Remanufacturing
excellence

Emotive

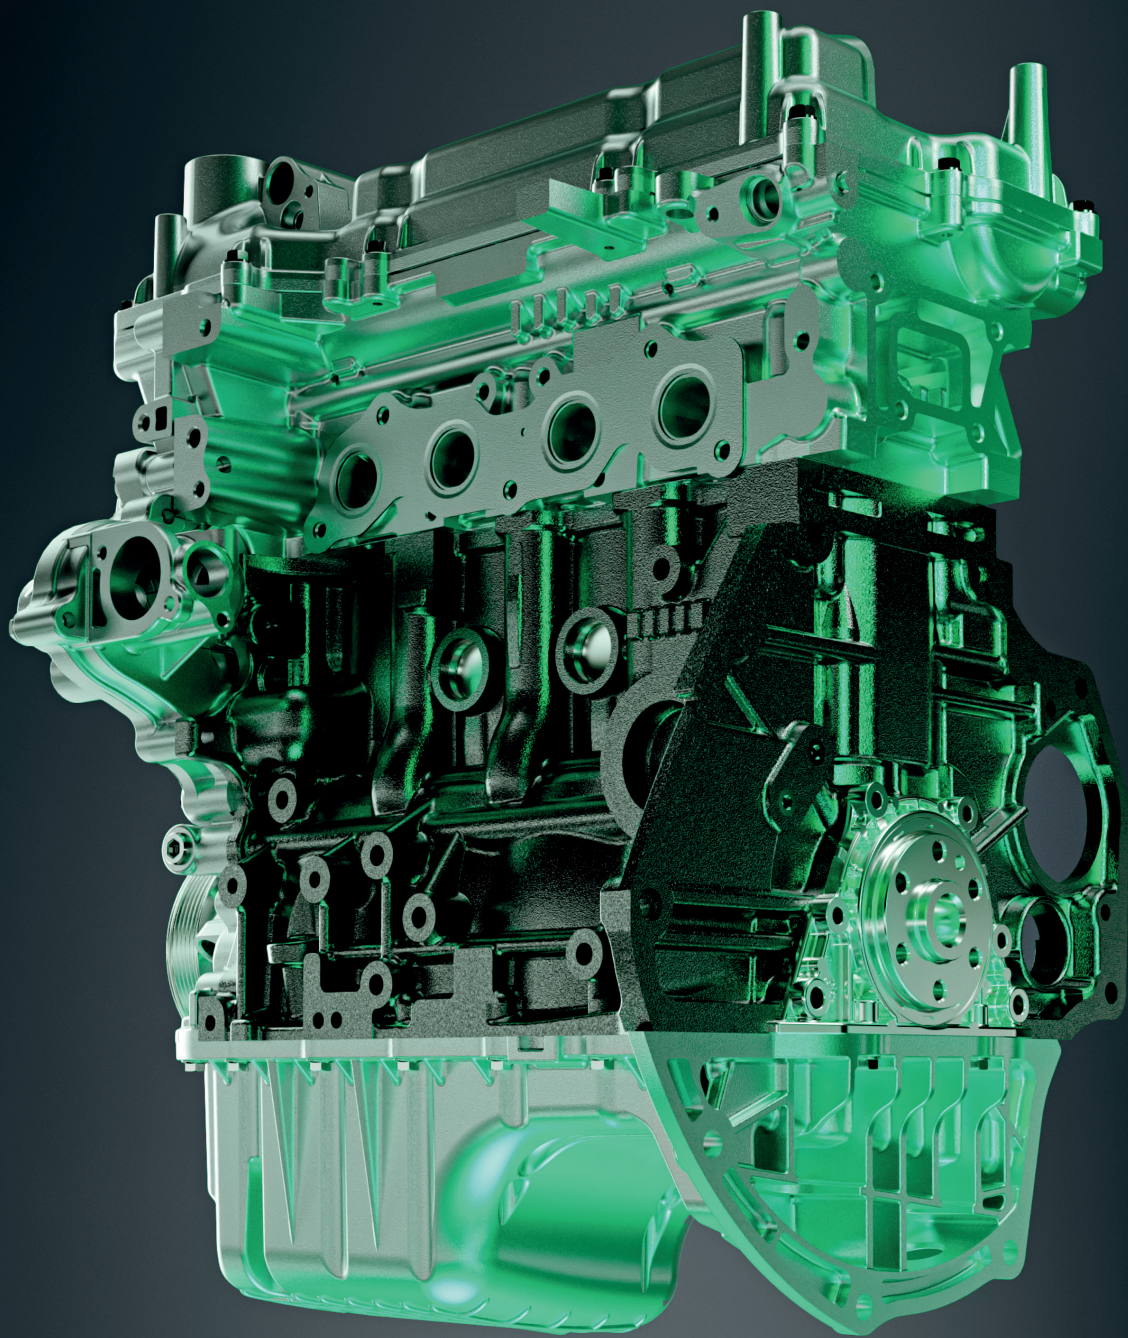

Magic drives

From our roots dating back to 1936 to our market launch in 2024, Emotive has always been the leading platform for automotive aftermarket solutions with a passionate commitment to customer satisfaction.

From braking systems and chassis components to cutting-edge fluids and electronics, Emotive offers top-quality products, services, and sustainable innovation.

Welcome to the leading automotive aftermarket platform.

Delight in remanufactured precision

Founded in 1987 in the Netherlands, MRT specializes in reviving combustion engines. The business initially focused on Volkswagen and Mercedes before expanding to include Toyota, Mitsubishi, Nissan, and French brands. With a commitment to quality and customer satisfaction, MRT ensures each product meets stringent standards, delivering reliable engines for passenger cars and vans. Through its Enginebase.com database and meticulous rebuild protocols, MRT delights customers with every engine they provide.

ENGINES

Pioneering sustainable solutions

VEGE has been a trailblazer in the automotive aftermarket, revolutionizing the industry with its eco-friendly remanufactured solutions since 1936. From engines to turbochargers, each VEGE product is meticulously crafted to meet the highest standards of quality and performance, rivalling new OEM alternatives. Committed to sustainability, VEGE's innovative Exchange Engine program minimizes downtime while significantly reducing waste and CO₂ emissions.

Sustainable remanufacturing

Each MRT and VEGE product is a masterful blend of high quality new and carefully selected rebuilt components. As champions of our green journey, we rework and reuse as many parts as possible during the remanufacturing process. Every part is examined, checked, and tested to maximize the potential sustainability benefits.

This approach allows us to contribute to the health of our planet. We are always driven to save valuable energy and resources, while ensuring that the finished product is as good as new. The savings we make are reinvested in quality assurance and passed on to our valued customers.

