Dahl är navet i produkt- och informationsflödet mellan 2 000 leverantörer och 36 000 kunder. Hos oss hittar du VS- och VA-branschens ledande varumärken, ett noga utvalt sortiment, smarta tjänster och lösningar. Allt för att förenkla din arbetsdag.

Tillgänglighet är ett av våra ledord, och det löser vi bland annat via ett brett utbud i alla våra butiker, ett sjuttiotal från Ystad i söder till Kiruna i norr, eller via vår eShop som är öppen även när vi har stängt.

Logistik är en del av vår kärnverksamhet och vi har en leveranssäkerhet på hela 99,6 procent. Våra egna chaufförer ser till att du får rätt material, till rätt plats i rätt tid.

Du kan lita på våra råd; vi hjälper dig gärna att hitta rätt lösning oavsett varumärke eller teknik. Går något snett finns vi också vid din sida. Som proffsleverantör ser vi nämligen alltid till att hålla marknadsmässiga leveransvillkor, inklusive hantering av garanti och returer utan krångel.

Välkommen till Dahl!

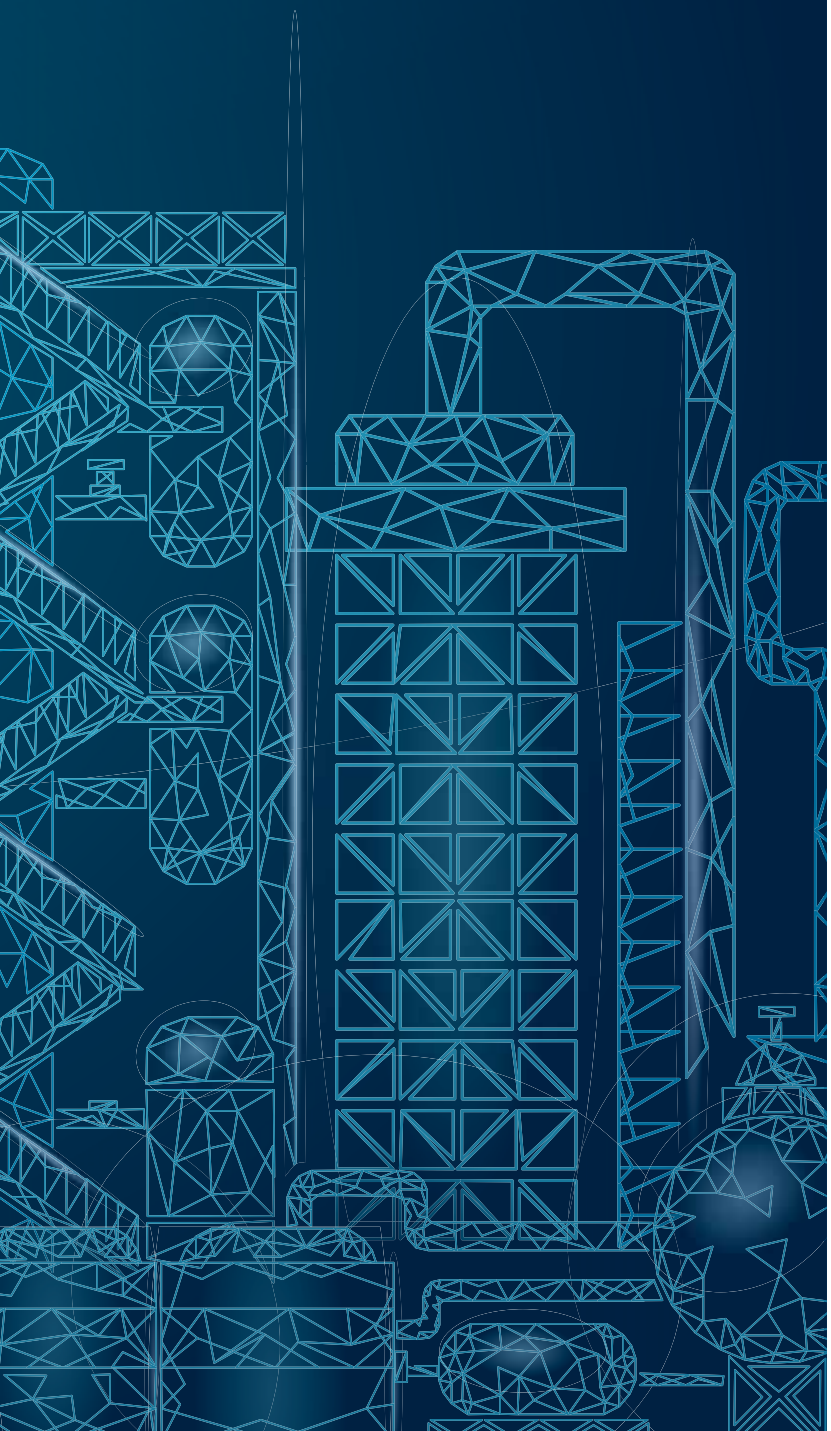
Välkommen till Dahl

– Sveriges ledande handelsbolag inom **VS, Mark & VA, Industri, Fastighet och Kyla**



Dahl är navet i produkt- och informationsflödet mellan 2 000 leverantörer och 36 000 kunder. Vi har totalt cirka 120 000 produkter och är Sveriges ledande handelsbolag i VS-branschen. Runt om i landet har vi ett sjuttiotal butiker, från Ystad i söder till Kiruna i norr, där vi möter våra kunder personligen för att hjälpa till med produkt- och affärsfrågor.

Till vår affärsplats dahl.se kommer alltfler kunder för att lägga order, en sajt som ständigt förbättras med innehåll och funktion. Allt du hittar i den här katalogen finns också online. Där uppdateras sortimentet dessutom dagligen – så missa inte chansen till ett ständigt aktuellt sortiment på dahl.se.

Handla online och hämta din leverans på DahlCenter;
då får du rätt saker packade och klara inför dagens jobb.

