

Hardie® Architectural Panel

Single Family Installation Requirements

EFFECTIVE JULY 2024

IMPORTANT: FAILURE TO FOLLOW JAMES HARDIE WRITTEN INSTALLATION INSTRUCTIONS AND COMPLY WITH APPLICABLE BUILDING CODES MAY VIOLATE LOCAL LAWS, AFFECT BUILDING ENVELOPE PERFORMANCE AND MAY AFFECT WARRANTY COVERAGE. FAILURE TO COMPLY WITH ALL HEALTH AND SAFETY REGULATIONS WHEN CUTTING AND INSTALLING THIS PRODUCT MAY RESULT IN PERSONAL INJURY. BEFORE INSTALLATION, CONFIRM YOU ARE USING THE CORRECT HARDIE® ZONE PRODUCT INSTRUCTIONS BY VISITING [HARDIEZONE.COM](https://www.hardiezone.com) OR CALL 1-866-942-7343 (866-9-HARDIE).

1 Introduction

The material contained herein provides installation guidelines for the Hardie™ Architectural Collection by James Hardie. This document is intended for use by builders, cladding installers, and other contractors who may be involved with the installation of the Hardie™ Architectural Collection.

Before you begin your siding project read the instruction manual completely and thoroughly. This document describes and illustrates the minimum steps required to install the Hardie™ Architectural Collection. No instruction manual can anticipate every condition, circumstance, or situation that might arise during installation over the course of the project. When in doubt about assembly details, contact the architect, specifier, or a building official. Contact your James Hardie Sales and Install Representative for product support 1-800-9HARDIE (1- 800-942-7343).

PREPARATION

Ensure the drainage plane is intact and all penetrations are sealed. Plan your work, use the proper tools, techniques, and follow installation procedures as covered in this installation manual. It is important that builders, specifiers, and installers recognize requirements and information pertaining to:

- Safety
- Storage and Handling
- Cutting
- Wall Preparation
- Fastening

For best results, before installation, ensure your panels are clean and free of dirt, dust, chalking, oil, grease, organic contaminants, or mold. Dust from cutting and construction should be removed immediately upon installation.

PRACTICE INSTALLING MATERIAL

Utilize a mock-up to evaluate installation and finishing techniques, with a focus on specific applications designed by a design professional or engineer. The fastening practice and/or fastening tools must be properly adjusted to avoid overdriving. Practice mock installation as needed to until workmanship and appearance are acceptable and approved.

2 Safe Working Practices

STORAGE & HANDLING

Store flat and keep dry and covered prior to installation. Installing siding wet or saturated may result in shrinkage. Protect edges and corners from breakage. James Hardie is not responsible for damage caused by improper storage and handling of the product.

Inspect to confirm material is free from damage.

ColorPlus® Technology finish Tip:

- When possible, carry with plastic covering in place. This will help to protect the ColorPlus® Technology finish.
- Wearing gloves will help prevent fingerprint smudges to the ColorPlus® Technology finish.

HANDLING PANELS

When handling Hardie® Architectural Panel care should be given to prevent damage to the edges and/or the ColorPlus® Technology finish.

- Utilize 2 persons to carry product.
- Carry panels as shown in Figure 2.1 and Figure 2.2.

Figure 2.1

Figure 2.2

PANEL HANDLING: PALLET / CUT STATION

Prevent from dragging panels across pallet or cut table

PANEL HANDLING: JOB SITE MOVEMENTS

Avoid resting on corner

Prevent from bumping into wall, ladders, scaffolding, etc.

PANEL HANDLING: INSTALLATION

CUT STATION & CUTTING

Setup cutting station (Fig. 2.3), and locate close to installation area.

Use a Hardie™ Blade to cut James Hardie fiber cement products. A track saw with vacuum system (Fig. 2.4) is best for cutting Hardie® Architectural Panel.

- Cleaner cuts
- Panels can be cut facing up (minimize panel movements)
- If using a traditional circular saw with vacuum system, place panel face down to prevent marring of the finished surface caused by friction from the saw.

