:** Circular saw equipped with a HardieBlade® saw blade and attached vacuum dust collection system.
  - b. Shears (manual, pneumatic or electric) or the score and snap method may also be used.
  - c. **Better:** Circular saw equipped with a dust collection feature and a HardieBlade® saw blade.
  - d. **Good:** Circular saw equipped with a HardieBlade® saw blade.

#### INDOORS

1. NEVER grind or cut with a power saw indoors.
2. Cut only using shears (manual, pneumatic or electric) or the score and snap method.

#### GENERAL

- During clean-up of dust and debris, wet dust and debris down with a fine water mist, apply a dust reducing sweeping compound in sufficient quantities, or use a vacuum to collect dust and debris. DO NOT use compressed air.  
DO NOT dry sweep without first applying a dust reducing control measure.
- For best performance when cutting with a circular saw, James Hardie recommends using HardieBlade® saw blades.
- Go to [jameshardiepros.com](http://jameshardiepros.com) for additional cutting and dust control recommendations.

**IMPORTANT:** The Occupational Safety and Health Administration (OSHA) regulates workplace exposure to silica dust. For construction sites, OSHA has deemed that cutting fibre cement with a circular saw having a blade diameter less than 8 inches and connected to a commercially available dust collection system per manufacturer's instructions results in exposures below the OSHA Permissible Exposure Limit (PEL) for respirable crystalline silica, without the need for additional respiratory protection.

If you are unsure about how to comply with OSHA silica dust regulations, consult a qualified industrial hygienist or safety professional, or contact your James Hardie technical sales representative for assistance. James Hardie makes no representation or warranty that adopting a particular cutting practice will assure your compliance with OSHA rules or other applicable laws and safety requirements.

### HANDLING PANELS

When handling Hardie® Architectural Panels care should be given to prevent damage to the edges and/or the ColorPlus finish.

- Utilize 2 persons to carry product.
- Carry panels as shown in Figure 2.1 and Figure 2.2.

Figure 2.1

Figure 2.2

#### ColorPlus Tip:

- When possible, carry with plastic covering in place. This will help to protect the ColorPlus finish.
- Wearing gloves will help prevent fingerprint smudges to the ColorPlus finish

### CUT STATION & CUTTING

Setup cutting station (Fig. 2.3), and locate close to installation area.

Use a HardieBlade® to cut James Hardie fibre cement products. A track saw with vacuum system (Fig. 2.4) is best for cutting Hardie® Architectural Panels.

- a. Cleaner cuts
- b. Panels can be cut facing up (minimize panel movements)
- c. If using a traditional circular saw with vacuum system, place panel face down to prevent marring of the finished surface caused by friction from the saw.

Figure 2.3

Figure 2.4

#### ColorPlus Tip:

- A scratch proof platform is a good idea to prevent from scratching the ColorPlus surface while cutting. The cardboard cover from the top of the pallet makes a great non marking surface.
- Keep a spray bottle (filled with water) and soft cloths to wipe cut dust off immediately after cutting to keep your ColorPlus finish looking fresh.
- Touch-up all cut edges

## 3 Design

### PANEL JOINT CONSIDERATIONS

Hardie® Architectural Panels have been designed to feature a “V” groove look, achieved by placing Y trim at vertical panel joints. When considering the location of panel joint layout, use the following:

1. Installation requirements
  - a. Clearances
  - b. Floor break (panels cannot be placed across floors)  
(horizontal flashing / trim is required)
  - c. Framing, sheathing, and fastener attachment  
(see panel joint placement options section within this document)
2. Align/center to key features  
(ex. windows, doors, etc.) (fig. 3.1)
3. Align/center to the structure  
(ex. walls, gables, etc.) (fig. 3.2)

Figure 3.1 Align to Key Feature

Figure 3.2 Align to Structure

**\* Design Advice:**

It is okay for panel widths to be equal or unequal at structure ends.