FLEXIBLA KONTORET

SMIDIGT ADMINISTRATIONSTJÄNST FÖR HANTVERKARE

Är du proffshantverkare och trött på att administrationen äter upp din arbetstid? Ta hjälp av Flexibla Kontoret – ett molnverktyg speciellt utformat för att förenkla och effektivisera administrationen för hantverkare.

I Flexibla Kontoret kan du registrera allt från materialinköp och arbetstid till fakturering och betalning – snabbt och smidigt via din mobil, surfplatta eller dator. Du får överblick över alla kunder, arbetsorder, fakturor och pågående affärer och kan enkelt dokumentera inköp och arbetstid.

Tjänsten är molnbaserad och drift, back-up, säkerhetslösningar och arbetsverktyg för pågående arbete ingår.

Välkommen till Flexibla Kontoret!

Logga inköp, logga tid och administrera online – med flexibla kontoret sköter du enkelt din administration och kan koncentrera dig på ditt hantverk!

Isella – vår största möbelserie

Rena, raka linjer och antingen ett tunt möbeltvättställ eller ett ovanpåliggande tvättställ på bänkskiva i svart eller vitt, ger den här serien en enkel, jordnära och ungdomlig stil.

Isella har möbler för varje behov, i en mängd olika mått och i fyra färger: högblank vit, matt vit, matt ljusgrå och sand. I serien ingår underskåp, tvättkorgsskåp, väggskåp och högskåp. Ariella tvättmaskinsmöbel kan matchas med bland annat Isella.

Alla delar i Isella-serien är lagerlagda för snabba leveranser.

Alternakatalogen är ett smart införsäljningsverktyg som du kan ge till din kund. Här finns mängder med inspiration, tips och produktfakta. Blir du återförsäljare får du dessutom ditt företagsnamn på baksidan av katalogen.

Upptäck hela sortimentet på alternabadrum.se – badrum genom hela livet! Följ oss också gärna i våra sociala kanaler för ytterligare inspiration.

Vår webbplats är fylld av inspiration och sköna idéer. Där kan du även bli återförsäljare och beställa kataloger.

FLEXIBLA KONTORET

SMIDIGT ADMINISTRATIONSTJÄNST FÖR HANTVERKARE

Är du proffshantverkare och trött på att administrationen äter upp din arbetstid? Ta hjälp av Flexibla Kontoret – ett molnverktyg speciellt utformat för att förenkla och effektivisera administrationen för hantverkare.

I Flexibla Kontoret kan du registrera allt från materialinköp och arbetstid till fakturering och betalning – snabbt och smidigt via din mobil, surfplatta eller dator. Du får överblick över alla kunder, arbetsorder, fakturor och pågående affärer och kan enkelt dokumentera inköp och arbetstid.

Tjänsten är molnbaserad och drift, back-up, säkerhetslösningar och arbetsverktyg för pågående arbete ingår.

Välkommen till Flexibla Kontoret!

Logga inköp, logga tid och administrera online – med flexibla kontoret sköter du enkelt din administration och kan koncentrera dig på ditt hantverk!

1551598	110 x 75	Utan rens-lucka	B	10.475

Avloppsrör syrafast Europipe

Rör med 1 muff

Blücher EuroPipe tunnväggiga rör och rördelar i dimension 40-315 mm, med TIG-teknologi samt pressad muff och spetsände uppfyller CEN-standard EN 1124-2. Levereras som standard med rörtätningar av EPDM-gummi, kan dock levereras med rörtätningar av NBR och FPM gummi. EPDM, Etenpropen: från -35 till +100 °C. NBR Nitril: från -30 till +80 °C god beständighet mot olja och bensin. FPM, Viton: -20 till +200 °C. SS-EN 1.4404.
Material: Syrafast stål

Kopplingar Hymax

Rak koppling Hymax

Hymax raka rörkoppling är tillverkad av stål och är skyddad emot korrision med Resicoat epoxy-beläggning. Rörkopplingen har med sin patenterade radiella tätningsfunktion endast en bult per sida upp till och med DN300, från DN350 och uppåt två bulter per sidan. Dubbelverkande mekanisk och hydraulisk tätning. Ej dragfast koppling.
Tryckklass: PN16

O-ring för koppar, rostfritt & elförzinkat

Svart EPDM

Grön Viton

Röd Viton

Altech o-ring, passar Altech presskopplingar. O-ring EPDM (svart) -standardring för tappvatten, värme samt oljefri tryckluft (mindre än 5 mg/m³). O-ring Viton (grön) - för solsystem, ånga och varmvatten som kräver höga temperaturer. Temperatur: mellan 0 och 160 °C, med toppar på 200 °C. Klass 5 enligt ISO 8573. O-ring Viton (röd) - för tryckluft med restolja (mer än 5 mg/m³) samt vissa petroleumvätskor. Max temperatur 60 °C.
Pressprofil: V och M

O-ring för koppar, rostfritt & elförzinkat

Svart EPDM

Grön Viton

Röd Viton

Altech o-ring, passar Altech presskopplingar. O-ring EPDM (svart) -standardring för tappvatten, värme samt oljefri tryckluft (mindre än 5 mg/m³). O-ring Viton (grön) - för solsystem, ånga och varmvatten som kräver höga temperaturer. Temperatur: mellan 0 och 160 °C, med toppar på 200 °C. Klass 5 enligt ISO 8573. O-ring Viton (röd) - för tryckluft med restolja (mer än 5 mg/m³) samt vissa petroleumvätskor. Max temperatur 60 °C.
Pressprofil: V och M