Figure 2.3

Figure 2.4

ColorPlus® Technology finish Tip:

- A scratch proof platform is a good idea to prevent from scratching the ColorPlus® Technology finish surface while cutting. The cardboard cover from the top of the pallet makes a great non marking surface.
- Keep a spray bottle (filled with water) and soft cloths to wipe cut dust off immediately after cutting to keep your ColorPlus® Technology finish looking fresh.
- Touch-up all cut edges

CUTTING INSTRUCTIONS

OUTDOORS

- Position cutting station so that airflow blows dust away from the user and others near the cutting area.
- Cut using one of the following methods based on jobsite requirements:
 - Best:** Circular saw equipped with a Hardie™ Blade saw blade and attached vacuum dust collection system.
 - Better:** Circular saw equipped with a dust collection feature and a Hardie™ Blade saw blade.
 - Good:** Circular saw equipped with a Hardie™ Blade saw blade.

INDOORS

- NEVER grind or cut with a power saw indoors.
- Cut only using shears (manual, pneumatic or electric) or the score and snap method.

GENERAL

- During clean-up of dust and debris, wet dust and debris down with a fine water mist, apply a dust reducing sweeping compound in sufficient quantities, or use a vacuum to collect dust and debris. DO NOT use compressed air.
DO NOT dry sweep without first applying a dust reducing control measure.
- For best performance when cutting with a circular saw, James Hardie recommends using Hardie™ Blade saw blades.
- Go to jameshardiepros.com for additional cutting and dust control recommendations.

IMPORTANT: The Occupational Safety and Health Administration (OSHA) regulates workplace exposure to silica dust. For construction sites, OSHA has deemed that cutting fiber cement with a circular saw having a blade diameter less than 8 inches and connected to a commercially available dust collection system per manufacturer's instructions results in exposures below the OSHA Permissible Exposure Limit (PEL) for respirable crystalline silica, without the need for additional respiratory protection.

If you are unsure about how to comply with OSHA silica dust regulations, consult a qualified industrial hygienist or safety professional, or contact your James Hardie technical sales representative for assistance. James Hardie makes no representation or warranty that adopting a particular cutting practice will assure your compliance with OSHA rules or other applicable laws and safety requirements.

3 Design

PANEL JOINT CONSIDERATIONS

Hardie® Architectural Panels have been designed to feature a “V” groove look, achieved by placing Y trim at vertical panel joints. When considering the location of panel joint layout, use the following:

1. Installation requirements
 - a. Clearances
 - b. Floor break (panels cannot be placed across floors)
(horizontal flashing / trim is required)
 - c. Framing, sheathing, and fastener attachment
(see panel joint placement options section within this document)
2. Align/center to key features
(ex. windows, doors, etc.) (fig. 3.1)
3. Align/center to the structure
(ex. walls, gables, etc.) (fig. 3.2)

Figure 3.1 Align to Key Feature

Figure 3.2 Align to Structure

*** Design Advice:**

It is okay for panel widths to be equal or unequal at structure ends.

4 General Requirements

IMPORTANT: Read these instructions in their entirety before attempting installation.

- These instructions to be used for installation on single family homes only. **For Commercial / Multi-Family installation requirements go to www.JamesHardiePros.com
- Hardie® Architectural Panel can be installed over braced wood. See General Fastening Requirements. Irregularities in framing and sheathing can mirror through the finished application. Correct irregularities before installing siding.
- Hardie® Architectural Panel may be installed on flat vertical wall applications only.
- Information on installing Hardie® products over non-nailable substrates (ex: gypsum, foam, etc.) can be located in James Hardie Tech Bulletin 19 at jameshardiepros.com.
- A water-resistive barrier (WRB) is required in accordance with local building code requirements. The WRB must be appropriately installed with penetration and junction flashing in accordance with local building code requirements. Hardie™ Weather Barrier, a non-woven non-perforated housewrap¹, which complies with building code requirements. James Hardie will assume no responsibility for water infiltration.
- Adjacent finished grade must slope away from the building in accordance with local building codes - typically a minimum of 6 in. in the first 10 ft.
- Do not use Hardie® Architectural Panel in Fascia or Trim applications.
- Do not install Hardie® products such that they may remain in contact with standing water.
- For larger projects, where the span of the wall is significant in length, the designer and/or architect should take into consideration the coefficient of thermal expansion and moisture movement of the product in their design. These values can be found in the [Technical Bulletin in "Expansion Characteristics of James Hardie Siding Products" at jameshardiepros.com](http://Technical Bulletin in 'Expansion Characteristics of James Hardie Siding Products' at jameshardiepros.com).
- James Hardie Building Products provides installation/wind load information for buildings with a maximum mean roof height of 85 feet (Consult applicable product evaluation or listing). For information on installations above 60 feet, please contact James Hardie technical support.
- Minimum standard panel design size is 12 in. x 16 in. Note: Panels may be notched and cut to size to fit between windows, doors, corners, etc.
- When installing with finish nails, finish nails must be straight, 16 gauge, and stainless steel.