## 4 General Requirements

**IMPORTANT:** Read these instructions in their entirety before attempting installation.

- Refer to table 1 for multifamily/commercial drainage requirements for Hardie® Architectural Panels.
- These instructions to be used for installation on Commercial / Multi-Family only. \*\*For Single Family installation requirements go to [www.JamesHardiePros.com](http://www.JamesHardiePros.com)
- Hardie® Architectural Panels can be installed over braced wood. See General Fastening Requirements. Irregularities in framing and sheathing can mirror through the finished application. Correct irregularities before installing siding.
- Hardie® Architectural Panels may be installed on flat vertical wall applications only.
- Information on installing Hardie® products over non-nailable substrates (ex: gypsum, foam, etc.) can be located in [JH Tech Bulletin 19 at www.jameshardie.com](http://JH Tech Bulletin 19 at www.jameshardie.com)
- A water-resistive barrier (WRB) is required in accordance with local building code requirements. The WRB must be appropriately installed with penetration and junction flashing in accordance with local building code requirements. James Hardie will assume no responsibility for water infiltration. James Hardie manufactures Hardie™ Weather Barrier, a non-woven non-perforated housewrap<sup>1</sup>, which complies with building code requirements.
- Adjacent finished grade must slope away from the building in accordance with local building codes - typically a minimum of 6 in. in the first 10 ft.
- Do not use Hardie® Architectural Panels in Fascia or Trim applications.
- Do not install Hardie® products such that they may remain in contact with standing water.
- For larger projects, where the span of the wall is significant in length, the designer and/or architect should take into consideration the coefficient of thermal expansion and moisture movement of the product in their design. These values can be found in the [Technical Bulletin in "Expansion Characteristics of Hardie® Siding Products" at www.jameshardie.com](http://Technical Bulletin in 'Expansion Characteristics of Hardie® Siding Products' at www.jameshardie.com).
- James Hardie Building Products provides installation/wind load information for buildings with a maximum mean roof height of 85 feet (Refer to the product Technical Data Sheet or ESR-1844). For information on installations above 60 feet, please contact JH technical support.
- Minimum standard panel design size is 12" x 16". Note: Panels may be notched and cut to size to fit between windows, doors, corners, etc.
- Straight 16 gauge stainless steel finish nails.

<sup>1</sup>For additional information on Hardie™ Weather Barrier, consult James Hardie at 1-866-4Hardie or [www.hardiewrap.com](http://www.hardiewrap.com)

**Table 1: Hardie® Architectural Panels  
Wall Drainage Requirements**

All national, state, and local building codes must be followed, and where they are more stringent than James Hardie Installation requirements, state and local requirements will take precedence. Consult the "Exterior Wall Drainage Requirements" bulletin at [www.jameshardiecommercial.com](http://www.jameshardiecommercial.com) for additional guidance and a more detailed list of drainage required areas.

### MINIMUM REQUIREMENTS BY STATE/COUNTY

(A) WRB<sup>1</sup> Dry Climates

(B) DRAINAGE PLANE (E.G. DRAINABLE WRB)  
WITH 90% DRAINAGE EFFICIENCY<sup>2</sup>  
Moist and Marine Climates

(C) RAINSCREEN (MIN. 3/8 IN. AIR GAP)<sup>3</sup>  
Severe Wind Driven Rain Climate

<sup>1</sup> Water-resistive Barrier and drainage requirements as defined by building code.

<sup>2</sup> Water-resistive Barrier as defined by local building code that is manufactured in a manner to enhance drainage; must meet minimum 90% drainage efficiency when tested in accordance with ASTM E2273 or other recognized national standards.

<sup>3</sup> Water-resistive Barrier (WRB) as defined by building code and a minimum 3/8 in. (10mm) air space between the WRB and the panel siding (formed by minimum 3/8 in. furring).

Note: When installing preservative-treated wood/furring, a non permeable membrane shall be installed between the furring and aluminum trims.

### A: Dry Climates: Weather Resistive Barrier

### B: Moist and Marine Climates: Drainage Plane (Drainable WRB with min. 90% drainage efficiency)

### C: Wind Driven Climates:

**Note:** When installing preservative-treated wood/furring, a non permeable membrane shall be installed between the furring and aluminum trims.

