

Product Guide 2024

all in FOR SKIN

From day one, it's up to all of us – nurses, parents and Pampers – to protect babies' fragile skin.

PAMPERS MULTI-STRIPE WETNESS INDICATOR™

That's why our latest innovation on Pampers® Swaddlers™ offers **three lines of wetness detection versus one**. This alerts nurses and parents earlier to **as little as 10mL of urine** for both boys and girls, regardless of baby's position.

Saves nurses' precious time and prevents waste, as there's no need to tear apart diapers to search for urine output

Moms can confidently and exclusively breastfeed

Early detection of soiled diapers helps nurses care for baby's fragile skin

Alleviates the worry of staying an extra night due to delayed discharge

“The journey from womb to world encompasses many transitions, especially in the first 24 hours of life. Healthcare providers are responsible for overseeing what and how an infant eats, and how elimination patterns unfold. Urine output has important clinical implications and acts as a proxy for adequate intake. The ability to safely and accurately detect urine output minimizes parental stress and optimizes timely discharge.”

– Charlotte Wool, PhD, RN, FAAN

CLINICALLY PROVEN Gentle for Newborn Skin

Every detail of new Pampers® Swaddlers™ sets it apart for skin protection. That means our diapers are soft, gentle and safe for even the most fragile newborn skin.

PAMPERS MULTI-STRIPE WETNESS INDICATOR™

Three lines of detection versus one provides early, accurate detection of urine

ABSORB AWAY LINER™

Pulls wetness away from baby's skin

BLANKIE SOFT™ MATERIAL

Provides the ultimate in touchable softness

UMBILICAL CORD NOTCH

Protects baby's delicate belly with a contoured fit

*No natural rubber

Pampers® Swaddlers™ Diapers & Sensitive™ Wipes: Proven to Restore Skin pH & Help Prevent Redness Better Than Huggies®.¹⁻⁴

In order to compare the impact of two different diaper and wipe regimens on erythema and skin pH, researchers conducted a randomized, IRB-approved, blinded two-test-product crossover-design study.

The study found that a regimen of Pampers® Swaddlers™ and Sensitive™ Wipes led to:

50% reduction in severe skin redness^{1,4}

2X more

redness-free babies
where rash happens most^{1,3,4}

Significantly
lowered & restored
to undiapered skin pH^{1,2,4}

¹Based on Clinical studies performed with 2018-2019 regimens of Sizes 0 & 1 Pampers Swaddlers and Sensitive Wipes and Huggies Little Snugglers and Natural Care Wipes. | ²The baseline pH shown for the Pampers regimen represents a non-statistically significant decrease in pH vs. undiapered skin. Gustin J, Carr AN, et al. Use of an emollient-containing diaper and pH-buffered wipe regimen restores skin pH and reduces residual enzymatic activity. *Pediatric Dermatology*. 2020;00:1-6. <https://doi.org/10.1111/pde.14169>. | ³Visualization of perianal skin redness based on skin grading after 14 days of regimen use. | ⁴Gustin J, Carr AN, et al. Improving newborn skin health: Effects of diaper care regimens on skin pH and erythema. *Pediatric Dermatology*. 2021;00:1-7. <https://doi.org/10.1111/pde.14602>

Designed to Promote Healthy Skin

Pampers® Swaddlers™ Diapers

Pampers Multi-Stripe Wetness Indicator™
Earlier detection of as little as 10mL of urine means baby doesn't have to sit in a soiled diaper for long. And it can detect watery stool too!

Absorb Away Liner™
Our proprietary diaper design has a topsheet that draws urine and runny stool away from baby's skin, and our super-absorbent core helps prevent urine from being transferred back to the skin.

Barrier Ointment
Clinically demonstrated to significantly decrease redness in the diapered area over the first week of product use vs. diapers without emollient.⁵
(Available on sizes P1 through 7)

Breathable Materials
Designed for comfortable airflow and reduced humidity.

Low-pH Buffering System
Supports skin health by creating a naturally low pH environment that helps keep potentially harmful fecal enzyme activity at a minimum.

Gentle, Low-Friction Care
A proprietary blend of fibers offers effective cleaning and a lower coefficient of friction than other options.⁶

Clinically Proven Mild for Babies' Skin
Dermatologically tested and hypoallergenic. (free of parabens and natural rubber)