Our positive sustainability impact in 2023

Excellence in engineering, processes & quality

Engines are highly complex. To guarantee top quality products, we ensure that major items like blocks and cylinder heads meet OE specifications. Anything that can't be safely reworked is harmoniously replaced by quality new parts.

Compared to engines, gearboxes have fewer components that can be restored. A VEGE rebuilt gearbox contains brand-new parts: bearings, seals, and other service critical parts precisely married to the original gearbox casing.

// To stay true to our 'as good as new' promise, every part and product undergoes rigorous quality tests at each stage of the rebuilding process.

After the final cosmetic touches are completed, our products are carefully packed into bespoke frames or crates, ready to embark on their journeys to customers all around Europe.

Engineered for renewal

With over 80 years of experience, we ensure that every remanufactured engine and component delivers quality on par with new OEM products—all at highly competitive prices. Our engineering team continuously expands our range, keeping our products at the forefront of the remanufacturing industry.

Beyond engines, we supply essential components such as cylinder heads, turbochargers, gearboxes, diesel injection pumps, common rail pumps, injectors, and brake calipers. Each part is carefully selected and processed to meet strict quality standards, ensuring reliable performance for customers worldwide.

Our upgraded Tunisian facility features a dedicated Turbo Department, certified to ISO9001 standards. By partnering with trusted suppliers, we guarantee a wide selection of components for both OEM and aftermarket applications.

The heart of performance

Engines

We offer a wide range of petrol and diesel exchange engines for all brands and models, utilizing overnight transport to minimize vehicle downtime.

Our Exchange Engines start from carefully selected used engines from trusted European suppliers, thoroughly inspected before undergoing our extensive renovation process. Each component is meticulously cleaned, inspected, and re-machined by our experts.