Figure 4.11  
Block Penetration  
(Recommended for HZ10®)

Figure 4.12  
Valley/Shingle Extension

Figure 4.13  
Bridging Floors

Do not bridge floors with Hardie® Textured Panel. Horizontal joints should always be created between floors, see below.

## FASTENING REQUIREMENTS

Position fasteners 3/8 in. from panel edges and no closer than 2 in. away from corners. Do not nail into corners. Refer to TDS (Technical Data Sheet) or ESR-1844 for Hardie Architectural Panels in the back of this document for wind load ratings (page 20).

## FINISH NAIL REQUIREMENTS

- Minimum 1-1/2 inch.
- Stainless steel only.
- 16 gauge straight. **DO NOT** use 15 gauge angled finish nails.

## FASTENING GUIDELINES

The following guidelines should be followed to achieve the desired aesthetics from the fastening of stainless steel finish nails to attach Hardie® Architectural Panels:

1. In-Line Regulator (Fig. 4.15)
  - a. Control variable air supply from compressor
  - b. 75-90 psi (average setting) if difficulty maintaining psi and/or depth control, check nailer for wear and replace or repair accordingly
2. No-Mar Tips (fig. 4.16)
  - a. Avoid surface damage
  - b. Depth control
3. Gun angle to wall (fig. 4.14)
4. Nails should be driven flush or proud. If left proud, then tap flush immediately with a smooth face hammer
5. Do Not over drive fasteners
  - a. Will appear after painting
  - b. Will increase need for patching & touch-up
6. Test nail depth on scrap prior to panel installation

## SCREWS TO STEEL REQUIREMENTS

When screws are used to attach panels to steel studs/furring, the screws shall have wing tips. If screws do not have wing tips, then pre-drilling is required. (Not applicable when using pins). Follow chart below for pre-drilling:

| SCREW  | PRE-DRILL | HEAD DIAMETER |
|--------|-----------|---------------|
| No. 8  | 7/32 in.  | Min 0.323 in. |
| No. 10 | 1/4 in.   | Min 0.323 in. |

## GENERAL

Finish nails must be stainless steel. Fasteners must be corrosion resistant, galvanized, or stainless steel. Electro-galvanized are acceptable but may exhibit premature corrosion. Unless otherwise directed, James Hardie recommends the use of quality, hot-dipped galvanized nails. James Hardie is not responsible for the corrosion resistance of fasteners.

Stainless steel fasteners are recommended when installing Hardie® products near the ocean, large bodies of water, or in very humid climates. Note: Ring shank (not smooth) shall be used when specifying stainless steel nails.

Manufacturers of ACQ and CA preservative-treated wood recommend spacer materials or other physical barriers to prevent direct contact of ACQ or CA preservative-treated wood and aluminium products. Fasteners used to attach HardieTrim Tabs, aluminium trim, or flashing to preservative treated wood shall be of hot dipped zinc-coated galvanized steel or stainless steel and in accordance to the latest versions of the IRC/IBC.

- Consult applicable product evaluation or listing for correct fasteners type and placement to achieve specified design wind loads (ESR-1844).
- **NOTE:** Published wind loads may not be applicable to all areas where Local Building Codes have specific jurisdiction. Consult James Hardie Technical Services if you are unsure of applicable compliance documentation.
- Drive fasteners perpendicular to siding and framing.
- Fastener heads should fit snug against siding (no air space).

## PNEUMATIC FASTENING

Hardie® products can be hand nailed or fastened with a pneumatic tool. Pneumatic fastening is highly recommended. Set air pressure so that the fastener is driven snug with the surface of the siding. A flush mount attachment on the pneumatic tool is recommended. This will help control the depth the nail is driven. If setting the nail depth proves difficult, choose a setting that under drives the nail. (Drive under driven nails snug with a smooth faced hammer - Does not apply for installation to steel framing).