¹For additional information on Hardie™ Weather Barrier, consult James Hardie at 1-866-4HARDIE or jameshardie.com/weather-barrier

Figure 4.13
Bridging Floors

Do not bridge floors with Hardie® Architectural Panel. Horizontal joints should always be created between floors, see below.

FASTENING REQUIREMENTS

Refer to TDS (Technical Data Sheet) for Hardie Architectural Panel in this document, or refer to ESR-1844 for additional fastening options and for wind load ratings (page 18).

FINISH NAIL REQUIREMENTS (wood only)

- Minimum 1-1/2 inch.
- Stainless steel only.
- 16 gauge straight. **DO NOT** use 15 gauge angled finish nails.

FASTENING GUIDELINES

The following guidelines should be followed to achieve the desired aesthetics from the fastening of stainless steel finish nails to attach Hardie® Architectural Panel:

1. In-Line Regulator (Fig. 4.15)
 - a. Control variable air supply from compressor
 - b. 75-90 psi (average setting) if difficulty maintaining psi and/or depth control, check nailer for wear and replace or repair accordingly
2. No-Mar Tips (fig. 4.16)
 - a. Avoid surface damage
 - b. Depth control
3. Gun angle to wall (fig. 4.14)
4. Nails should be driven flush or proud. If left proud, then tap flush immediately with a smooth face hammer
5. Do Not over drive fasteners
 - a. Holes may appear after painting
 - b. Will increase need for patching & touch-up
6. Test nail depth on scrap prior to panel installation

GENERAL

If finish nails are used, they shall be stainless steel. All other fasteners shall be corrosion resistant, galvanized, or stainless steel. Electro-galvanized are acceptable but may exhibit premature corrosion. Unless otherwise directed, James Hardie recommends the use of quality, hot-dipped galvanized nails. James Hardie is not responsible for the corrosion resistance of fasteners.

Stainless steel fasteners are recommended when installing Hardie® products near the ocean, large bodies of water, or in very humid climates. Note: Ring shank (not smooth) shall be used when specifying stainless steel nails.

Manufacturers of ACQ and CA preservative-treated wood recommend spacer materials or other physical barriers to prevent direct contact of ACQ or CA preservative-treated wood and aluminium products. Fasteners used to attach Hardie™ Trim Tabs, aluminium trim, or flashing to preservative treated wood shall be of hot dipped zinc-coated galvanized steel or stainless steel and in accordance to the latest versions of the IRC/IBC.

- Consult applicable product evaluation or listing for correct fasteners type and placement to achieve specified design wind loads.
- **NOTE:** Published wind loads may not be applicable to all areas where Local Building Codes have specific jurisdiction. Consult James Hardie Technical Services if you are unsure of applicable compliance documentation.
- Drive fasteners perpendicular to siding and framing.
- Fastener heads should fit snug against siding (no air space).

PNEUMATIC FASTENING

Hardie® products can be hand nailed or fastened with a pneumatic tool. Pneumatic fastening is highly recommended. Set air pressure so that

the fastener is driven snug with the surface of the siding. A flush mount attachment on the pneumatic tool is recommended. This will help control the depth the nail is driven. If setting the nail depth proves difficult, choose a setting that under drives the nail. (Drive under driven nails snug with a smooth faced hammer - Does not apply for installation to steel framing).