Our engines combine new and remanufactured parts, maintaining high quality while reducing costs and energy consumption. Each unit undergoes rigorous quality testing at every stage. Once complete, engines are securely packed in metal frames or crates, ready for worldwide shipping. We take pride in our green certification.

Power transfer and control

Gearboxes

We launched our first gearbox program in the UK in 1995. Since then, the range has expanded to cover all major European car manufacturers.

Our remanufactured gearboxes include 4, 5, and 6-speed manual transmissions for cars and light commercial vehicles, from Audi to Volvo, including FWD, RWD, and 4WD applications.

Each unit is disassembled, cleaned, calibrated, inspected, and rebuilt with new bearings, seals, and gaskets by our trained engineers. Defective parts are replaced, and recognized weaknesses are improved with upgraded components. Every remanufactured gearbox is fitted with new bearings; all seals and gaskets are completely replaced with new ones as standard. Thanks to our extensive European stock, most gearboxes are delivered within 24-48 hours.

Boost power,
enhance efficiency.

Turbochargers

The first turbo range was launched in 2005 as a natural extension of our remanufacturing program. Initially limited, it has since expanded to cover all makes and models for petrol and diesel applications. Our remanufactured turbochargers meet original manufacturers' specifications, ensuring optimal performance. We supply exchange turbos for cars and commercial vehicles equipped with Garrett, BorgWarner, KKK, Schwitzer, Mitsubishi, Holset, Toyota, and IHI units.

Our Tunisian facility now features a dedicated Turbo Department, ensuring consistent quality. We also take pride in our ISO 9001 certification, guaranteeing reliability in every remanufactured turbocharger.

Precision fuel delivery for a sustainable performance

Pumps and injectors

We believe that a hard-working diesel engine replacement should include a remanufactured injection pump for optimal performance. To meet growing demand, we introduced diesel injection equipment. We invest in advanced technology and specialist equipment to remanufacture and test diesel components in-house. Our rapidly expanding Diesel Shop department receives regular orders from top car manufacturers.

We offer the aftermarket a high-quality, ever-growing range of diesel products. In most cases, pumps and injectors are available from stock and delivered within 24-48 hours.

Restore precision, ensure safety

Brake calipers

Our brake calipers are built through a strict manufacturing process uphold the highest standards of quality and safety.

Each unit undergoes a strict pre-production inspection to ensure only the best cores enter the process.

Calipers are fully dismantled, deep-cleaned with our unique thermal and chemical process, and shot-blasted for a like-new cosmetic finish. The cast iron core receives new thermal plating, and all key components are rigorously inspected to make sure they meet the original specification and tolerances.

Sealing faces are checked, and crucial parts like pistons and seals are 100% replaced.

Every caliper is end-of-line tested for quality during production. Handbrake-equipped models come pre-filled for easier and fast installation.

rapid delivery

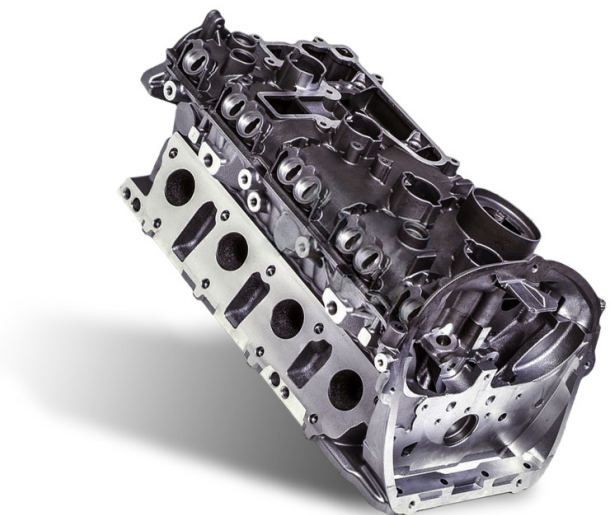

Cylinder heads

We offer a wide range of exchange cylinder heads with unmatched availability. Our "All Brands Program" is probably the largest in the current automotive aftermarket, and if we don't manufacture a specific model, we can remanufacture customer-supplied units.