## COLORPLUS FASTENERS

Color matched stainless steel finish nails are available for Hardie® Architectural Panels with ColorPlus technology Nails installed the same as described above. Touch-up fasteners as needed using the touch applicator brush Fig. 4.17

Figure 4.14

Figure 4.15

Figure 4.16

Figure 4.17

## 5 Tools

### TOOLS FOR FASTENING

#### 1 Straight 16 Gauge Stainless Finish Nails

Fasten using minimum 1-1/2 inch straight 16 gauge stainless steel nails. DO NOT use 15 gauge angled finish nails.

#### 2 Straight Finish Nailer

16 gauge straight finish nailer for attaching trims and panels.

#### 3 Inline Air Regulator

An inline pressure regulator will assist in better fastener depth control. Nails shall be underdriven as opposed to overdriven if depth control is an issue

### TOOLS FOR CUTTING METAL TRIMS

#### 1 Miter Saw

To cut metal trims

#### 2 Non-Ferrous Metals Blade

80-tooth

#### 3 Tin Snips

Cutting flashings

### TOOLS FOR CUTTING HARDIE® ARCHITECTURAL PANELS

#### 1 Track Saw With Vacuum dust collection system

OR

#### 2 7-1/4 in Circular Saw with Vacuum dust collection system

Cutting against straight edge is recommended.

#### 3 HardieBlade® Saw Blade

Poly-diamond blade for James Hardie® fiber cement.

### FASTENING METAL TRIMS

**Attach trims to:**  
Wood - using a staple, or finish nail or flat head nail.

DO NOT use a button or bugle headed fastener when attaching trims.

# 6 Products and Accessories

## INSTALLATION EXAMPLE

\*Max 16 in. O.C. stud spacing applies to finish nail direct to stud application only. See Technical Data Sheet for nail spacing and additional framing options.

## ACCESSORIES

|                                                                                          |                                                                                   |                                                                                   |                                                                                   |                                                                                     |                                                                                             |
|------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------|-----------------------------------------------------------------------------------|-----------------------------------------------------------------------------------|-------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------|
| <b>1</b> Joint Sealant                                                                   | <b>2</b> Hardie™ Weather Barrier                                                  | <b>3</b> Seam Tape                                                                | <b>4</b> Flex Flashing                                                            | <b>5</b> Pro-Flashing                                                               | <b>6</b> Foam Back Sealing Tape (EPDM)                                                      |
|         |  |  |  |  |          |
| General purpose polyurethane exterior grade joint sealant. Not supplied by James Hardie. | Water barrier and vapor permeable membrane. <sup>†</sup>                          | Hardie™ Seam Tape or equivalent.                                                  | Hardie™ Flex Flashing or equivalent.                                              | Hardie™ Pro-Flashing or equivalent.                                                 | Minimum 2 in. x 1/16 in. thick. Installed under vertical joints to improve water tightness. |

## TRIM

|                                                                                                                         |                                                                                                     |                                                                                   |                                                                                   |                                                                                     |                                                                                     |
|-------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------|-----------------------------------------------------------------------------------|-------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------|

|  |  |  |
| Aluminum extrusion to be used for transitions at inside corners.                    | Aluminum extrusion to be used for transitions at outside corners.                   | Aluminum extrusion to be used for transitions at mid-wall                           |

## FASTENER DETAILS

|                                                                                                         |
|---------------------------------------------------------------------------------------------------------|
| <b>23</b> Straight 16 Gauge Stainless Finish Nails                                                      |
|                     |
| Min. 1 1/2 in. straight 16 gauge stainless steel finish nails. DO NOT use 15 gauge angled finish nails. |

## Finish Nail

Tips: for fastener depth control:

- Oil nail guns regularly.
- If excessive air pressure (above 90psi) is needed or having difficulty controlling nail depth. Nail gun may be worn.

\*Use a smooth face hammer and lightly tap flush.

Refer to the Hardie® Architectural Panel Technical Data Sheet for fastening options.

Note: When installing preservative-treated wood/furring, a non permeable membrane shall be installed between the furring and aluminium trims.