COLORPLUS® TECHNOLOGY FINISH FASTENERS

Color matched stainless steel finish nails are available for Hardie® Architectural Panel with ColorPlus® Technology finish Nails installed the same as described above. Touch- up fasteners as needed using the touch applicator brush Fig.16

Figure 4.14

Figure 4.15

Figure 4.16

Figure 4.17

† Fill with an exterior grade patching compound

5 Tools

TOOLS FOR FASTENING

1 Straight 16 Gauge Stainless Finish Nails

Fasten using minimum 1-1/2 inch straight 16 gauge stainless steel nails. DO NOT use 15 gauge angled finish nails.

2 Straight Finish Nailer

16 gauge straight finish nailer for attaching trims and panels.

3 Inline Air Regulator

An inline pressure regulator will assist in better fastener depth control. Nails shall be underdriven as opposed to overdriven if depth control is an issue.

TOOLS FOR CUTTING METAL TRIMS

1 Miter Saw

To cut metal trims

2 Non-Ferrous Metals Blade

80-tooth

3 Tin Snips

Cutting flashings

TOOLS FOR CUTTING HARDIE® ARCHITECTURAL PANEL

1 Track Saw With Vacuum dust collection system

OR

2 7-1/4 in Circular Saw with Vacuum dust collection system

Cutting against straight edge is recommended.

3 Hardie® Blade Saw Blade

Poly-diamond blade for Hardie® fiber cement.

FASTENING METAL TRIMS

Attach trims to:
Wood - using a staple, or finish nail or flat head nail.

DO NOT use a button or bugle headed fastener when attaching trims.

6 Products and Accessories

INSTALLATION EXAMPLE

Hardie™ Architectural Trim

ACCESSORIES

1 Joint Sealant	2 Hardie™ Weather Barrier	3 Seam Tape	4 Flex Flashing	5 Pro-Flashing	6 J Trim
					
General purpose polyurethane exterior grade joint sealant. Not supplied by James Hardie.	Water barrier and vapor permeable membrane. ¹	Hardie™ Seam Tape or equivalent.	Hardie™ Flex Flashing or equivalent.	Hardie™ Pro-Flashing or equivalent.	Aluminium extrusion to be used as a trim at abutments. (e.g. soffits, masonry, etc. Not recommended for windows & doors)

TRIM

7 2-Piece J Trim	8 Low-Profile Inside Corner Trim	9 Inside Corner Trim	10 Low-Profile Outside Corner Trim	11 Low Profile 45° Inside Corner Trim	12 Low Profile 45° Outside Corner Trim
					
Aluminium extrusion to be used as a trim at abutments. (e.g. windows, doors, soffits, masonry, etc.)	Aluminium extrusion to be used for inside corners.	Aluminium extrusion to be used for inside corners.	Aluminium extrusion to be used for outside corners.	Aluminium extrusion to be used for bay windows.	Aluminium extrusion to be used for bay windows.

VERTICAL TRIM OPTIONS

13 Vertical Y Trim	14 Vertical H Trim	15 Low-Profile Horizontal Z-Trim	16 Horizontal Z Flashing Trim	17 Raised Reveal Base Trim	18 L- Base Trim
					
Aluminium extrusion to be used along vertical butt joints.	Aluminium extrusion to be used along vertical butt joints.	Aluminium extrusion to be used along horizontal control joints.	Aluminium extrusion to be used along horizontal control joints.	Aluminium extrusion to be used as a base edge solution.	Aluminium extrusion to be used as a base edge solution.

HORIZONTAL TRIM OPTIONS

TRANSITIONAL TRIMS

19 Hardie® Trim Boards	20 Low-Profile Inside Corner Transition Trim	21 Low-Profile Outside Corner Transition Trim	22 Low-Profile Vertical Transition Trim	23 Straight 16 Gauge Stainless Finish Nails
				
Fiber cement trim for corners and windows. Can be mounted horizontally or vertically.	Aluminium extrusion to be used for transitions at inside corners.	Aluminium extrusion to be used for transitions at outside corners.	Aluminium extrusion to be used for transitions at mid-wall	Min. 1½ in. straight 16 gauge stainless steel finish nails. DO NOT use 15 gauge angled finish nails.

