EXECUTIVE SUMMARY

The Trustee for Huntingwood Property Trust (TfHPT - the Applicant) are seeking to construct an industrial development located at Augusta Street, Blacktown (within the Huntingwood Precinct).

The Proposal is considered State Significant Development (SSD) and accordingly, an Environmental Impact Statement (EIS) has been prepared to support the SSD Application for the Proposal. This Water and Hydrology Assessment has been prepared by Costin Roe Consulting to support the preparation of the EIS and assess the Proposal's impact on the surrounding environment in relation to soils and water including stormwater and stormwater management for both construction and operational phases of the development.

Proposal overview

The proposed SSDA seeks approval to redevelop the site to accommodate a warehouse and distribution centre use inclusive of the following:

- Site establishment works, including tree removal, minor excavation / bulk earthworks.
- Construction and operation of four (4) new warehouse buildings comprising a multi-level warehouse building on the eastern portion of the site and three single storey warehouse buildings on the western portion of the site.
- Other associated works including landscaping, at-grade car parking and general site improvements.
- Vehicle access provided via Augusta Street and a new proposed access from the Great Western Highway.
- Lot consolidation of properties.

Access to the eastern portion of the development will be enabled by a new intersection coordinated by TfNSW to allow access to and from the site via the Great Western Highway. Access to the western portion of the site will be made via Flushcombe Road and Augusta Street.

Purpose of this assessment

This Water and Hydrology Impact Assessment has been prepared to address the following Secretary's Environmental Assessment Requirements (SEARs):

- Item Number 12: Ground and Water Conditions
- Item Number 13: Stormwater and Wastewater
- Item Number 14: Flooding Risk

Construction impacts

During the construction phase, a Sediment and Erosion Control Plan will be in place to ensure the downstream drainage system and receiving waters are protected from sediment laden runoff. Reference should be made to the letter referenced **CO13904.03-14.ltr** and attached under Annexure N of this report for more detail around the proposed temporary construction access routes over Blacktown Creek.

The first proposed temporary crossing is located over the southern portion of Blacktown Creek (within the development boundary) and follows an existing maintenance track across the creek. However, this route crosses a proposed future wetland area and, therefore, cannot remain in place throughout the lifetime of the construction works.

Conversely, a second temporary crossing, situated over the northern portion of Blacktown Creek, have been identified and is the preferable option as it can remain in place throughout the entire construction process, until the future intersection from proposed Lot 5 (west) with the Great Western Highway is constructed.

The temporary haul road crossings are expected to be made up of approximately 300mm thick road base.

Sediment fences and sediment fence returns should be erected prior to the commencement of any work with Blacktown Creek. Sediment fences should remain in place until completion of the instream work associated with the construction of the temporary crossings, in these locations, to protect existing downstream infrastructure and vegetation. It is proposed that work is undertaken during a period of dry forecasted weather.

A cofferdam arrangement, based on IECA recommendations, will be proposed to protect the disturbed area. A temporary low flow diversion pipe or pumped system should be installed at the base of the channel to divert clean water from the upstream baseflow. Similar alternate works methodology may be employed in the final detail design subject to Contractor input and the final ESCP and temporary works methodology.

It is proposed that all instream works are undertaken in the specified section of Blacktown Creek in accordance with the abovementioned series of erosion and sediment control plans and immediately plant the works with appropriate species, at a density that would naturally occur, to stabilise the works.

Operational impacts

During the operational phase of the development, we propose a stormwater quality treatment system incorporating the use of a treatment train approach with the primary treatment being via either pit litter baskets and/or gross pollutant traps (GPT's). Tertiary treatment will be facilitated via either bio-retention systems (combined with an On-Site detention (OSD) basins), or proprietary filtration within underground on-site detention tanks.

Best management practices have been applied to the development to ensure that the quality of stormwater runoff is not detrimental to the receiving environment. Further to the above, the proposed stormwater quality system meets the requirements of *Huntingwood Precinct Development Control Plan 2011*, Blacktown City Council Water Sensitive Urban Design (WSUD) 2020 document and objectives stated in Clause 2.44 of the Industrial and Employment SEPP.

Stormwater quantity management proposes detention of stormwater discharge which limits post-development flows to pre-development flows, based on the Blacktown City Council requirements and those included in the Huntingwood Precinct Development Control Plan 2011 ("*on-site detention requirements established in the "On-Site Stormwater Detention Handbook" prepared by the Upper Parramatta River Catchment Trust Fourth Edition dated December 2005 (UPRCT)"*) and councils deemed to comply on-site detention tool. On-site detention has been proposed as either open basins or underground detention tanks.

Further it has been confirmed that the development considers flood and overland flow planning requirements in relation to Blacktown Creek and unnamed tributary of Blacktown Creek. The development confirms acceptable impact criteria, and design which is consistent with the requirements of Huntingwood Precinct Development Control Plan 2011.

The development does not increase runoff from existing conditions and, as such, the site discharge will not adversely affect any land drainage system or watercourse as a result of the development.

Conclusion

The hydrological assessment of the local site drainage confirms that recommended water quality and quantity measures will ensure that no adverse impacts result on receiving waterways as a result of the development.

The detail contained in this report provides sufficient information to show the consent authority that legal points of discharge and a suitable stormwater management strategy is available for the development and the requirements associated with the strategy. It is recommended the management strategies in this report be approved and incorporated into the future detailed design.

1 INTRODUCTION & SCOPE

1.1 Introduction

Costin Roe Consulting Pty Ltd (CRC) has been commissioned by The Trustee for Huntingwood Property Trust to prepare this report in accordance with the technical requirements of the Secretary's Environmental Assessment Requirements (SEARs), and in support of the State Significant Development Application (SSD- 36138263) for the proposed Augusta Street warehouse and distribution centre at Augusta Street, Blacktown.

This report presents a civil engineering assessment the properties at Augusta Street, Blacktown, which is located within the Huntingwood Precinct. This report provides an assessment of the civil engineering characteristics of the development site and technical considerations of the following aspects:

- Earthworks & geotechnical paramaters;
- Water Cycle Management Strategy (WCMS).

The WCMS comprises several key areas of stormwater and water management which are provided below. These key areas have been established with the aim to reduce impacts from the development on the surrounding environment and neighbouring properties. The water cycle management strategy identifies the management measures required to meet the targets set. The key water cycle management areas assessed in this report are:

- Storm Water Quantity;
- Storm Water Quality;
- Water Supply and Reuse;
- Flooding; and
- Erosion and Sediment Control

A request for Planning Secretary's Environmental Assessment Requirements (SEAR's) to the DPIE has been made by the applicant. **Section 1.3** of this report for specific responses to civil engineering and water management related items included in the SEAR's. Reference to **Appendix E** should be made for SSD-36138263 SEAR's dated 2 August 2022.

1.2 Consultation

Consideration to the various stakeholders has been made in relation to the development, including Council has been made during the assessment period.

Stakeholder	Consultation Method and Date	Issues Discussed	Project Response
Blacktown City Council - Mr Christophe Ferguson	E-mail - 25 March 2022	Confirming that their Overland Flow Study flood extents and XP-RAFTS catchments do not cover the site under application and requests that a	See Appendix F

		hydrologic and hydraulic assessment be completed for this application.	
Blacktown City Council Flood Advice	E-mail - 9 May 2022	Confirming that the Stormwater and Flooding reports referenced in the Huntingwood Precinct DCP documents needs to be obtained from DBL Property (Pty) Ltd.	See Appendix G
Blacktown City Council – Mr Laith Almoil	E-mail - 20 June 2022	Confirming that the OSD Deemed to Comply excel spreadsheet version 1.9 is the applicable version and should be used to calculate the OSD parameters.	See Appendix H
Letter addressed to all reviewing parties	Letter – 8 March 2024	Response to RTS Comments received	See Appendix K

Letter addressed to all reviewing parties	Letter – 6 May 2024	Response to RTS Comments received	See Appendix L
Letter addressed to all reviewing parties	Letter – 1 August 2024	Response to RTS Comments received	See Appendix M
Letter addressed to all reviewing parties	Letter – 26 July 2024	Proposed Temporary Crossing of Blacktown Creek	See Appendix N

1.3 SEAR's Responses

This report supports an EIS for the proposal, and to address the NSW Department of Planning and Environment Amended SEARS letter dated 2 August 2022, reference SSD-36138263.

We note the below "key issues and documentation" assessments are based on the technical requirements of the Secretary's Environmental Assessment Requirements (SEARs) recently implemented by DPIE and following key areas in the document:

- *Item 12. Ground and Water Conditions*
- *Item 13. Water Management*
- *Item 14. Flooding Risk*

Table 1.1 provides a summary of the SEARs General Requirements which relate to water and hydrology, and where these have been addressed in this report.

Table 1.1. SEARs Warehouse and Distribution Centres Key Areas

SEAR's Key Item	Response and where addressed
12. Ground and Water Conditions	
Assess potential impacts on soil resources and related infrastructure and riparian lands on and near the site, including soil erosion, salinity and acid sulfate soils.	Refer to **Section 3** and geotechnical assessments by **PSM** and **JBS&G** for confirmation of soil resources and potential impacts. The entire development site is currently undeveloped. The existing properties fronting Flushcombe Road (which comprise ~4Ha in area) located on the far west of the land area, had an existing industrial development and four abandoned residential dwellings which have been demolished and cleared from site. There is also a small access road and existing Telstra tower on the site. The site is noted to be located within an established industrial precinct, called the Huntingwood Precinct. Existing industrial warehouses are present in the precinct, and these located to the west of this site. The proposed works involve bulk earthworks, construction of retaining walls, realignment of the existing creeks to prepare the site for 4 new warehouse structures and its associated drainage infrastructure to avoid adverse impacts on the downstream properties. The existing site levels range between RL66.01m and RL91.36m, naturally draining from south to north. The site comprises of two ridges dividing the site into four catchment areas.

SEAR's Key Item	Response and where addressed
	The proposed development's warehouse ground floor FFL's are noted to be between RL73.31m and RL82.40m. A maximum fill height of 10m and a maximum of -11m cut is noted across the site's total earthworks. We note there are two conservation areas within the site, one of which is considered a riparian corridor as referenced in the Huntingwood DCP. Refer to **Section 3,** the Geotechnical report by **PSM** for confirmation of soil resources and potential impacts and the Acid Sulfate Soils (ASS) report by **JBS&G** for the confirmation that an Acid Sulfate Soil Management Plan is not required.
Provide a Surface and Groundwater Impact Assessment that assesses potential impacts on: - Surface water resources (quality and quantity) including related infrastructure, hydrology, dependent ecosystems, drainage lines, downstream assets and watercourses. - Groundwater resources in accordance with the Groundwater Guidelines.	Refer to **Section 4, 5 & 6** for assessment of water resources, hydrology (including quality and quantity), watercourses and riparian lands during operation. We note there are two conservation areas/watercourses located within the property boundary. Blacktown Creek towards the east of the site and an unnamed watercourse (to be referenced as "Unnamed Watercourse" going forward) to the west of the site, both draining in a northernly direction. The two watercourses on the property have been reported to be highly dilapidated and currently of low ecological value (refer *Biodiversity Development Assessment Report – Anne Clements & Associates*). The proposed development includes rehabilitation of Blacktown Creek and a portion of the existing unnamed watercourse including the provision of a riparian corridor (in accordance with NRAR guidelines and the Huntingwood DCP 2011). Further, as part of the development, revegetation and rehabilitation works are proposed to Blacktown Creek and a portion of the unnamed watercourse.

SEAR's Key Item	Response and where addressed
	Refer to **Section 8** for soil and water management measures during construction, drawings in **Appendix A** for associated erosion and sediment control drawings, and **Appendix C** for a Draft Soil and Water Management Plan. The proposed erosion and sediment control measures during the construction of the development are based on the Landcom document *Managing Urban Stormwater – Soils & Construction Volume 1 ('Blue Book') (Landcom, 2004)*. Measures proposed will limit potential for offsite impact associated with water runoff and soils during construction. Consideration to management of salinity and acid sulphate has been made based on the recommendations of the geotechnical investigations by **PSM** and **JBS&G**. A surface water runoff including surface water runoff, water quality and water quantity has been completed. The key stormwater objectives, based on relevant water sensitive urban design criteria, have been set out in **Section 4.1** and **Section 6.1** of the report. Discharge from the site is noted to be made to Blacktown Creek, the Unnamed Watercourse and a small portion draining towards the existing stormwater infrastructure in the north-eastern corner of the site. The drainage under the GWH via existing culverts from both the Blacktown Creek and the Unnamed Watercourse is controlled with fitted aperture plates. **Section 6** provides a demonstration of the key criteria being met, based on MUSIC modelling. Configuration of the proposed measures are shown on the Civil Design Drawings included in **Appendix A**. For a groundwater impact assessment, refer to **Section 3.5** & the Geotechnical Engineer's report - Portions of the building foundations of the warehouses in the center and on the eastern boundary of the site will be in areas where a deep cut is expected, and ground

SEAR's Key Item	Response and where addressed
	water will likely be encountered. With no basement for the warehouse proposed, groundwater will likely not be an issue for this development. With the development's likelihood to encounter groundwater in the areas of deep cut, impact from groundwater and on groundwater systems as a result of development are to be considered.
13. Water Management	
Provide an Integrated Water Management Plan for the development that: • is prepared in consultation with the local council and any other relevant drainage or water authority. • outlines the water-related servicing infrastructure required by the development (informed by the anticipated annual and ultimate increase in servicing demand) and evaluates opportunities to reduce water demand (such as recycled water provision). • details the proposed drainage design for the site including any on-site detention facilities, water quality management measures and the nominated discharge points, on-site sewage management, and measures to treat, reuse or dispose of water. • demonstrates compliance with the local council or other drainage or water authority requirements and avoids adverse impacts on any downstream properties.	Refer to **Section 4, 5 & 6** for assessment of water resources, hydrology (including quality and quantity), watercourses and riparian lands during operation, in consultation with the relevant local council and authorities (refer **Appendix F, G & H).** Stormwater management assessments of the site's surface water runoff, water quality and water quantity have been completed. The key stormwater objectives (proposed drainage design for the site including any on-site detention facilities, water quality management measures and the nominated discharge points), based on relevant water sensitive urban design criteria, have been set out in **Section 4.1** and **Section 6.1** of the report. The entire development site is currently undeveloped. The existing properties fronting Flushcombe Road (which comprise ~4Ha in area) located on the far west of the land area, had an existing industrial development and four abandoned residential dwellings which have been demolished and cleared from site. There is also a small access road and existing Telstra tower on the site. The development of the land will not result in unacceptable impacts to any resources noting similar water quantity discharge and improved stormwater quality. We note there are two conservation areas/watercourses located within the property boundary. Discharge from the site is noted to be made to the Blacktown Creek, the

SEAR's Key Item	Response and where addressed
	Unnamed Watercourse and a small portion draining towards the existing stormwater infrastructure in the north-eastern corner of the site. The existing drainage under the GWH via existing culverts from both the Blacktown Creek and the Unnamed Watercourse is currently controlled with fitted aperture plates.
Where drainage infrastructure works are required that would be handed over to the local council, or other drainage or water authority, provide full hydraulic details and detailed plans and specification of proposed works that have been prepared in consultation with, and comply with the relevant standards of, the local council or other drainage or water authority.	Refer **Section 4** and drawings in **Appendix A** for detailed assessment of the existing- and post development conditions pertaining to the overland flow path. The proposal requires consideration to upstream catchments (approximately 55Ha) draining under the Western Motorway through the site via the two conservation areas/watercourses located within the property boundary. The upstream catchment south-east of the site discharge into an existing bio-retention basin within that catchment, before flowing through the site.
14. Flooding Risk	
Identify any flood risk on-site having regard to adopted flood studies, the potential effects of climate change, and any relevant provisions of the NSW Floodplain Development Manual.	Refer **Section 7** for assessments pertaining to flooding and overland flow. The proposal requires consideration to upstream catchments (approximately 55Ha) draining under the Western Motorway through the site via the two watercourses and associated riparian corridors on the site. Runoff from the upstream catchment south-east of the site (which comprises the Wet and Wild amusement park) is noted to be managed via an existing detention and bio-retention basin within that catchment, before flowing through the site. These managed flows comprise the bulk of runoff within Blacktown Creek. A new flood model for the site was compiled and the assessment shows a reduction in post development 1% AEP flood levels, hence meeting impact requirements and shows the

SEAR's Key Item	Response and where addressed
	proposed building achieves flood planning and freeboard requirements. Additionally, to the new flood model created by Costin Roe Consult, the existing flood study conducted by Hyder Consult and referenced by council in the Huntingwood Precinct DCP, was referenced and compared to the new model. Both studies indicate there is no flooding in the 1% AEP local events, but some flooding in the PMF event. The development floor levels have been set allowing for freeboard to the overland flow path of greater than 0.5m during the 1% AEP flood event. The requirements of Council and NSW Floodplain Development Manual are met for this development.
Assess the impacts of the development, including any changes to flood risk on-site or off-site, and detail design solutions and operational procedures to mitigate flood risk where required.	Refer **Section 7** for assessments pertaining to flooding and overland flow. The assessments show the existing overland flow from the upstream catchments can be conveyed via the watercourses, with no impacts on the development site. Flood planning considerations are met. The site has suitable flood immunity to the known flood behaviour and acceptable flood risk has been demonstrated.

2 DEVELOPMENT SITE

2.1 Location

The property is located within the Blacktown City Council (BCC) local government area (LGA), as shown in **Figure 2.1 and 2.2.** The site is also located within the Huntingwood Precinct of the Western Sydney Employment Lands, an established industrial precinct.

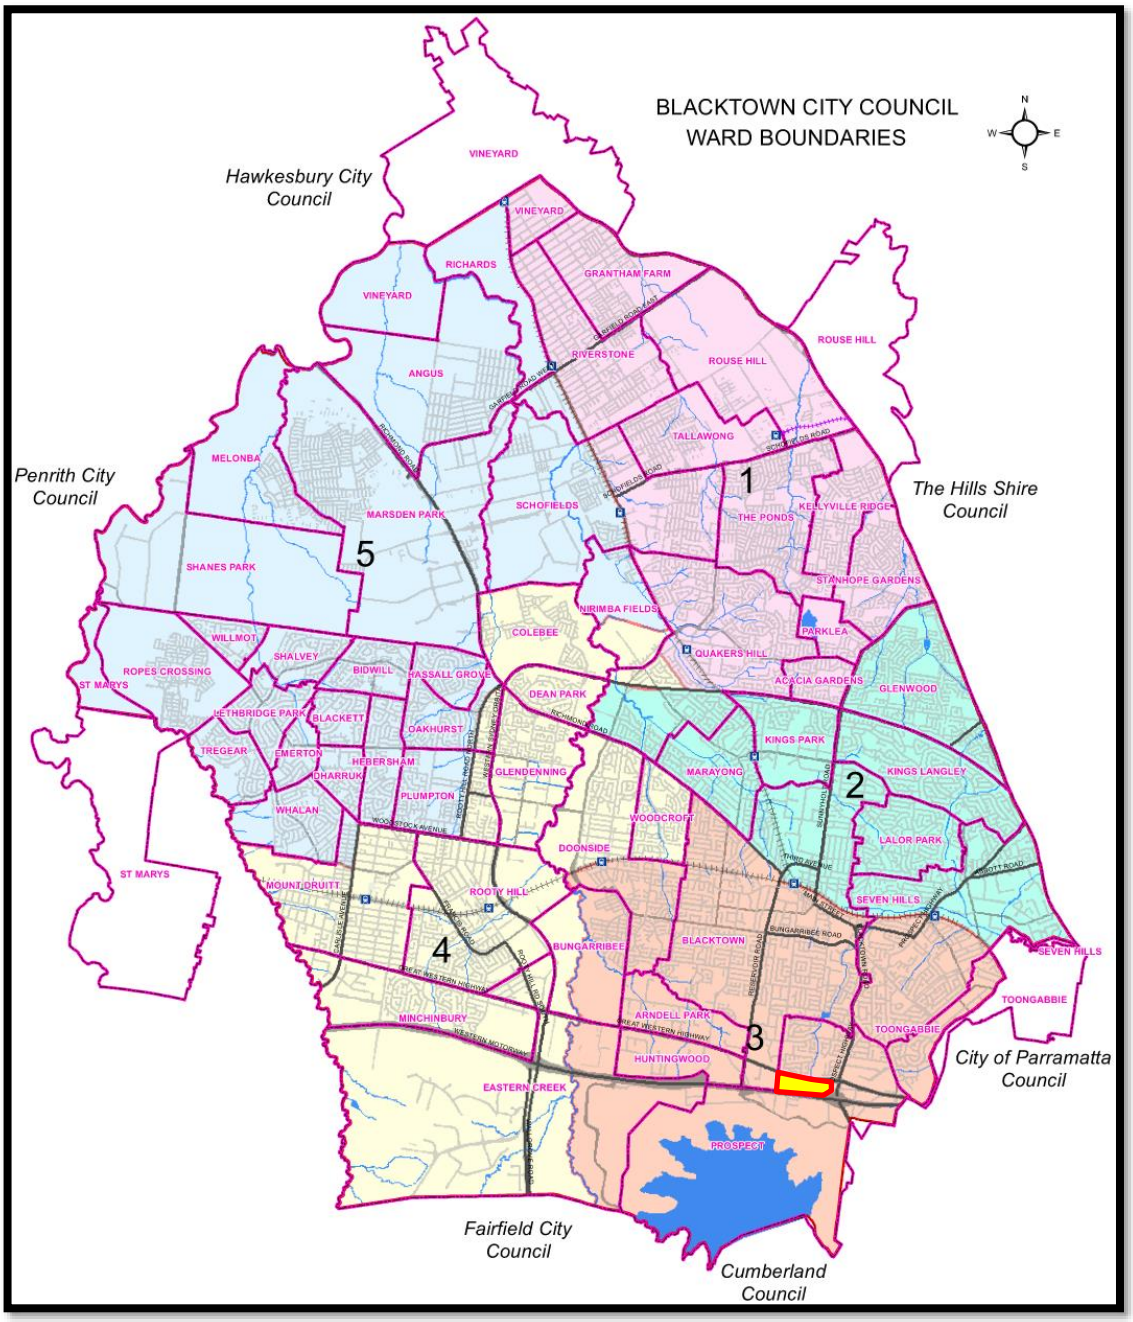

Figure 2.1. Site Location within the Blacktown Council LGA (Source: Blacktown City Council Ward Map)

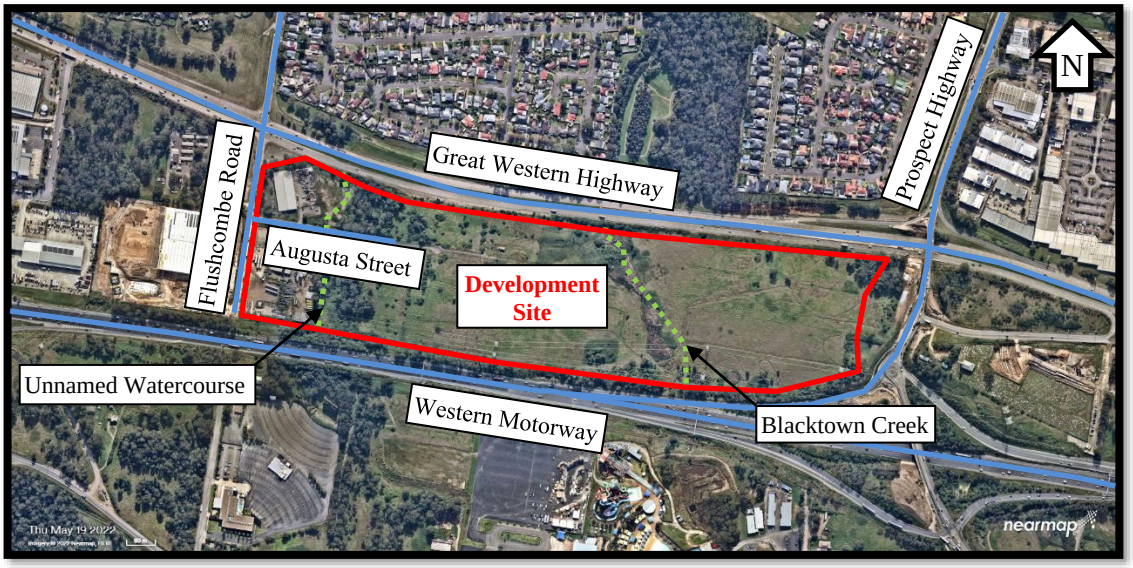

Figure 2.2. Site Location and Aerial Imagery (Source: Nearmap 16 June 2022)

2.2 Existing Site Description

The total site area is approximately 26.64 Ha. The site can be divided into four separate sub-catchment areas by the existing riparian corridors, somewhat central ridge line and Augusta Street.

The site is approximately 1100m in length fronting both the Western Motorway (south) and the Great Western Highway (GWH), and approximately 270m in width fronting Flushcombe Road.

To the north is the GWH and a residential area, to the east is a small portion of Industrial land (understood to be Transport for NSW (TfNSW) land) as well as the Prospect Highway and a cemetery, to the south is the Western Motorway as well as a waterpark (Raging Waters Sydney, temporarily closed) and a drive-in movie theatre. Further to the west are existing industrial developments.

The site is crossed by two watercourses as shown in **Figures 2.2** and **2.3**. Blacktown Creek towards the east of the site and the Unnamed Watercourse to the west of the site. Blacktown Creek is currently degraded with little to no native vegetation.

The existing site generally grades from two ridges on the site, draining east and west from the ridgeline, towards a riparian corridor and drainage swale, which drains from the south to the north, as seen in **Figure 2.3**.

Discharge from the site is via Blacktown Creek, the Unnamed Watercourse and a small portion draining towards the existing stormwater infrastructure in the north-eastern corner of the site. The drainage under the GWH via existing culverts from both the Blacktown Creek and the Unnamed Watercourse is controlled with fitted aperture plates (Source: Flood Study and Stormwater Management by Hyder Consulting, 18 January 2010).

The highest level on site is at RL91.36m AHD in the south-eastern corner of the site and the lowest is at RL66.01m AHD within the Blacktown Creek.

