Overview and Next Steps

Cristian Pradera & Jan Stibor
SDM Planning Manager, ADS-B Programme Manager

ADS-B Implementation Plan

Delivered to EC on December 21st, 2018

Full support and buy-in by consulted stakeholders

Two cornerstone elements

Status and prognosis charts on Air and Ground domains

Support to policymaking concerning Exemptions

Conclusions of the ADS-B workshop

Letter from Henrik Hololei to the stakeholders

The **final implementation dates** set out in Regulation (EU) n. 1207/2011 and its amendments **stand and must be met**

All stakeholders were invited to **communicate their implementation plans to the SESAR Deployment Manager (SDM)** to feed the “Air-Ground synchronised ADS-B implementation plan”

The plan will be **developed by SDM and consulted and agreed with all stakeholders by end 2018** and will go **into the execution phase in January 2019**

All stakeholders were **invited to continue their ADS-B implementation**

In the context of the “Air-Ground synchronised ADS-B implementation plan” the **exemption and incentives policies** will be examined and potentially modified

Current outlook (2018)

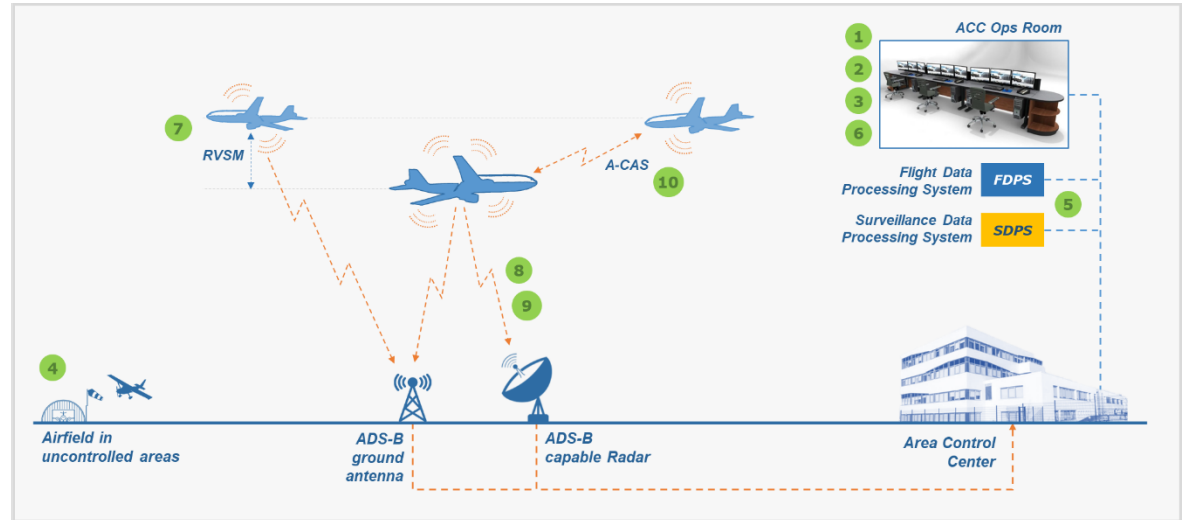

Overall ground ADS-B coverage

Future outlook (2023)

ADS-B Implementation Plan

- Many envisaged use cases for ADS-B Out.

List of applications

- 1 Traffic surveillance to support Flight Information Services and alerting
- 2 Surveillance beyond AoR border
- 3 Traffic data collection
- 4 Surveillance in uncontrolled airspace
- 5 Performance improvements in trackers and trajectory predictors
- 6 Driving Extended AMAN
- 7 RVSM conformance monitoring
- 8 Passive acquisition
- 9 ADD substitution
- 10 Extended hybrid ACAS

Operational and Technical Enhancements using ADS-B

Johan Martensson
Surveillance Expert, EUROCONTROL

Operational Enhancements (1/3)

Surveillance Coverage – from Local to Global

- **ADS-B is Simple, Flexible and Passive – enabling increased surveillance coverage**

Examples of current SUR coverage enhancements:

- **Remote area:** NAT SUR Corridor, Shanwick, Santa Maria, Reykjavik FIRs, Svalbard,...
- **Regional:** Lower altitude surveillance
- **Gap fill:** North Sea, Baltic Sea, lower altitudes in many areas of Europe, ..
- **Other:** Aircraft Tracking (GADSS), Traffic Awareness, ATFM, RVSM/HMU, Environment [CO2, Noise,...],..