O-ring för koppar, rostfritt & elförzinkat

Svart EPDM

Grön Viton

Röd Viton

Altech o-ring, passar Altech presskopplingar. O-ring EPDM (svart) -standardring för tappvatten, värme samt oljefri tryckluft (mindre än 5 mg/m³). O-ring Viton (grön) - för solsystem, ånga och varmvatten som kräver höga temperaturer. Temperatur: mellan 0 och 160 °C, med toppar på 200 °C. Klass 5 enligt ISO 8573. O-ring Viton (röd) - för tryckluft med restolja (mer än 5 mg/m³) samt vissa petroleumvätskor. Max temperatur 60 °C.
Pressprofil: V och M

O-ring för koppar, rostfritt & elförzinkat

Svart EPDM

Grön Viton

Röd Viton

Altech o-ring, passar Altech presskopplingar. O-ring EPDM (svart) -standardring för tappvatten, värme samt oljefri tryckluft (mindre än 5 mg/m³). O-ring Viton (grön) - för solsystem, ånga och varmvatten som kräver höga temperaturer. Temperatur: mellan 0 och 160 °C, med toppar på 200 °C. Klass 5 enligt ISO 8573. O-ring Viton (röd) - för tryckluft med restolja (mer än 5 mg/m³) samt vissa petroleumvätskor. Max temperatur 60 °C.
Pressprofil: V och M

Flänspackningar

Planpackning för universellt bruk, Dixo 5000

Universalpackning av nitrilgummi-bunden aramidfiber, tjocklek 1,5 mm. Packningen är belagd med ett släppmedel för att undvika fastbränning på fläns-ytorna. Lämpar sig väl för användning i samband med rostfria flänsar och saltvatten på tack vare dess låga kloridinnehåll. God gastäthet och brett mediaresistensområde. Användningsområde: tätning av flänsar, lock, luckor och delningsplan hanterande vatten, svaga syror och alkalier, oljor, drivmedel, lösningsmedel, gaser, etc. Dixo 5000 är godkänd av DVGW för användning i gas- och dricksvattenapplikationer. Max drifttemperatur: +130°C kontinuerligt, +200°C kortvarigt . Max invändigt tryck: 40 bar. Dimensioner enligt EN1514-1 IBC, gäller samtliga produkter i nedanstående tabell.
Tjocklek: 1,5 mm

Gummibunden grafit med aramidfiber DIXO 7000 XP

Universalpackning med brett mediaresistensområde och högre temperaturresistens än konventionella gummibundna fibermaterial. Dixo 700 XP täcker in de vanligast förekommande applikationerna inom process- och kraft/värmeindustrin. Packningen är på ytan försedd med en miljövänlig antistickbeläggning, som är helt fri från lösningsmedel. Användningsområde: Dixo 700 XP är idealisk för tätning av rörflänsar, lock, luckor och delnings-plan. Packningen är resistent mot ånga, vatten, petroleumprodukter, köldmedia, lösningsmedel, gaser, svaga syror och alkalier med mera. Egenskaper: Dixo 700 XP har hög temperaturbeständighet, liten volmminskning i värme, brett mediaresistensområde och god anpassningsförmåga till ojämnheter i flänsytor. Dess utmärkta värmetryckstabilitet bidrar till liten sättning, vilket därigenom förlänger perioderna mellan serviceintervall. Max driftstemperatur: +250°C, högre i gynnsamma fall. Max invändigt tryck: 40 bar. Dimensioner enligt EN 1514-1 IBC, gäller samtliga produkter i tabellen nedan.

Sträckmetallarmerad planpackning av expanderad grafit, Grafex EX, PN10

Grafex EX består av SS316L syrafast sträckmetall på båda sidor belagd med 100% expanderad naturgrafit utan tillsats av binde- eller fyllmedel. Används för tätning av flänsförband vid höga tryck och temperaturer. Kan användas för praktiskt taget alla förekommande medier som ånga, vatten, petroleumprodukter, lösningsmedel, syror, lutar, gaser etc. med undantag för starkt oxiderande syror i hög temperatur. Mycket god motståndskraft mot utblåsning. Kan med fördel användas i avgasflänsar etcetera. Egenskaper: grafex EX kännetecknas av dess mycket goda tätningsegenskaper och breda mediaresistensområde och har därför kommit att bli industrins problemlösare nr 1. Ytterligare kännetecken är att Grafex EX ej har sättning i värme, vilket innebär att packningen inte behöver efterdras. Materialet åldras inte utan håller lika länge som flänsarna. Grafex EX har mycket god motståndskraft mot utblåsning vid ojämna yttryck, värmepåkänningar och dynamiska belastningar samt tätar även flänsar med repor och ojämnheter. Godkännanden: godkänd av BAM för syrgasapplikationer samt av Svenska Gasföreningen för naturgas och gasol. Grafex EX uppfyller kraven på brandsäkerhet enligt API607. Temperaturområde: -200 °C till +550 °C i oxiderande atmosfär, +650 °C i ånga samt +710 °C i avgaser, cirka max +900 °C i icke oxiderande atmosfär. Max invändigt tryck: 40 bar generellt. Högre i gynnsamma fall. PH-område: 0-14. Dimensioner enligt EN1514-1 IBC, tjocklek 1,5 mm, gäller samtliga produkter i tabellen nedan.

Multiflon Black, PN10-40 / 10-16

Multiflon Black enligt 1514-1 standard. PTFE-packning. Innehar kol och grafitarmering, 20% kol och 5% grafit. Multiflon Black har mycket god kemikalieresistens, tål nästan allt utom smälta alkalimetaller och vissa fluorföreningar. Har avsevärt reducerad kall- och varmflytning jämfört med konventionella fyllda och pigmenterade PTFE-material. Materialet är extremt diffusionstätt, lätt att hantera, klippa och stansa. Ingen risk för fastbränning, materialet är antistatiskt, åldras inte och kan efterdras. Användningsområde: flänsar, lock, luckor och delningsplan. Lämplig för ett brett spektrum av medier, till exempel syror, lutar, lösningsmedel. Multiflon är standardpackning inom pappers- och cellulosaindustrin. Temperaturområde: -200 °C till +180 °C. Max invändigt tryck: 40 bar, PH-område: 0-14.
Tjocklek: 1,5 mm