## 7 Panel Installation

### PANEL INSTALLATION PROCESS - VERTICAL ORIENTATION

Follow Table 1 on page 4 for wall drainage requirements:

- A. Dry Climate: Code approved WRB required.
- B. Moist and Marine Climate: Drainage wrap required.
- C. Severe Wind Driven Rain Climate: 3/8 in. rainscreen required.

\*Refer to the Hardie® Architectural Panel Technical Data Sheet for fastening options.

## PANEL INSTALLATION PROCESS - HORIZONTAL ORIENTATION

Follow Table 1 on page 4 for wall drainage requirements:

- A. Dry Climate: Drain wrap\* required.
- B. Moist and Marine Climate: Drain wrap\* required.
- C. Severe Wind Driven Rain Climate: 3/8 in. rainscreen required.

\*Minimum 90% drainage efficiency when tested in accordance with ASTM E2273.

## 9 Finishing & Maintenance

### CUT EDGE TREATMENT

**IMPORTANT:** Caulk, paint or prime all field cut edges. James Hardie touch-up kits are required to touch-up Hardie® products with ColorPlus® Technology finishes.

### CARE & MAINTENANCE

Routinely perform the following to help maintain the appearance and performance of Hardie® siding and trim products:

- Washing down the exterior surfaces every 6 to 12 months with a garden hose or low pressure water spray to remove dirt and debris.
- Re-applying of exterior finishes.
- Maintaining the exterior envelope and connections including joints, penetrations, flashings, and sealants (caulking) to prevent moisture entry behind the siding.
- Cleaning out gutters, blocked pipes, and overflows as required.
- Prune vegetation to prevent contact with the siding.
- Ensuring required external ground clearances and drainage slopes are maintained.

### CAULKING

For best results use an Elastomeric Joint Sealant complying with ASTM C920 Grade NS, Class 25 or higher or a Latex Joint Sealant complying with ASTM C834. Caulking/Sealant must be applied in accordance with the caulking/sealant manufacturer's written instructions.

**NOTE:** some caulk manufacturers do not allow "tooling".

### PAINTING

DO NOT use stain, oil/alkyd base paint, or powder coating on Hardie® products. James Hardie factory primed products must be painted within 180 days of installation. 100% acrylic topcoats are recommended. Do not paint when Hardie® products are wet. Follow paint manufacturer's instructions and application rates. Back rolling is recommended if spray application is used.

#### Tips: for a beautiful finish

- Surface preparation - Ensure the surface is dry, clean and any blemishes are patched using a suitable exterior grade cementitious patching compound and blend with surrounding texture using a sponge or scouring pad.
- Prevent paint bridging by applying thin even coats of paint. If bridging occurs, take a paint brush and brush bridging out. When rolling or brushing paint with the joint lines. Do not paint across the joint lines, this may result in bridging.
- Avoid excess painting of the "V" joint.

### COLORPLUS® TECHNOLOGY FINISH CAULKING, TOUCH-UP & LAMINATE

- Care should be taken when handling and cutting Hardie® products ColorPlus® Technology finishes. During installation, use a wet soft cloth or soft brush to gently wipe off any residue or construction dust left on the product, then rinse with a garden hose.
- Touch up nicks, scrapes and nail heads using the ColorPlus® Technology touch-up applicator. Touch-up should be used sparingly. If large areas require touch-up, replace the damaged area with a new piece of siding with ColorPlus Technology.
- Laminate sheet must be removed immediately after installation of each course.
- Terminate non-factory cut edges into trim where possible, and caulk. Color matched caulks are available from your Hardie® products ColorPlus® Technology finishes dealer.
- Treat all other non-factory cut edges using the ColorPlus® Technology edge coat, available from your Hardie® products ColorPlus® Technology finishes dealer.

**NOTE:** James Hardie does not warrant the usage of third party touch-up or paints used as touch-up on Hardie® products with ColorPlus® Technology finishes.