Our **3** equipment levels provide flexible solutions for cilinder heads:

- **Complete** – includes springs, valves, and camshaft
- **Semi-complete** – includes springs and valves only
- **Bare** – cylinder head only

With extensive European stock, most orders ship within 24-48 hours. If a part is unavailable, we leverage our global supplier network to locate it, ensuring comprehensive coverage for all needs.

The complete solution

DPF filters & EGR valves

Our enthusiasm for innovation drives the remanufacturing of original DPF filters and EGR valves, and as ecological arguments for a cleaner planet become ever stronger, more vehicles are being equipped with these components.

Our vision is to offer the market an eco-friendly alternative that reduces pollutant emissions, leveraging our long-standing experience in remanufacturing.

Only the highest quality OE cores are selected for remanufacturing, and the latest technologies are applied to provide the most popular part references for DPF and EGR.

Steering racks and hydraulic pumps

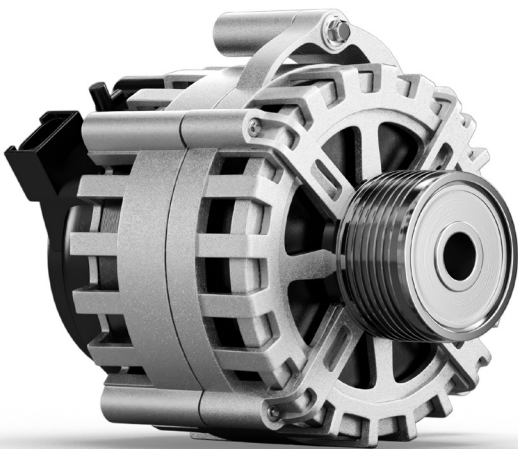

Remanufactured steering racks and hydraulic pumps are among the latest additions to our growing portfolio.

Our wide assortment of products is enhanced by carefully selected European partners that have invested in the best technology in this specialist area. We also have outstanding availability, providing the fast solutions the market demands.

Starters, Alternators and AC compressor

We are committed to providing high-quality remanufactured alternatives to new parts. Staying true to our mission, we have partnered with proven, reliable suppliers across Europe to deliver remanufactured starters, alternators, and AC compressors.

Our portfolio continues to expand, offering an attractive and eco-friendly alternative to new components.

Fully-automated professional cleaning,

100%

safe, without chemical additives

Professional carbon cleaning station: healthy car equipment

Carbon cleaning station

The carbon cleaning station is a professional hydrogen generation device specifically designed to offer optimal technical performance. It conducts fully-automated professional cleaning without chemical additives at low r.p.m. speed (idle). The cleaning is done in under an hour and it's 100% safe.

It achieves excellent results by reducing pollutant emissions and fuel consumption while also restoring the vehicle's original torque and power.

Benefits:

- Carbon cleaning for better performance.
- Restores original power and torque.
- Reduces emissions and fuel consumption.
- Extends vehicle lifespan.

Safety

Hydrogen is a flammable gas, therefore it is necessary to comply with strict safety systems, both active (prevention) and passive (correction).

The Carbon Cleaning Station is 100% European and has the highest level of security, with 6 unique security systems.

1. Over-pressure safety value
2. H₂/O₂ flame stopper (homologated)
3. Electric thermostat
4. Automatic filling by pump
5. Vibration sensor (motor)
6. Sound warnings, failure, functions, etc.

Design

The VEGE Carbon Cleaning Station M-5000 is expertly designed for seamless storage, transport, quick assembly, and effortless commissioning. Its engineered structure ensures high functionality and ease of use in daily operations.

Usability

It is a very simple and intuitive system. The software programmed on industrial PLC facilitates the optimal functioning of the machine. program selector, displacements, times, pause, start, automatic filling, timer, alerts.

Smart

Smart packaging for easy and safe storage and transport.

Easy-to-interpret visual instructions for quick and easy assembly.

OPTIMAL dimensions for transport and operation (less than 40kg).

Speedy exchange through readily available units

The MRT and VEGE 'off the shelf' exchange program offers customers the largest choice in Europe, providing fast solutions for all budgets. Our ambition is to be 'the one-stop shop' for all replacement needs.