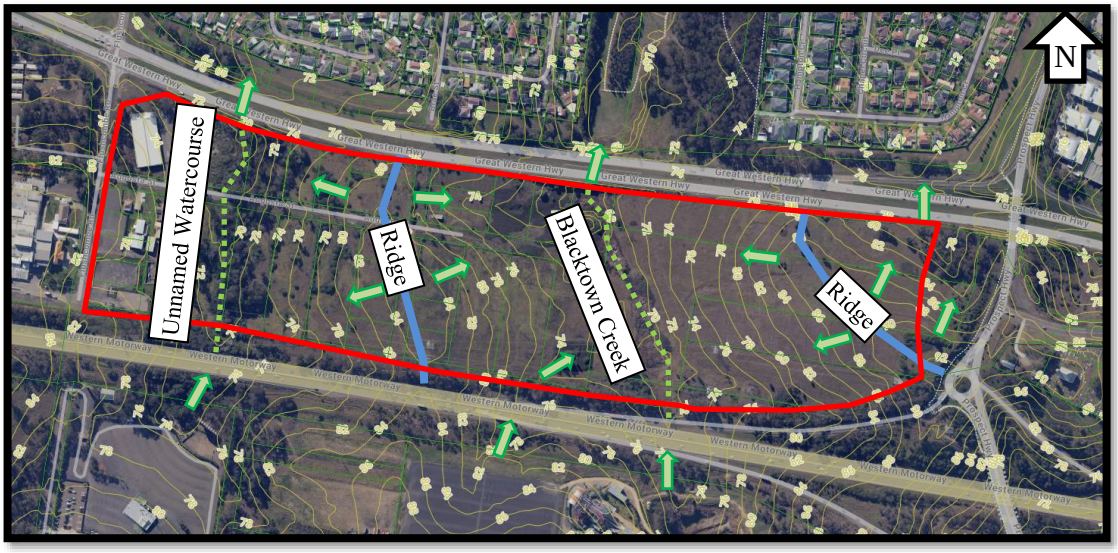

Figure 2.3. Site General overland flow drainage (Source: Nearmap 16 June 2022)

Existing fill material comprising clay material mixed with debris from demolition (e.g. tiles, bricks and glass bottles) were observed during the geotechnical investigation at localised areas, showing some historical disturbance of the existing site.

Augusta Street (asphalt surface) enters the site from Flushcombe road and crosses the existing Unnamed Watercourse over two 900mm dia. RCPs.

There are also various easements and existing services located across the site, most notably being the following:

1. Endeavour Energy's overhead cables and transmission towers spanning from the east to the west along the southern boundary of the site.
2. 100mm dia. CICL Sydney Water potable water pipeline along Augusta Street up to the existing Telstra tower, where the pipeline diverts to the north and eventually cross under the GWH.
3. 500mm and 150mm dia. CICL Sydney Water potable water pipeline along Flushcombe Road.
4. 225mm dia. PP Sydney Water sewer pipeline as well as a Vocus Communication conduit located along the eastern embankment of Blacktown Creek from the south to north.
5. Other services located along Flushcombe Road include Endeavour Energy conduits, Jemena Gas pipelines and NBN conduits.

2.3 Proposed Development

The proposed SSDA seeks approval to redevelop the site to accommodate warehouses and distribution centres with the following:

The proposed SSDA seeks approval to redevelop the site to accommodate a warehouse and distribution centre use inclusive of the following:

- Site establishment works, including tree removal, minor excavation / bulk earthworks.
- Construction and operation of four (4) new warehouse buildings comprising a multi-level warehouse building on the eastern portion of the site and three single storey warehouse buildings on the western and central portion of the site. The warehouse buildings will include ancillary office space and indicative warehouse fit out works including warehouse racking.
- The warehouse and distribution tenancies are proposed to be operated 24 hours per day, 7 days per week.
- Other associated works including landscaping, at-grade car parking and general site improvements.
- Business and building identification signage including wayfinding signage.
- Vehicle access provided via Augusta Street and a new proposed access from the Great Western Highway
- Lot consolidation of properties.

The indicative site layout prepared by Pace Architects has been included in **Figure 2.4**.

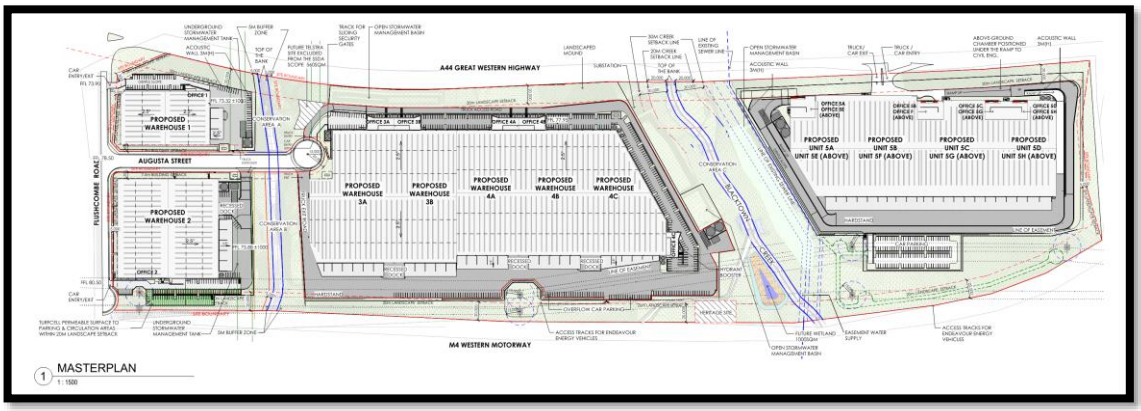

Figure 2.4. Proposed Development – Concept Layout Plan

A variance of +/-1.0m to the final building levels has been shown on the drawings. This variance is included in the concept design drawings to ensure that allowances for items unknown at the concept phase can be included in the overall development earthworks without significant export. Refer to **Section 3.2** for further discussion pertaining to earthworks and spoil allowances.

3 SITE WORKS

3.1 Soil and Geological Conditions

Based on geotechnical investigation by PSM and our knowledge of the area, the site is expected to be underlain by Bringelly Shale of the Wianamatta Group (Rwb) comprising shale, carbonaceous claystone, claystone, laminate, fine to medium-grained lithic sandstone, rare coal and tuff.

The 1:100,000 Penrith geological map (1991) also indicated that a diatreme (Jv16) comprising volcanic breccia and basalt is located in close proximity to the site.

The summary of the inferred subsurface conditions encountered in the geotechnical investigation is summarised below in **Figure 3.1** (Source: PSM's Geotechnical Report PSM4636-006L last revised on 17 April 2024).

Table 3 – Summary of Inferred Subsurface Conditions Encountered in Test Locations

Inferred Unit	Inferred top of unit depth below ground surface (m)	Description
TOPSOIL	0.0	CLAY to Silty CLAY trace/ with gravel: red and brown, high plasticity; gravel sub-angular up to 5 mm, soft to firm consistency, moist to wet condition, rootlets observed.
EXISTING FILL	0.0 – 0.3	CLAY to Gravelly CLAY: red, grey and brown, low to high plasticity; gravel sub-angular up to 30 mm, soft to very stiff consistency, dry to moist condition, rootlets observed. Sandy GRAVEL: brown, red and dark grey, sand medium grained; gravel sub-rounded up to 20 mm, moist consistency. Some debris from demolition e.g., tiles, bricks and glass bottles were observed at localised areas
NATURAL SOIL	0.0 – 3.3	CLAY to CLAY trace gravel: red, grey and yellow brown, low to high plasticity; gravel sub-rounded to sub-angular up to 25 mm, firm to hard consistency, dry to moist condition, with ironstone embedded.
BEDROCK A	1.2 – 4.6	SHALE: red, grey and orange brown, extremely to slightly weathered, very low to low strength
BEDROCK B	5.7 – 9.6	SHALE: grey and brown, moderately weathered to fresh, low to medium strength Interbedded SHALE and SANDSTONE: grey, approximately 50% sandstone and 50% shale, fine to medium grained, slightly weathered, medium strength

Figure 3.1. Summary of Inferred subsurface conditions encountered in Test Locations (Source: Table 3 in geotechnical report PSM4636-006L)

A maximum fill height of 8.7m and a maximum of -9.4m cut will be encountered across the site during the bulk earthwork operation.

It is recommended that the bulk earthworks be completed in accordance with the PSM bulk earthworks specifications referenced PSM4636-003S. The geotechnical report classifies the site as Class H1 and recommend the Civil- and Structural engineers consider likely heave/settlement due to the effect of climatic factors in the design. The warehouse foundations will need to be found on either stiff clay of suitable strength or engineered fill.

It is expected that some of the existing fill material may need to be re-worked. The extent of re-work (i.e., remove and re-compact as engineered fill) will need to be confirmed on site during detailed investigations.

It is expected that some excavation through rock will be required to reach bulk excavation levels for the development. The rock material is classified as "very low to low" strength.

Acid sulphate soils are not likely to be present on the development site so are not considered to be an issue.

3.2 Bulk Earthworks

Bulk earthworks will be required to facilitate the development of the estate for industrial use. The earthworks will be undertaken to provide large flat building pads, hardstand areas and a car parking areas. Earthworks are also required to raise Augusta Street to a height which is above the 1% AEP flood level to facilitate continuous access via Flushcome Rd/Augusta Street.

A high-level earthwork volume estimate assessment has been completed for the site. The estimated volumes are shown on the Costin Roe drawings in **Appendix A**.

The earthworks analysis has been completed to a level of detail to enable general pad levels to be set and to obtain an order of magnitude cut and fill volume estimate. Given the preliminary nature of the assessment, an upper and lower bound of earthworks volumes has been included to allow for contingency in cost planning estimates. The assessment in **Appendix A** is based on the earthworks using FFL building pad RLs of 73.30m AHD, 76.00m AHD, 78.10m AHD and 82.40m AHD respectively from west to east.

The primary drivers for the proposed earthworks levels are a balance between minimising the extent of retaining walls as well as balancing the earthworks and minimising fill as much as practically possible. As noted earlier (refer **Section 2.3**) a variance of +/-1.0m to the final building levels has been shown on the drawings. This variance is included in the concept design drawings to ensure that allowances for items unknown at the concept phase (such as building spoil generation from construction, geotechnical conditions, final grading designs, service trenching spoil and road box out) can be kept on site, without exporting, and including in the overall development earthworks.

The earthworks volume estimates are as follows:

	Apparent Volume	Upper Bound (+15%)	Lower Bound (-15%)
Cut (m^3)	-322,000	-370,300	-280,000
Fill (m^3)	303,100	348,565	263,565
Balance (m^3)	-18,900	-21,735	-16,435

Table 3.1. Earthwork Volume Estimates

Given the order of magnitude of the volume of earthworks and concept nature of the earthworks modelling, a more balanced cut and fill result is expected to be achievable through a detailed modelling exercise, unless a larger volume of unsuitable material is encountered during the earthworks process. Consideration to bulking of cut materials including rock and clay materials should be allowed for. Bulking of clay would normally be expected to be 4% of the removed volume and rock bulking can be expected in the range of 8-12%.

Earthworks allowances for services trenches, retaining walls and detailed building excavation should also be made to avoid excessive unknown exports during later stages of the project. Allowances in the range of 1,250-2,500m^3/Ha can be expected depending on the type of development and final site layouts. As noted, an upper and lower bound of earthworks volumes has been included to allow for some of these items.

Soil Erosion and Sediment Control measures, including sedimentation basins are to be placed in accordance with submitted drawings and the *Soil and Water Management Plan* in **Section 8** of this report.

All geotechnical testing and inspections performed during the filling operations will be undertaken to Level 1 geotechnical control, in accordance with AS3798-2007.

3.3 Retaining Walls

The civil engineering objective is to minimise retaining walls within the constraints of the masterplan layout, allowable grading to suit industrial development and batters in landscaped areas where possible.

Retaining will be required across the entire site with walls in cut up to 8m in height and walls in fill up to 8m in height. The walls in fill are anticipated to comprise modular masonry block system (Keystone) with reinforced soil backfill and the walls in cut to comprise either contiguous pile walls or reinforced concrete block system.

While Blacktown Development Control Plan 2015 does not apply to the site, the design geometry of walls has been completed in accordance with *Table 6.3* and *Figure 6.3* of Blacktown City Councils *DCP Part E – Development in Industrial Areas, Section 6.2*. Refer **Figure 3.2** below. Retaining walls will be tiered where walls are higher than 3m in height.

Location of retaining walls is shown on drawing **Co13904.03-SSDA601 to SSDA604.**

■ **Controls**

Provision	Control
Embankment batters from property boundary	3m:1m (length to height ratio)
Maximum height of retaining wall elements	3m
Terraced fill greater than 3m in height	1.5m:3m (length to height ratio)

Table 6.3 Cut and fill requirements

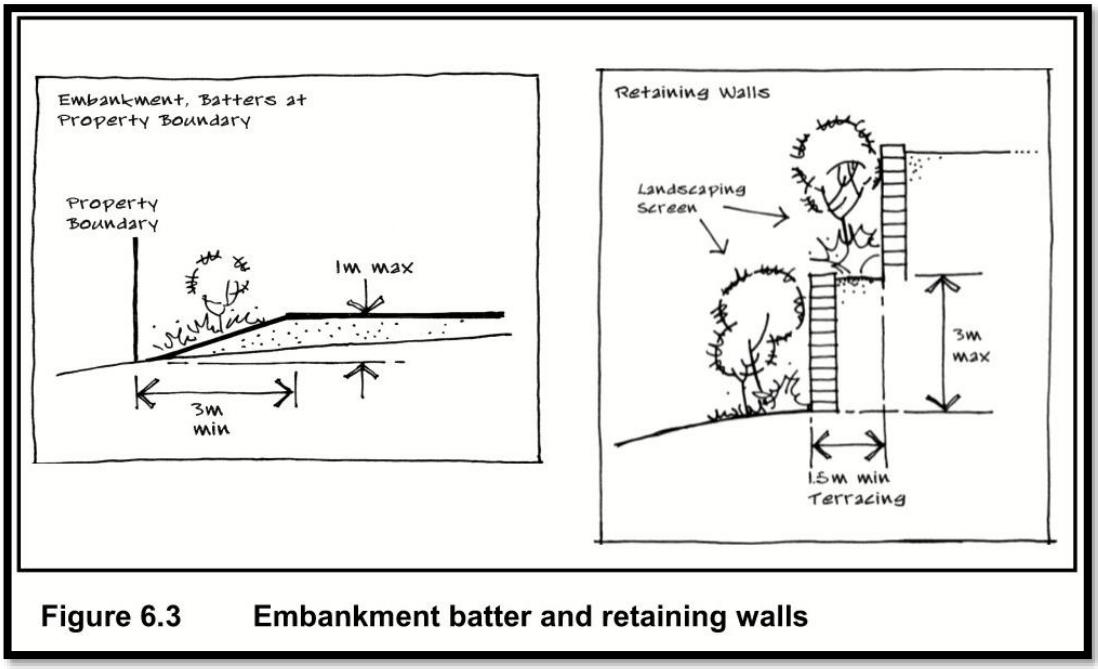

Figure 3.1 DCP *Part E – Development in Industrial Areas* Figure 6.3 & Table 6.3

3.4 Embankment Stability

To assist in maintaining embankment stability permanent batters in clay will be no steeper than 2.5 horizontal to 1 vertical while temporary batters will be no steeper than 2 horizontal to 1 vertical.

Permanent batters will also be adequately vegetated or turfed which will assist in maintaining embankment stability.

Stability of batters and reinstatement of vegetation shall be in accordance with the submitted drawings and the *Soil and Water Management Plan* in **Section 8** of this report.

3.5 Groundwater

Groundwater was identified in a geotechnical investigation completed by PSM which was referenced as *PSM4636-006L*.

The ground water levels were measured by PSM at 3.8mbgl (western portion of the site), 5.9mbgl (centre of the site) and 4.5mbgl (eastern portion of the site). Ground water will be encountered during the bulk earthworks activity during construction. Portions of the building foundations of the warehouses in the centre and on the eastern boundary of the site will be in areas where a deep cut is expected, and ground water will likely be encountered. With no basement for the warehouse proposed, groundwater will likely not be an issue for this development. The development's likelihood to encounter groundwater in the areas of deep cut, impact from groundwater and on groundwater systems as a result of development are to be considered.

Surface water management, including conveyance of surface runoff, management of water quantity (through on-site detention) and water quantity (through on-site and estate wide management systems using WSUD principles and best practice pollution reduction objectives) has been proposed in the design.

3.6 Acid Sulphate Soils and Salinity

An assessment of the potential for acid sulphate soils has been requested as part of the SEAR's requirements.

We note the **JBS&G** report confirms a very low potential for acid sulfate potential and that the management of ASS will not be required.

The **PSM** investigation confirms soils are non-saline to moderately saline.

4 WATER CYCLE MANAGEMENT STRATEGY & DRAINAGE METHODOLOGY

4.1 Key Areas and Objectives

Water Cycle Management (WCM) is a holistic approach that addresses competing demands placed on a region's water resources, whilst optimising the social and economic benefits of development in addition to enhancing and protecting the environmental values of receiving waters.

Developing a WCMS at the SSD stage of the land development process provides guidance on urban water management issues. This WCMS has been prepared to inform DPIE, and relevant stakeholders, that the development is able to provide and integrate WCM measures into the stormwater management strategy for the development.

The key WCM targets which have been adopted in the design are included in **Table 4.1** following, and included in the drawings found in **Appendix A**

Table 4.1. WCM Targets

Element	Target	Reference
Water Quantity	Minimise flooding from increased stormwater runoff due to development	Huntingwood Precinct DCP, Section 4.2.1 which requires OSD in accordance with 'On-Site Detention Handbook' prepared by UPRCT, Fourth Edition, Dec 2005.
Water Quality	Load-based pollution reduction targets based on an untreated urbanised catchment: Gross Pollutants 92% Total Suspended Solids 90% Total Phosphorus 68% Total Nitrogen 47% Total Hydrocarbons 91%	Huntingwood Precinct DCP, Section 4.2.3
Flooding	Buildings set at least 0.5m above the 1% AEP flood level (with culverts 50% blocked). 1% AEP flow path maintained through site. Restoration of degraded creek with the design width and top of bank designed to 1 in 2-year ARI. Creek crossings for driveways, or roads will be subject to DECCW requirements.	Huntingwood Precinct DCP, Section 4.2.4 NSW Floodplain Development Manual.

Element	Target	Reference
	Outside of the riparian zone the trunk drainage will be a pipe designed for the 1 in 100-year ARI flow providing a fail-safe overland flow path dedicated that can convey at least 50% of the pipe flow.	
Stream Health	Stream Erosion Index less than 3.5	Blacktown City Council Part J DCP
Water Supply (Water Conservation)	Reduce Demand on non-potable water uses. Provide 80% reduction of non-potable uses.	Huntingwood Precinct DCP, Section 4.2.2 Blacktown City Council Part J DCP
Construction Stormwater Management & Erosion and Sediment Control	A construction stormwater management plan and appropriate associated erosion and sedimentation control measures must be described in the environmental assessment for all stages of construction to mitigate potential impacts to surrounding properties.	Landcom Blue Book Council DPI

A summary of the how each of the WCM objectives will be achieved are described below. Reference to the relevant sections of the report should be made for further and technical details relating to the WCM measures:

- *Stormwater Quantity Management (Refer **Section 5**)*

  The intent of this criterion is to reduce the impact of urban development on existing drainage system by limiting post-development discharge within the receiving waters to the pre-development peak, and to ensure no affectation of upstream, downstream, or adjacent properties.

  Attenuation of stormwater runoff from the development is required in accordance with on-site detention requirements established in the "On-Site Stormwater Detention Handbook" prepared by the Upper Parramatta River Catchment Trust Fourth Edition dated December 2005 (UPRCT).

  Refer to **Section 5** of the document for further discussion pertaining to water quantity management.

- *Stormwater Quality Management (Refer **Section 6**)*

  There is a need to target pollutants that are present in stormwater runoff to minimise the adverse impact these pollutants could have on downstream receiving waters.

  The required pollutant reductions are included in **Table 4.1** of this document and MUSIC modelling has been completed to confirm the reduction objectives can be met for the estate. We note the pollutant reduction requirements included in the Huntingwood Precinct DCP are greater than those adopted in Councils 2020 WSUD Guidelines for

Development and Part J DCP. The higher level of treatment is noted to be required to offset for untreated parts of the catchment (including roadways).

A series of Stormwater quality improvement devises (SQID's) have been incorporated in the design of the estate. The proposed management strategy will include the following measures:

- Primary treatment of external areas will be made via pit inserts or GPT's.
- Tertiary treatment of the development will be made via bioretention basins where there is available space as well as via one of two proprietary treatment systems where space is limited. The second mentioned treatment systems are proposed to be syphon actuated filtration systems housed in underground tanks.
- Discharge into watercourses as noted in previous sections of the report will occur following treatment which meets the Huntingwood DCP pollution targets. Refer to drawings in the **Co13904.03-SSDA400s** series.
- Some treatment will also be present by provision of rainwater reuse tanks on development sites through reuse and settlement within the tanks.

Reference to **Section 6** of this document should be made for detailed Stormwater Quality modelling and measures.

- *Flood Management (refer **Section 7**)*

  The proposed development considered flooding and large rainfall events in relation to the two watercourses through the site (with 50% blockage of the existing culverts), and local runoff and overland flow paths including the overland flow from the upstream catchments to the south of the site (west of the Western Motorway).

  Consideration to flood requirements has been made per the Huntingwood Precinct DCP and NSW Floodplain Development Manual. Refer **Section 7** for details.

  The following measures have been incorporated in the design:

  - All buildings are sited 500mm above the 1% AEP design flood level of local flow paths.
  - Overland flow paths to manage runoff in large storm events have been made including achieving at least 500mm freeboard to building levels from the flow paths. We note that generally a greater level of flood immunity is available to the development sites than that required by flood planning policy. As such appropriate and acceptable level of flood risk to the development is available.

- *Stream Health (refer **Section 6.4**)*

  Stream Erosion Index (SEI) calculation has been made, in accordance with the methodology set out in Blacktown City Councils Water Sensitive Urban Design Handbook (2020). Blacktown City Council Require that the post development duration of stream forming flows shall be no greater than 3.5 times the pre-development duration of stream forming flows with a stretch target of 1.

- *Water Demand Reduction/ Rainwater Reuse (refer **Section 6.6**)*

  Rainwater reuse measures will be provided as part of future building development designs. Rainwater reuse will be required to reduce demand on non-potable uses by 80%. The

reduction in demand will target non-potable uses such as toilet flushing and irrigation. **Refer Section 6.6**.

- *Stormwater Management During Construction (refer **Section 8**)*

  A construction stormwater management plan and associated erosion and sediment control measures is proposed based on *Landcom Blue Book* and Council requirements. The management measures take a staged approach from initial site establishment, construction stages and the period between the completion of the estate infrastructure works and development of individual lots. Temporary access will be provided between the central Lot 3 &4 and Lot 5 as discussed in the letter referenced CO13904.03-14.ltr (**Appendix N**) in the form of a cofferdam arrangement, based on IECA recommendations, to protect the disturbed area. A temporary low flow diversion pipe or pumped system should be installed at the base of the channel to divert clean water from the upstream baseflow. Similar alternate works methodology may be employed in the final detail design subject to Contractor input and the final ESCP and temporary works methodology.

4.2 Existing Site Drainage

Most of the site is currently undeveloped industrial zoned land, which has been described in **Section 2.2**.

The existing site generally grades from two ridges on the site, draining east and west from the ridgeline, towards a riparian corridor and drainage swale, which drains from the south to the north, as seen in **Figure 2.3**.

Discharge from the site is via Blacktown Creek, the Unnamed Watercourse and a small portion draining towards the existing stormwater infrastructure in the north-eastern corner of the site. The drainage under the GWH via existing culverts from both the Blacktown Creek and the Unnamed Watercourse is controlled with fitted aperture plates shown in the diagrams below (Source: Flood Study and Stormwater Management by Hyder Consulting, 18 January 2010).