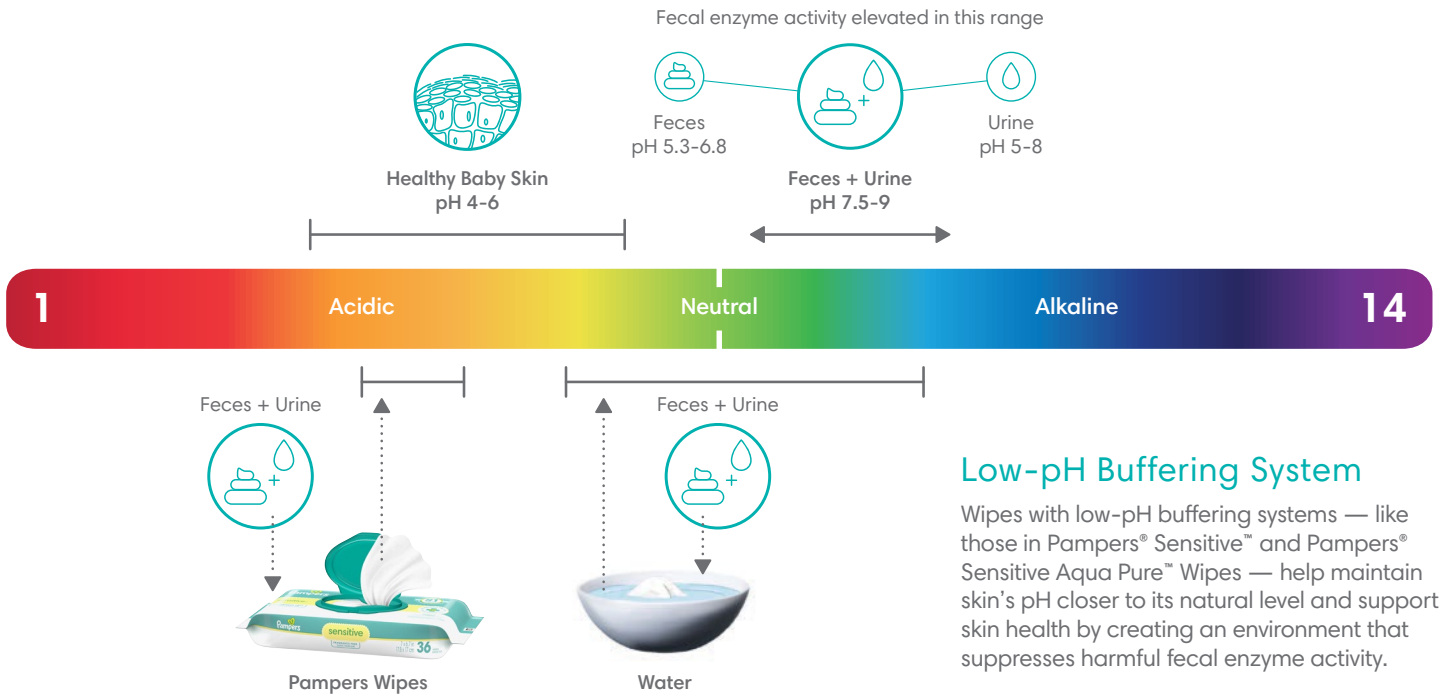

Pampers® Sensitive™ Wipes

⁵Odio et al. (2000) Dermatology 200:238-243. | ⁶vs. Water Wipes® and Huggies Natural Care® Wipes; P&G data on file

Wipes Can Be a Tool to Maintain pH Balance

One of the main causes of diaper rash is pH imbalance resulting from skin contact with urine and stool.¹ When mixed in a diaper, urine and stool have a pH between 7.5 and 9, which is considerably higher than the normal range of healthy skin (between 4 and 6). Baby wipes designed with pH in mind can help restore and maintain a more natural pH.²

Clinical Benefits vs. Washcloth & Water

Prestigious peer-reviewed publications^{3,4} have documented the clinical benefits of pH-buffering wipes versus washcloth and water, and thought leaders in pediatric dermatology (and beyond) frequently cite this work.

A randomized, double-blinded, parallel-design, on-baby study found that Pampers® Sensitive™ Wipes maintained skin pH at healthy baseline levels, while washcloth and water actually raised skin pH.³

¹Lambers H, Piessens S, Bloem A, Pronk H, Finkel P. Natural skin surface pH is on average below 5, which is beneficial for its resident flora. *International Journal of Cosmetic Science*. 2006; 28:359-370. | ²Tsai TF, Maiback HI. How irritant is water? An overview. *Contact Dermatitis*. 1991; 41:311-314. | ³Adam, R. (2009): *Pediatric Dermatology* Vol. 26 No. 5 506-513. | ⁴C. Bathing and cleansing in newborns from day 1 to first year of life: recommendations from a European round table meeting. *Journal of the European Academy of Dermatology and Venereology*. 2009;23(7):751-759. | ⁷No Benzyl Alcohol, Ethanol or Drying Alcohol | ⁸Also referred to as MI or Kathon™

Why Water Alone May Not be Enough

- Water is a poor cleaner, especially of oily substance found in stool and on skin⁴
- Skin is acidic. The pH of water is 7, which can raise skin pH and activate fecal enzymes^{5,6}
- Washing with water alone can have a drying effect on infant skin⁶
- Water alone cannot stop bacteria from growing

Pampers® Sensitive™ Wipes

Pampers® Aqua Pure™ Wipes

- 97.5% purified water
- Helps maintain healthy skin, essential for overall health and wellness
- Hypoallergenic
- 1 Wipe Pop-Top dispensing

- 99% purified water
- Unique formulation for a gentle glide and low coefficient of friction on skin
- Hypoallergenic
- 1 Wipes Pop-Top dispensing

Made WITH

Purified Water

Provides pure, effective cleaning

PEG-40 Hydrogenated Castor Oil

A gentle emulsifier that aids in the removal of soil from baby's bottom

Citric Acid and Sodium Citrate

Buffers the pH of the wipe to help maintain the natural pH balance of baby's skin

Sodium Benzoate

Prevents microbial contamination and has been tested and approved safe for babies

Disodium EDTA

Maintains the freshness of the wipe and prevents microbial contamination

Sorbitan Caprylate

A gentle emulsifier that enhances the preservative performance

Xanthan Gum

Improves the texture of the wipe formula and its feeling on baby's skin

Caprylic/Capric Triglyceride

Acts as a skin-conditioning agent as well as a gentle emulsifier

BIS-PEG/PPG-16/16 PEG/PPG-16/16 Dimethicone

Used as a gentle emulsifying and conditioning agent designed to promote baby's skin health

Made WITH