Our extensive remanufacturing exchange program for engines and gearboxes covers a huge range of makes and models of cars and light commercial vehicles, both petrol and diesel. Simply choose from our range of remanufactured, rebuild, selected low milage used or new engines, transfer boxes, differentials, and gearboxes.

Finding what you need with Enginebase

To make our customers' lives easier, we have developed our very own digital platform called Enginebase. In just a few clicks, you can find the correct engine for your vehicle, check real-time availability and price.

Whether you have a part number, a vehicle model, or just a fragment of information, our search options will guide you to what you need. Our 360-degree photobooth showcases every detail of our engines, in the best possible light. Enginebase is available in multiple languages, making it accessible to everyone.

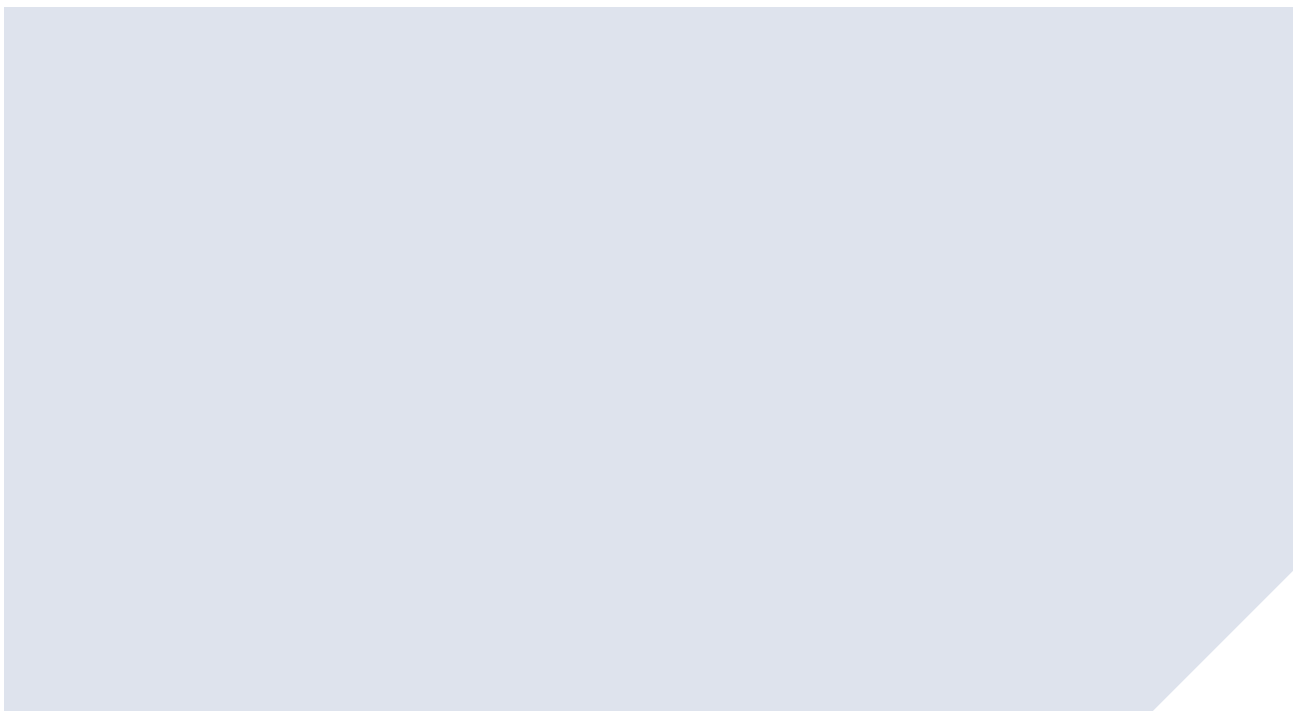

enginebase.nl

Engineering excellence backed by our warranty

From our three wholly owned, state-of-the-art factories in Europe and beyond, MRT and VEGE ensure that only the finest items reach our customers. All our products are built with the same high technical standards. Hence, our products are sold with a Pan-European comprehensive unlimited mileage guarantee. For your peace of mind, the warranty period is 12 months and during that time you are covered for parts and labour on all accepted claims.