Självhäftande tejp av e-PTFE, Softseal

Softseal tillverkas av 100% ren PTFE, som expanderats monoaxiellt till ett mjukt och formbart material (e-PTFE). Softseal levereras i band med självhäftande baksida för enkel montering och tätar även vid ojämna och skeva ytor. Materialet kräver inte högt yttryck och är därför idealiskt för veka flänsar, flänsar av plast, glas, emalj med mera. Softseal har mycket god kemikaliebeständighet. Hårdnar inte och är dessutom lätt att montera och avlägsna. Användningsområde: flänsar, lock, luckor och delningsplan. Softseal tål alla gaser och vätskor utom smälta alkalimetaller och fluor. Temperaturområde: -240 °C till +270 °C. Max invändigt tryck: 40 bar, högre under idealiska förhållanden, PH-område: 0-14.

Planpackning DIXO 6000 Gummibunden Aramidfiber

Dixo® 6000 Soft är ett unikt nitrilgummibundet aramidfibermaterial speciellt framtagen för att användas i applikationer med låga skruvkrafter men fungerar även med fördel i livsmedels- och läkemedelsindustrin. Dixo ® 6000 Soft är mjukare än traditionella fibermaterial och kan i hög utsträckning ersätta flertalet gummikvaliteter. Till skillnad från gummi tål Dixo ® 6000 Soft avsevärt högre yttryck utan att krossas.
Tjocklek: 3 mm

Tillbehör

Smörjmedel EcoLube

4095068

4095076

Grafitbaserat smörjmedel EcoLube. En produkt med mycket hög renheten på grafiten (99,5%) ger låg friktion och korrosionsskyddande egenskaper. Det bidrar till en idealprodukt i krävande industriella driftmiljöer. DENSIQ EcoLube grafitpasta är ett smörjmedel tillverkat av grafitflingor med mycket hög renhet i kombination med en petroleumbaserad bärare. DENSIQ EcoLube har kontrollerade och jämna smörjegenskaper vid förspänning av skruvförband. Detta gäller även efter flera år i svår utomhusmiljö och vid mycket höga driftstemperaturer och överträffar därigenom fullständigt konventionella smörjmedel.
Funktion: Smörjning av skruvförband

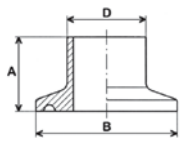
Clampbygel SH, gjuten



SH-BYGELN som är konstruktions- och tryckklassad av SAQ, TÜV och Forbairt är en bygel med unika egenskaper. Den V-formade profilen garanterar en linjär kontaktyta runt hylsans fläns, till skillnad från traditionella byglar, som oftast ger tvåpunkts kontakt. Härigenom elimineras risken för den snedbelastning som kan uppstå med andra typer av bygelkonstruktioner. SH-bygeln kan ändå användas tillsammans med alla clampsvetshylsor av standardtyp. SH-bygeln är tryckklassad av SAQ enligt följande: • 1/2” - 3 1/2” = PN16 • 4” - 6” = PN 10 • >6” = PN 6 • SH-bygeln finns i dimensioner från 1/2” till 12” . Övrigt: A-måttet avser clamphylsans flänsdiameter. Material: AISI 316.

DAHL // /OPTIMERA/

DAHL PICK-UP POINT!

PICK-UP POINT

BESTÄLL ONLINE OCH ANGE VAR DU VILL HÄMTA GODSET
så kommer det levererat till den ort/butik du anger.

Nu kan du hämta ditt beställda material även hos vårt systerbolag Optimera.
Godset beställer du på dahl.se för leverans till en butik, där finns nu ännu fler butiker att välja bland, vi samarbetar med Optimera på utvalda orter.

Så här beställer du från Dahl:

> På dahl.se väljer du lämpligt Dahlcenter eller Pick-up point via ”Hitta butik”
> Genomför din order och välj hämta i butik som leveransalternativ
> Ditt gods aviseras via sms och du är sedan välkommen till Dahl i våra butiker eller Pick-up Point (Optimera) för att hämta ditt gods.

Dahl Pick-up point finns nu på Optimera i följande orter:

- Eksjö
- Eslöv
- Falköping
- Hagby
- Hallsberg
- Höganäs
- Klippan
- Ljungby
- Ljusterö
- Nässjö
- Mjölby
- Skanör
- Svedala
- Säffle
- Sävsjö
- Tranås
- Ulricehamn
- Vaggeryd
- Vagnhärad
- Vara
- Vetlanda
- Värnamo
- Åhus
- Älmhult

Allmän information

Allmän information

Stål
Rent järn är mjukt men genom tillsats av olika legeringsämnen kan egenskaperna påverkas. Med stål avses rent järn som legerats med andra ämnen. Dessa ämnen tillsätts vid stålverk och gjuterier i form av ferrolegeringar (innehåller ett eller flera av dessa ämnen i avsevärd mängd). Stålets viktigaste legeringsämne är kol. Stål har i regel kontrollerad sammansättning. Små förändringar i sammansättningen och värmebehandling påverkar starkt stålets egenskaper. Två stål med samma sammansättning kan ha olika egenskaper, beroende på stålens struktur. Man skiljer mellan kolstål och legerat stål, mellan vilka gränsen dock ej är fullt skarp.

Kolstål
Kolstål innehåller, förutom kol, små halter av legeringsämnena kisel, aluminium, mangan, fosfor och svavel. De två sistnämnda är föroreningar. Mangan förhindrar svavlets skadliga inverkan. Stål som stelnar med blåsbildning kallas otätat stål. Kisel tillsätts för att få stål fritt från blåsor vid stelnandet, s.k. tätat stål. Vid låga temperaturer, under noll grader, krävs aluminiumtätat stål.