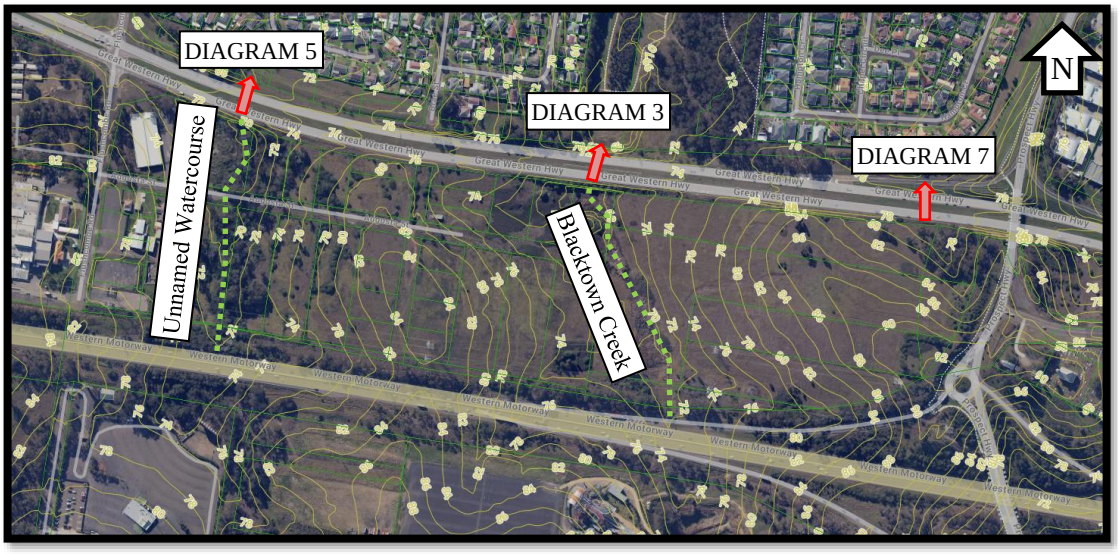

Figure 4.1 Locations of culverts under GWH (details of culverts shown in Figures 4.2 below obtained from Flood Study and Stormwater Management by Hyder Consulting, 18 January 2010)

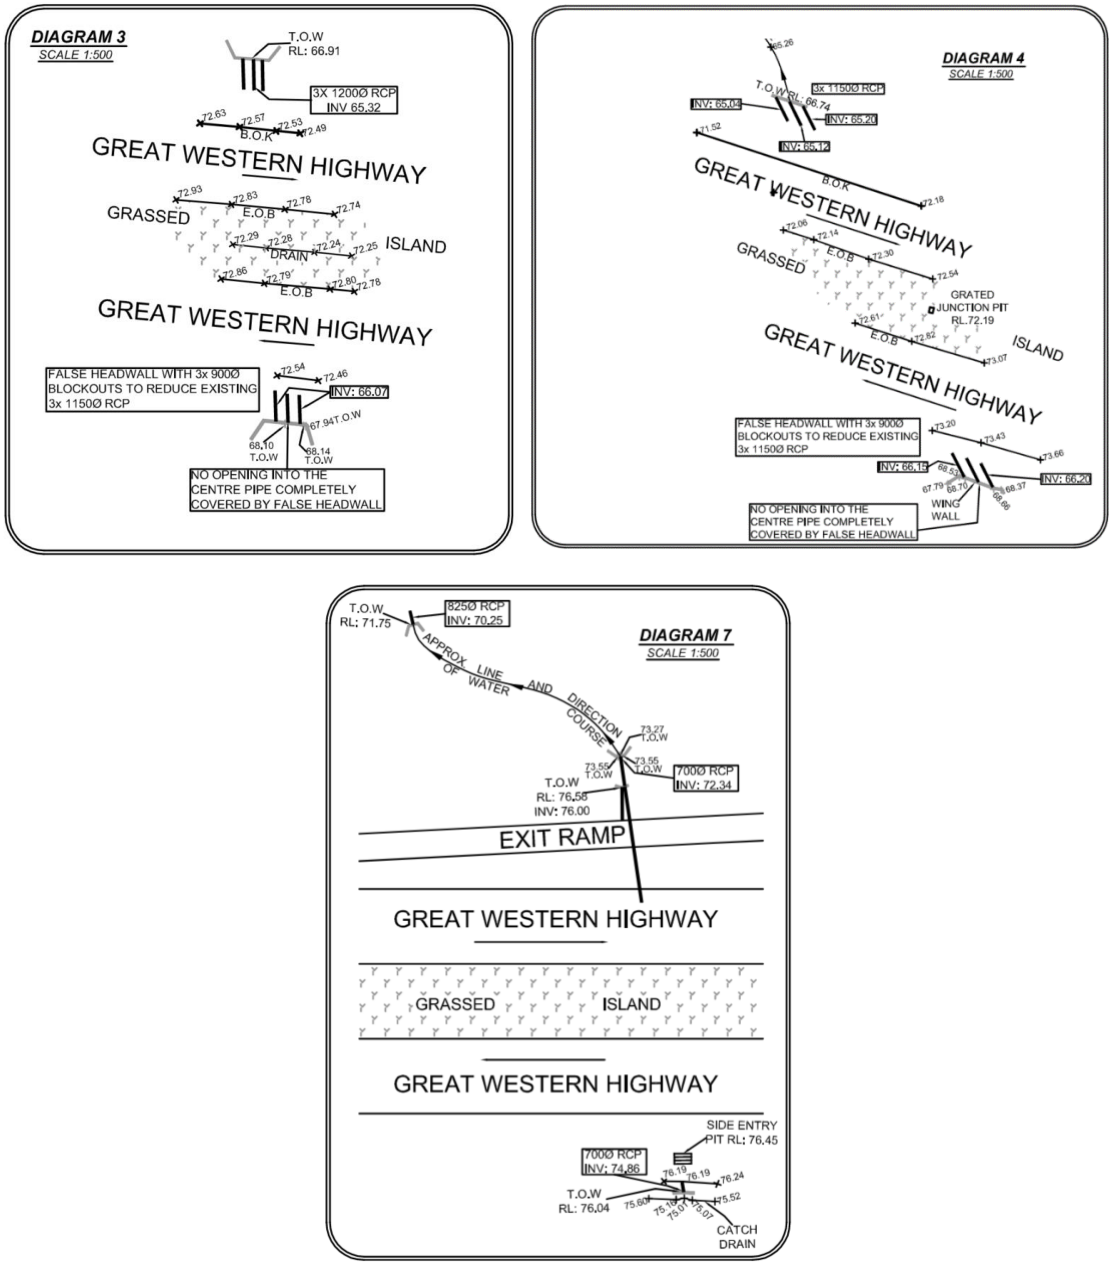

Figure 4.2 Details of culverts under GWH obtained from Appendix G in the Flood Study and Stormwater Management by Hyder Consulting, 18 January 2010

The remainder of the site has minimal existing formal inground drainage systems. These systems are anticipated to be decommissioned as part of the development of the new pads, unless determined to be of value as part of the future development.

It is noted that the design allowances for the trunk drainage system is based on a design capacity which allows for the 1% AEP design flow and 50% blockage of both inlet pits and the culvert

system. Further discussion on the system and overland flow considerations is included in **Section 7**.

4.3 Proposed Surface Water Drainage System

As required by the Huntingwood DCP, trunk drainage outside of the riparian zone will be a pipe designed for the 1% AEP (1 in 100 year ARI) flow providing a fail-safe overland flow path dedicated that can convey at least 50% of the pipe flow. This results in the trunk piped system being able to convey all stormwater runoff up to and including the 1% AEP event.

A typical major (1% AEP overland) and minor (5% AEP inground) drainage system, typically adopted as general engineering practice and the minimum requirements of Council, to safely and efficiently convey collected stormwater run-off from the development to the legal point of discharge as such is not relevant for this site, given the minor system in this instance caters for the capacity of the major.

We note that emergency overland flow paths (i.e., those for events greater than the 1% AEP) have been considered in the design layout. The major system will employ the use of defined overland flow paths, such as roads and open channels, to safely convey excess run-off from the site.

The design of the stormwater system for this site will be based on relevant national design guidelines, Australian Standard Codes of Practice, the standards of BCC and accepted engineering practice. Runoff from buildings will generally be designed in accordance with *AS 3500.3 National Plumbing and Drainage Code Part 3 – Stormwater Drainage*. Overall site runoff and stormwater management will generally be designed in accordance with the Institution of Engineers, Australia publication "*Australian Rainfall and Runoff*" (2019 Edition), Volumes 1 and 2 (AR&R).

Water quality and re-use are to be considered in the design to ensure that any increase in the detrimental effects of pollution is mitigated, Council Water Quality Objectives are met and that the demand on potable water resources is reduced.

The proposed drainage system will be required to convey the overland flow from upstream catchments south of the property through the site.

The legal point of discharge is a point specified by Council where stormwater from a property can be discharged. The legal point of discharge is usually Council's stormwater infrastructure (where available), the street kerb and channel for smaller developments or downstream receiving waters like an existing stream or gully, lake, pond or waterbody. Legal points of discharge for this site are via the existing Blacktown Creek culvert, the Unnamed Watercourse culvert and the culvert located in the north-eastern corner of the site, all draining from the site, under the GWH.

With reference to the drawings in **Appendix A,** the drainage system proposed can be described as follows:

- Minor System (On-lot piped drainage): 5% AEP
- Major System (Overland Flow): 1% AEP
- Trunk drainage system designed to the 1% AEP (1 in 100yr ARI);
- Site discharge via the existing inter-allotment drainage system culverts under the GWH.

- Treatment of stormwater via rainwater tanks (portion of the roof), pit inserts, Gross Pollutant Traps, bioretention basins and/or one of two proprietary filtration systems where space is limited.
- Conveyance of overland flow from the site and upstream catchments via hardstands, parking areas and other roads to the existing riparian corridors within the site.

4.4 Hydrologic Modelling and Analysis

4.4.1 Rainfall Data

Rainfall intensity Frequency Duration (IFD) data used as a basis for DRAINS modelling and initial pipe sizing based on rational method assessments for the 2 to 100 Year ARI events, was taken from The Bureau of Meteorology Online IFD Tool.

4.4.2 Runoff Models

In accordance with the recommendations and standards of Council, the calculation of the runoff from storms of the design ARI has been calculated with the catchment modelling software DRAINS for internal drainage only.

Detailed hydraulic assessment of the internal drainage system will be calculated at detail/ construction certificate stage.

The design parameters for the DRAINS model are to be based on the recommendations as defined by council and parameters for the area and are as follows:

Table 4.2. DRAINS Parameters

Model	Model for Design and analysis run	Rational method	
	Rational Method Procedure	ARR2019	
	Soil Type-Normal	3.0	
	Paved (Impervious) Area Depression Storage	1	mm
	Supplementary Area Depression Storage	1	mm
	Grassed (Pervious) Area Depression Storage	5	mm
AMC	Antecedent Moisture Condition (ARI=1-5 years)	2.5	
AMC	Antecedent Moisture Condition (ARI=10-20 years)	3.0	
AMC	Antecedent Moisture Condition (ARI=50-100 years)	3.5	
	Sag Pit Blocking Factor (Minor Systems)	0	
	On Grade Pit Blocking Factor (Minor Systems)	0	
	Sag Pit Blocking Factor (Major Systems)	0.5	
	On Grade Pit Blocking Factor (Major Systems)	0.2	

4.5 Hydraulics

4.5.1 General Requirements

Hydraulic calculations will be carried out utilising DRAINS modelling software during the detail design stage to ensure that all surface and subsurface drainage systems perform to or exceed the required standard.

4.5.2 Freeboard

The calculated water surface level in open junctions of the piped stormwater system will not exceed a freeboard level of 150mm below the finished ground/ grate level, for the peak runoff from the Minor System runoff.

The calculated water surface for the peak runoff from the Major System runoff will not exceed a freeboard level of 500mm below the finished floor level of the building.

4.5.3 Public Safety

For all areas subject to pedestrian traffic, the product (dV) of the depth of flow d (in metres) and the velocity of flow V (in metres per second) will be limited to 0.4, for all storms up to the 100-year ARI.

For other areas, the dV product will be limited to 0.6 for stability of vehicular traffic (whether parked or in motion) for all storms up to the 100-year ARI.

4.5.4 Inlet Pit Spacing

The spacing of inlets throughout the site will be such that the depth of flow, for the Major System design storm runoff, will not exceed the top of the kerb (150mm above gutter invert).

4.5.5 Overland Flow (development lots)

Dedicated flow paths have been designed to convey all storms up to and including the

100-year ARI. These flow paths will convey stormwater from the site to the detention systems prior to discharge.

5 WATER QUANTITY MANAGEMENT

Blacktown City Council's Huntingwood Precinct DCP and Water Sensitive Urban Design (WSUD) 2020 Developers Guideline require management of stormwater quantity for developments, with the intent of minimising flooding from the increased stormwater run-off due to the development.

Water quantity management may be made by providing a stormwater detention system (i.e., on-site detention), to limit the runoff discharged from private property or to provide an assessment which confirms on-site detention is not necessary for the development. It is noted that the DCP requires the OSD designs to be in accordance with the "*On-Site Stormwater Detention Handbook - Fourth Edition dated December 2005*" prepared by the Upper Parramatta River Catchment Trust (UPRCT). Further consultation with Blacktown (E-mail 20 June 2022 (Laith Almoil), confirming that the OSD Deemed to Comply excel spreadsheet version 1.9 is an appropriate version and should be used to calculate the OSD parameters (refer **Appendix J**).

The site is divided into seven catchments for on-site detention calculations, with three upstream catchments to the south and a section of the Western Motorway draining through the site. The upstream catchment (22.01Ha) associated with the water park, has an existing Stormwater attenuation basin located before the discharge point into the development site. We note existing catchments upstream of the site bypass any site detention systems and do not form part of the OSD calculations for the development. Refer to **Figure 5.1** below showing the approximate catchments and sizes.

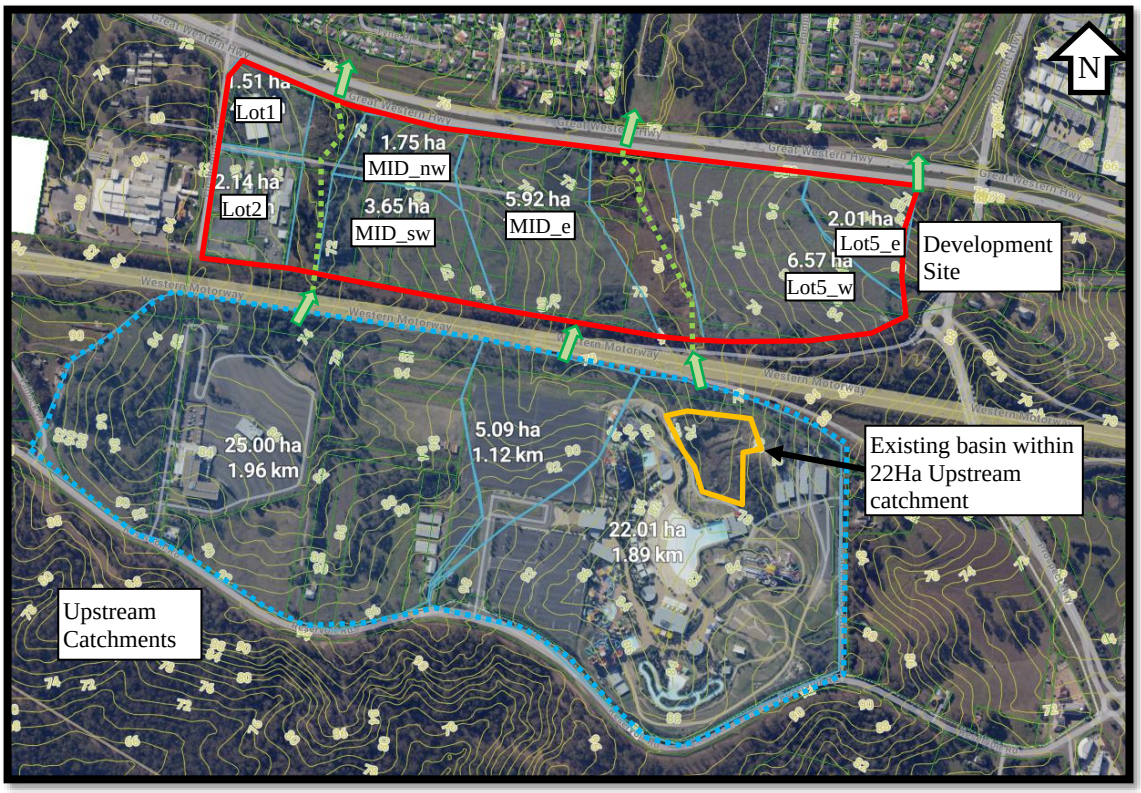

Figure 5.1 Existing Catchments (source: Mecone Mosaic 2022)

Table 5.1. OSD Volume Requirements

Catchment Name	Site Area to OSD (Ha)	Required Storage below Emergency Overflow Weir (m3)
Catchment 1 (Warehouse 1)	1.16	560
Catchment 2 (Warehouse 2)	2.04	948
Catchment 3A (Warehouse 3)	1.03	467
Catchment 3B (Warehouse 3)	2.81	1280
Catchment 4 (Warehouse 4)	5.41	2463
Catchment 5A_1 (Warehouse 5)	1.63	742
Catchment 5A_2 (Warehouse 5)	2.89	1314
Catchment 5B (Warehouse 5)	1.81	915

Of the total 26.6Ha development size, approximately 5.70Ha existing landscaped areas located along the boundaries of the site will remain undeveloped landscaped areas sloping away from the development and will not be forming part of the OSD storage calculations. In addition to the area above, approximately 0.573Ha is associated with Augusta Street, bypassing the OSD structures.

These areas of the site are sloped to eventually discharge into Blacktown creek and the Discharge swale on the west. Reference should be made to drawing **CO13904.03-SSDA472** in **Appendix A** for a breakdown of the OSD catchment areas.

Blacktown Council's Mr. Laith Almoil was contacted to obtain Blacktown Council's latest '*OSD Deemed to Comply Tool*' and to confirm that this should be used to determine the On-site detention (OSD) requirements and to design the OSD tank. Mr. Almoil confirmed the above requirements in an e-mail attached under **Appendix H**.

The Q100 flood level at the respective discharge points is summarised in the table below:

Table 5.2. Approximate Q100 Flood Levels at respective discharge points

Catchment Name	Approximate Q100 Level (m ADH)
Catchment 1 (Warehouse 1)	RL69.00
Catchment 2 (Warehouse 2)	RL71.40
Catchment 3A (Warehouse 3)	RL68.90
Catchment 3B (Warehouse 3)	RL69.65
Catchment 4 (Warehouse 4)	RL69.40
Catchment 5A (Warehouse 5)	RL70.50
Catchment 5B (Warehouse 5)	RL76.50

Refer to drawing **Co13904.03-SSDA400-404** for location of OSD systems and **Appendix J** for calculations.

6 STORMWATER QUALITY, REUSE AND MAINTENANCE

6.1 Stormwater Quality Objectives

There is a need to provide a design which incorporates the principles of Water Sensitive Urban Design (WSUD) and to target pollutants that are present in the stormwater so as to minimise the adverse impact these pollutants could have on receiving waters and to also meet the requirements specified by Council.

Blacktown City Council has nominated, in the *Huntingwood Precinct DCP*, the requirements for stormwater quality to be performed on a catchment wide basis. These are presented in terms of annual percentage pollutant reductions on a developed catchment and are included in **Table 4.1**.

6.2 Proposed Stormwater Treatment System

Developed impervious areas including roof, hardstand, car parking, roads and other extensive impervious areas are required to be treated by the Stormwater Treatment Measures (STM's). The STM's shall be sized according to the whole catchment area of the development. The STM's for the development shall be based on a treatment train approach to ensure that all the objectives above are met.

Components of the treatment train for the development are as follows:

- Primary treatment to the parking, roof, and hardstand areas is to be performed via either the provision of pit inserts to all grated pits (Lots 1, 2, 3 & 4) or the provision of Gross Pollutant Traps (Lot 5);
- Tertiary treatment is to be performed via either Bio-retention basins prior to discharge from the site Catchments 3A & 4, or to a proprietary filtration treatment system (Ocean Protect Stormfilters (or approved equivalent) in the new OSD tanks for catchments 1, 2, 3B, 5A-1, 5A-2 and 5B, prior to discharge;
- A portion of the roof will also be treated via rainwater reuse and settlement within the rainwater tank.

6.3 Stormwater Quality Modelling

The MUSIC model was chosen to model water quality. By simulating the performance of stormwater management systems, MUSIC can be used to predict if the proposed systems and changes to land use are appropriate for their catchments and capable of meeting specified water quality objectives (CRC 2002). The water quality constituents modelled in MUSIC, of relevance to this report, include Total Suspended Solids (TSS), Total Phosphorus (TP) and Total Nitrogen (TN).

The pollutant retention criteria set as required by Council and nominated in **Section 4.1** of this report were used as a basis for assessing the effectiveness of the selected treatment trains.

The parameters used in the MUSIC model are presented in **Appendix B**. **Figure 6.1 to Figure 6.7** below shows the MUSIC model layout. The biodiversity areas and riparian corridors have been excluded from the MUSIC model.

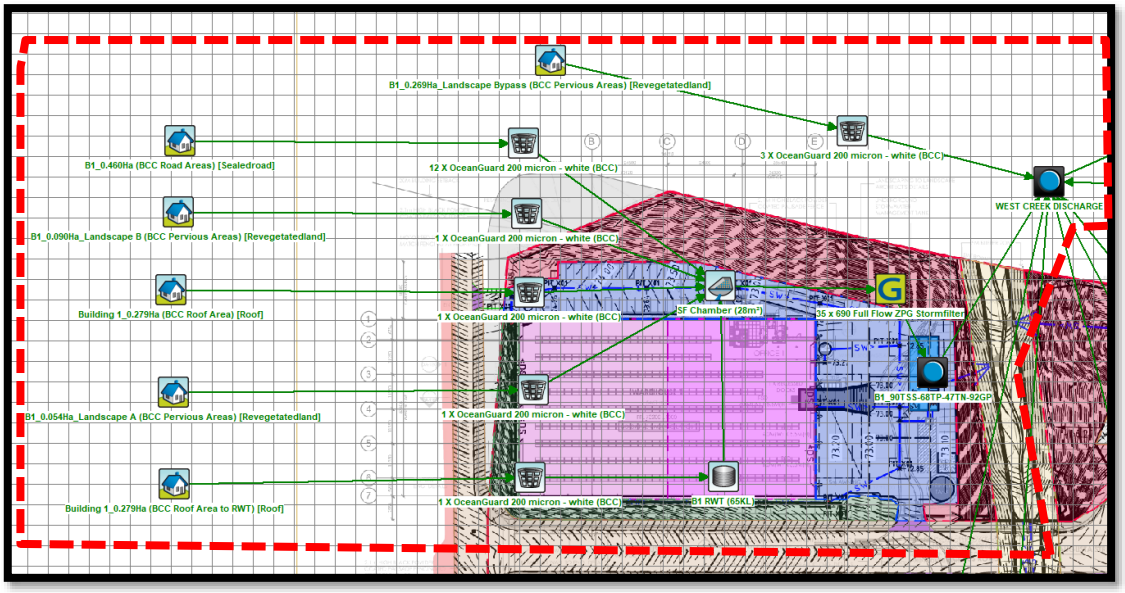

Figure 6.1. MUSIC model layout (Catchment 1)

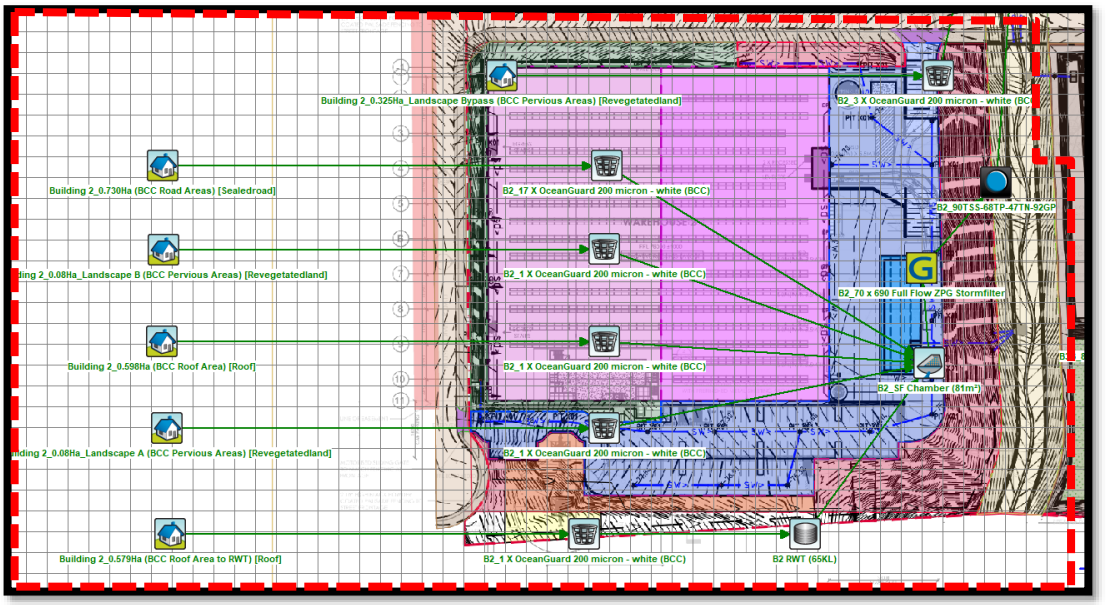

Figure 6.2. MUSIC model layout (Catchment 2)

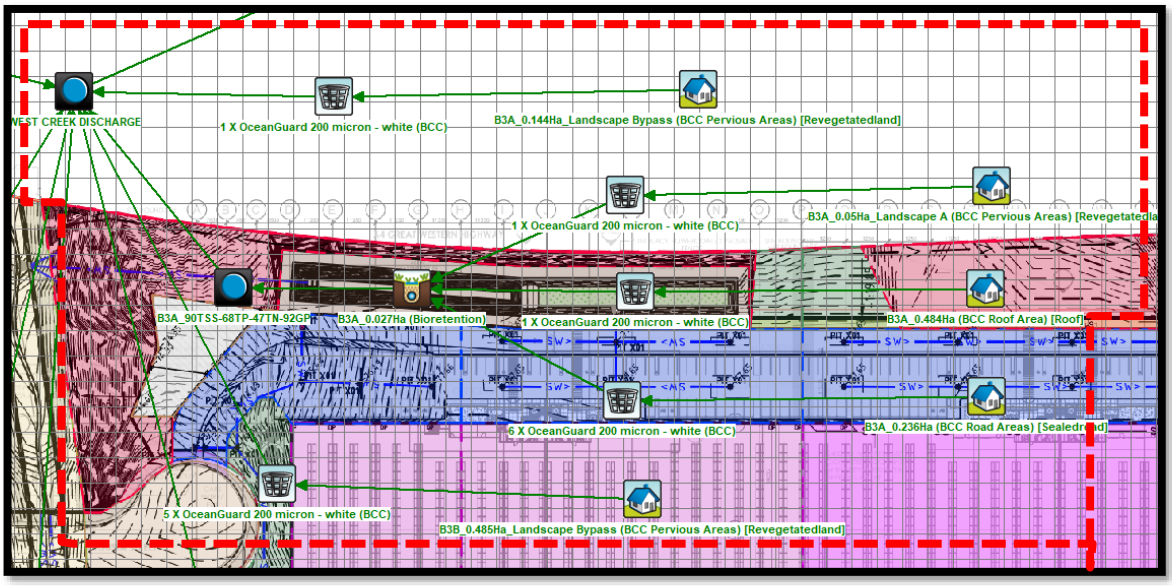

Figure 6.3. MUSIC model layout (Catchment 3A)

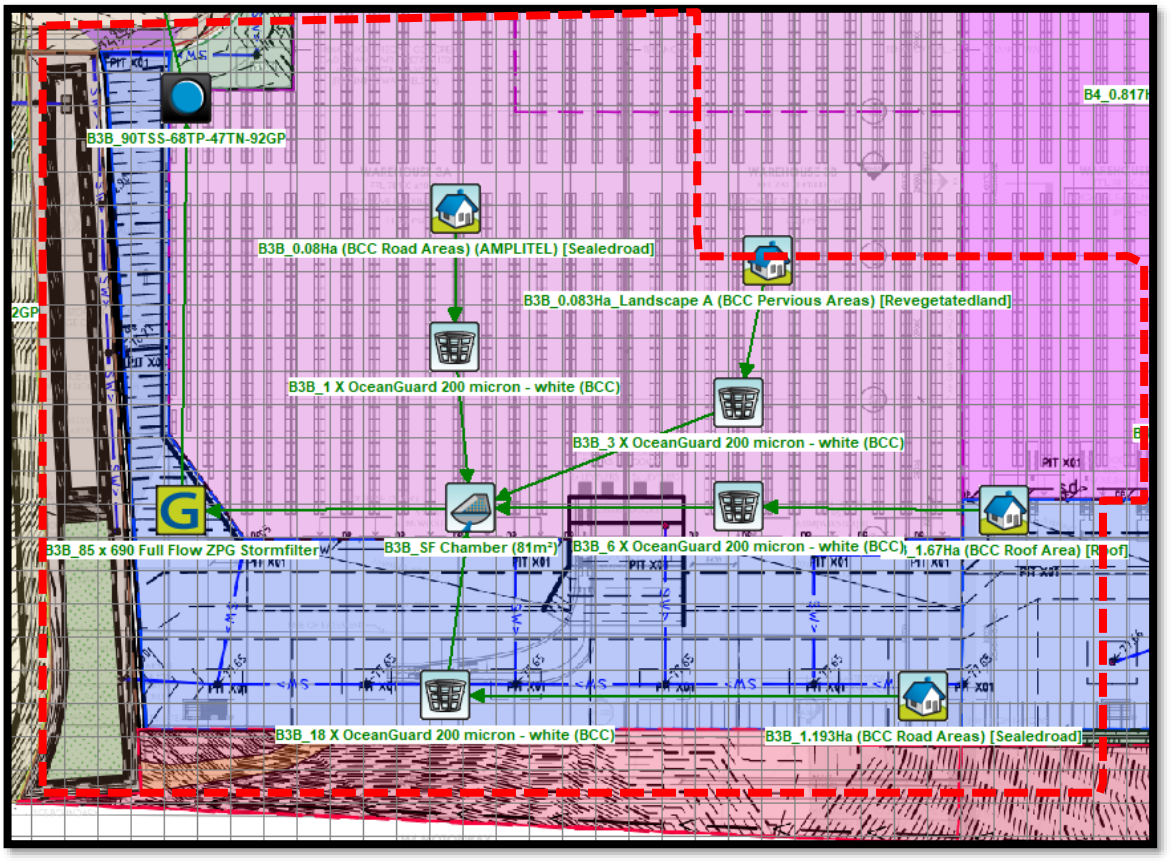

Figure 6.4. MUSIC model layout (Catchment 3B)