FASTENER DETAILS

Finish Nail

Tips: for fastener depth control:

- Oil nail guns regularly.
- If excessive air pressure (above 90psi) is needed or having difficulty controlling nail depth. Nail gun may be worn.

*Use a smooth face hammer and lightly tap flush.

Refer to the Hardie® Architectural Panel Technical Data Sheet for fastening options.

Note: When installing preservative-treated wood/furring, a non permeable membrane shall be installed between the furring and aluminium trims.

7 Panel Installation

PANEL INSTALLATION PROCESS - VERTICAL ORIENTATION

When installing Hardie® Architectural Panel in the vertical orientation, install either the vertical Y or H trim at all vertical panel joints to meet moisture management requirements.

*Refer to the Hardie® Architectural Panel Technical Data Sheet for fastening options.

PANEL INSTALLATION PROCESS - HORIZONTAL ORIENTATION

NON-NAILABLE SUBSTRATES 1in. OR LESS (eg. foam & gypsum)

Figure 8.11 - Fastening over non-nailable substrates

Note: The direction to follow applies to Hardie® Architectural Panel fastened with stainless finish nails only. Information on installing Hardie® products over non-nailable substrates (ex: gypsum, foam, etc.) can be located in James Hardie Technical Bulletin in 19 at jameshardiepros.com

Extend nail by the combined thickness of non-nailable substrate(s). (eg. If C is 1in., then finish nail shall be 2½ in.)

- A Stainless finish nail
- B Hardie® Architectural Panel
- C Non-nailable substrate(s) (e.g. rigid foam or gypsum)
Note: Non-nailable substrate(s) shall not exceed 1 in. in combined total thickness.
- D Optional WSP (minimum 7/16 in.)
- E Wall Framing (e.g. wood)

Consult water-resistive barrier (WRB) manufacturer for placement of WRB.

Figure 8.12 - Off-stud nailing when installing non-nailable substrates

Off-stud nailing application may be used when installing non nailable substrates with a maximum 1 inch thickness and is being installed over sheathing.

See Technical Data Sheet (TDS) Table 3, Wind Design Table, Off-Stud Nailing Application for fastening requirements.

JOINT PLACEMENT OPTIONS

Figure 8.13 - Panel joint placement options

Hardie® Architectural Panel joint placed off-stud when over min. 7/16in. OSB

Hardie® Architectural Panel joint placed on-stud when structural sheathing is not present

Hardie® Architectural Panel joint placed off-stud when over max. 1in. non-nailable substrates (foam, gypsum, etc.) when min. 7/16in. OSB present

Hardie® Architectural Panel joint placed on-stud when over max. 1in. non-nailable substrates (foam, gypsum, etc.) when structural sheathing is not present

Hardie® Architectural Panel joint placed over additional framing over max. 1in. non-nailable substrates (foam, gypsum, etc.) when structural sheathing is not present

9 Finishing & Maintenance

CUT EDGE TREATMENT

IMPORTANT: Caulk, paint or prime all field cut edges. James Hardie touch-up kits are required to touch-up James Hardie® products with ColorPlus® Technology finishes.

CARE & MAINTENANCE

Routinely perform the following to help maintain the appearance and performance of James Hardie® siding and trim products:

- Washing down the exterior surfaces every 6 to 12 months with a garden hose or low pressure water spray to remove dirt and debris.
- Re-applying of exterior finishes.
- Maintaining the exterior envelope and connections including joints, penetrations, flashings, and sealants (caulking) to prevent moisture entry behind the siding.
- Cleaning out gutters, blocked pipes, and overflows as required.
- Prune vegetation to prevent contact with the siding.
- Ensuring required external ground clearances and drainage slopes are maintained.

CAULKING

For best results use an Elastomeric Joint Sealant complying with ASTM C920 Grade NS, Class 25 or higher or a Latex Joint Sealant complying with ASTM C834. Caulking/Sealant must be applied in accordance with the caulking/sealant manufacturer's written instructions.

NOTE: some caulk manufacturers do not allow "tooling".