Legerat stål
Genom tillsats av avgörande mängder legeringsämnen erhålls stål för mer kvalificerade ändamål. I legerat stål ingår, förutom de i kolstål förekommande legeringsämnena, avgörande mängder av något eller några av legeringsmetallerna krom, nickel, volfram, vanadin, molybden, titan m.fl. Legerat stål kallas även för specialstål.

Värmebehandling
Värmebehandling ger stål en viss önskad struktur och därmed sammanhängande fysiska egenskaper. Värmebehandlingarna kan indelas i två grupper, glödgning (kornens form och storlek ändras men kristalltyperna består) eller härdning (nya kristalltyper bildas). Avspänningsglödgning utföres för att få bort skadliga spänningar efter bearbetning av materialet (t.ex. efter kallbearbetning, smidning mm). Med normalisering avses en glödning som gör att ett grovkornigt material med låg hållfasthet får en finkornig struktur med hög hållfasthet. Mjukglödgning gör stålet mjukt för bearbetning med skärande verktyg samt lämpligt för härdning. Vid härdning bör upphettningen ske jämt och likformigt. Då stålet är genomvarmt, förs det ner i en kylvätska, varvid även avkylningen måste ske likformigt. Genom anlöpning (upphettning) avser man att minska hårdheten samt öka slaghållfastheten. Med seghärdning, härdning med anlöping, erhålles hög sträckgräns, något minskad tänjbarhet men hög slagtålhet och utmattningsgräns. Sätthärdning (cementering) ger åt ett mjukt och segt stål, med låg kolhalt, en hård och slitstark yta.

Aducering
Aducering är långvarig upphettning av gjutna föremål i en sluten ugn utan lufttillträde. Genom detta förfarande får gjutjärn stålets egenskaper.
Aducergods har högre hållfasthet, särskilt större seghet, än vanligt gjutgods.

Handelsstål
Handelsstål, även benämnda allmänna konstruktionsstål, är huvudsakligen kolstål. De är enkla i sin sammansättning med låga halter av kol och mangan.
Dessa stål är svetsbara och har begränsad hållfasthet. För vissa områden är handelsstålen underkastade säkerhetskrav som fastställs av statliga myndigheter.

Tryckkärlsstål
Tryckkärlsstål kan vara kolstål eller legerade stål. För tryckkärlsstålen gäller betydligt högre säkerhetskrav, än på handelsstålen, vilket har medfört en omfattande kontroll av dessa stål. Kraven gäller främst hållfasthet och seghet vid låga temperaturer, vid rumstemperatur eller vid förhöjda temperaturer samt svetsbarhet i kombination med säkerhetskrav, fastställda av statliga myndigheter. Myndighetskraven kan variera beroende på användningsändamålet.

Lågtemperaturstål
Då produkter skall användas vid lägre materialtemperaturer än 0 °C bör man välja speciella lågtemperaturstål. Lågtemperaturstålen är tryckkärlsstål med finkornig struktur. Normen SS-EN 10216-4, olegerade och legerade stål med fordrade lågtemperaturegenskaper, behandlar rör för minustemperatur.
Tidigare TT35N enligt DIN motsvaras närmas av P215NL.

Standard
I Sverige används förutom svensk standard (SS och SS EN) även tysk (DIN), brittisk (BS) och amerikansk (ASTM) standard. Successivt kommer EU-standard (EN) att ersätta övrig europeisk standard. I Sverige kommer europastandarden att benämnas SS EN följt av normbeteckningen, t.ex. SS EN 10028.

Flänsnorm SS-EN 1092-1:2007

Flänsnormen gäller som svensk standard för stålflänsar.

Normen omfattar flänsar i dimensionsområde 10-4000 och inom tryck-klasserna PN2,5-400.

Skillnaden mellan DIN och EN flänsar är vikt och godstjocklek för en del dimensioner.
Dimensionerna 10-40 i PN16 utgår och ersättas med PN40

Hålcc, diameter och bultdimension blir fortsatt lika vilket gör att de är monteringsmässigt kompatibla med varandra.

Flänsarna som tillverkats i C22.8 produceras i EN-material P250 vilket är att betrakta som jämförbart.
Flänsar som tillverkats i SS1312 / RSt37.2 produceras i S235JR.

Allmän information

Allmän information

Rostfritt stål
Då stål utsätts för angrepp och förstörelse genom inverkan av aggressiva medier talar man om korrosion. Efter det angripande mediets tillstånd och temperatur skiljer man mellan vätske-, gas-, värmekorrosion osv. Rostfritt stål är en sammanfattande benämning på stålsorter som genom lämpliga legeringstillsatser givits hög korrosionsresistens. Deras motståndsförmåga mot korrosionsangrepp beror på att de lätt passiviseras. En tunn och tät men för ögat osynlig oxidhinna bildas på metallytan. Om hinnan skadas, återbildas den lätt i närvaro av syre.

Legeringsämnen
Grundläggande för de rostfria stålen är att de har krom (Cr) som huvudlegeringsämne och i allmänhet är kromhalten högre än 12%. Rostfria stål med krom som enda legeringsämne, kromstål, upptar en stor del av världsproduktionen men huvuddelen innehåller väsentliga mängder av andra legeringsämnen. Ändamålet med dessa legeringsämnen är oftast att höja stålens korrosionshärdighet men även att förändra deras struktur eller att höja hållfastheten.
Nickel (Ni) påverkar huvudsakligen stålets struktur och mekaniska egenskaper. Vid tillräckligt hög nickelhalt får rostfritt stål austenitisk struktur. Molybden (Mo) har en starkare positiv inverkan på korrosionsbeständigheten än krom, med undantag för salpetersyra. Något oegentligt har de Mo-legerade austenitiska stålen kallats syrafasta stål, vilket hänför sig till deras resistens mot de syror som används inom cellulosaindustrin, främst sulfitindustrin. Andra vanligt förekommande legeringsämnen är kväve (N), koppar (Cu), titan (Ti) och niob (Nb). De två sistnämnda stabiliserar stålen genom att binda kol. Kol (C) är i de flesta rörstål en förorening, som kan förorsaka interkristallin korrosion efter svetsning. Av denna anledning vill man ha så låg kolhalt som möjligt. Lägre kolhalt förbättrar även svetsbarheten.