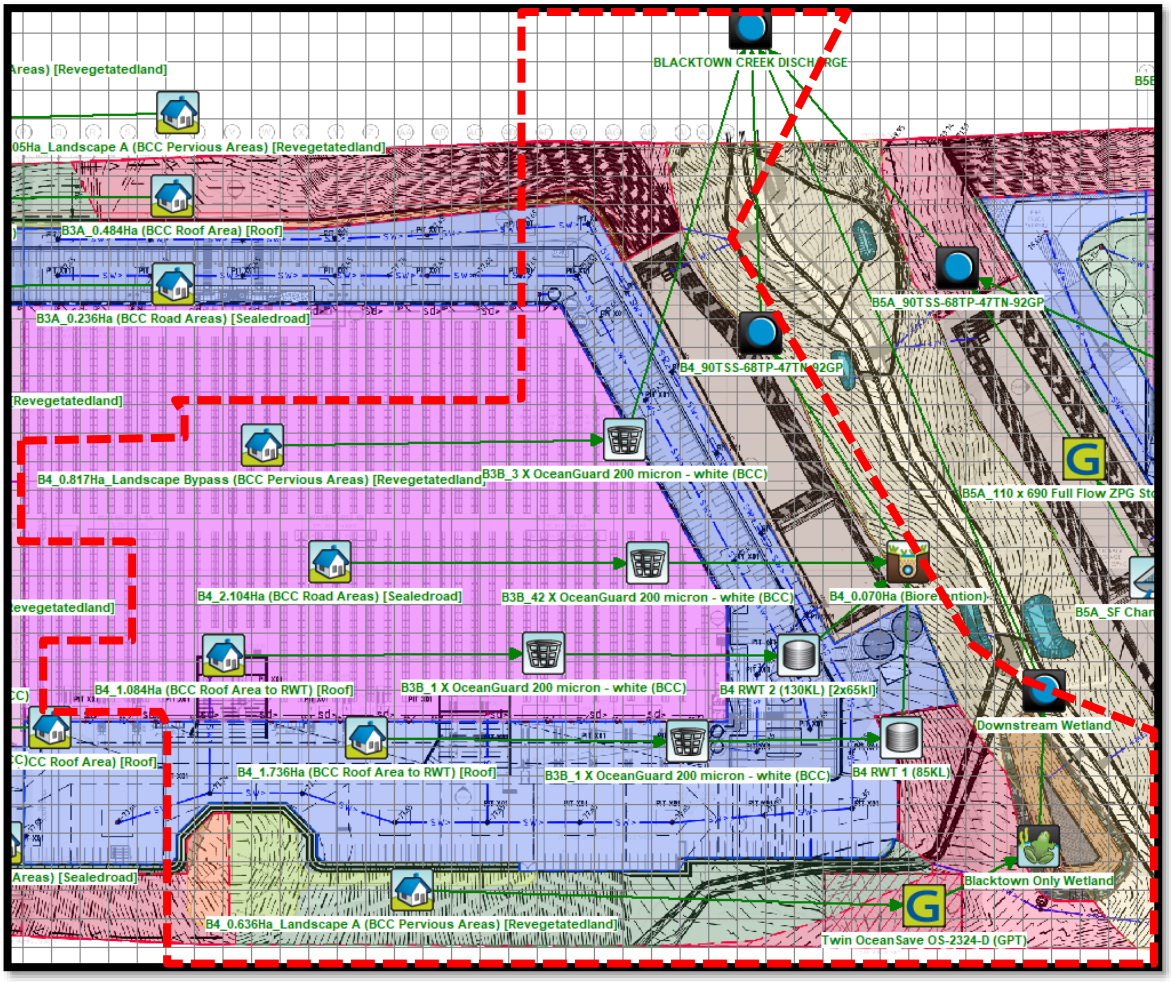

Figure 6.5. MUSIC model layout (Catchment 4)

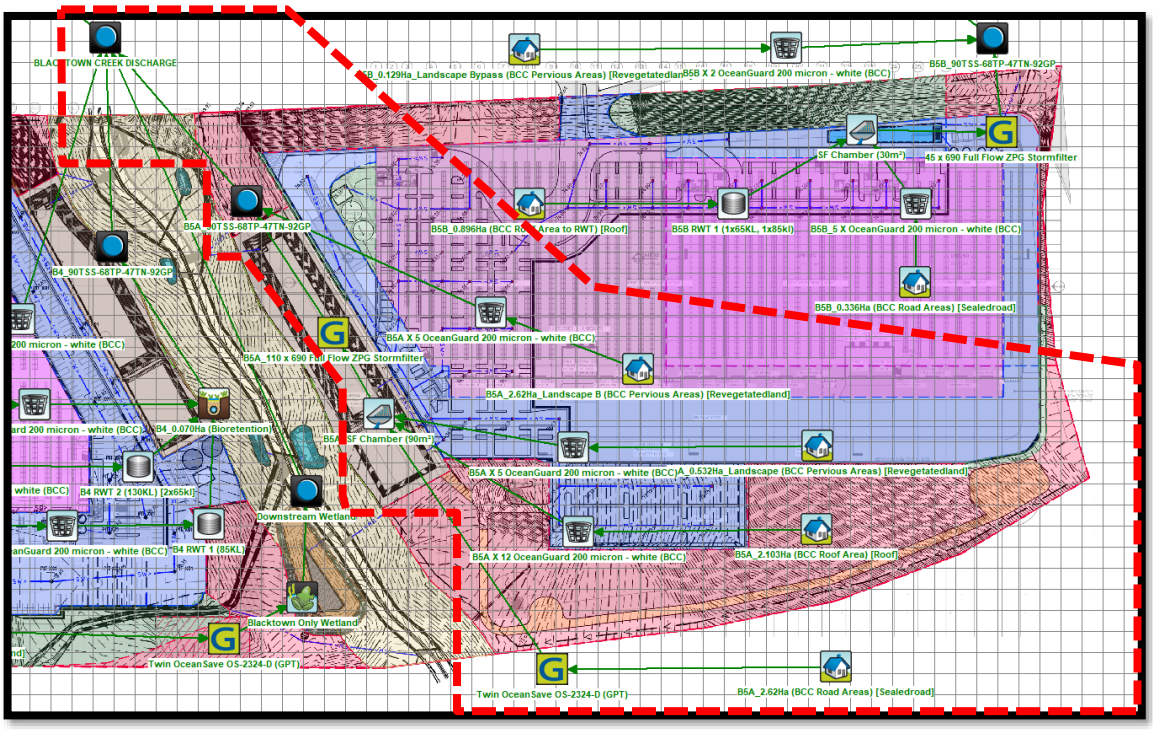

Figure 6.6. MUSIC model layout (Catchment 5A)

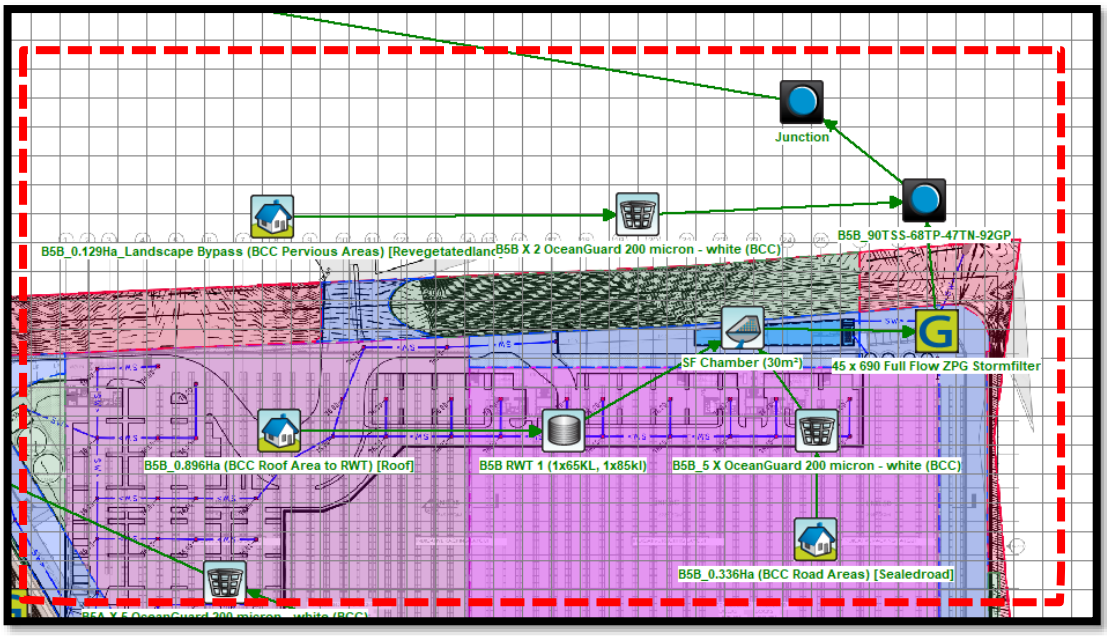

Figure 6.7. MUSIC model layout (Catchment 5B)

Table 6.1 shows the results of the MUSIC analysis. The reduction rate is expressed as a percentage and compares the post-development pollutant loads without treatment versus post-development loads with treatment.

Table 6.1. MUSIC analysis results - % reductions

	Source	Residual Load	% Reduction
Total Suspended Solids (kg/yr) (TSS)	23000	2170	90.6
Total Phosphorus (kg/yr) (TP)	47	14.7	68.6
Total Nitrogen (kg/yr) (TN)	314	165	47.3
Gross Pollutants (kg/yr) (GP)	3340	0	100

MUSIC modelling has been performed to assess the effectiveness of the selected treatment trains and to ensure that the pollutant retention requirements of Precinct's DCP have been met.

The MUSIC modelling has shown that the proposed treatment train of STM will provide stormwater treatment which will meet Council's and typical growth centre water quality reduction objective requirements in an effective and economical manner.

Given the expected low source loadings of hydrocarbons and oil/grease and removal efficiencies of the treatment devices we consider that the requirements of the Council have been met. Further discussion on hydrocarbons can be found in **Appendix B.**

6.4 Stormwater Harvesting

Stormwater harvesting refers to the collection of stormwater from the developments internal stormwater drainage system for re-use in non-potable applications. Stormwater from the stormwater drainage system can be classified as either rainwater where the flow is from roof areas, or stormwater where the flow is from all areas of the development.

For the purposes of this development, we refer to a rainwater harvesting system, where benefits of collected stormwater from roof areas over a stormwater harvesting system can be made as rainwater is generally less polluted than stormwater drainage.

Rainwater harvesting is proposed for this development with re-use for non-potable applications. Internal uses include such applications as toilet flushing while external applications will be used for irrigation. The aim is to reduce the water demand for the development by 80%.

In general terms the rainwater harvesting system will be an in-line tank for the collection and storage of rainwater. At times when the rainwater storage tank is full rainwater can pass through the tank and continue to be discharged via gravity into the stormwater drainage system. Rainwater from the storage tank will be pumped for distribution throughout the development in a dedicated non-potable water reticulation system. This however would be subject to future detail design.

Rainwater tanks have been designed, using MUSIC software to balance the supply and demand, based on the below base water demands and to provide 80% reduction in non-potable water demand. Rainwater tank reuse demands were calculated based on typical water demands of toilets and irrigation of landscaped areas. Water demands for toilets was calculated using 0.1kL/day/ toilet. Water demands for irrigation of landscaped areas was calculated using 0.4kL/year/m^2.

6.4.1 Rainwater Tank Sizing

The use of rainwater reduces the mains water demand and the amount of stormwater runoff. By collecting the rainwater run-off from roof areas, rainwater tanks provide a valuable water source suitable for flushing toilets and landscape irrigation.

Rainwater tanks have been designed, using MUSIC software to balance the supply and demand, based on the calculated base water demands and proposed roof catchment areas. Allowances in the MUSIC model has been made for high flow bypass which will be managed by 300mm downpipe roofwater collection configuration along a portion of each of the warehouses.

Table 6.2. Rainwater Reuse Requirements

Warehouse	Roof Catchment (Ha)	Highflow Bypass (L/s)	Tank Size in MUSIC (kL)	Predicted Demand Reduction (%)	Provided Tank (kL)
Warehouse 1	0.284	100	50kl	84	65kl
Warehouse 2	0.578	100	60kl	82	65kl
Warehouse 3&4	2.820	100	195kl	81	2x65kl 1x85kl
Warehouse 5	0.896	100	135kl	81	1x65kl 1x85kl

The MUSIC model, results summarised in **Table 6.2**, predicts that the reuse demands of 80% will be met for the development with the provision of minimum rainwater tank sizes noted above.

Table 6.3. Water Demand

Warehouse	Irrigation Area (m2)	Irrigation (Annual Demand (kl/yr)	No. of Toilets estimated (No.)	Daily Demand (kL/day)
Warehouse 1	1313	525	4	0.4
Warehouse 2	2018	807	5	0.5
Warehouse 3&4	7655	1837 1225	9	0.4 0.5
Warehouse 5	5000	2000	30	3

We note that the final configuration and sizing of the rainwater tanks is subject to detail design considerations and optimum site utilisation.

6.5 Stream Erosion Index (SEI)

Blacktown Council's WSUD developer handbook confirms that SEI will not be required where permanent on-site stormwater detention is provided using Blacktown Council's spreadsheet (Appendix J), providing a low flow orifice sized at 50% AEP and with a total minimum storage volume of 300m3/Ha for the 50% AEP event. The development site also includes Rainwater tanks supplying 80% of non-potable water demand (see section 6.4.1) & Bioretention basins to Catchments 3A, 3B, 4 & 5A in its proposed treatment train process.

6.6 Maintenance and Monitoring

It is important that each component of the stormwater system and water quality treatment train is properly operated and maintained. In order to achieve the design treatment objectives, an indicative maintenance schedule has been prepared and included as **Appendix C** to assist in the effective operation and maintenance of the various water quality components.

Inspection frequency may vary depending on site specific attributes and rainfall patterns in the area. In addition to the nominated frequency, it is recommended that inspections are made following large storm events.

7 FLOODING AND OVERLAND FLOW

7.1 Introduction

A review of overland flow and flooding in relation to the proposed development has been completed. The assessment confirms the requirements of Blacktown City Council's DCP and assessments as required of the SEAR's have been met.

Our review and assessment have been based on a review of the detail survey, the proposed development, and assessment of the site in relation to the flood modelling and documented flood behaviour included in the flood study completed by Hyder in 2010 for the development area (document ref: DN00214). This flood study was completed in support of a rezoning application for the Huntingwood East Precinct to form part of the required documentation regarding flooding and stormwater management to prepare a Precinct Plan.

One riparian corridor drains through the site from south to north, being Blacktown Creek to the east, and an unnamed drainage swale to the west (hereon referred to as Drainage Swale) to the west, both being tributaries of the Parramatta River. An upstream catchment from the opposite side of the M4 Motorway to the south discharges into the creeks through three sets of headwalls and pipes underneath the motorway, two into Blacktown Creek and one into the Drainage Swale. At the downstream site boundary to the north, each creek is discharged through a set of pipes underneath the Great Western Highway. Blacktown Creek discharges into another riparian corridor adjacent to some residential properties, and the Drainage Swale discharges as overland flow through residential properties.

In its existing condition, the creeks are responsible for conveyance of flood waters towards the Parramatta River and provide some degree of flood storage within the site boundaries. Realignment of the creeks is proposed to fit the architectural scheme and has been designed to ensure negligible flood affectation as a result of the development.

An overland flow assessment and two-dimensional flood model (TUFLOW) has been completed in relation to the overland flow path and the creeks in the existing and realigned condition. The following sections of the report describe the catchment description, flood description and proposed flood management.

Detailed technical information pertaining to the TUFLOW modelling and output completed by our office is included in **Appendix I**.

We have included the following items as part of our review:

• Hyder (2010) – Flood Study and Stormwater Management – Huntingwood East Precinct, Blacktown (document ref: DN00214)

• Review of Councils Floodplain Management Policy in relation to the development including review of potential impacts of the development on existing flooding, and potential impacts on the development from flooding.

7.2 Hyder Flood Study 2010

Extracts of flood behaviour within the site creeks were obtained from a flood study prepared by Hyder in 2010. The study involved a hydrological and hydraulic assessment of the catchment at a local level.

We provide excerpts associated with the 1% AEP storm event from the Flood Study in **Figure 7.1** and **Figure 7.2** to provide a localised overview of the flood conditions over the development site.

Figure 7.1 is noted to be an excerpt of the 1% AEP flood depths and levels and **Figure 7.2** is the 1% AEP flood hazard.

Discussion on flood behaviour is made in **Section 7.3**.

Figure 7.1. Hyder Flood Study – 1% AEP Flood Extent

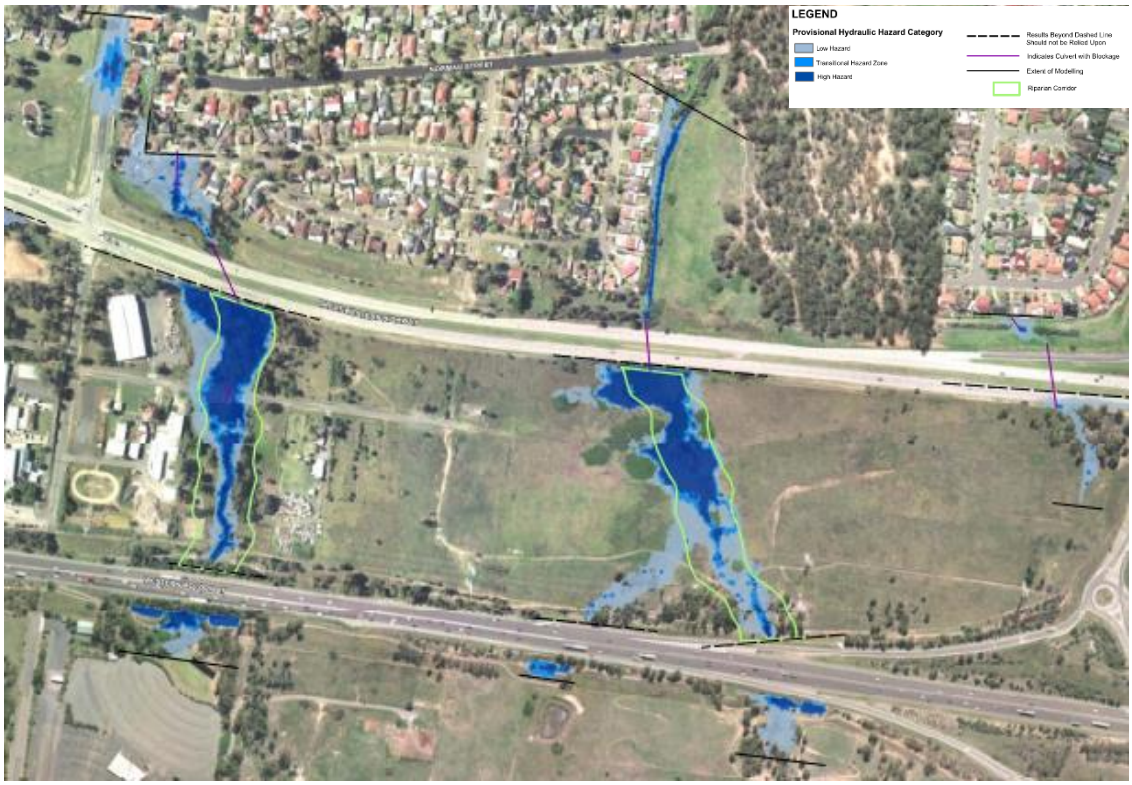

Figure 7.2. Hyder Flood Study – 1% AEP Flood Hazard Map

7.3 Existing Overland Flow and Flood Behaviour

Hyder's flood assessment confirms that the site is a major overland flow path in the 1% AEP flood event, conveying water from upstream catchments to the south, which then flow north towards Parramatta River. The contributing catchments total approximately 55Ha and are split across the two creeks. With reference to **Figure 7.1**, flood water enters through existing stormwater infrastructure constructed underneath the M4 Motorway and converges in the creeks on site. From the flood study, flood levels within the site range from 70m to 75m AHD, reaching depths of up to 4.3m towards the downstream end.

Given the above, the site is shown to be impacted by flooding during the 1% AEP and in more intense storm events. Additional modelling has been conducted to determine the effect of the proposed development on the existing flood behaviour.

7.4 Costin Roe Consulting Modelling

7.4.1 Introduction

A detailed site specific TUFLOW model of the pre and post development conditions has been completed by Costin Roe Consulting. The assessment being completed with consideration to Blacktown City Council's WSUD developer handbook (2020) and – Engineering Guide for Development. Technical parameters and detail included in the TUFLOW model are included as **Appendix I.**

The pre-developed model has been prepared utilising the flood levels and hydrographs as completed by our office, which has been verified against the flood information derived from a flood study completed by Hyder in 2010. Post development modelling has been completed with the introduction of the proposed development. Flood plans showing detailed pre-development and post-development results for the modelled storm events are attached in **Appendix I2**.

7.4.2 Pre-Development 1% AEP

Reference to **Figure 7.3** shows the pre-developed 1% AEP output for depth and levels. **Figure 7.4** shows velocity and **Figure 7.5** show true hazard categorisation.