Operational Enhancements (2/3)

Seamless operations with harmonised Separation Minima

- **Remote:** From Procedural (40-80nm) to SUR based (5-17nm)
- **Continental:** 3/5nm everywhere, where needed

Safety Nets and ATC tools

- STCA, MSAW, APW, A-SMGCS functions, ADD, ACAS

Mitigation for service outages - Back-up

- Avoiding capacity constraints

Operational Enhancements (3/3)

Enhanced ATS (FIS, SAR,...)

Airspace Infringements

Collision Avoidance mitigation

Airborne SUR Applications (ADS-B IN)

- AIRB, CAVS, SURF A/IA, IM, TSAA/ATAS – improving Safety, Capacity, Efficiency

Technical Enhancements (1/2)

Infrastructure Optimisation – from Complex to Simple

- Towards ADS-B plus MON (Mode S, MLAT)
- Improved ACAS

High Update rate & Accuracy

- 2 Position and Velocity msg/s with high accuracy

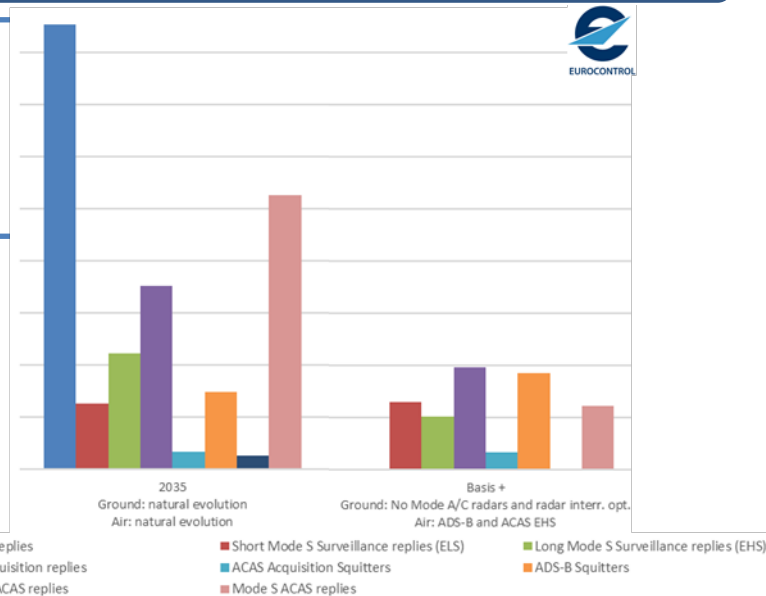

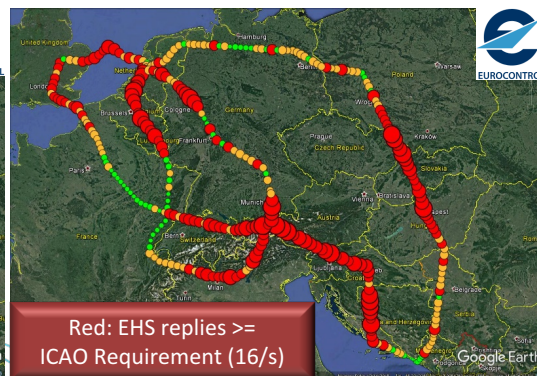

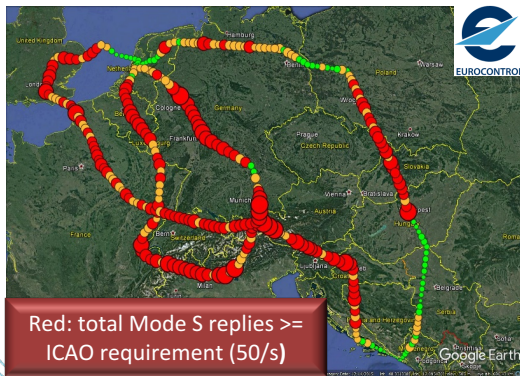

Technical Enhancements (2/2)

Spectrum efficiency – from Active to Passive SUR

Reducing:

- Mode S DAP extraction
- Mode S All-Call
- ACAS interrogations and replies

Conclusions

Network Performance Enhancements using ADS-B

ADS-B is Simple, Flexible and Passive

- Expanding Surveillance Coverage
- Improving Surveillance Performance
- Improving the Use of Surveillance Data in ATM
- Reducing Spectrum Impact
- Enabling growth and future concepts

Timely integration required

Work in partnership for an optimal transition

Regulation 1207/2011

Exemptions

Bryan Jolly
Senior Expert - ATM/ANS

Your safety is our mission.