Struktur
När stålet övergår från flytande till fast form, stelnar, får legeringen en karakteristisk kristallstruktur. Man delar in de rostfria stålen efter denna struktur i ferritiska, martensitiska, austenitiska stål samt mellangrupper. En sådan grupp är ferrit-austenitiska stål som även benämns Duplexstål.

Stålsorter
Merparten av de rostfria rör och rördelar som används inom processindustrin har austenitisk struktur. Dessa stål är normalt omagnetiska, men kan genom kallbearbetning bli svagt magnetiska. Även svetsarna blir något magnetiska. Svetsbarheten för austenitiska stål är god till mycket god. För särskilt krävande korrosiva miljöer, t.ex. högtemperaturkorrosion, finns höglegerade rostfria specialstål.

Tekniska leveransbestämmelser
Rör och rördelar som används i tryckkärl skall levereras i enlighet med gällande norm SS - EN.

Produktutförande på rör
Merparten av rörledningarna konstrueras med längssvetsade rostfria rör. Det svetsade rörets fördelar överträffar i de flesta fall ett sömlöst rör, inte minst prismässigt. För specifika användningsområden används även spiralsvetsade tunnväggiga rör. Tillverkningsmetoden gör att de spiralsvetsade rören har ytterst snäva toleranser, liten rakhetsavvikelse och kan levereras med stor ytterdiameter i förhållande till väggtjockleken. Vissa typer av rör, t.ex. hydraulikrör, finns endast i sömlöst utförande.

Gängrördelar och insticksrördelar
Rostfria gängrördelar tillverkas som standard av syrafast material med invändigt cylindriska (BSPP) och utvändigt koniska (BSPT) rörgängor (Withwort).
En del av sortimentet finns ävens om insticksrördelar för svetsanslutning. På dessa har man ersatt gängdelen med en ursvarvning, anpassad till rörets ytterdiameter.
Vissa gängrördelar kan även levereras med amerikanska rörgängor (NPT).

Svetsning
Rostfritt stål skiljer sig fysikaliskt från olegerat material, bl.a. med avseende på värmeutvidgning, värmeledningsförmåga och elektriskt motstånd.
Skillnaderna måste beaktas av såväl konstruktörer som svetsare.
Austenitiska stålsorter har ett mer eller mindre kritiskt temperaturområde från 500 °C till 800 °C. Alltför lång tid inom detta område gör att kromkarbider skiljs ut i stålets korngränser. Resultatet blir nedsatt korrosionsmotstånd. Kolhalten spelar en avgörande roll. Ju högre kolhalt, desto större känslighet och desto sämre blir stålets beständighet mot korrosion. För svetsning av rostfritt stål mot olegerade eller låglegerade stål finns särskilda överlegerade svetsmaterial. I de fall där svetsar ej är åtkomliga för någon slags rengöring, som exempelvis på rotsidan av montageskarvar i rörledningar, måste dessa gasskyddas.

Svetsens efterbehandling
Vid all svetsning får man en viss oxidering i den värmepåverkade zonen och vid metallbågsvetsning dessutom slagg och smälta partiklar. För att materialet skall ha fullgod korrosionsbeständighet fordras att ytan är metalliskt ren. Rengöringen kan utföras mekaniskt med slipning, borstning eller blästring alternativt kemiskt genom betning.
Det är viktigt att alla verktyg som används vid rengöringen endast används för rostfria stål. Dessutom får endast rostfria borstar användas.
Blästermedel får inte innehålla stålpartiklar.

DAHL

Du har väl inte missat vår app?

Hela grossistlagret i din egen telefon, smart va?

Appen funkar via i ditt lager, i servicebilen och i butik
– ett tryggt sätt att handla i dessa tider.

Ladda ner appen här:

Available on the iPhone App Store

ANDROID APP ON Google play

Med appen kommer du även åt nödvändig produktinformation på ett enkelt sätt, scanna produktkoden och kolla bland dokumenten. Där finns allt ifrån produktblad, installationsmanualer till kvalitetsdokument.

Inte nog med det, appen funkar med administrationstjänsten Flexibla Kontoret.

Nu kan du fakturera lika enkelt som du handlar.

Läs mer om Flexibla Kontoret här:

Stålmetallflänsar

Stålmetallfläns VFZ PN6/PN16 CU

Stålmetallfläns

Bestående av ett metallnav för lödning, som fasthålls av en låsring i en yttre stålfläns. Stålflänsen är axiellt låst vid metallnavet, samtidigt som den är radiellt vridbar kring detsamma. Material: nav av rödmetall, fläns av stål i varmgalvaniserat utförande.

Lod / flussmedel för kapillärlödning

Silverfosforkopparlod 2% Ag

Silverfosforkopparlod med 2% silver som används främst för koppar rördetaljer och kopparplåt. Meltolit 2P är för hårdlödning i koppar samt mässing och i viss mån stål. Produkten innehåller fosfor vilket bryter ”oxiden” på grundmaterialet vid sammanfogning av kopparrör, kopparanslutningar och VVS/kyldetaljer. Vid lödning av mässingsdetaljer behövs separat flussmedel typ Meltolit 770 (VVS godkänt). Arbetstemperatur 740°C.

Silverfosforkopparlod 5% Ag

Silverfosforkopparlod med 5% silver som används främst för koppar rördetaljer och kopparplåt. Meltolit 5P är för hårdlödning i koppar samt mässing och i viss mån stål. Produkten innehåller fosfor vilket bryter ”oxiden” på grundmaterialet vid sammanfogning av kopparrör, kopparanslutningar och VVS/kyldetaljer. Vid lödning av mässingsdetaljer behövs separat flussmedel typ Meltolit 770 (VVS godkänt). Arbetstemperatur 710°C.