PAINTING

DO NOT use stain, oil/alkyd base paint, or powder coating on James Hardie® products. James Hardie factory primed products must be painted within 180 days of installation. 100% acrylic topcoats are recommended. Do not paint when James Hardie® products are wet. Follow paint manufacturer's instructions and application rates. Back rolling is recommended if spray application is used.

Tips: for a beautiful finish

- Surface preparation - Ensure the surface is dry, clean and any blemishes are patched using a suitable exterior grade cementitious patching compound and blend with surrounding texture using a sponge or scouring pad.
- Prevent paint bridging by applying thin even coats of paint. If bridging occurs, take a paint brush and brush bridging out. When rolling or brushing paint with the joint lines. Do not paint across the joint lines, this may result in bridging.
- Avoid excess painting of the "V" joint.

COLORPLUS® TECHNOLOGY FINISH CAULKING, TOUCH-UP & LAMINATE

- Care should be taken when handling and cutting James Hardie® products ColorPlus® Technology finishes. During installation, use a wet soft cloth or soft brush to gently wipe off any residue or construction dust left on the product, then rinse with a garden hose.
- Touch up nicks, scrapes and nail heads using the ColorPlus® Technology finish touch-up applicator. Touch-up should be used sparingly. If large areas require touch-up, replace the damaged area with a new piece of siding with ColorPlus® Technology finish.
- Laminate sheet must be removed immediately after installation of each course.
- Terminate non-factory cut edges into trim where possible, and caulk. Color matched caulks are available from your James Hardie® products ColorPlus® Technology finishes dealer.
- Treat all other non-factory cut edges using the ColorPlus® Technology finish edge coat, available from your James Hardie® products ColorPlus® Technology finishes dealer.

NOTE: James Hardie does not warrant the usage of third party touch-up or paints used as touch-up on James Hardie® products with ColorPlus® Technology finishes.

PAINTING JAMES HARDIE® SIDING AND TRIM PRODUCTS WITH COLORPLUS® TECHNOLOGY FINISHES

When repainting James Hardie® products with ColorPlus® Technology finishes, James Hardie recommends the following regarding surface preparation and topcoat application:

- Ensure the surface is clean, dry, and free of any dust, dirt, or mildew.
- Repriming is normally not necessary.
- 100% acrylic topcoats are recommended.
- DO NOT use stain or oil/alkyd based paints on James Hardie products.
- Apply finish coat in accordance with paint manufacturers' written instructions regarding coverage, application methods, and application temperature.
- DO NOT caulk* nail heads when using James Hardie® products with ColorPlus® Technology finishes, refer to the ColorPlus® Technology finishes touch-up section.

WARNING

High pressure water blast and sand blasting may damage the surface of the fiber cement product. Low pressure water spray, a soft medium bristle (nonmetal) brush is most suitable for cleaning fiber cement products. Acid washing can damage fiber cement surface and is not recommended.

NOTE: if using a pressure washer, care must be taken to ensure that the water stream does not damage the surface of the siding. Use wide fan tips that are kept a minimum of 6 feet from the wall and at a pressure under 1500 psi to minimize the chance of damaging the siding. Damage arising from improper cleaning or maintenance is not covered under applicable James Hardie warranties.

* Fill small holes and scratches (smaller than a dime) with an exterior grade patching compound

All national, state, and local building code requirements must be followed and where they are more stringent than the Hardie® Architectural Panels installation requirements, state and local requirements will take precedence.

Document Scope

This document applies to the following Hardie® Architectural Panel- Fine Sand, Architectural Panel- Mounded Sand, Architectural Panel- Sea Grass. The use of this product is limited to buildings not exceeding 85 feet in height.

General Description

Hardie® Architectural Panels are non-combustible fiber-cement panel, manufactured by James Hardie Building Products Inc.

Product Dimensions

Thickness – 0.3125 inches Length – 96, 120, & 144 inches Width – 48 inches

Product Composition

Hardie® Architectural Panels are *Grade II, Type A*, fiber-cement sheets as defined by ASTM C 1186. The panels are manufactured by the Hatschek process and cured by high pressure steam autoclaving.