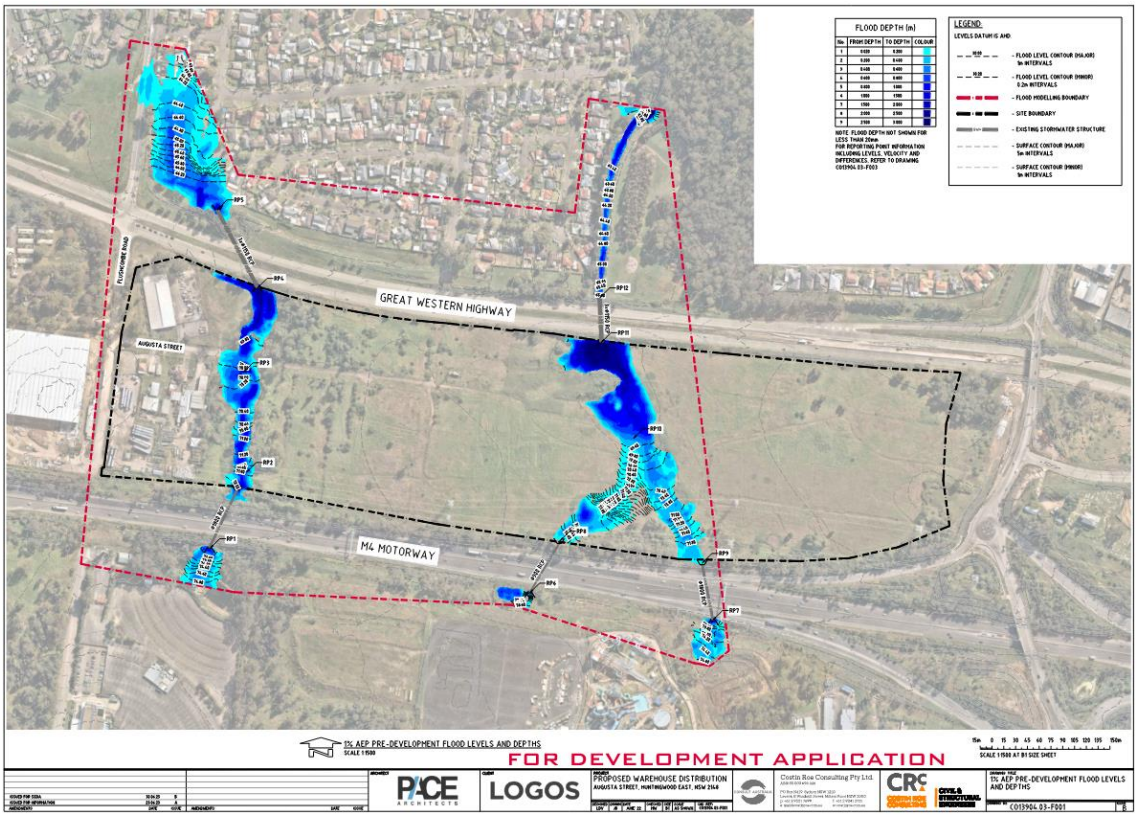

Figure 7.3: 1% AEP Pre-developed Level and Depth Output

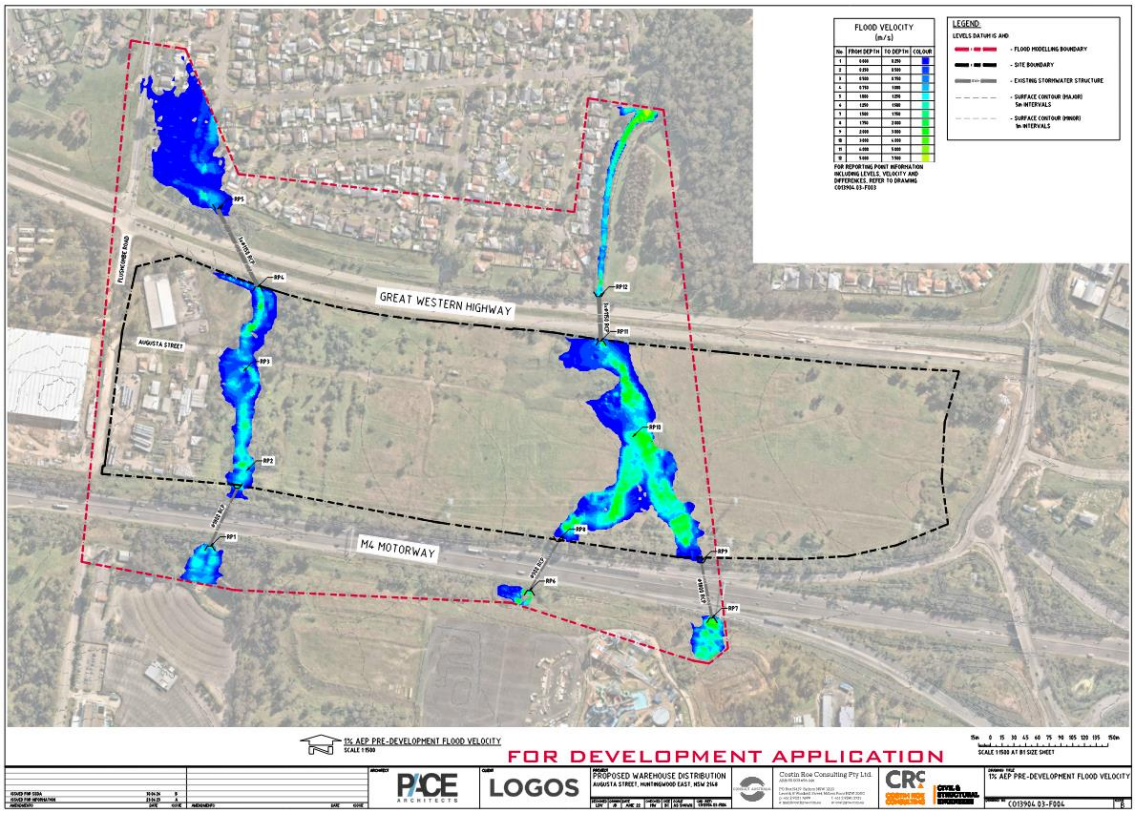

Figure 7.4: 1% AEP Pre-developed Velocity

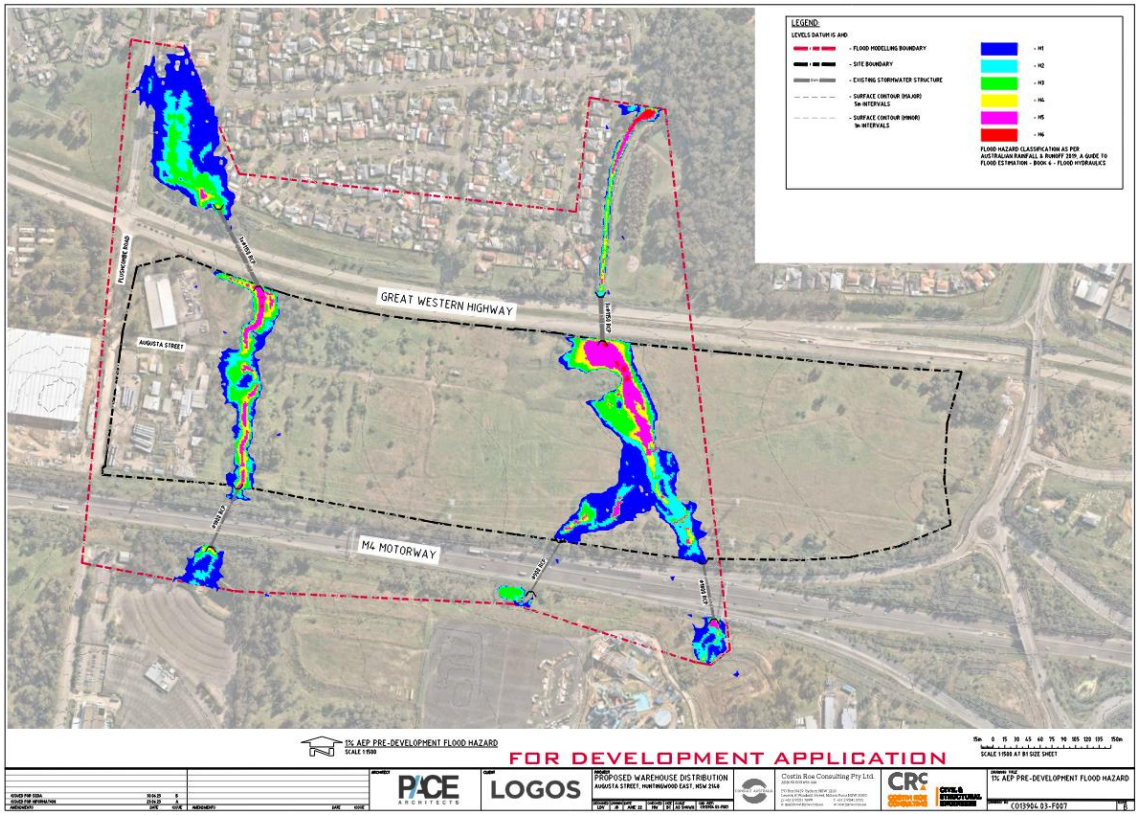

Figure 7.5: 1% AEP Pre-developed Flood Hazard Categorisation

7.4.3 Post-Development 1% AEP

Reference to **Figure 7.6** shows the post-developed 1% AEP output for depth and levels. **Figure 7.7** shows velocity and **Figure 7.8** show true hazard categorisation.

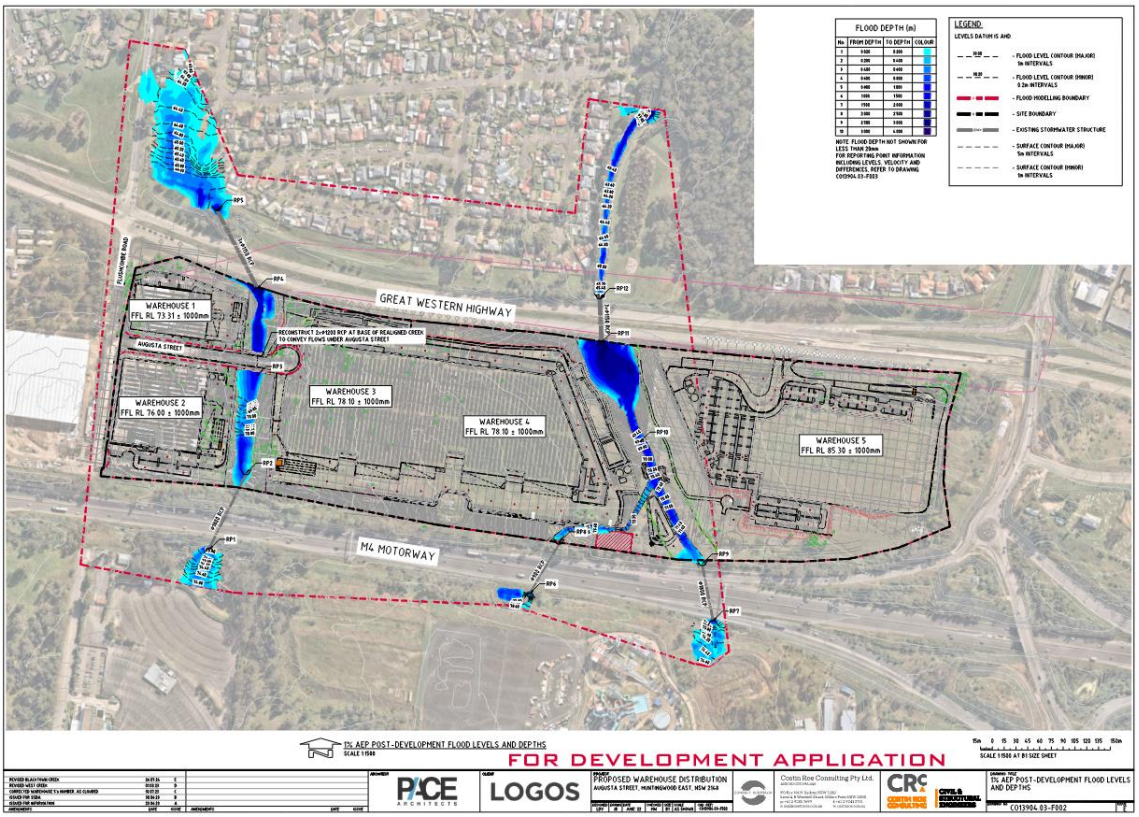

Figure 7.6: 1% AEP Post-developed Level and Depth Output

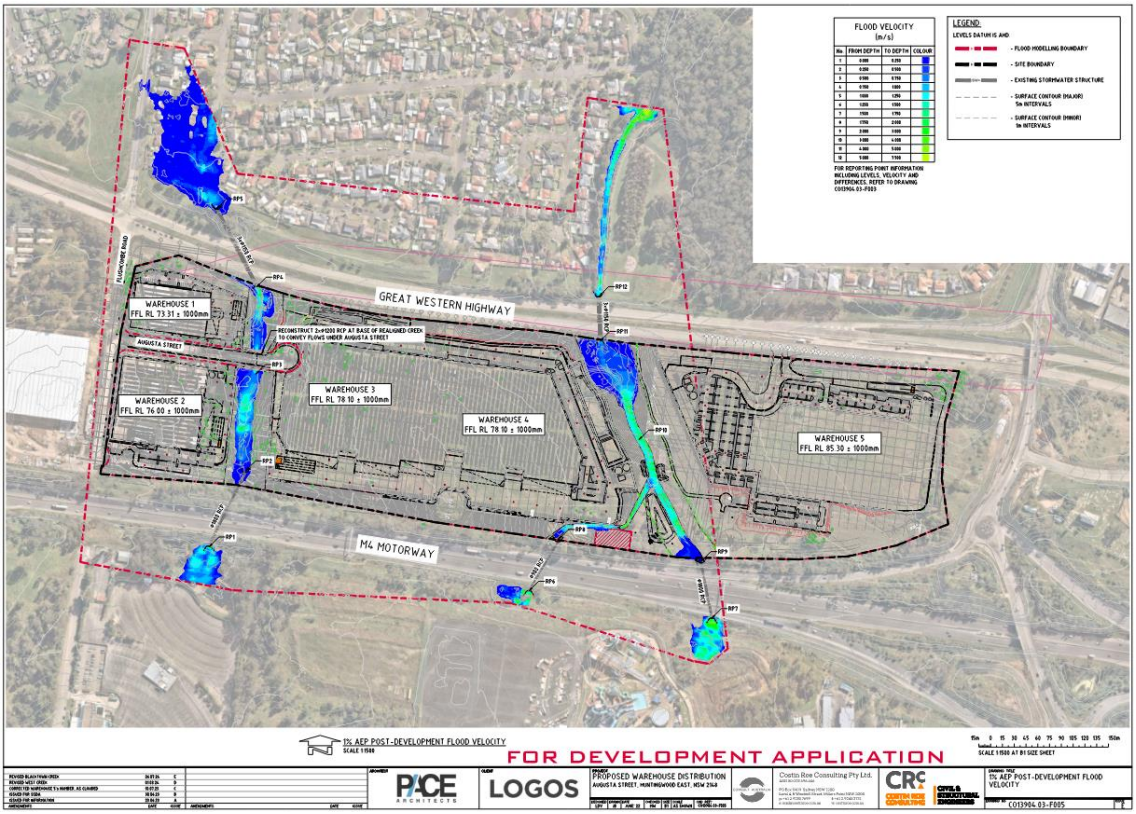

Figure 7.7: 1% AEP Post-developed Velocity

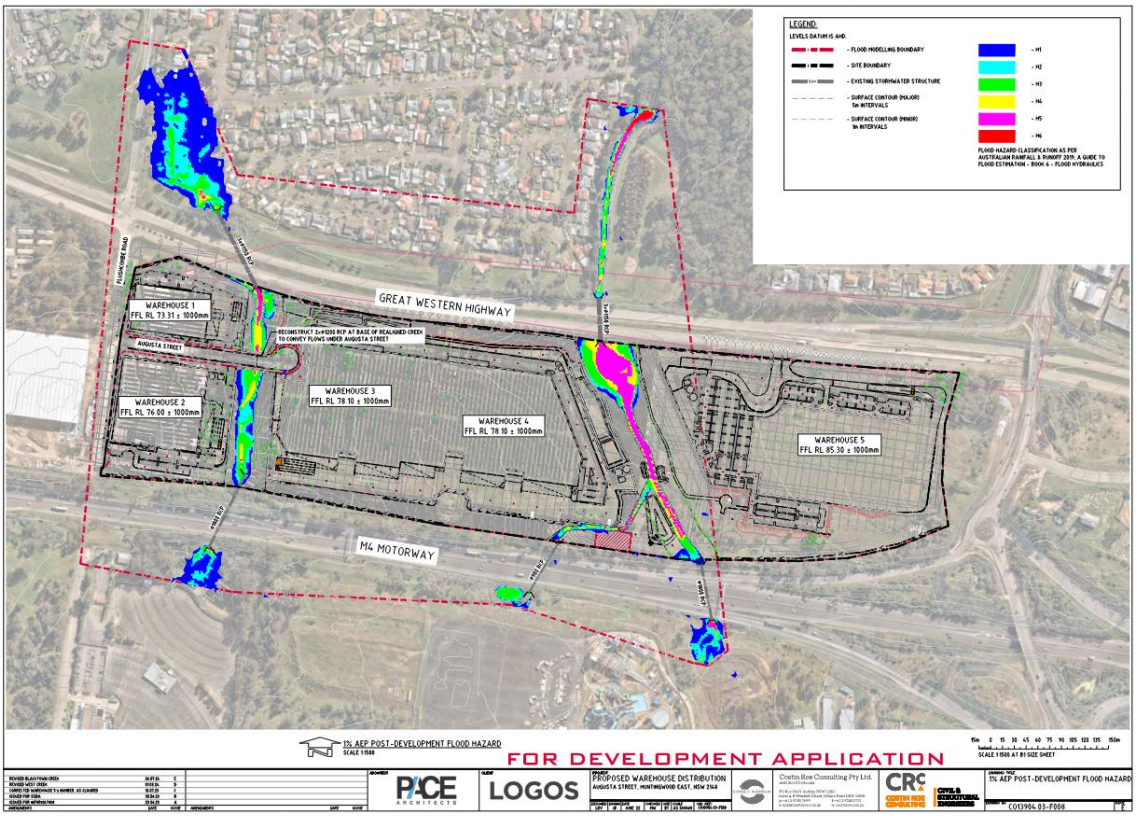

Figure 7.8: 1% AEP Post-developed Flood Hazard Categorisation

7.4.4 1% AEP Comparison

Figure 7.9 shows the 1% AEP flood level afflux (flood level difference) and **Figure 7.10** shows the 1% AEP velocity afflux, associated with the development. **Table 7.1** contains data at 12 reporting points to compare the pre and post development conditions.

The output for the 1% AEP storm event shows that:

- There is generally a decrease in flood levels upstream and downstream of the development site.
- Flood levels within the creek differ from the pre-developed condition due to the proposed creek realignment.

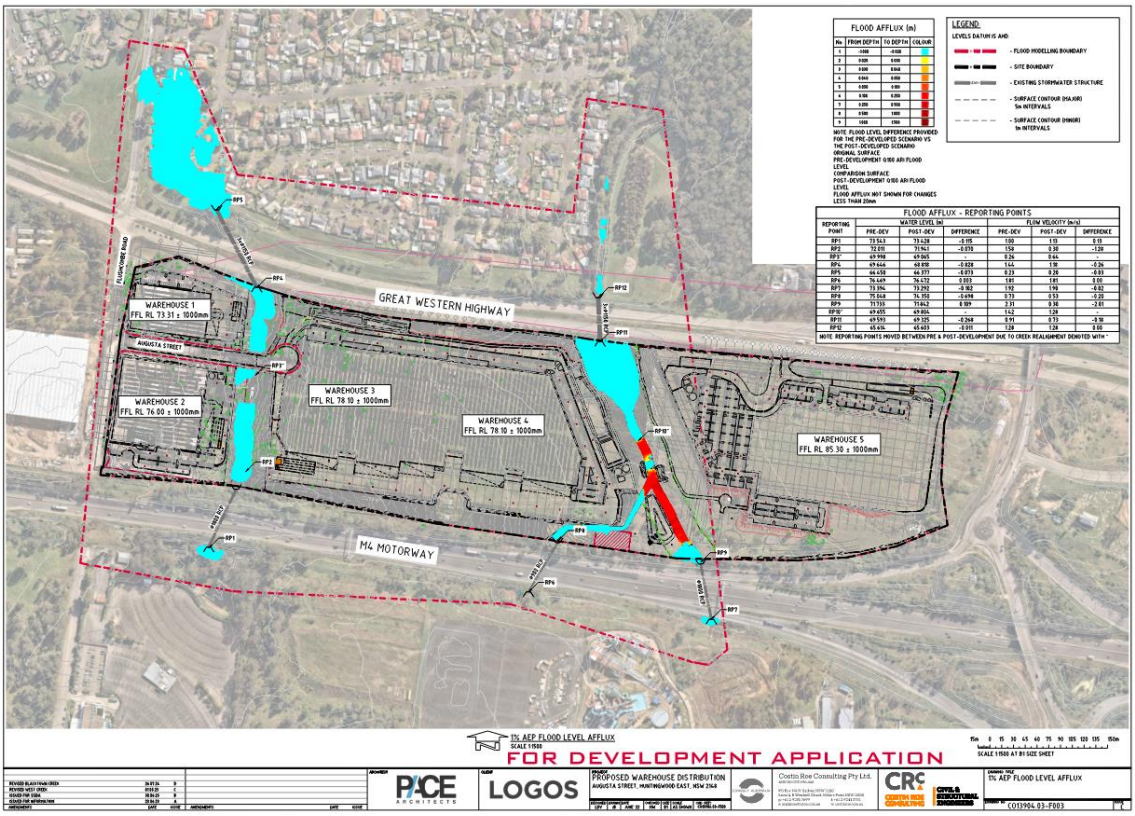

Figure 7.9: 1% AEP Post Developed Flood Level Afflux

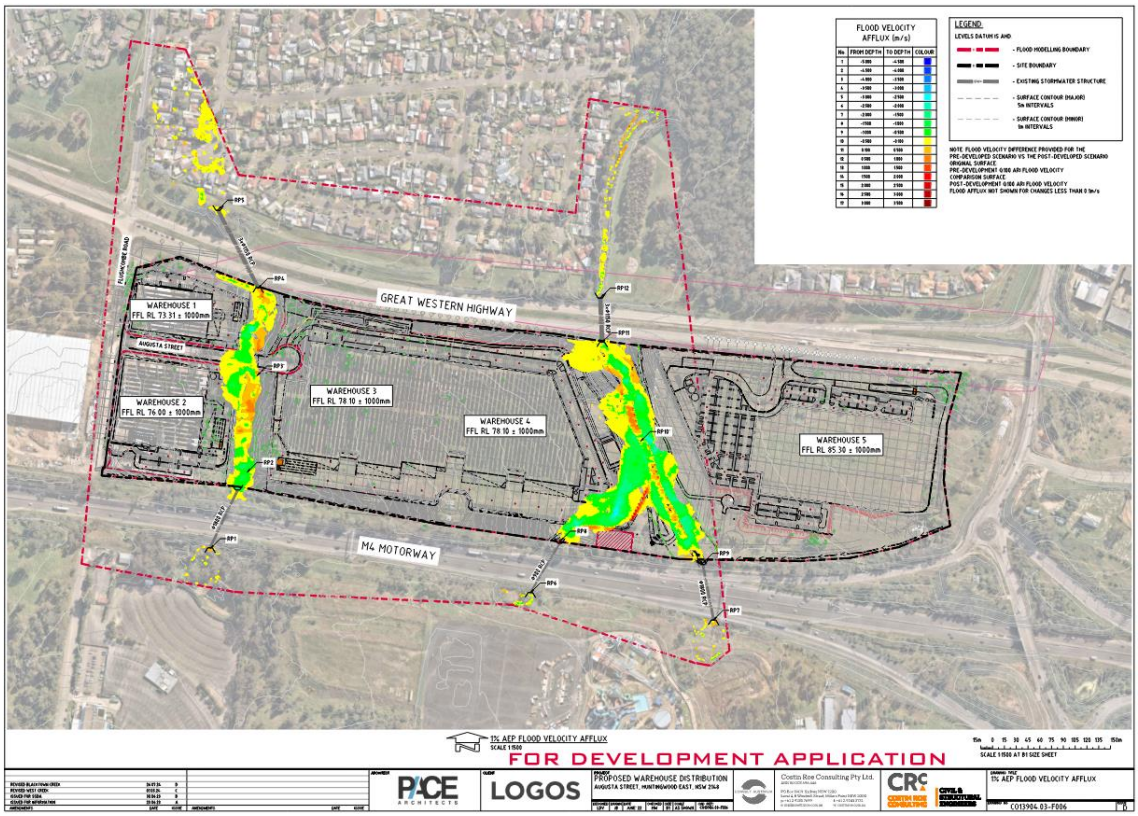

Figure 7.10: 1% AEP Post Developed Flood Velocity Afflux

7.5 Council Flood modelling Requirements

Council's *WSUD developer handbook* provides relevant requirements relating to development sites identified as affected by mainstream flooding, local runoff, local overland flooding, or sites situated in a defined low point with the potential for overland flows.

The intent of the document is to ensure that new developments do not experience undue flood risk and that existing development is not adversely flood affected through increased damage or hazard as a result of new development.

The flood planning level (FPL) for business/ industrial to be at or above the 1% AEP (1 in 100-year ARI) flood level plus 0.5m freeboard.

Building No	FPL	Proposed FFL
Building 1	RL69.00m	RL73.31m
Building 2	RL72.00m	RL76.00m
Building 3	RL72.00m	RL78.10m
Building 4	RL74.35m	RL78.10m

Building 5	RL76.50m	RL85.30

All levels on the site are noted to be higher than the FPL.

The PMF or extreme event provides an upper limit of flooding and associated consequences for the problem being investigated. It is used for emergency response planning purposes to address the safety of people.

In relation to flood impact on the development or impact from the development on flooding, it is noted that the modelled 1% AEP flood extent does not encroach the subject property, hence no adverse impact to existing flood conditions or surrounding developments are associated with the proposed development. As noted, that the majority of the site is not impacted by the regional PMF flood event, except for Building 1's hardstand being noted as Hazard Category H1.

Overall flood risk for the development, and from the development is considered low to negligible, and the development meets current council flood policy.

Hydraulic and Hazard Categorisation

Floodwaters can vary significantly, both in time and place across the floodplain. They can flow fast and deep at some locations and slow and shallow at other locations. This can result in large variations to the personal danger and physical property damage resulting from the flood.

Blacktown Council has 3 principles for management of the residual impacts of flooding (that is, the remaining flooding impacts once floor levels are raised to the flood planning level). These are, in order of importance:

1. Protection of people from injury.
2. Protection of building structures from damage.
3. Protection of building contents.

Blacktown Council's general standards for hazard for areas outside the Hawkesbury-Nepean backwater flooding area are based on Figure 6.7.9 Combined Flood Hazard Curves from Australian Rainfall and Runoff 2019 (ARR). These include:

- Vehicle parking (H1) - V * D <= 0.3 where V <= 2 m/s and D <= 0.2 m
- Driveways (H1) - V * D <= 0.3 where V <= 2 m/s and D <= 0.3 m
- Pedestrian Access (H2) - V * D <= 0.6 where V <= 2 m/s and D <= 0.5 m

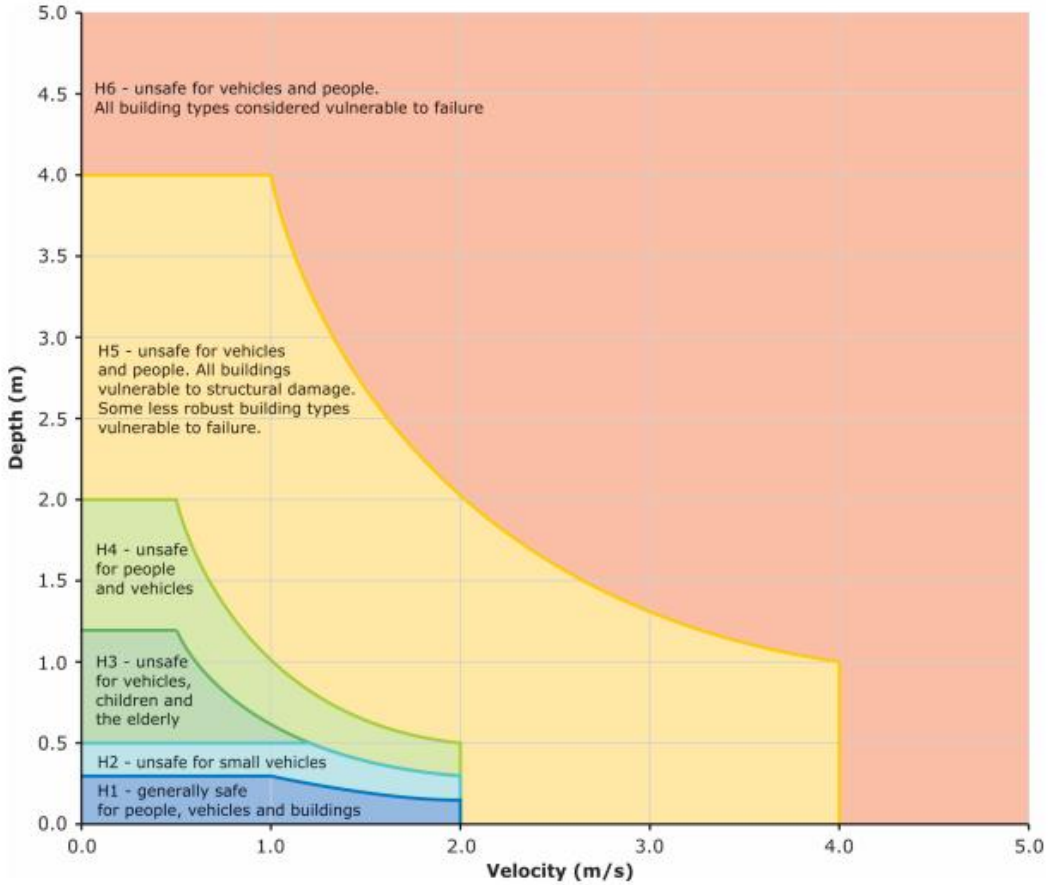

Figure 6.7.9. Combined Flood Hazard Curves (Smith et al., 2014)

Figure 7.17. Combined Flood Hazard Curves (Smith et al., 2014)

Table 6.7.3. Combined Hazard Curves - Vulnerability Thresholds (Smith et al., 2014)

Hazard Vulnerability Classification	Description
H1	Generally safe for vehicles, people and buildings.
H2	Unsafe for small vehicles.
H3	Unsafe for vehicles. children and the elderly.
H4	Unsafe for vehicles and people.
H5	Unsafe for vehicles and people. All buildings vulnerable to structural damage. Some less robust buildings subject to failure.
H6	Unsafe for vehicles and people. All building types considered vulnerable to failure.