220025	2,0	15	1	3.390

Silvermjuklod 3,5% Ag

Silverlegerat tennlod för koppar-, mässing och stål samt rostfria legeringar som används främst för VVS och kylindustrin. Meltolit P30 95/5 är för mjuklödning i kapillär-, rör och plåtdelar. Produkten innehåller inte fosfor vilket betyder att det behövs ett mjuklods-flussmedelför att bryta oxiden på grundmaterialet vid sammanfogning av dessa metaller. Tenn/silver lodet fungerar utmärkt där mindre spalter och jämn fogpassning förekommer. Mycket lättflytande lod med bra färgöverenstämmelse med rostfritt. Produkten användes inom ordinär finmekanik och VVS och kylinstallationer etc. Smältintervall 221-230°C.

Artikelnr	Diam mm	Ag %	Vikt kg	Pris
220023	2,0	3,5	0,5	720
220024	3,0	3,5	0,5	672

Silverlod 44% Ag

Kadmiumfritt silverlod med 44% silver som används för samtliga metaller förutom aluminium och dess legeringar. Meltolit 44 är för hårdlödning i kapillär-, rör-, plåtdelar. Produkten innehåller inte fosfor vilket betyder att det behövs ett silverlodsflussmedel, typ Meltolit 770, som bryter ”oxiden” på grundmaterialet vid sammanfogning dessa metaller. Silverlodet fungerar utmärkt där större spalter och ojämn fogpassning förekommer. Produkten användes inom ordinär mekanik och hårdmetallverktyg, varvsindustri etc. Arbetstemperatur 730°C.
Längd: 500 mm

Artikelnr	Ag %	Diam mm	Stl	Pris

Silverlod flussbelagt 55% Ag

Kadmiumfritt flussbelagt silverlod med 55% silver som används för samtliga metaller förutom aluminium och dess legeringar. Meltolit 55SnF är för hårdlödning i kapillär-,rör- plåtdelar. Silverlodet har markant höga flyt- och vätningsegenskaper, då bra fogpassning erfordras. Produkten användes inom finmekanik, värmeväxlare och sanitära installationer etc. God färgöverenstämmelse med rostfritt. Arbetstemperatur 660°C.

Fyrkantsspridare

Jämn täckning tack vare en vattendriven motor och 15 strålar. Justerbar bevattningsbredd. Täcker en yta på max. 180m² eller max. 14 x 13 meter.

Artikelnr	Mtrl	Färg	Pris
410108	Plast	Gul	300

Automatisk slangförvaring Flowmax TM

Väggfäste som gör väggvindan vridbar i 180°. Levereras med 28 meter 13,7 mm Flowmax™ slang, 2 meter matarslang, väggfäste, munstycke, snabbkoppling, stoppkoppling och krankoppling 1/2” och 3/4”.

Artikelnr	Dim ansl	Mtrl	Pris
410035	1/2-3/4	Plast	4.900

Slangvinda Auto Reel

Väggmonterad slangvinda med automatisk indragning. Ny design och förbättrade funktioner. Det nya väggfästet gör det märkbart enklare att sätta fast och ta bort Auto Reel från väggen och de nya kopplingarna ger ökad komfort vid byte av slangtillbehör. Inklusive 11,7 mm slang, 2 meter matarslang, 1 st munstycke, 1 st snabbkoppling med greppyta, 1 st stoppkoppling med greppyta, 1 st krankoppling 1/2” och 3/4” och väggfäste.

Artikelnr	Mtrl	Utför	Pris
410015	Plast	Slangvinda med 30 meter slang	5.600

Slangvagn Pro Metall

Rymmer 90 meter 12,5 mm (1/2”), 75 meter 15 mm (5/8”) eller 50 meter 19 mm (3/4”) slang. Tillverkad av högsta kvalitet av plast och förzinkat stål. Enkel att flytta tack vare det extra långa och mjuka handtaget och de större, mjukare mönstrade hjulen. En bredare hjulbas och kombinerat med lägre tyngdpunkt gör slangvagnen stabilare. Levereras med 1 styck slanghållare och 2 stycken snabbkopplingar 1/2”-5/8”.

Artikelnr	Mtrl	Pris

DAHL

Du har väl inte missat vår app?

Hela grossistlagret i din egen telefon, smart va?

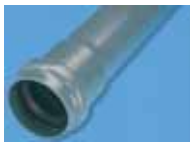
Appen funkar via i ditt lager, i servicebilen och i butik
– ett tryggt sätt att handla i dessa tider.

Ladda ner appen här:

Available on the iPhone App Store

ANDROID APP ON Google play

Med appen kommer du även åt nödvändig produktinformation på ett enkelt sätt, scanna produktkoden och kolla bland dokumenten. Där finns allt ifrån produktblad, installationsmanualer till kvalitetsdokument.



Inte nog med det, appen funkar med administrationstjänsten Flexibla Kontoret.

Nu kan du fakturera lika enkelt som du handlar.

Läs mer om Flexibla Kontoret här:

3106247

3106248

3106250

3106251

Expanderande gumminippel, passar för normal muff - PVC/PP, en övergång som löser problem med varierade storlekar i Normal-rörsmuffar. Kopplingen expanderar vid åtdragning som då upptar den storleksavvikelse som finns i muffen på de gamla sand och rotationsgjutna normalrören. En övergång vid exempelvis golvbrunnsbyte och andra inbyggnadsmontage där gamla normalrör skall kopplas samman med nya plaströr. Nippeln är godkänd för inbyggnad, stående och liggande montage.
Material: PP/TPE. Färg: Svart/grå

Vakuumventilsats JAFO

Vakuumventil som passar vattenlås / diskbänksvattenlås DB-Lås I och DB-Lås II. Luftningsventilen ansluts till rensrör RSK 8086523 . Luftningsventilen öppnar vid undertryck och släpper in luft i avloppssystemet vilket därmed utjämnar undertrycket så att vattenlåset inte sugs ut. Vid normaltryck och övertryck är luftningsventilen stängd och helt tät. Anslutning invändigt: G = 1 1/2''. Vakuumventil som passar vattenlås / diskbänksvattenlås DB-Lås I och DB-Lås II. Luftningsventilen ansluts till rensrör RSK 8086523 . Luftningsventilen öppnar vid undertryck och släpper in luft i avloppssystemet vilket därmed utjämnar undertrycket så att vattenlåset inte sugs ut. Vid normaltryck och övertryck är luftningsventilen stängd och helt tät. Anslutning invändigt: G = 1 1/2''.