Code Compliance

Hardie® Architectural Panels complies with:

- The 2009, 2012, and 2015 International Building Code® (IBC) Section 1404.10, 2018 and 2021 International Building Code® (IBC) Section 1403.10 and 2009, 2012, 2015, 2018, and 2021 International Residential Code® (IRC) Table R703.3(1) and Section R703.10.1 as ASTM C 1186 Grade II, Type A Fiber Cement.
- The 2017 and 2020 Florida Building Code® (FBC) Section 1404.10 and 1405.16 as ASTM C 1186 Grade II, Type A Fiber Cement.

Wind Design:

- Design Tables 2 & 3 provide allowable capacity in mph for transverse load conditions for the Hardie® Architectural Panels attached to either wood framing, furring or WSP, tested in accordance to ASTM E 330.
- Wood framing shall have a specific gravity of 0.42 or greater unless otherwise stated.
- Wood Structural Sheathing (WSP) panel must have a specific gravity of 0.50 or higher unless otherwise stated.

Fire Characteristics:

- Hardie® Architectural Panels are classified as non-combustible when tested in accordance with ASTM E136.
- Hardie® Architectural Panels may be used in ASTM E119 fire resistance rated assemblies as listed by Warnock Hersey.
- Hardie® Architectural Panels are a Class A material according to 2017 and 2020 FBC, 2018 and 2021 IBC Section 803.1.2; *Surface Burning Characteristics* when tested in accordance with ASTM E 84: Flame Spread Index = 0 and Smoke Developed Index = 0.
- The building official reserves the right to approve alternate materials, design and methods of construction based on research reports and/or tests based on 2018 IBC, 2017 & 2020 FBC Section 104.11.

Installation Requirements

- Test reports can be furnished to the building official upon request, contact your local James Hardie sales representative.
- Hardie® Architectural Panels shall be installed on exterior walls braced in accordance with the applicable building code.
- A water-resistive barrier complying with Section R703.2 of the IRC or Section 1403.2 of the FBC is required to be installed.
- Install the Hardie® Architectural Panels in accordance with this report and the James Hardie published installation requirements. For a copy contact your local James Hardie sales representative or visit www.JamesHardiePros.com.

							60	110	-	-	85	-	-

1. Installation must be in accordance with manufacturer's installation instructions.

2. Building heights are the mean roof height (ft) of a building except the eave height shall be used for the roof angles of less than or equal to 10° (2-12 roof slope).

3. Linear interpolation of building height (≤ 60 ft) and wind speed is permitted.

4. Wind speed design coefficient assumptions per Analytical Method in ASCE 7-05: $I=1$, $K_{zt}=1$, $K_d=0.85$, $G_{Cp}=-1.4$, $G_{Cpi}=-0.18$.

5. Wind speed design assumptions per Analytical Method in ASCE 7-10 & ACE 7-16 Section 30.4: $K_{zt}=1$, $K_d=0.85$, $G_{Cp}=-1.4$, $G_{Cpi}=0.18$.

6. Wood framing species must have a specific gravity of 0.42 gravity or higher.

7. Wood framing species must have a specific gravity of 0.46 gravity or higher.

8. Wood Structural Sheathing panel must have a specific gravity of 0.50 or higher.

9. V_{ult} = ultimate design wind speed.

10. V_{asd} = nominal design wind speed.

11. V = basic design wind speed.

12. Basic Design Wind Speed per ASCE 7-16 or 2017 FBC/2018 IBC Figures 1609.3(1) through 1609.3(8). Where design is based on the fastest mile wind speeds, the basic wind speed shall be converted to the fastest mile wind speed V_{fm} per Section R301.2.1.3 of the 2012 IRC.

13. 2017 & 2020 FBC, 2018 IBC Section 1609.3.1 Eq. 16-33, V_{asd} = V_{ult} (0.6)^{0.5}.

14. The NDS published specific gravities of SPF lumber & Wood Structural Panel (WSP) furring are 0.42 and 0.50 respectively. Attachment of the furring to the structural framing must be determined by the project design engineer to resist the allowable design wind loads for the maximum wind speeds as tabulated.

Hardie® Architectural Panels

All national, state, and local building code requirements must be followed and where they are more stringent than the Hardie® Architectural Panels installation requirements, state and local requirements will take precedence.