Table 6.7.4. Combined Hazard Curves - Vulnerability Thresholds Classification Limits (Smith et al., 2014)

Hazard Vulnerability Classification	Classification Limit (D and V in combination)	Limiting Still Water Depth (D)	Limiting Velocity (V)
H1	D*V ≤ 0.3	0.3	2.0
H2	D*V ≤ 0.6	0.5	2.0
H3	D*V ≤ 0.6	1.2	2.0
H4	D*V ≤ 1.0	2.0	2.0
H5	D*V ≤ 4.0	4.0	4.0
H6	D*V > 4.0	-	-

Figure 7.18. Adopted Hazard Criteria and Provisional Flood Hazard Chart (Australian Rainfall and Runoff 2019)

Flood Damages

Damage caused by floods is generally categorised as either tangible or intangible. Tangible damages are financial in nature and can be readily measured in monetary terms. They include direct damages such as damage or loss caused by floodwaters wetting goods and property, and indirect damages such as lost wages incurred during cleanup periods after the flood event. Intangible damage includes emotional stress and even mental and physical illness caused by the flood. It is difficult, if not impossible to quantify intangible damages in financial terms.

From a flood planning perspective, it is important to consider the following direct damage categories:

- Contents Damage – refers to damage to the contents of buildings, including carpets and furniture etc.;
- Structural Damage – refers to damage to the structural fabric of buildings, such as foundations, walls floors, windows, and built-in fittings; and
- External Damage – includes damage to all items external to buildings, including cars, landscaping etc.

As there is no way to prevent a flood from occurring, and it is unrealistic to exclude all development within flood-prone areas, the intent of establishing a FPL is to minimise the risk of direct damage when a flood occurs. By minimising the direct damage, there is a carry-on effect, whereby other associated indirect tangible damages and intangible damages are also minimised.

Emergency Response Planning

Flood planning refers to the preparation of a formal community-based plan of action to deal with the threat, onset and aftermath of flooding. It involves planning for an event equal to, or greater than the event used to derive the FPL.

The plan of action should include an on-site response plan that addresses what measures should be undertaken once the threat of a flood is determined to be imminent. A flood evacuation strategy should also be included so that all persons within the precinct are familiar with the processes required if a flood occurs.

7.6 Flood Assessment Conclusion

A TUFLOW hydrodynamic flood model has been completed and the pre and post development flood events assessed for the 1% AEP rainfall event.

The assessment shows a reduction in post development 1% AEP flood levels, hence meeting impact requirements. The assessment shows the proposed building achieves flood planning and freeboard requirements.

8 CONSTRUCTION SOIL AND WATER MANAGEMENT

8.1 Soil and Water Management General

Without any mitigation measures and during typical construction activities, site runoff would be expected to convey a significant sediment load. A *Soil and Water Management Plan* (SWMP) and *Erosion and Sediment Control Plan* (ESCP), or equivalent, would be implemented for the construction of the Proposal. The SWMP and ESCPs would be developed in accordance with the principles and requirements of *Managing Urban Stormwater – Soils & Construction Volume 1 ('Blue Book')(Landcom, 2004)* with a staged approach.

In accordance with the principles included in the Blue Book, a number of controls have been incorporated into a preliminary Staged ESCP (refer to accompanying Drawings in **Appendix A**. The Staged ESCP considers initial site establishment, requirements during construction of roads and infrastructure and estate earthworks, completion of estate works and the period between this and development of individual lots.

Section 1 provides a summary of the construction works for the Proposal. While all construction activities have the potential to impact on water quality, the key activities are:

- Erosion and sediment control installation.
- Grading of existing earthworks to suit building layout, drainage layout and pavements.
- Stormwater and drainage works.
- Service installation works.
- Building construction works.

We note that a more detailed ESCP and Construction Soil and Water Management Plan forms part of the Construction Environmental Management Plan (CEMP) submitted in the EIS and prepared by the Principal Contractor. The measures in **Section 8** of this report will be generally consistent with those of the CEMP.

8.2 Typical Management Measures

Sediment Basins

Sediment basins have been sized (based on 5 day, 85th percentile rainfall) and located to ensure sediment concentrations in site runoff are within acceptable limits. Preliminary basin sizes have been calculated in accordance with the Blue Book and are based on 'Type F' soils. These soils are fine grained and require a relatively long residence time to allow settling. (Or 'Type D' soils. These soils contain a significant proportion of fine (<0.005mm) "dispersible" materials that will never settle unless flocculated.)

Sediment basins for 'Type F'/'Type D' soils are typically wet basins which are pumped out following a rainfall event when suspended solids concentrations of less than 50 mg/L have been achieved.

Refer CO13904.03-SSDA200 for calculations, per the Blue Book Guidelines Section 6.3.3.

Sediment Fences & Diversion Drains

Sediment fences are located around the perimeter of the site to ensure no untreated runoff leaves the site. They have also been located around the existing drainage channels to minimise sediment migration into waterways and sediment basins. They have also been located around the proposed stockpiles on the site.

Stabilised Site Access

For the proposal, a stabilised site access is proposed at the seperate entries to the eastern works area via the GWH and the western works area via Flushcombe Road. This will limit the risk of sediment being transported onto Flushcombe Road, Great Western Highway and other public roads.

Reference should be made to the letter referenced **CO13904.03-14.ltr** and attached under Annexure N of this report for more detail around the proposed temporary construction access routes over Blacktown Creek. The first proposed temporary crossing is located over the southern portion of Blacktown Creek (within the development boundary) and follows an existing maintenance track across the creek. However, this route crosses a proposed future wetland area and, therefore, cannot remain in place throughout the lifetime of the construction works. Conversely, a second temporary crossing, situated over the northern portion of Blacktown Creek, have been identified and is the preferable option as it can remain in place throughout the entire construction process, until the future intersection from proposed Lot 5 (west) with the Great Western Highway is constructed.

The temporary haul road crossings are expected to be made up of approximately 300mm thick road base. Sediment fences and sediment fence returns should be erected prior to the commencement of any work with Blacktown Creek. Sediment fences should remain in place until completion of the instream work associated with the construction of the temporary crossings, in these locations, to protect existing downstream infrastructure and vegetation. It is proposed that work is undertaken during a period of dry forecasted weather.

A cofferdam arrangement, based on IECA recommendations, will be proposed to protect the disturbed area. A temporary low flow diversion pipe or pumped system should be installed at the base of the channel to divert clean water from the upstream baseflow. Similar alternate works methodology may be employed in the final detail design subject to Contractor input and the final ESCP and temporary works methodology. It is proposed that all instream works are undertaken in the specified section of Blacktown Creek in accordance with the abovementioned series of erosion and sediment control plans and immediately plant the works with appropriate species, at a density that would naturally occur, to stabilise the works.

8.3 Other Management Measures

Other management measures that will be employed are expected to include:

- Minimising the extent of disturbed areas across the site at any one time.
- Progressive stabilisation of disturbed areas or previously completed earthworks to suit the proposal once trimming works are complete.
- Regular monitoring and implementation of remedial works to maintain the efficiency of all controls.

It is noted that the controls included in the preliminary ESCP are expected to be reviewed and updated as the design, staging and construction methodology is further developed for the Proposal.

9 CONCLUSION

This Civil Engineering Report has been prepared in accordance with the technical requirements of the Secretary's Environmental Assessment Requirements (SEARs), and in support of the State Significant Development Application (SSD- 36138263) for a Proposed Development at Augusta Street, Blacktown, NSW within the Huntingwood Precinct.

A civil engineering strategy for the site has been developed which provides a best practice solution within the constraints of the existing landform and proposed development layout. Within this strategy a stormwater quantity and quality management strategy has been developed to consider peak flows and reduce pollutant loads in stormwater leaving this site. The stormwater management for the development has been designed in accordance with Blacktown City Council requirements and ensuring acceptable impacts relating to the development.

The hydrological assessment shows local post development flows from the site will be managed to pre-development flow or lower, consistent with the requirements of Blacktown City Council, Huntingwood Precinct DCP and UPRCT OSD requirements. The assessment demonstrates that the site discharge will be acceptable per local and regional planning requirement and not unduly affect any land, drainage systems or watercourse as a result of the development.

During the construction phase, a Sediment and Erosion Control Plan will be in place to ensure the downstream drainage system and receiving waters are protected from sediment laden runoff. Temporary access would be designed across Blacktown Creek as detailed in letter CO13904.03-14.ltr.

During the operational phase of the development, we propose a stormwater quality treatment system incorporating the use of a treatment train approach with the Primary treatment being via either pit litter baskets and/or gross pollutant traps (GPT's) and the Tertiary treatment via either Bio-retention basins prior to discharge from the site Catchments 3A & 4, or to a proprietary filtration treatment system (Ocean Protect Stormfilters (or approved equivalent) in the new OSD tanks for catchments 1, 2, 3B, 5A-1, 5A-2 and 5B. These are the proposed measures to mitigate any increase in stormwater pollutant load generated by the development.

MUSIC modelling results indicate that the proposed STM are effective in reducing pollutant loads in stormwater discharging from the site and meet the requirements of Council's pollution reduction targets. Best management practices have been applied to the development to ensure that the quality of stormwater runoff is not detrimental to the receiving environment.

A TUFLOW hydrodynamic flood model has been completed and the pre and post development flood events assessed for the 5%, 1%, 0.5%, 0.2% AEP rainfall events and the PMF event.

The assessment shows a reduction in post development 1% AEP flood levels, hence meeting impact requirements. The assessment shows the proposed building achieves flood planning and freeboard requirements.

This Appendix confirms the technical input and detailed output completed as part of the assessment. **Appendix I** is to be read in conjunction with Section 7 of this report.

It is recommended the management strategies in this report be approved and incorporated into the future detailed design.

GENERAL NOTES:

1. THESE DRAWINGS SHALL BE READ IN CONJUNCTION WITH ALL ARCHITECTURAL AND OTHER CONSULTANTS' DRAWINGS AND SPECIFICATIONS AND WITH SUCH OTHER WRITTEN INSTRUCTIONS AS MAY BE ISSUED DURING THE COURSE OF THE CONTRACT. ANY DISCREPANCY SHALL BE REFERRED TO THE ENGINEER BEFORE PROCEEDING WITH THE WORK.
2. ALL MATERIALS AND WORKMANSHIP SHALL BE IN ACCORDANCE WITH THE RELEVANT AND CURRENT STANDARDS AUSTRALIA CODES AND WITH THE BY-LAWS AND ORDINANCES OF THE RELEVANT BUILDING AUTHORITIES EXCEPT WHERE VARIED BY THE PROJECT SPECIFICATION.
3. ALL DIMENSIONS SHOWN SHALL BE VERIFIED BY THE BUILDER ON SITE.
   ENGINEER'S DRAWINGS SHALL NOT BE SCALED FOR DIMENSIONS.
   ENGINEER'S DRAWINGS ISSUED IN ANY ELECTRONIC FORMAT MUST NOT BE USED FOR DIMENSIONAL SETOUT. REFER TO THE ARCHITECT'S DRAWINGS FOR ALL DIMENSIONAL SETOUT INFORMATION.
4. DURING CONSTRUCTION THE STRUCTURE SHALL BE MAINTAINED IN A STABLE CONDITION AND NO PART SHALL BE OVERSTRESSED. TEMPORARY BRACING SHALL BE PROVIDED BY THE BUILDER TO KEEP THE WORKS AND EXCAVATIONS STABLE AT ALL TIMES.
5. UNLESS NOTED OTHERWISE ALL LEVELS ARE IN METRES AND ALL DIMENSIONS ARE IN MILLIMETRES.
6. ALL WORKS SHALL BE UNDERTAKEN IN ACCORDANCE WITH ACCEPTABLE SAFETY STANDARDS & APPROPRIATE SAFETY SIGNS SHALL BE INSTALLED AT ALL TIMES DURING THE PROGRESS OF THE JOB.

ELECTRONIC INFORMATION NOTES:

1. THE ISSUED DRAWINGS IN HARD COPY OR PDF FORMAT TAKE PRECEDENCE OVER ANY ELECTRONICALLY ISSUED INFORMATION, LAYOUTS OR DESIGN MODELS.
2. THE CONTRACTOR'S DIRECT AMENDMENT OR MANIPULATION OF THE DATA OR INFORMATION THAT MIGHT BE CONTAINED WITHIN AN ENGINEER-SUPPLIED DIGITAL TERRAIN MODEL AND ITS SUBSEQUENT USE TO UNDERTAKE THE WORKS WILL BE SOLELY AT THE DISCRETION OF AND THE RISK OF THE CONTRACTOR.
3. THE CONTRACTOR IS REQUIRED TO HIGHLIGHT ANY DISCREPANCIES BETWEEN THE DIGITAL TERRAIN MODEL AND INFORMATION PROVIDED IN THE CONTRACT AND/OR DRAWINGS AND IS REQUIRED TO SEEK CLARIFICATION FROM THE SUPERINTENDENT.
4. THE ENGINEER WILL NOT BE LIABLE OR RESPONSIBLE FOR THE POSSIBLE ON-GOING NEED TO UPDATE THE DIGITAL TERRAIN MODEL, SHOULD THERE BE ANY AMENDMENTS OR CHANGES TO THE DRAWINGS OR CONTRACT INITIATED BY THE CONTRACTOR.

DRAWING TITLE: DRAWING LIST & GENERAL NOTES

DRAWING No: C013904.03-SSDA100

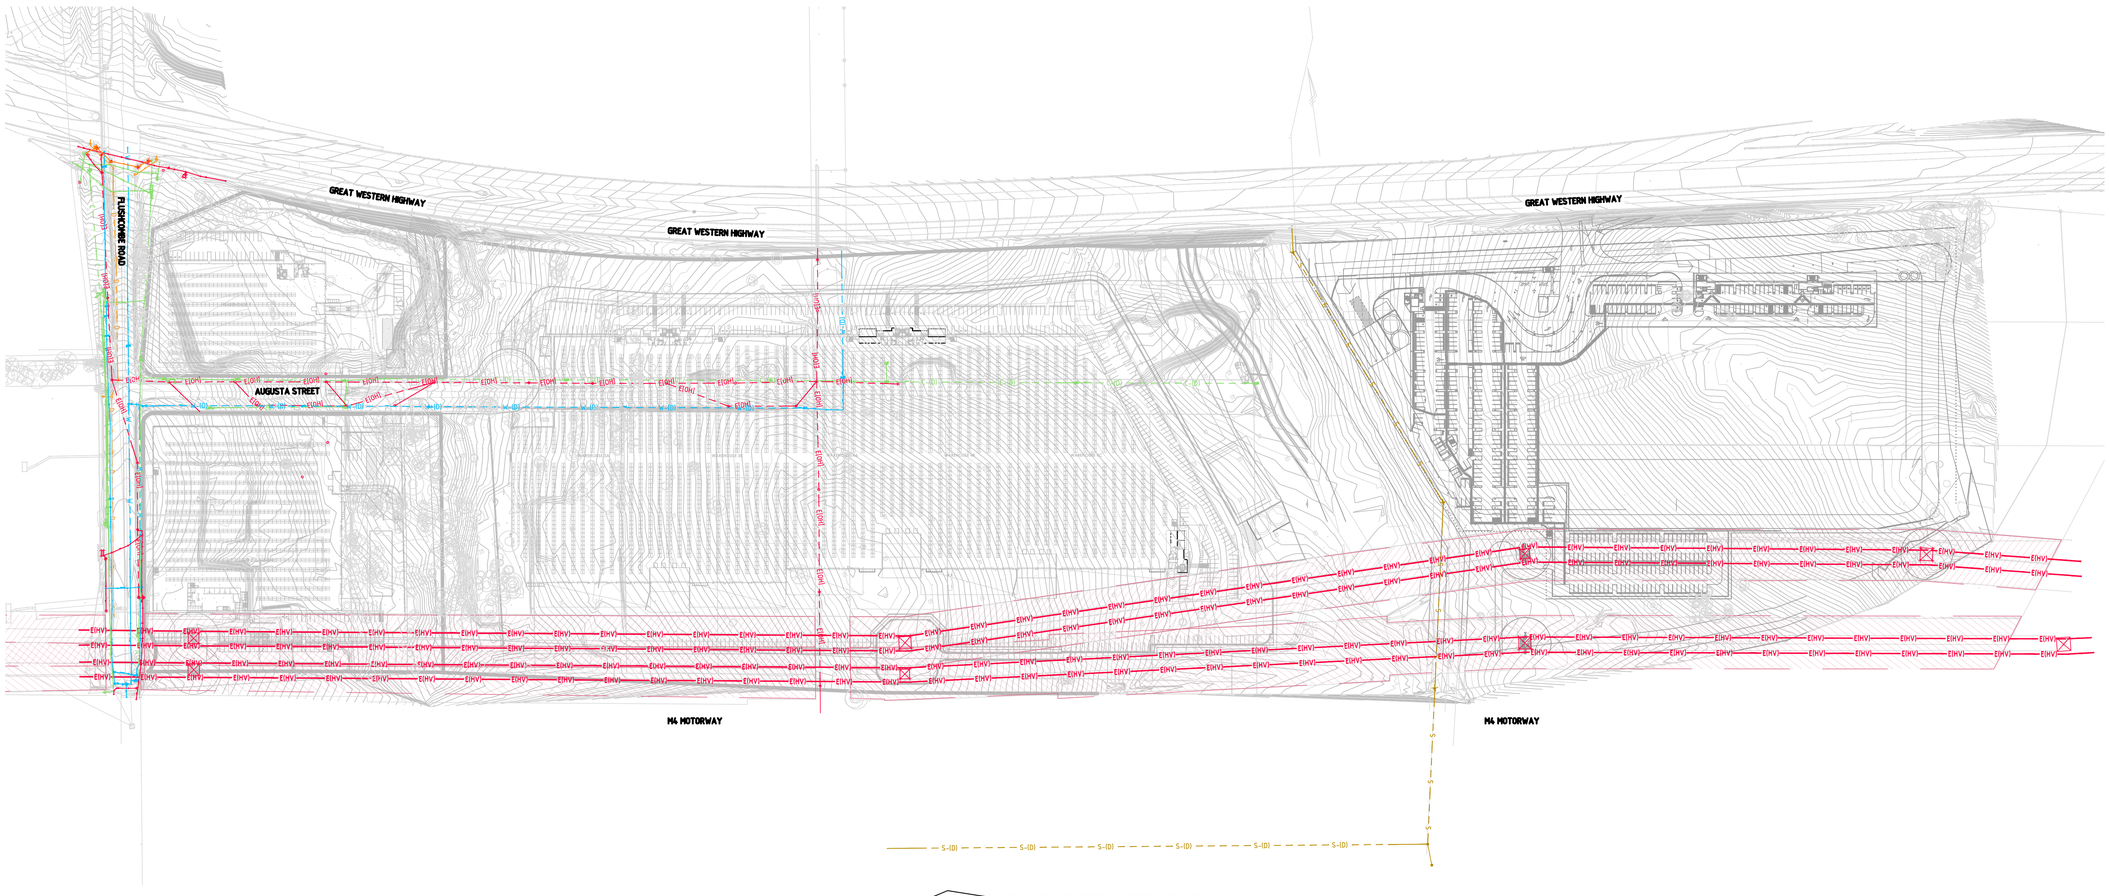

ISSUE: G

EXISTING SERVICES NOTES:

1. DURING THE EXECUTION OF WORKS, THE CONTRACTOR SHALL MAINTAIN THE INTEGRITY OF EXISTING SERVICES. THE CONTRACTOR SHALL REPAIR ANY DAMAGE CAUSED TO THE EXISTING SERVICES TO THE SATISFACTION OF THE SUPERINTENDENT AND THE RELEVANT SERVICE AUTHORITY, AT NO COST TO THE PRINCIPAL.
2. WHERE IT IS NECESSARY TO REMOVE, DIVERT OR CUT INTO ANY EXISTING SERVICE, THE CONTRACTOR SHALL GIVE AT LEAST THREE (3) DAYS NOTICE OF ITS REQUIREMENTS TO THE SUPERINTENDENT, WHO WILL ADVISE WHAT ARRANGEMENTS SHOULD BE MADE FOR THE ALTERATION OF SUCH EXISTING WORKS.
3. EXISTING SERVICES HAVE BEEN PLOTTED FROM SUPPLIED DATA. THE ACCURACY IS NOT GUARANTEED. IT SHALL BE THE CONTRACTOR'S RESPONSIBILITY TO ESTABLISH THE LOCATION AND LEVEL OF ALL EXISTING SERVICES PRIOR TO COMMENCING WORK. ALL CLEARANCES AND APPROVALS SHALL ALSO BE OBTAINED FROM THE RELEVANT SERVICE AUTHORITY PRIOR TO THE COMMENCEMENT OF WORK.
4. ALL NEW AND EXHUMED SERVICES THAT CROSS EXISTING AND FUTURE ROADS/PAVEMENTS WITHIN THE SITE SHALL BE BACKFILLED WITH DGB20 MATERIAL TO SUBGRADE LEVEL AND COMPACTED TO 98% STANDARD DENSITY RATIO. SUBJECT TO PRIOR APPROVAL FROM RELEVANT AUTHORITY.
5. ON COMPLETION OF SERVICES INSTALLATION. ALL DISTURBED AREAS SHALL BE RESTORED TO ORIGINAL, INCLUDING KERBS, FOOTPATHS, CONCRETE AREAS, GRAVEL AREAS, GRASSED AREAS AND ROAD PAVEMENTS.
6. CARE TO BE TAKEN WHEN EXCAVATING NEAR UTILITY SERVICES. NO MECHANICAL EXCAVATION TO BE UNDERTAKEN OVER SERVICES. LIAISE WITH RELEVANT AUTHORITY.
7. THE CONTRACTOR SHALL ALLOW FOR THE CAPPING OFF, EXCAVATION AND REMOVAL IF REQUIRED OF ALL EXISTING SERVICES IN AREAS AFFECTED BY THE WORKS WITHIN THE CONTRACT AREA AS SHOWN ON THE DRAWINGS UNLESS DIRECTED OTHERWISE BY THE SUPERINTENDENT. ALL TO REGULATORY AUTHORITY STANDARDS AND APPROVAL.
8. THE CONTRACTOR IS TO MAINTAIN EXISTING STORMWATER DRAINAGE FLOWS THROUGH THE ROADS AT ALL TIMES. MAKE DUE ALLOWANCE FOR ALL SUCH FLOWS AT ALL TIMES.
9. PRIOR TO COMMENCEMENT OF ANY WORKS THE CONTRACTOR SHALL OBTAIN THE SUPERINTENDENT'S APPROVAL OF THE PROGRAM FOR THE RELOCATION/CONSTRUCTION OF TEMPORARY SERVICES.
10. CONTRACTOR SHALL CONSTRUCT TEMPORARY SERVICES AS REQUIRED TO MAINTAIN EXISTING SUPPLY TO BUILDINGS REMAINING IN OPERATION DURING WORKS TO THE SATISFACTION AND APPROVAL OF THE SUPERINTENDENT. ONCE DIVERSION IS COMPLETE AND COMMISSIONED THE CONTRACTOR SHALL REMOVE ALL SUCH TEMPORARY SERVICES AND MAKE GOOD TO THE SATISFACTION OF THE SUPERINTENDENT.
11. INTERRUPTION TO SUPPLY OF EXISTING SERVICES SHALL BE DONE SO AS NOT TO CAUSE ANY INCONVENIENCE OR DAMAGE TO THE ADJACENT RESIDENCES. CONTRACTOR TO GAIN APPROVAL OF THE SUPERINTENDENT FOR TIME OF INTERRUPTION.
12. THE CONTRACTOR SHALL UNDERTAKE A DIAL BEFORE YOU DIG (DBYD 1100) SERVICES SEARCH BEFORE THE COMMENCEMENT OF ANY WORKS.