EASA is an agency of the European Union

ADS-B & MODE S equipage requirement

Regulation 1207/2011 – laying down requirements for the performance and the interoperability of surveillance for the single European sky.

All flights operating as **general air traffic** in accordance with **instrument flight rules** within the airspace provided for in Article 1(3) of Regulation (EC) No 551/2004

ATS providers which provide ATC services based on surveillance data, and to CNS service providers which operate surveillance systems

Airborne Mode S
Elementary
Surveillance

..7 June 2020

Airborne ADS-B Out
& Mode S Enhanced
Surveillance¹

..7 June 2020

Ground
Systems

.. Exchange of Surveillance data
.. Surveillance chain must be capable of identifying individual a/c from the downlinked a/c ID
.. System must be efficient

**No exemptions
permit from the
carriage
requirements**

1. MTOW 5700 Kg or max cruising > 250 Kts

Current exemptions

No exemptions permit from the carriage requirements (ADS-B or MODE S)

Article 14 –
Exemptions on aircraft

Article 8(3) – State
aircraft

Mode S EHS (Part C of Annex II) – May be exempt from full compliance – notification justifying the need by 1 January 2019

(a) compelling technical reasons;
(b) State aircraft that will be out of service by 1 January 2024;
(c) procurement constraints

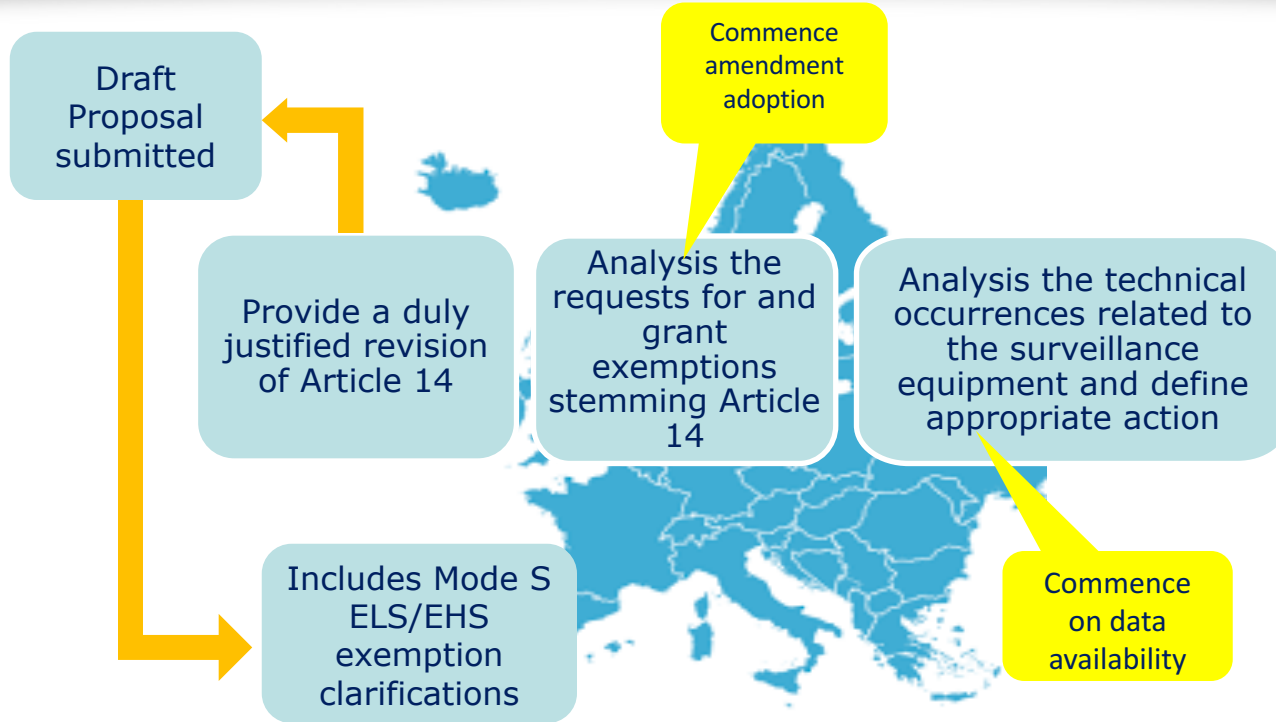

RMT.0679 - Revision of surveillance performance and interoperability

100 to 150 existing aircraft to be equipped per month before 2020: industry capacity?