Vakuumventiler JAFO

3131242

3131243

Excentriska vakuumventiler. JAFO Javac vakuumventiler är konstruerade för att släppa in luft i avloppssystemet när undertryck uppstår, vid t.ex. spolning av WC. Om vattenlåset sugs ur kan installation av en vakuumventil på den del av avloppsröret där utsuget uppstår, förhindra detta. Om vattnet i WC-stolen istället stiger vid spolning, är problemet det motsatta, dvs. övertryck i avloppsröret. Detta beror oftast på en förträngning i avloppssystemet som hindrar vattnet från att rinna ut. Övertryck kan inte avhjälpas med en vakuumventil, utan kräver att avloppssystemet rensas.
Modell: Excentrisk. Standard: EN 12380 A1 EN.
Temperaturområde: -20-+60 °C

Artikelnr	Ansl mm	Kap l/s	Pris
3131243	75/50	16,3	530
3131242	110/75	47,2	628

Vakuumventil JAFO

Junior finns i två dimensioner: Ø 32 och 40 mm. 40-anslutningen kan ändras till 32 mm genom att övergångsnippeln tas av. 40-anslutningen limmas på 32-anslutningen. JAFO vakuumventiler är konstruerade för att släppa in luft i avloppssystemet när undertryck uppstår, vid till exempel spolning av WC. Om vattenlåset sugs ur kan installation av en vakuumventil på den del av avloppsröret där utsuget uppstår, förhindra detta. Om vattnet i WC-stolen i stället stiger vid spolning, är problemet det motsatta dvs. övertryck i avloppsröret. Detta beror oftast på en förträngning i avloppssystemet som hindrar vattnet från att rinna ut. Övertryck kan inte avhjälpas med en vakuumventil, utan kräver att avloppssystemet rensas. Junior vakuumventil passar bland annat i JAFO:s WC-anslutningar med extra inlopp. Den är också lämplig för placering under diskbänk och tvättställ och finns därför även som komplett sats, RSK 3131139 för montering i JAFO rensrör, RSK 8086523.

STEP-koppling

STEP-kopplingen är en säker lösning för att sammanfoga horisontella relinade ledningar med ej relinade ledningar. Med de traditionella metoder, som idag finns på marknaden kan det uppstå skarvar, vilket ökar risken för läckage och det är svårt att uppnå önskat fall. Med Repipers unika STEP-koppling som är RISE trycktestad kan du uppnå täta kopplingar utan skarvar eller glipor.

Råttstopp och tillbehör Nordisk Innovation

Råttstopp TX11 Universal

1195901

1195903

För betong-/PVC-rör. Serie med VA-godkända råttstopp/råttsäkringar. Råttstoppet är tillverkat av rostfritt betsat stål, AISI 316. Monteringen av råttstoppet är enkelt och kan göras från marken med en montagestång oavsett djup. Alla råttstopp har öppen botten, så att det inte uppstår några hinder i brunnens bottenränna. Råttstoppet är utrustat med avtagbara vändbara spjäll, så att det kan installeras både på inlopps- och utloppssidan. I brunnar djupare än 1 meter kan råttstoppet monteras med montagestång, RSK nr 2632634. Längd 1 meter. Montagestången kan förlängas med förlängningsröret, RSK nr 2632635, längd 1 meter per rör.

1195918

För betong-/PVC-rör. Serie med VA-godkända råttstopp/råttsäkringar. Råttstoppet är tillverkat av rostfritt betsat stål, AISI 316. Monteringen av råttstoppet är enkelt och kan göras från marken med en montagestång oavsett djup. Alla råttstopp har öppen botten, så att det inte uppstår några hinder i brunnens bottenränna. Råttstoppet är utrustat med avtagbara vändbara spjäll, så att det kan installeras både på inlopps- och utloppssidan. Material i syrafast stål. I brunnar djupare än 1 meter kan råttstoppet monteras med montagestång, RSK nr 2632634. Längd 1 meter. Montagestången kan förlängas genom monteringsförlängare RSK nr 2632635, längd 1 meter styck.
Material: Syrafast stål

Artikelnr	Diam mm	L mm	Pris
1195917	100/110	160	5.175
1195918	150/160	160	5.800

Montagestång

Montagestång för installation av råttstopp i rens- och inspektionsbrunnar. I brunnar djupare än 1 meter kan råttstoppet monteras med montagestång, längd 1 meter. Montagestången kan förlängas med förlängningsröret rsk 2632635, längd 1 meter per rör.

Universal PEX monteringsdetaljer LK

Kopplingsskydd

Är avsett att användas för LK Press- Pex-kopplingar i rör-i-rör installationer. Kopplingsskyddet är anpassat för LK tomrör med dy 25 och 34 mm, passar därmed PressPex-kopplingar med dimension 16, 20 och 25 i rakt, vinkel- och T-rörsutförande. Förutom den isolerande funktionen, mot värmeavgivning och kondens, skyddas kopplingen mot kontakt med betong vid ingjutning. LK Kopplingsskydd består av en vikbar plastkåpa och passar tomrör dy 34 med hjälp av distanser, även tomrör med dy 25. Eventuellt outnyttjat hål tätas med plastbrickan. Plastbricka och distanser medlevereras.