DRAWING TITLE: PROPOSED TEMPORARY CONSTRUCTION ACCESS ROUTES AND CREEK CROSSINGS

DRAWING No: C013904.03-SSDA190 ISSUE: B

TABLE 1 - STABILISATION REQUIREMENTS AND TREATMENT METHODS

DURING CONSTRUCTION - TEMPORARY STABILISATION
(DURING PERIODS OF INACTIVITY OR WHEN WORKS ARE ON HOLD)

LANDS	STABILISATION REQUIREMENT	TIMEFRAMES	TREATMENT METHODS - PRODUCTS	REMARKS
ALL LANDS	C-FACTOR = 0.15 (50% EQUIVALENT GROUND COVER[1]	APPLIES AFTER 20 WORKING DAYS OF INACTIVITY (EVEN THOUGH WORKS MIGHT CONTINUE LATER)	SOIL BINDER (I.E VITAL P47/STONEWALL OR EQUIVALENT[1])	- SPRAY ALL SURFACES WITH VITAL P47/STONEWALL OR EQUIVALENT[1]. - VITAL DILUTION RATE = 1:10(VITAL:WATER). -RE-APPLY/MAINTAIN AS NECESSARY (APPROX. EVERY 3-6 MONTHS WITHOUT SUITABLE VEGETATION COVER) TO ENSURE THE REQUIRED COVER IS PROVIDED.
			GEOTEXTILE, JUTE MATTING, BLACK PLASTIC OR EQUIVALENT[1]	- COVER ALL EXPOSED SOILS. - RE-APPLY/MAINTAIN AS NECESSARY TO ENSURE THE REQUIRED COVER IS PROVIDED.
WATERWAYS, DRAINAGE LINES AND CONCENTRATED FLOW AREAS	C-FACTOR = 0.05 (70% GRASS COVER OR EQUIVALENT GROUND COVER[1]	APPLIES AFTER 10 WORKING DAYS FROM COMPLETION OF FORMATION AND BEFORE THEY ARE ALLOWED TO CARRY CONCENTRATED FLOWS.	REFER TO THE DRAIN SPECIFICATIONS DETAILED ON THE PLAN FOR SPECIFIC LINING/STABILISATION REQUIREMENTS. EXAMPLE TREATMENT METHODS ARE SHOWN BELOW.	
			TEMPORARY LINING - GEOTEXTILE (I.E. BIDIM A24 OR EQUIVALENT[1])	- COMPLETE ANY SUBSOIL TREATMENT BEFORE LAYING THE MATTING. - INSTALL MATTING IN ACCORDANCE WITH SD 5-7. - RE-APPLY/MAINTAIN AS NECESSARY TO ENSURE THE REQUIRED COVER IS PROVIDED.
			JUTE MESH, SEEDING AND SOIL BINDER (I.E. VITAL P47/STONEWALL OR EQUIVALENT[1]) - LOW FLOWS TO MODERATE	- COMPLETE SUBSOIL TREATMENT (I.E. GYPSUM LIGHTLY RIPPED INTO SUBGRADE AT A RATE OF 5 TONNES/Ha). - PLACE TOPSOIL TO A DEPTH OF AT LEAST 75mm. - COMPLETE ANY FERTILISATION AND SEEDING BEFORE LAYING THE MATTING. - INSTALL MATTING IN ACCORDANCE WITH SD 5-7. - SPRAY ALL SURFACES WITH VITAL P47/STONEWALL OR EQUIVALENT[1]. - VITAL DILUTION RATE = 1L / m^2 OF DILUTED VITAL MIXTURE. - RE-APPLY/MAINTAIN AS NECESSARY TO ENSURE THE REQUIRED COVER IS PERMANENTLY MAINTAINED.
			JUTE MATTING (~350gsm) AND SEEDING OR EQUIVALENT[1]) - LOW FLOWS TO MODERATE	- COMPLETE SUBSOIL TREATMENT (I.E. GYPSUM LIGHTLY RIPPED INTO SUBGRADE AT A RATE OF STONNES/Ha). - PLACE TOPSOIL TO A DEPTH OF AT LEAST 75mm. - COMPLETE ANY FERTILISATION AND SEEDING BEFORE LAYING THE MATTING. - INSTALL MATTING IN ACCORDANCE WITH SD 5-7. - RE-APPLY/MAINTAIN AS NECESSARY TO ENSURE THE REQUIRED COVER IS PERMANENTLY MAINTAINED.
			TURF REINFORCEMENT MATTING (TRM) (E.G. TERRAMAT OR EQUIVALENT[1]) - MODERATE FLOWS	- COMPLETE SUBSOIL TREATMENT (I.E. GYPSUM LIGHTLY RIPPED INTO SUBGRADE AT A RATE OF STONNES/Ha). - PLACE TOPSOIL TO A DEPTH OF AT LEAST 75mm. - COMPLETE ANY FERTILISATION AND SEEDING BEFORE LAYING THE MATTING. - INSTALL MATTING IN ACCORDANCE WITH SD 5-7. - RE-APPLY/MAINTAIN AS NECESSARY TO ENSURE THE REQUIRED COVER IS PERMANENTLY MAINTAINED.
			ROCK LINING - HIGH FLOWS	- COMPLETE SUBSOIL TREATMENT (I.E. GYPSUM LIGHTLY RIPPED INTO SUBGRADE AT A RATE OF STONNES/Ha). - INSTALL GEOTEXTILE UNDERLAY (IF SPECIFIED) IN ACCORDANCE WITH SD 5-7. - INSTALL ROCK ARMOURING (TO THE DEPTH AND SIZE AS SPECIFIED ON THE PLAN).
STOCKPILES	C-FACTOR = 0.10 (60% GRASS COVER OR EQUIVALENT GROUND COVER[1]	APPLIES AFTER 10 WORKING DAYS FROM COMPLETION OF FORMATION	SEEDING AND SOIL BINDER (I.E. VITAL P47/STONEWALL OR EQUIVALENT[1])	- APPLY SEED TO ALL STOCKPILE SURFACES (NOTE: SEEDING MAY NOT BE REQUIRED IF EXISTING SEEDBED IS PRESENT). -SPRAY ALL STOCKPILE SURFACES WITH VITAL P47/STONEWALL OR EQUIVALENT[1] - VITAL DILUTION RATE = 1:10 (VITAL:WATER). - APPLICATION RATE = 1L / m2 OF DILUTED VITAL MIXTURE. - RE-APPLY/MAINTAIN AS NECESSARY TO ENSURE THE REQUIRED COVER IS PERMANENTLY MAINTAINED.
			GEOTEXTILE, JUTE MATTING, BLACK PLASTIC OR EQUIVALENT[1]	- COVER ALL EXPOSED SOILS. - RE-APPLY/MAINTAIN AS NECESSARY TO ENSURE THE REQUIRED COVER IS PROVIDED.
GENERAL SURFACES	C-FACTOR = 0.10 / 0.05 (60% / 70% GRASS COVER OR EQUIVALENT GROUND COVER[1]	C-FACTOR = 0.1 APPLIES AFTER 10 WORKING DAYS FROM COMPLETION OF FORMATION AND C-FACTOR = 0.05 APPLIES WITHIN A FURTHER 60 DAYS	TOPSOIL, SEEDING AND SOIL BINDER (I.E. VITAL P47/STONEWALL OR EQUIVALENT[1])	- REFER TO SD 7-1 - COMPLETE SUBSOIL TREATMENT (I.E. GYPSUM LIGHTLY RIPPED INTO SUBGRADE AT A RATE OF STONNES/Ha). - PLACE GYPSUM TREATED TOPSOIL TO A DEPTH OF AT LEAST 75mm. - APPLY ANY FERTILISERS REQUIRED. - APPLY SEED TO ALL SURFACES. - SPRAY ALL SURFACES WITH VITAL P47/STONEWALL OR EQUIVALENT[1]. - VITAL DILUTION RATE = 1:10 (VITAL:WATER). - APPLICATION RATE = 1L / m2 OF DILUTED VITAL MIXTURE. - RE-APPLY/MAINTAIN AS NECESSARY TO ENSURE THE REQUIRED COVER IS PERMANENTLY MAINTAINED.
			HYDROMULCH OR EQUIVALENT[1]	- REFER TO SD 7-1 - COMPLETE SUBSOIL TREATMENT (I.E. GYPSUM LIGHTLY RIPPED INTO SUBGRADE AT A RATE OF STONNES/Ha). - PLACE GYPSUM TREATED TOPSOIL TO A DEPTH OF AT LEAST 75mm. - APPLY HYDROMULCH WITH APPROVED SEED MIX TO SOIL SURFACE. - RE-APPLY/MAINTAIN AS NECESSARY TO ENSURE THE REQUIRED COVER IS PERMANENTLY MAINTAINED.

[1] - EQUIVALENT COVER/PRODUCT MUST ACHIEVE THE EQUIVALENT C-FACTOR WITH PROVEN RESEARCH/DOCUMENTATION TO VERIFY THIS. STANDARD DRAWINGS REFERENCED CAN BE LOCATED IN THE 'SOILS & CONSTRUCTION, MANAGING URBAN STORMWATER - VOLUME 1' BOOK BY LANDCOM. ALTERNATIVE DETAILS MAY BE SOUGHT IN CONSULTATION WITH THE ENGINEER

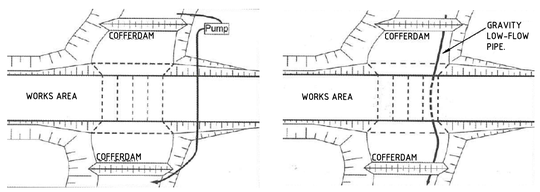

TABLE 2 - LIMITATIONS TO ACCESS DURING CONSTRUCTION

LAND USE	LIMITATION	REMARKS
CONSTRUCTION AREAS	LIMITED TO 5 (PREFERABLE 2) METRES FROM THE EDGE OF ANY ESSENTIAL CONSTRUCTION ACTIVITY AS SHOWN ON ENGINEERING PLANS.	ALL SITE WORKERS SHOULD CLEARLY RECOGNISE THESE AREAS THAT, WHERE APPROPRIATE, ARE IDENTIFIED WITH BARRIER FENCING (UPSLOPE) AND SEDIMENT FENCE (DOWNSLOPE) OR SIMILAR MATERIALS.
ACCESS CORRIDORS	LIMITED TO A MAXIMUM WIDTH OF 7 METERS	THE SITE MANAGER WILL DETERMINE AND MARK THE LOCATION OF THESE ZONES ON SITE, THEY CAN VARY IN POSITION SO AS TO BEST CONSERVE EXISTING VEGETATION AND PROTECT DOWNSTREAM AREAS WHILE BEING CONSIDERATE OF THE NEEDS EFFICIENT WORKS ACTIVITIES. ALL SITE WORKERS WILL CLEARLY RECOGNISE THESE BOUNDARIES.
REMAINING LANDS, INCLUDING REVEGETATION AREA	ENTRY PROHIBITED EXCEPT FOR ESSENTIAL MANAGEMENT WORKS	THINNING OF GROWTH MIGHT BE NECESSARY, FOR EXAMPLE, FOR FIRE REDUCTION OR WEED REMOVAL.

EROSION CONTROL NOTES

ALL SEDIMENT CONTROL WORK INCLUDING DIVERSION BANKS, CATCH DRAINS, V-DRAINS AND SEDIMENT FENCES SHALL BE COMPLETED IN ACCORDANCE WITH THE STAGED PLANS PRESENTED AND SHALL FACILITATE A STAGED CONSTRUCTION METHODOLOGY.

1. ALL EROSION & SEDIMENT CONTROLS SHALL BE COMPLETED IN ACCORDANCE WITH THE 'SOILS AND CONSTRUCTION, MANAGING URBAN STORMWATER - THE BLUE BOOK' BY LANDCOM.
2. SEDIMENT FENCES AND SEDIMENT FENCE RETURNS SHALL BE ERECTED CONVEX TO THE CONTOUR TO POND WATER.
3. STRAW BALE BARRIERS & GEOFABRIC FENCES OR SEDIMENT FANCNES ARE TO BE CONSTRUCTED TO TOE OF BATTER, PRIOR TO COMMENCEMENT OF EARTHWORKS, IMMEDIATELY AFTER CLEARING OF VEGETATION AND BEFORE REMOVAL OF TOP SOIL.
4. ALL TEMPORARY EARTH BERMS, DIVERSION AND SEDIMENT BASIN EMBANKMENTS ARE TO BE MACHINE COMPACTED, SEEDED AND MULCHED FOR TEMPORARY VEGETATION COVER AS SOON AS THEY HAVE BEEN FORMED. REFER TO TABLE 1 FOR APPROVED STABILISATION METHODS.
5. CLEAN OR NON-SITE WATER IS TO BE DIVERTED AWAY FROM DISTURBED GROUND AND INTO THE DRAINAGE SYSTEM OVER STABLE SURFACES.
6. THE CONTRACTOR IS RESPONSIBLE FOR MAINTAINING AND PROVIDING ON GOING ADJUSTMENT TO EROSION CONTROL MEASURES AS REQUIRED DURING CONSTRUCTION.
7. ALL SEDIMENT TRAPPING STRUCTURES AND DEVICES ARE TO BE INSPECTED AFTER STORMS OF 5mm OR GREATER WITHIN A 24 HOUR PERIOD FOR STRUCTURAL DAMAGE OR CLOGGING, TRAPPED MATERIAL IS TO BE REMOVED TO A SAFE, APPROVED LOCATION.
8. THE SITE IS TO BE INSPECTED FOLLOWING A RAINFALL EVENT OF 5mm OR GREATER WITHIN A 24 HOUR PERIOD FOR EVIDENCE OF EROSION AND RESPOND WITH INCREASED CONTROL IF REQUIRED.
9. ALL FINAL EROSION PREVENTION MEASURES INCLUDING THE ESTABLISHMENT OF GRASSING ARE TO BE MAINTAINED UNTIL THE END OF THE DEFECTS LIABILITY PERIOD.
10. ALL EARTHWORKS AREAS SHALL BE ROLLED ON A REGULAR BASIS TO SEAL THE EARTHWORKS.
11. ALL FILL AREAS ARE TO BE LEFT WITH A BUND AT THE TOP OF THE SLOPE AT THE END OF EACH DAY'S EARTHWORKS TO DIRECT WATER TO A STABLE OUTLET OVER THE BATTER OR INTERNALLY TOWARDS SEDIMENT CONTROL. THE HEIGHT OF THE BUND SHALL BE A MINIMUM OF 200mm.
12. ALL CUT AND FILL SLOPES ARE TO BE SEEDED AND HYDROMULCHED WITHIN 10 DAYS OF COMPLETION OF FORMATION.
13. AFTER PERMANENT STABILISATION OF THE SITE IS COMPLETE (I.E. BY TOPSOILING, PAVING ETC.) AND THE SITE IS DEEMED TO BE STABLE IN THE OPINION OF A SUITABLY QUALIFIED PERSON ALL TEMPORARY WORK SUCH AS SEDIMENT FENCE, DIVERSION DRAINS ETC SHALL BE REMOVED.
14. ALL STOCKPILES ARE TO BE SUITABLY COVERED AND STABILIZED TO THE SATISFACTION OF THE SITE MANAGER TO PREVENT WIND AND WATER EROSION.
15. ANY AREA THAT IS NOT APPROVED BY THE CONTRACT ADMINISTRATOR FOR CLEARING OR DISTURBANCE BY THE CONTRACTOR'S ACTIVITIES SHALL BE CLEARLY MARKED AND SIGN POSTED, FENCED OFF OR OTHERWISE APPROPRIATELY PROTECTED AGAINST ANY SUCH DISTURBANCE.
16. ALL STOCKPILE SITES SHALL BE SITUATED IN AREAS INDICATED ON THE APPROVED EROSION AND SEDIMENTATION CONTROL PLAN OR APPROVED FOR SUCH USE BY THE SITE MANAGER. A 6m BUFFER ZONE SHALL EXIST BETWEEN STOCKPILE SITES AND ANY STREAM OR FLOW PATH. ALL STOCKPILES SHALL BE ADEQUATELY PROTECTED FROM EROSION AND CONTAMINATION OF THE SURROUNDING AREA BY USE OF THE MEASURES IN THE APPROVED ESCP.
17. ACCESS AND EXIT AREAS SHALL INCLUDE TRUCK SHAKER GRID OR OTHER METHODS APPROVED BY THE SITE MANAGER FOR THE REMOVAL OF SOIL MATERIALS FORM MOTOR VEHICLES.
18. THE CONTRACTOR IS TO ENSURE RUNOFF FROM ALL AREAS WHERE THE NATURAL SURFACE IS DISTURBED BY CONSTRUCTION, INCLUDING ACCESS ROADS, DEPOT AND STOCKPILE SITES, SHALL BE FREE OF SEDIMENTS BEFORE IT IS EITHER DISPERSED TO STABLE AREAS OR DIRECTED TO NATURAL WATERCOURSES.
19. THE CONTRACTOR SHALL PROVIDE AND MAINTAIN SLOPES, CROWNS AND DRAINS ON ALL EXCAVATIONS AND EMBANKMENTS TO ENSURE SATISFACTORY DRAINAGE AT ALL TIMES WATER SHALL NOT BE ALLOWED TO POND ON THE WORKS UNLESS SUCH PONDING IS PART OF AN APPROVED ESCP / SWMP.

PUMPED SYSTEM OPTION — GRAVITY PIPE OPTION

INSTREAM WORKS COFFERDAM ARRANGEMENT

DUST CONTROL NOTES:

1. IT IS THE RESPONSIBILITY OF THE CONTRACTOR TO ENSURE DUST CONTROL MEASURES ARE APPLIED AND MAINTAINED IN ACCORDANCE WITH THE GOVERNING AUTHORITIES REQUIREMENTS.
2. THE APPLICATION OF LIQUID BASED DUST SUPPRESSION MEASURES MUST BE SUCH THAT SEDIMENT LADEN RUNOFF RESULTING FROM SUCH MEASURES DOES NOT CREATE A TRAFFIC OR ENVIRONMENTAL HAZARD. (EG UTILISING SEDIMENT CONTROLS)
3. DUST GENERATION ASSOCIATED WITH WIND EROSION TO BE CONTROLLED USING WATER TRUCKS, DUST SUPPRESSING FOG, MIST GENERATORS, SEALANT PLACED OVER THE SOIL, SURFACE ROUGHENING OR RE-VEGETATION.
4. THE FOLLOWING ACTIVITIES SHALL BE ADOPTED, IF NECESSARY, TO MANAGE DUST CONTROL ON SITE:
   - LIMITING THE AREA OF SOIL DISTURBANCE AT ANY GIVEN TIME
   - REPLACING TOPSOIL AFTER COMPLETION OF EARTHWORKS.
   - PROGRAMMING WORK TO MINIMISE THE LIFE OF STOCKPILES.
   - TEMPORARILY STABILISING LONG-TERM STOCKPILES.
   - GRAVELLING UNSEALED ACCESS AND HAUL ROADS.
   - MINIMISING TRAFFIC MOVEMENT ON EXPOSED SURFACES.
   - LIMITING VEHICULAR TRAFFIC TO 15km/h.
   - RETAINING EXISTING VEGETATION AS WIND BREAKS.
   - UTILISING A WATER CART WITH POTABLE WATER ONLY
5. OIL, LANDFILL GAS CONDENSATE OR ANY CONTAMINATED LEACHATE IS NOT TO BE USED FOR DUST SUPPRESSION.

INSTREAM WORKS:

1. SEDIMENT FENCES AND SEDIMENT FENCE RETURNS TO BE ERECTED PRIOR TO THE COMMENCEMENT OF ANY WORK. SEDIMENT FENCES TO REMAIN UNTIL COMPLETION OF INSTREAM WORK IN THESE LOCATION TO PROTECT EXISTING DOWNSTREAM PROPERTIES AND ROAD PAVEMENT. (REFER TO SSDA250 FOR DETAILS).
2. UNDERTAKE WORK DURING A PERIOD OF DRY FORECASTED WEATHER.
3. PROTECT DISTURBED AREA WITH COFFERDAMS AS REQUIRED.
4. TEMPORARY LOW FLOW DIVERSION PIPE OR PUMPED SYSTEM MAY BE INSTALLED AT THE BASE OF CHANNEL TO DIVERT CLEAN WATER FROM UPSTREAM BASEFLOW.
5. UNDERTAKE ALL INSTREAM WORK IN THE SPECIFIED SECTION OF THE CHANNEL IN ACCORDANCE WITH APPROVED PLANS AND IMMEDIATELY PLANT TO STABLISE THE WORKS.
6. PLANT WITH APPROPRIATE SPECIES, AT A DENSITY THAT WOULD NATURALLY OCCUR.

SITE STABILITY NOTE:

LAND DISTURBANCE & LAND FILLING ACTIVITIES MUST BE UNDERTAKEN IN A PHASED MANNER, IMPACTING A MAXIMUM AREA OF 65Ha AT ANY ONE TIME PER CONDITION B41(a).
DISTURBED AREAS MUST BE STABILISED TO A C-FACTOR OF 0.05 PRIOR TO THE COMPLETION OF ANY OTHER WORKS PER CONDITION B41(b).
REFER TO TABLE 1 ABOVE FOR APPROVED STABILISATION METHODS

INSPECTION & MAINTENANCE NOTES:

IT IS THE RESPONSIBILITY OF THE CONTRACTOR TO ENSURE ADEQUATE INSPECTIONS AND MAINTENANCE ARE CARRIED OUT DURING SITE WORKS. DAILY AND WEEKLY INSPECTION CHECKLISTS HAVE BEEN PROVIDED IN THE COSTIN ROE SOIL AND WATER MANAGEMENT PLAN (SWMP) 13904.03-03D.rpt DATED 23/07/23.

AS NOTED, IT IS THE RESPONSIBILITY OF THE CONTRACTOR TO ENSURE ADEQUATE MAINTENANCE OF EROSION & SEDIMENT CONTROL MEASURES ARE UNDERTAKEN DURING THE WORKS PERIOD. DAMAGED, DISLODGED OR FAULTY ESC MEASURES ARE TO BE IMMEDIATELY RECTIFIED AND THE SURROUNDING AREA IS TO BE REMEDIATED AS PER NOTES ON THIS DRAWING, THE SWMP AND THE LANDCOM 'BLUE BOOK'.

SOIL & WATER MANAGEMENT PLAN NOTE:

ALL DRAWINGS ARE TO BE READ IN CONJUNCTION WITH THE SOIL AND WATER MANAGEMENT PLAN BY COSTIN ROE CONSULTING, REF 13904.03-03D.rpt

SEDIMENT CONTROL BASIN NOTES

1. TYPE D BASIN IS REQUIRED.
2. VOLUME OF THE BASINS SHALL BE AS NOMINATED ON DRAWING. NOMINAL POND LOCATIONS AND NOMINAL DIMENSIONS.
3. SEDIMENT BUILD UP TO NOT EXCEED 33% TOTAL CAPACITY OF BASIN.
4. DEWATERING OF BASIN TO BE PERFORMED TO THE BOTTOM OF THE SEDIMENT SETTLING ZONE FOLLOWING ACHIEVEMENT OF WQO's. MANAGEMENT OF DOSAGE AND DISCHARGE TO BE ACHIEVED WITHIN 5 DAYS OF THE INITIAL RAINFALL EVENT.
5. FOLLOWING DEWATERING PER NOTE 4, WATER LEVEL TO BE MAINTAINED AT 20% CAPACITY AFTER A FOUR DAY SETTLING PERIOD FOLLOWING A STORM EVENT SUCH THAT THE BASIN HAS SUFFICIENT CAPACITY TO CONTAIN RUNOFF AND SEDIMENT FROM SUBSEQUENT RAINFALL EVENTS.
6. WATER TO BE DOSED WITH GYPSUM TO ACCELERATE SETTLEMENT OF SUSPENDED SOLIDS AS REQUIRED.
7. GYPSUM DOSAGE RATE TO BE APPLIED AT APPROX. 32kg PER 100 CUBIC METRE OF COLLECTED RUNOFF.
8. THE USE OF ALUM (OR ANY OTHER ALTERNATIVE) AS A FLOCCULANT IS NOT RECOMMENDED. ALUM OR ANY OTHER FLOCCULANT IS TO BE USED ONLY FOLLOWING CONSULTATION WITH AND ACCEPTANCE FROM COUNCIL ESC OFFICERS.
9. DISCHARGE FROM POND IS PERMISSIBLE WHEN THE WATER PH IS 6.5-8.5 AND IS CLARIFIED TO AT OR BELOW A TSS OF 50mg/L. CLARIFICATION WOULD GENERALLY BE ACHIEVED IN 36-72 HOURS WITH THE USE OF GYPSUM PLUS NO VISIBLE OIL OR GREASE. CORRELATION TESTS MUST BE UNDERTAKEN ON SITE TO ENSURE THIS IS ACHIEVED.
10. DEWATERING SHALL BE DONE IN SUCH A MANNER AS TO REMOVE THE CLEAN WATER (BEING WATER WITHIN THE ADOPTED CRITERIA) WITHOUT REMOVING OR DISTURBING THE SEDIMENT THAT HAS SETTLED. THE PUMP INTAKE PIPE IS NOT TO REST ON THE SETTLED SEDIMENT LAYER.
11. IF WATER EXCEEDS TSS OF 50mg/L DURING DEWATERING, PUMPING IS TO CEASE. RECORDS ARE TO BE KEPT (ON-SITE AT ALL TIMES) OF ALL MEASUREMENT PRIOR TO, DURING AND AFTER DISCHARGE. RECORDS TO BE MADE AVAILABLE TO COUNCIL OFFICERS UPON REQUEST.
12. PROVIDE SECURITY FENCE TO BASIN FOR SAFETY.

SEDIMENTATION BASIN NOTE:

REFER TO SEDIMENT & EROSION CONTROL NOTES.

FOR SEDIMENT AND EROSION CONTROL DETAILS, REFER TO THE LANDCOM 'BLUE BOOK' AND EXTRACTS ON DRAWING SSDA250.

SEDIMENTATION BASIN SIZING BASED ON RECOMMENDATIONS OF 'SOILS AND CONSTRUCTION, MANAGING URBAN STORMWAER-THE BLUE BOOK'. CAPACITY BASED ON 5-DAY RAINFALL DEPTHS AT 85th PERCENTILE INTENSITY (32.2mm) IN THE LIVERPOOL CATCHMENT AREA.

NOTES:
1. ASSUME TYPE D SOIL (CLAY/SILTY CLAY)
2. ASSUME GROUP D SOIL (HIGH PLASTICITY AND SHRINK/SWELL PROPERTIES)
3. REFER TO DRAWING SSDA201 FOR SEDIMENTATION BASIN CALCULATIONS

DRAWING No: C013904.03-SSDA200
ISSUE: E

EROSION AND SEDIMENT CONTROL PLAN - STAGE 1
SCALE 1:1500

STAGING NOTES- STAGE 1:

STAGE 1 REPRESENTS INITIAL SITE ESTABLISHMENT. THE STAGE 1 SCOPE IS NOTED TO BE PRIOR TO SITE STRIPPING & GRUBBING.

STAGE 1 IMPLEMENTATION RECOMMENDATIONS:

1. SURVEY AND MARK BOUNDARIES, ACCESS NO GO ZONES, TREE PROTECTION ZONES (IF REQUIRED), DIVERSION DRAINS, LAYDOWN AREAS, SITE PARKING AREAS, AND SITE OFFICE ZONES.
2. PREPARE AND CONSTRUCT STABILISED SITE CONSTRUCTION ENTRY'S.
3. INSTALL ALL PRELIMINARY EROSION & SEDIMENT CONTROL MEASURES. MINIMUM ITEMS INCLUDE PERIMETER SILT FENCES, ANY SECURITY FENCING, NO GO ZONES, DIVERSION DRAINS AND SITE AREAS.
4. INSTALL ALL DIVERSION DRAINS.
5. PREPARE AND CONSTRUCT SEDIMENT BASINS.

SEDIMENT CONTROL BASIN NOTES:

FOR SEDIMENT & EROSION CONTROL DETAILS REFER TO DRAWING C013904.03-SSDA250.

SEDIMENTATION BASIN SIZING BASED ON RECOMMENDATIONS OF 'SOILS AND CONSTRUCTION, MANAGING URBAN STORMWATER-THE BLUE BOOK'.