### PAINTING HARDIE® SIDING AND TRIM PRODUCTS WITH COLORPLUS® TECHNOLOGY FINISHES

When repainting Hardie® products with ColorPlus® Technology finishes, James Hardie recommends the following regarding surface preparation and topcoat application:

- Ensure the surface is clean, dry, and free of any dust, dirt, or mildew.
- Repriming is normally not necessary.
- 100% acrylic topcoats are recommended.
- DO NOT use stain or oil/alkyd based paints on Hardie® products.
- Apply finish coat in accordance with paint manufacturers' written instructions regarding coverage, application methods, and application temperature.
- DO NOT caulk nail heads when using Hardie® products with ColorPlus® Technology finishes, refer to the ColorPlus® Technology touch-up section.

### WARNING

High pressure water blast and sand blasting may damage the surface of the fibre cement product. Low pressure water spray, a soft medium bristle (nonmetal) brush is most suitable for cleaning fibre cement products. Acid washing can damage fibre cement surface and is not recommended.

**NOTE:** if using a pressure washer, care must be taken to ensure that the water stream does not damage the surface of the siding. Use wide fan tips that are kept a minimum of 6 feet from the wall and at a pressure under 1500 psi to minimize the chance of damaging the siding. Damage arising from improper cleaning or maintenance is not covered under applicable James Hardie warranties.

## 10 Appendix

### ALTERNATIVE VERTICAL JOINT TREATMENTS

Install panels in moderate contact (Fig. 1), alternatively joints may also be covered with battens, PVC, or metal jointers or caulked (Not applicable to ColorPlus® Finish) (Fig. 2-4).

Figure 1

Figure 2

#### Batten Joint

Figure 3

#### “H” Joint

Figure 4

#### Caulk Joint

leave appropriate gap between panels, then caulk\*

\*Apply caulk in accordance with caulk manufacturer's written application instructions. (Caulking Joints is not applicable to ColorPlus® Finish)

All national, state, and local building code requirements must be followed and where they are more stringent than the Hardie® Architectural Panels installation requirements, state and local requirements will take precedence.

### Document Scope

This document applies to the following Hardie® Architectural Panel- Fine Sand, Architectural Panel- Mounded Sand, Architectural Panel- Sea Grass. The use of this product is limited to buildings not exceeding 85 feet in height.

### General Description

Hardie® Architectural Panels are non-combustible fiber-cement panel, manufactured by James Hardie Building Products Inc.

### Product Dimensions

Thickness – 0.3125 inches      Length – 96, 120, & 144 inches      Width – 48 inches

### Product Composition

Hardie® Architectural Panels are *Grade II, Type A*, fiber-cement sheets as defined by ASTM C 1186. The panels are manufactured by the Hatschek process and cured by high pressure steam autoclaving.

### Code Compliance

Hardie® Architectural Panels complies with:

- The 2009, 2012, and 2015 International Building Code® (IBC) Section 1404.10, 2018 and 2021 International Building Code® (IBC) Section 1403.10 and 2009, 2012, 2015, 2018, and 2021 International Residential Code® (IRC) Table R703.3(1) and Section R703.10.1 as ASTM C 1186 Grade II, Type A Fiber Cement.
- 2017, 2020, & 2023 Florida Building Code® (FBC) Section 1404.10 and 1405.16 as ASTM C 1186 Grade II, Type A Fiber Cement.

### Wind Design:

- Design Tables 2 & 3 provide allowable capacity in mph for transverse load conditions for the Hardie® Architectural Panels attached to either wood framing, furring or WSP, tested in accordance to ASTM E 330.
- Wood framing shall have a specific gravity of 0.42 or greater unless otherwise stated.
- Wood Structural Sheathing (WSP) panel must have a specific gravity of 0.50 or higher unless otherwise stated.

### Fire Characteristics:

- Hardie® Architectural Panels are classified as non-combustible when tested in accordance with ASTM E136.
- Hardie® Architectural Panels may be used in ASTM E119 fire resistance rated assemblies as listed by Warnock Hersey.
- Hardie® Architectural Panels are a Class A material according to 2017, 2020, & 2023 FBC, 2018 and 2021 IBC Section 803.1.2; Surface Burning Characteristics when tested in accordance with ASTM E 84: Flame Spread Index = 0 and Smoke Developed Index = 0.
- The building official reserves the right to approve alternate materials, design and methods of construction based on research reports and/or tests based on 2018 & 2021 IBC; 2017, 2020, & 2023 FBC Section 104.11.