- Applies to Hardie® Architectural Panel – Fine Sand, Hardie® Architectural Panel – Mounded Sand, Hardie® Architectural Panel – Sea Grass, Hardie® Architectural Panel – Sculpted Clay only.
- Installation must be in accordance with manufacturer's installation instructions.
- Building heights are the mean roof height (ft) of a building except the eave height shall be used for the roof angles of less than or equal to 10° (2-12 roof slope)
- Linear interpolation of building height (≤ 60 ft) and wind speed is permitted.
- Wind speed design coefficient assumptions per Analytical Method in ASCE 7-05: $I=1$, $K_{zt}=1$, $K_d=0.85$, $G_{Cp}=-1.4$, $G_{Cpi}=-0.18$.
- Wind speed design assumptions per Analytical Method in ASCE 7-10 & ASCE 7-16 Section 30.4: $K_{zt}=1$, $K_d=0.85$, $G_{Cp}=-1.4$, $G_{Cpi}=0.18$.
- Wood framing species must have a specific gravity of 0.42 gravity or higher.
- Wood framing species must have a specific gravity of 0.46 gravity or higher.
- Wood Structural Sheathing panel must have a specific gravity of 0.50 or higher.
- V_{ult} = ultimate design wind speed.
- V_{asd} = nominal design wind speed.
- V = basic design wind speed.
- Basic Design Wind Speed per ASCE 7-16 or 2017 FBC/2018 IBC Figures 1609.3(1) through 1609.3(8). Where design is based on the fastest mile wind speeds, the basic wind speed shall be converted to the fastest mile wind speed V_{fm} per Section R301.2.1.3 of the 2012 IRC.
- 2017 & 2020 FBC, 2018 IBC Section 1609.3.1 Eq. 16-33, V_{asd} = V_{ult}(0.6)^{0.5}

Hardie® Architectural Panels

All national, state, and local building code requirements must be followed and where they are more stringent than the Hardie® Architectural Panels installation requirements, state and local requirements will take precedence.

Figure 1, Fastening Configuration for 16" O.C. Wood Frame: Off-Stud Application

- 4 in o.c. along studs
- 4 in o.c. along panel edges
 - Edges may be attached to WSP sheathing only

Figure 2, Fastening Configuration for 24" O.C. Wood Frame: Off-Stud Application

- 4 in o.c. along studs
- 4 in o.c. along panel edges
 - Edges may be attached to WSP sheathing only

SILICA WARNING

DANGER: May cause cancer if dust from product is inhaled. Causes damage to lungs and respiratory system through prolonged or repeated inhalation of dust from product. Refer to the current product Safety Data Sheet before use. The hazard associated with fiber cement arises from crystalline silica present in the dust generated by activities such as cutting, machining, drilling, routing, sawing, crushing, or otherwise abrading fiber cement, and when cleaning up, disposing of or moving the dust. When doing any of these activities in a manner that generates dust you must (1) comply with the OSHA standard for silica dust and/or other applicable law, (2) follow James Hardie cutting instructions to reduce or limit the release of dust; (3) warn others in the area to avoid breathing the dust; (4) when using mechanical saw or high speed cutting tools, work outdoors and use dust collection equipment; and (5) if no other dust controls are available, wear a dust mask or respirator that meets NIOSH requirements (e.g. N-95 dust mask). During clean-up, use a well maintained vacuum and filter appropriate for capturing fine (respirable) dust or use wet clean-up methods - never dry sweep.

WARNING: This product can expose you to chemicals including respirable crystalline silica, which is known to the State of California to cause cancer. For more information go to P65Warnings.ca.gov.

RECOGNITION: James Hardie® Hardie® Architectural Panel complies with ASTM C1186 and meets the following Fiber-Cement siding code requirements; Sections 1404.10, 1405.16, and 1405.16.1 (2006, 2009, 2012, 2015 IBC), Sections 1403.10, 1404.16 & 1404.16.1 (2018, 2022 IBC), Table R703.4 (2006, 2009, 2012 IRC), Table R703.3 (2015, 2018, 2022 IRC) and Section R703.10. Hardie® Architectural Panel is also recognized for application with the following product approval agencies: State of Florida Product Approval FL#13223.