ADS-B Exemptions & EASA role

Exemption condition

Main exemption condition to permit managed aircraft equipage delay

Aircraft with CoA post 7 June 2020 will be compliant

Operators of aircraft with a first CoA before 7 June 2020 may be granted an exemption under specific conditions

a retrofit program has been established demonstrating compliance prior to TBA

aircraft cease operations within the airspace prior to 7 TBA.

exemptions shall be in a form and manner established by EASA and shall be submitted prior to TBA.

No change to the scope for airborne community

New clause for ANSPs to use ADS-B data

Change of transponder requirement to comply with Annex 10 to the Chicago Convention, Volume IV, Third Edition including all amendments up to No 77.

Addition clause for Non equipage of ADS-B & EHS for of **maintenance, delivery or flight testing** (ELS must be installed)

Clarification of **continuity** requirements

Clarification of **MEL** for ADS-B & EHS

March 2019

Consultation

Adoption EASA CMT

Q3 2019

In force

Q3 2019

Additional Consideration

What about General Aviation ?

RMT.0679 – concluded “as there is no immediate safety or operational issue, a correctly formulated action plan needs to be developed by the Agency taking into account the anticipate operations of general aviation and drones.”

Established a CNS Implementation Expert group

- **General Aviation ADS-B requirements** - to assess what should be the minimum requirements, enabling the reduction the radar interrogations and provide a full SUR picture.

RMT.0376 Anti-collision systems on aircraft other than aeroplanes in excess of 5 700 kg or 19 pax.

Are all unintended consequences addressed?

Spectrum assessments – especially if using the existing ADS-B technology for all users.

GNSS vulnerabilities need to be fully assessed to ensure safety

BIZAV AIR TRANSPORT DEFENSE ROTORCRAFT PODCAST

ADS-B Is Insecure and Easily Spoofed, Say Hackers

by Matt Thurber - September 3, 2012, 12:45 AM

The ADS-B system that is the cornerstone of the FAA's NextGen ATC modernization plan is at risk of serious security breaches, according to Brad Haines, a hacker and network security consultant who is worried about ADS-B vulnerabilities. Haines first outlined his concerns during a [presentation](#) he gave at the Def Con 20 hacker conference in Las Vegas in July. Automatic Dependent Surveillance-Broadcast (ADS-B) is on track to replace radar with a system that broadcasts GPS-based position data to controllers and other ADS-B-equipped aircraft as part of the NextGen system. Yet according to Haines—aka RenderMan—ADS-B signals are unauthenticated and unencrypted, and “spoofing” or inserting a fake aircraft into the ADS-B system is easy.

Haines and another hacker named Nick Foster demonstrated this by [spoofing a fake aircraft](#) into the simulated busy airspace over San Francisco, using the open source Flight Gear flight simulator program. Spoofing a target into the real ADS-B system would be a simple matter of transmitting the signal on the ADS-B frequencies (978 and 1090 MHz).

The FAA told AIN that the ADS-B system is secure. “We have ways of validating the data that shows up on a controller’s screen so that spoofed targets are filtered out,” an FAA spokeswoman said. “An FAA ADS-B security action plan identified and mitigated risks and monitors the progress of corrective action. These risks are security sensitive and are not publicly available. The air traffic system is based on redundancies to ensure safe operations. The FAA plans to maintain about half of the current network of secondary radars as a backup to ADS-B in the unlikely event it is needed.”

About

Currently Airborne Military Aircraft

ADS-B Exchange is currently tracking the following military aircraft. Some positions are able to be seen via ADS-B or calculated through multilateration. Some positions are unknown, but a signal from the aircraft is being received.

All of this information is broadcast from the aircraft, to anyone with a receiver, on 1090 Mhz. Therefore, security risks are not a concern (as the information is already being broadcast anyhow).

Currently Tracking 6742 aircraft