### Installation Requirements

- Test reports can be furnished to the building official upon request, contact your local James Hardie sales representative.
- Hardie® Architectural Panels shall be installed on exterior walls braced in accordance with the applicable building code.
- A water-resistive barrier complying with Section R703.2 of the IRC or Section 1403.2 of the FBC is required to be installed.
- Install the Hardie® Architectural Panels in accordance with this report and the James Hardie published installation requirements. For a copy contact your local James Hardie sales representative or visit [www.JamesHardiePros.com](http://www.JamesHardiePros.com).

## Hardie® Architectural Panels

All national, state, and local building code requirements must be followed and where they are more stringent than the Hardie® Architectural Panels installation requirements, state and local requirements will take precedence.

Table 2, Wind Design Table, Exposed Fastening

Allowable Wind Speed (mph) for Hardie® Architectural Panels (Analytical Method in ASCE 7-10, 7-16 Chapter 30)

1. Installation must be in accordance with manufacturer's installation instructions

2. Building heights are the mean roof height (ft) of a building except the eave height shall be used for the roof angles of less than or equal to 10° (2-12 roof slope)

3. Linear interpolation of building height ( $\leq 60$  ft) and wind speed is permitted.

4. Wind speed design coefficient assumptions per Analytical Method in ASCE 7-05:  $I=1$ ,  $K_{zt}=1$ ,  $K_d=0.85$ ,  $G_{Cp}=-1.4$ ,  $G_{Cpi}=-0.18$

5. Wind speed design assumptions per Analytical Method in ASCE 7-10 & ACE 7-16 Section 30.4:  $K_{zt}=1$ ,  $K_d=0.85$ ,  $G_{Cp}=-1.4$ ,  $G_{Cpi}=0.18$

6. Wood framing species must have a specific gravity of 0.42 gravity or higher.

7. Wood framing species must have a specific gravity of 0.46 gravity or higher.

8. Wood Structural Sheathing panel must have a specific gravity of 0.50 or higher.

9. V<sub>ult</sub> = ultimate design wind speed.

10. V<sub>asd</sub> = nominal design wind speed.

11. V = basic design wind speed

12. Basic Design Wind Speed per ASCE 7-16 or 2017 FBC/2018 IBC Figures 1609.3(1) through 1609.3(8). Where design is based on the fastest mile wind speeds, the basic wind speed shall be converted to the fastest mile wind speed V<sub>fm</sub> per Section R301.2.1.3 of the 2012 IRC.

13. 2017, 2020, & 2023 FBC, 2018 IBC Section 1609.3.1 Eq. 16-33, V<sub>asd</sub> = V<sub>ult</sub> (0.6)<sup>0.5</sup>

14. The NDS published specific gravities of SPF lumber & Wood Structural Panel (WSP) furring are 0.42 and 0.50 respectively. Attachment of the furring to the structural framing must be determined by the project design engineer to resist the allowable design wind loads for the maximum wind speeds as tabulated.

## Hardie® Architectural Panels

All national, state, and local building code requirements must be followed and where they are more stringent than the Hardie® Architectural Panels installation requirements, state and local requirements will take precedence.

Table 3, Wind Design Table, Hybrid - Direct to Stud and Off-Stud Nailing Application

Allowable Wind Speed (mph) for Hardie® Textured Panels (Analytical Method in ASCE 7-10, 7-16 Chapter 30)

- Applies to Hardie® Architectural Panel – Fine Sand, Hardie® Architectural Panel – Mounded Sand, Hardie® Architectural Panel – Sea Grass, Hardie® Architectural Panel – Sculpted Clay only.
- Installation must be in accordance with manufacturer's installation instructions.
- Building heights are the mean roof height (ft) of a building except the eave height shall be used for the roof angles of less than or equal to 10° (2-12 roof slope)
- Linear interpolation of building height (≤ 60ft) and wind speed is permitted.
- Wind speed design coefficient assumptions per Analytical Method in ASCE 7-05: I=1, K<sub>zt</sub>=1, K<sub>d</sub>=0.85, G<sub>Cp</sub>= -1.4, G<sub>Cpi</sub>= -0.18.
- Wind speed design assumptions per Analytical Method in ASCE 7-10 & ASCE 7-16 Section 30.4: K<sub>zt</sub>=1, K<sub>d</sub>=0.85, G<sub>Cp</sub>= -1.4, G<sub>Cpi</sub>= 0.18.
- Wood framing species must have a specific gravity of 0.42 gravity or higher.
- Wood framing species must have a specific gravity of 0.46 gravity or higher.
- Wood Structural Sheathing panel must have a specific gravity of 0.50 or higher.
- V<sub>ult</sub> = ultimate design wind speed.
- V<sub>asd</sub> = nominal design wind speed.
- V = basic design wind speed.
- Basic Design Wind Speed per ASCE 7-16 or 2017 FBC/2018 IBC Figures 1609.3(1) through 1609.3(8). Where design is based on the fastest mile wind speeds, the basic wind speed shall be converted to the fastest mile wind speed V<sub>fm</sub> per Section R301.2.1.3 of the 2012 IRC.
- 2017 & 2020 FBC, 2018 IBC Section 1609.3.1 Eq. 16-33, V<sub>asd</sub> = V<sub>ult</sub>(0.6)/0.5

# Hardie® Architectural Panels

All national, state, and local building code requirements must be followed and where they are more stringent than the Hardie® Architectural Panels installation requirements, state and local requirements will take precedence.

**Figure 1, Fastening Configuration for 16" O.C. Wood Frame: Hybrid - Direct to Stud and Off-Stud Nailing Application**

- 4 in o.c. along studs
- 4 in o.c. along panel edges
  - Edges may be attached to WSP sheathing only

**Figure 2, Fastening Configuration for 24" O.C. Wood Frame: Hybrid - Direct to Stud and Off-Stud Nailing Application**

- 4 in o.c. along studs
- 4 in o.c. along panel edges
  - Edges may be attached to WSP sheathing only

COMM2101 P 23/23 09/24

**SILICA WARNING**

**DANGER:** May cause cancer if dust from product is inhaled. Causes damage to lungs and respiratory system through prolonged or repeated inhalation of dust from product. Refer to the current product Safety Data Sheet before use. The hazard associated with fibre cement arises from crystalline silica present in the dust generated by activities such as cutting, machining, drilling, routing, sawing, crushing, or otherwise abrading fibre cement, and when cleaning up, disposing of or moving the dust. When doing any of these activities in a manner that generates dust you must (1) comply with the OSHA standard for silica dust and/or other applicable law, (2) follow James Hardie cutting instructions to reduce or limit the release of dust; (3) warn others in the area to avoid breathing the dust; (4) when using mechanical saw or high speed cutting tools, work outdoors and use dust collection equipment; and (5) if no other dust controls are available, wear a dust mask or respirator that meets NIOSH requirements (e.g. N-95 dust mask). During clean-up, use a well maintained vacuum and filter appropriate for capturing fine (respirable) dust or use wet clean-up methods - never dry sweep.

**WARNING:** This product can expose you to chemicals including respirable crystalline silica, which is known to the State of California to cause cancer. For more information go to P65Warnings.ca.gov.

**RECOGNITION:** James Hardie® Hardie® Architectural Panel complies with ASTM C1186 and meets the following Fiber-Cement siding code requirements; Sections 1404.10, 1405.16, and 1405.16.1 (2006, 2009, 2012, 2015 IBC), Sections 1403.10, 1404.16 & 1404.16.1 (2018, 2021 IBC), Table R703.4 (2006, 2009, 2012 IRC), Table R703.3 (2015, 2018, 2021 IRC) and Section R703.10. Hardie® Architectural Panel is also recognized for application with the following product approval agencies: State of Florida Product Approval FL#13223.