SEDIMENT BASIN 1:

CATCHMENT AREA	= 1.49ha
REQUIRED BASIN VOLUME	= 360m³
BASE DIMENSION (LxB)	= 8.0m x 15.0m
TOP DIMENSION (LxB)	= 17.0m x 24.0m
MAX SIDE SLOPE	= 1V:3H
DEPTH	= 1.5m
PROVIDED BASIN VOLUME	= 375m³

SEDIMENT BASIN 2:

CATCHMENT AREA	= 2.53ha
REQUIRED BASIN VOLUME	= 611m³
BASE DIMENSION (LxB)	= 12.0m x 20.0m
TOP DIMENSION (LxB)	= 21.0m x 29.0m
MAX SIDE SLOPE	= 1V:3H
DEPTH	= 1.5m
PROVIDED BASIN VOLUME	= 616m³

SEDIMENT BASIN 3:

CATCHMENT AREA	= 1.73ha
REQUIRED BASIN VOLUME	= 418m³
BASE DIMENSION (LxB)	= 10.0m x 15.0m
TOP DIMENSION (LxB)	= 19.0m x 24.0m
MAX SIDE SLOPE	= 1V:3H
DEPTH	= 1.5m
PROVIDED BASIN VOLUME	= 434m³

SEDIMENT BASIN 4:

CATCHMENT AREA	= 3.46ha
REQUIRED BASIN VOLUME	= 836m³
BASE DIMENSION (LxB)	= 15.0m x 24.0m
TOP DIMENSION (LxB)	= 24.0m x 33.0m
MAX SIDE SLOPE	= 1V:3H
DEPTH	= 1.5m
PROVIDED BASIN VOLUME	= 843m³

SEDIMENT BASIN 5:

CATCHMENT AREA	= 6.48ha
REQUIRED BASIN VOLUME	= 1565m³
BASE DIMENSION (LxB)	= 25.0m x 31.0m
TOP DIMENSION (LxB)	= 34.0m x 40.0m
MAX SIDE SLOPE	= 1V:3H
DEPTH	= 1.5m
PROVIDED BASIN VOLUME	= 1581m³

SEDIMENT BASIN 6:

CATCHMENT AREA	= 6.62ha
REQUIRED BASIN VOLUME	= 1599m³
BASE DIMENSION (LxB)	= 26.0m x 31.0m
TOP DIMENSION (LxB)	= 35.0m x 40.0m
MAX SIDE SLOPE	= 1V:3H
DEPTH	= 1.5m
PROVIDED BASIN VOLUME	= 1634m³

SEDIMENT BASIN 7:

CATCHMENT AREA	= 1.96ha
REQUIRED BASIN VOLUME	= 573m³
BASE DIMENSION (LxB)	= 11.0m x 16.0m
TOP DIMENSION (LxB)	= 20.0m x 25.0m
MAX SIDE SLOPE	= 1V:3H
DEPTH	= 1.5m
PROVIDED BASIN VOLUME	= 486m³

SEDIMENTATION BASINS TO COLLECT RUN-OFF IN EXTREME RAINFALL EVENTS. COLLECTED RUN-OFF TO BE ASSESSED BY A QUALIFIED LABORATORY FOR DOUSING RATES OF ALUM OR GYPSUM TO ENSURE COAGULATION OF SEDIMENTS PRIOR TO WATER BEING DISCHARGED TO COUNCIL STORMWATER SYSTEM.

EACH BASIN IS TO HAVE A MARKER PLACED AS PER THE DETAIL TO INDICATE WHEN SEDIMENT IS TO BE REMOVED. REMOVED SEDIMENT IS TO BE CLASSED AND DEWATERED PRIOR TO REMOVAL FROM SITE.

ALLOWANCE TO BE MADE DURING BENCHING OF SITE TO ENSURE RUN-OFF IS DIRECTED TO SEDIMENTATION BASINS.

NOTES:
1. ASSUME TYPE D SOIL (CLAY/SILTY CLAY)
2. ASSUME GROUP D SOIL (HIGH PLASTICITY AND SHRINK/SWELL PROPERTIES)
3. Cv = 0.50 & LENGTH TO WIDTH RATIO OF 2 (MIN.)

SOIL TYPE TO BE ASSESSED BY A GEOTECHNICAL ENGINEER

EROSION AND SEDIMENT CONTROL PLAN - STAGE 2

SCALE 1:1500

STAGING NOTES - STAGE 2:

STAGE 2 REPRESENTS WORKS FOLLOWING SITE ESTABLISHMENT INCLUDING SITE STRIPPING & GRUBBING, AND COMMENCEMENT OF EARTHWORKS.

STAGE 2 IMPLEMENTATION RECOMMENDATIONS:

1. PREPARE AND CONSTRUCT SEDIMENT BASIN.
2. ADJUST DIVERSION DRAINS TO ENSURE ALL RUNOFF IS DIRECTED TO BASIN. CHECK AND CONFIRM ON SITE FOR ANY CONTOURS OR DRAINAGE LINES NOT SHOWN ON THE ESCP AND ALLOW FOR THEM ON SITE AS REQUIRED.
3. ESTABLISH SITE COMPOUND INCLUDING OFFICE AND PARKING AREAS.
4. ENSURE ESCP MEASURES SHOWN ON PLAN ARE INSTALLED, AND EXISTING MEASURES ARE CHECKED AND MAINTAINED AS REQUIRED.
5. COMMENCE SITE STRIPPING (LIMIT TO AREA OF WORKS AS NECESSARY TO COMPLETE THE WORKS) AND CUT TO FILL EARTHWORK.
6. MONITOR AND INSPECT MEASURES IN ACCORDANCE WITH THE SITE INSPECTION CHECK SHEETS AND SOIL AND WATER MANAGEMENT PLAN INCLUDED IN THE SITE CEMP.
7. ALL CONTROLS TO BE MAINTAINED THROUGHOUT THE CONSTRUCTION PERIOD, AND PROGRESSIVELY ADJUSTED TO SUIT SITE CONDITIONS IN ACCORDANCE WITH THE CEMP., THE SOIL AND WATER MANAGEMENT PLAN (SUBPLAN OF THE CEMP) AND PER BLUE BOOK/ WHITE BOOK REQUIREMENTS.

SEDIMENT CONTROL BASIN NOTES:

DRAWING No C013904.03-SSDA251 ISSUE C

BULK EARTHWORKS PLAN
SCALE 1:1500

SITE PREPARATION NOTES:

1. ALL EARTHWORKS SHALL BE COMPLETED GENERALLY IN ACCORDANCE WITH THE GUIDELINES SPECIFIED BY THE GEOTECHNICAL REPORT PSM4636-007L PROVIDED BY PSM CONSULT PTY LTD DATED 22/03/2022.
2. EXISTING LEVELS ARE BASED ON INFORMATION PROVIDED BY LANDPARTNERS TITLED SY074904.002.2.2 DATED 04/03/2022.
3. STRIP ANY TOP SOIL OR DELETERIOUS MATERIAL AND DISPOSE OF FROM SITE OR STORE AS DIRECTED.
4. COMPLETE CUT TO FILL EARTHWORKS TO ACHIEVE THE REQUIRED LEVELS AS INDICATED ON THE DRAWINGS WITHIN A TOLERANCE OF +0mm/-10mm THROUGH BUILDING PADS/PAVEMENTS AND +0mm/-20mm ELSEWHERE.
5. PREPARE STEEP BATTERS TO RECEIVE FILL BY CONSTRUCTING BENCHING TO FACILITATE FILL PLACEMENT AND COMPACTION. WHERE EXPOSED ROCK (WEATHERED SHALE OR SANDSTONE) IS ENCOUNTERED AT CUT SUBGRADE LEVEL, THE EARTHWORKS CONTRACTOR IS TO ALLOW TO RIP THE SURFACE TO A NOMINAL 0.3-0.4m DEPTH AND RECOMPACT (PER THE ENGINEERING SPEC) AS REQUIRED.
6. AREAS TO RECEIVE FILL (THAT ARE NOT ON BENCHED BATTERS) AND AREAS IN CUT SHALL BE PROOF ROLLED TO IDENTIFY ANY SOFT HEAVING MATERIAL. SOFT MATERIAL SHALL BE BOXED OUT AND REMOVED PRIOR TO FILL PLACEMENT. PROOF ROLLING TO BE INSPECTED BY A GEOTECHNICAL ENGINEER OR THE EARTHWORKS DESIGNER.
7. SITE WON FILL SHALL BE COMPACTED IN MAXIMUM 300mm LAYERS AND TO DRY OR HILF DENSITY RATIOS (STANDARD COMPACTION) OF BETWEEN 98% AND 103%. THE PLACEMENT MOISTURE VARIATION OR HILF MOISTURE VARIATION SHALL BE CONTROLLED TO BE BETWEEN 2% DRY AND 2% WET.
8. IMPORTED FILL SHALL BE COMPACTED IN MAXIMUM 300mm LAYERS AND TO DRY OR HILF DENSITY RATIOS (STANDARD COMPACTION) OF BETWEEN 98% AND 103%. THE PLACEMENT MOISTURE VARIATION OR HILF MOISTURE VARIATION SHALL BE CONTROLLED TO BE BETWEEN 2% DRY AND 2% WET.
9. ALL ENGINEERED FILL PARTICLES SHALL BE ABLE TO BE INCORPORATED WITHIN A SINGLE LAYER. FURTHER, LESS THAN 30% OF PARTICLES SHALL BE RETAINED ON THE 37.5 mm SIEVE. ENGINEERED FILL SHALL BE ABLE TO BE TESTED IN ACCORDANCE WITH THE STANDARD COMPACTION METHOD (AS1289.5.4.1) OR HILF TEST METHOD (AS1289.5.7.1). THESE METHODS REQUIRE LESS THAN 20% RETAINED ON THE 37.5 mm SIEVE. WHERE BETWEEN 20% AND 30% OF PARTICLES ARE RETAINED ON THE 37.5 mm SIEVE THE ABOVE TEST METHODS SHALL STILL BE ADOPTED AND TEST REPORTS ANNOTATED APPROPRIATELY. THESE REQUIREMENTS SHOULD BE MET BY THE MATERIAL AFTER PLACEMENT AND COMPACTION
10. ALL EARTHWORKS SHALL BE COMPLETED UNDER LEVEL 1 CONTROL IN ACCORDANCE WITH AS 3798-2007.
11.
12. ALL THE EARTHWORKS UNDERTAKEN AND THE SUBGRADE CONDITION IN THE CUT AREAS (IN THE STATED PERIOD) ARE DOCUMENTED IN THE REPORTS AND HAVE BEEN UNDERTAKEN IN ACCORDANCE WITH THE SPECIFICATION.
13. PRIOR TO ANY EARTHWORKS, EROSION CONTROL AS OUTLINED IN THE EROSION AND SEDIMENTATION CONTROL PLAN SHALL BE COMPLETED.
14. EXISTING ROCK, IF ANY, SHALL BE REMOVED BY HEAVY ROCK BREAKING OR RIPPING.
15. MATCH EXISTING LEVELS AT BATTER INTERFACE.
16. CONTRACTOR TO MATCH EXISTING LEVELS AT THE INTERFACE OF EARTHWORKS AND EXISTING SURFACE AT BATTER LOCATIONS OR WHERE NO RETAINING WALLS ARE PRESENT. ANY DISCREPANCY BETWEEN DESIGN AND EXISTING LEVELS TO BE REFERRED TO THE ENGINEER FOR DIRECTION OR ADJUSTMENTS TO DESIGN LEVELS.
17. DURING EARTHWORKS THE CONTRACTOR IS TO ENSURE ALL AREAS ARE FREE DRAINING & WILL NOT RETAIN WATER DURING RAINFALL. PROVIDE TEMPORARY MEASURES AS REQUIRED TO ENSURE FREE FLOWING RUNOFF THROUGH MANAGED DRAINAGE PATHS, DIVERSION DRAINS OR OTHER SUITABLE DISPOSAL METHOD AS AGREED DURING THE WORKS. REFER ANY CONCERNS TO THE ENGINEER. REFER TO EROSION AND SEDIMENT CONTROL DRAWINGS AND NOTES.

EARTHWORK ESTIMATES

SITE AREA	= 27.4 Ha
DISTURBED AREA	= 24.6 Ha
TOPSOIL STRIP (200mm OVER 27.4 Ha)	=(-54,800m³) (TO BE EXPORTED/REUSED*)
CUT	= -322,000m³
FILL	= +303,100m³
DIFFERENCE	= -18,900m³ (i.e. CUT OVER FILL)

NOTE:
VOLUMES BASED ON 200mm TOPSOIL STRIP OVER THE NOMINATED AREA.

A PORTION OF THE STRIPPED TOPSOIL TO BE REUSED/BLENDED IN LANDSCAPE SETBACK AREAS ONLY SUBJECT TO DISCUSSIONS WITH THE ENGINEER.

EARTHWORKS VOLUMES ARE APPROXIMATE ONLY.

NO ALLOWANCE HAS BEEN MADE FOR DELETERIOUS MATERIAL, EROSION AND SEDIMENT CONTROL, DETAIL EXCAVATION, BULKING OR COMPACTION OF FILLED SOILS, THE REMOVAL OF UNCONTROLLED OR CONTAMINATED MATERIAL OR ANY OTHER UNSPECIFIED EXCAVATION RELATED TO CONSTRUCTION ACTIVITIES.

EARTHWORK ESTIMATES

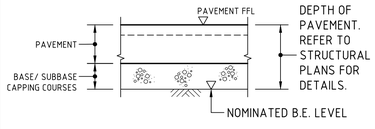

LEVELS SHOWN TO BE +/-1000mm FROM THOSE SHOWN. FINAL LEVELS SUBJECT TO FINAL GEOTECHNICAL INVESTIGATIONS, ARCHITECTURAL LAYOUT AND ACHIEVING A CUT TO FILL EARTHWORKS BALANCE OVER THE PROPERTY.

LEGEND:

LEVELS DATUM IS AHD.

EXISTING LEVELS ARE BASED ON INFORMATION PROVIDED BY LANDPARTNERS TITLED SY074904.002.2.2 DATED 04/03/2022.

- 50.00 – EXISTING CONTOUR (0.25m INTERVAL)
- 50.00 – B.E.L. CONTOUR (MAJOR 1.0m)
- 50.25 – B.E.L. CONTOUR (MINOR 0.25m)

|---|---|---

CATCHMENT 1: STORMWATER MANAGEMENT SYSTEM:

COMBINED STORMWATER QUALITY/QUANTITY MANAGEMENT DEVICE
UNDERGROUND TANK WITH OCEAN PROTECT 690mm ZPG STORMFILTER UNITS
OR AN APPROVED EQUIVALENT WATER QUALITY TREATMENT DEVICE
NUMBER OF STORMFILTER CARTRIDGES = 35
ON-SITE DETENTION VOLUME PROVIDED = 550m3

ESTATE DISCHARGE POINT 1:

REHABILITATED WESTERN SWALE TO DISCHARGE UNDER THE GREAT WESTERN HIGHWAY VIA THE EXISTING CULVERT WITH FALSE HEADWALL WITH 3x⌀900. BLOCKOUTS TO REDUCE EXISTING 3x⌀1150 RCP.

CATCHMENT 3A: STORMWATER MANAGEMENT SYSTEM:

COMBINED STORMWATER QUALITY/QUANTITY MANAGEMENT BASIN
BIO-RETENTION AREA PROVIDED = 265m2
300mm EXTENDED DETENTION DEPTH
500mm MIN FILTER MEDIA
SURFACE AREA NOMINATED FOR BIO-RETENTION FILTRATION IS EXCLUSIVE OF SCOUR PROTECTION
ON-SITE DETENTION VOLUME PROVIDED = 467m3
REFER TO DRAWING SSDA462 FOR TYPICAL SECTIONS THROUGH BASIN

ESTATE DISCHARGE POINT 2:

REHABILITATED BLACKTOWN CREEK TO DISCHARGE UNDER THE GREAT WESTERN HIGHWAY VIA THE EXISTING CULVERT WITH FALSE HEADWALL WITH 3x⌀900. BLOCKOUTS TO REDUCE EXISTING 3x1150 RCP.

CATCHMENT 5A-1 STORMWATER MANAGEMENT SYSTEM:

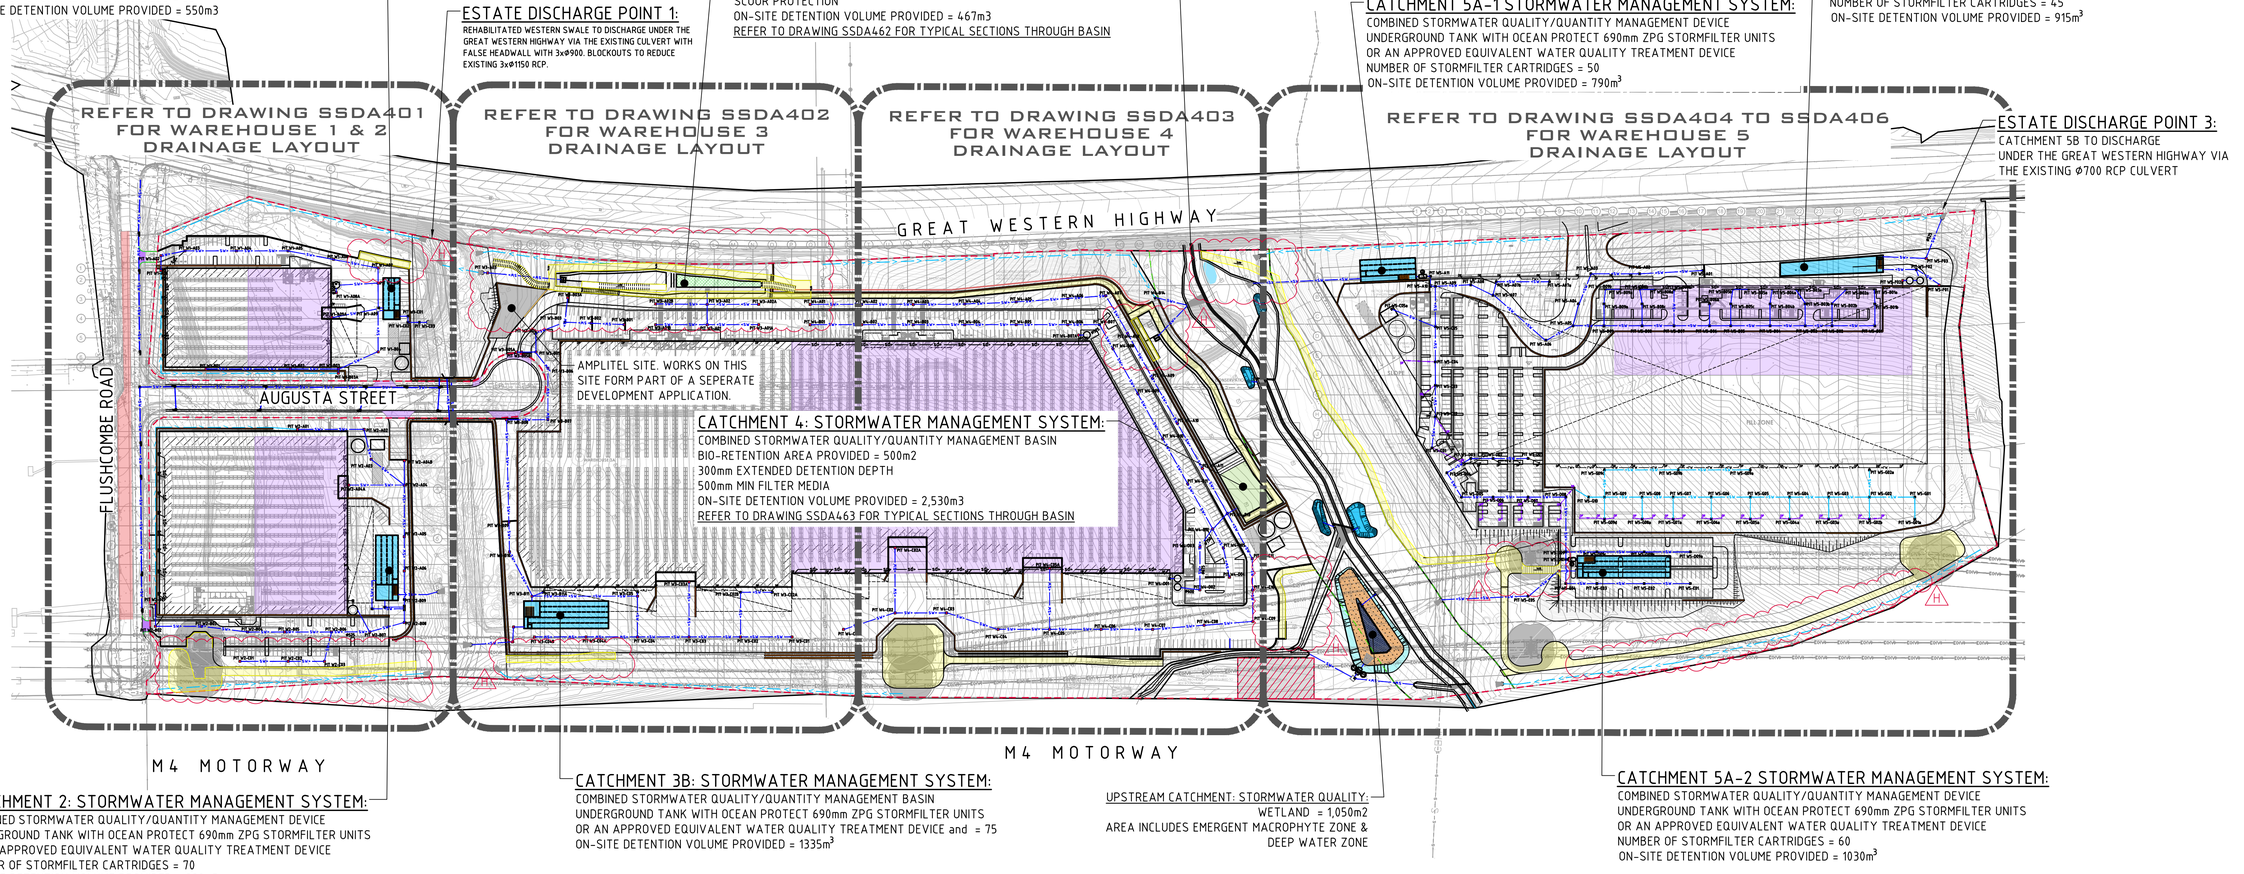

COMBINED STORMWATER QUALITY/QUANTITY MANAGEMENT DEVICE
UNDERGROUND TANK WITH OCEAN PROTECT 690mm ZPG STORMFILTER UNITS
OR AN APPROVED EQUIVALENT WATER QUALITY TREATMENT DEVICE
NUMBER OF STORMFILTER CARTRIDGES = 50
ON-SITE DETENTION VOLUME PROVIDED = 790m^3

CATCHMENT 5B STORMWATER MANAGEMENT SYSTEM:

COMBINED STORMWATER QUALITY/QUANTITY MANAGEMENT DEVICE
UNDERGROUND TANK WITH OCEAN PROTECT 690mm ZPG STORMFILTER UNITS
OR AN APPROVED EQUIVALENT WATER QUALITY TREATMENT DEVICE
NUMBER OF STORMFILTER CARTRIDGES = 45
ON-SITE DETENTION VOLUME PROVIDED = 915m^3

ESTATE DISCHARGE POINT 3:

CATCHMENT 5B TO DISCHARGE UNDER THE GREAT WESTERN HIGHWAY VIA THE EXISTING ⌀700 RCP CULVERT

CATCHMENT 4: STORMWATER MANAGEMENT SYSTEM:

COMBINED STORMWATER QUALITY/QUANTITY MANAGEMENT BASIN
BIO-RETENTION AREA PROVIDED = 500m2
300mm EXTENDED DETENTION DEPTH
500mm MIN FILTER MEDIA
ON-SITE DETENTION VOLUME PROVIDED = 2,530m3
REFER TO DRAWING SSDA463 FOR TYPICAL SECTIONS THROUGH BASIN

CATCHMENT 2: STORMWATER MANAGEMENT SYSTEM:

COMBINED STORMWATER QUALITY/QUANTITY MANAGEMENT DEVICE
UNDERGROUND TANK WITH OCEAN PROTECT 690mm ZPG STORMFILTER UNITS
OR AN APPROVED EQUIVALENT WATER QUALITY TREATMENT DEVICE
NUMBER OF STORMFILTER CARTRIDGES = 70
ON-SITE DETENTION VOLUME PROVIDED = 990m3

CATCHMENT 3B: STORMWATER MANAGEMENT SYSTEM:

COMBINED STORMWATER QUALITY/QUANTITY MANAGEMENT BASIN
UNDERGROUND TANK WITH OCEAN PROTECT 690mm ZPG STORMFILTER UNITS
OR AN APPROVED EQUIVALENT WATER QUALITY TREATMENT DEVICE and = 75
ON-SITE DETENTION VOLUME PROVIDED = 1335m^3

UPSTREAM CATCHMENT: STORMWATER QUALITY:

WETLAND = 1,050m2
AREA INCLUDES EMERGENT MACROPHYTE ZONE & DEEP WATER ZONE

CATCHMENT 5A-2 STORMWATER MANAGEMENT SYSTEM:

COMBINED STORMWATER QUALITY/QUANTITY MANAGEMENT DEVICE
UNDERGROUND TANK WITH OCEAN PROTECT 690mm ZPG STORMFILTER UNITS
OR AN APPROVED EQUIVALENT WATER QUALITY TREATMENT DEVICE
NUMBER OF STORMFILTER CARTRIDGES = 60
ON-SITE DETENTION VOLUME PROVIDED = 1030m^3

STORMWATER DRAINAGE KEY PLAN

SCALE 1:1500

STORMWATER DRAINAGE NOTES:

1. ALL STORMWATER WORKS TO BE COMPLETED IN ACCORDANCE WITH AUSTRALIAN STANDARD AS3500.3 PLUMBING AND DRAINAGE, PART 3: STORMWATER DRAINAGE.
2. THE MINOR (PIPED) SYSTEM HAS BEEN DESIGNED FOR THE 1 IN 20 YEAR ARI STORM EVENT AND THE MAJOR (OVERLAND) SYSTEM HAS BEEN DESIGNED FOR THE 1 IN 100 YEAR ARI STORM EVENT.
3. ALL FINISHED PAVEMENT LEVELS SHALL BE AS INDICATED ON FINISHED LEVELS PLANS C013904.03-SSDA501.
4. PIT SIZES SHALL BE AS INDICATED IN THE SCHEDULE WHILE PIPE SIZES AND DETAILS ARE PROVIDED ON PLAN.
5. EXISTING STORMWATER PIT LOCATIONS AND INVERT LEVELS TO BE CONFIRMED BY SURVEY PRIOR TO COMMENCING WORKS ON SITE.
6. PUBLIC DOMAIN DRAINAGE TO BE MIN. CLASS 3 UNDER KERBS, AND CLASS 4 FOR PIPES CROSSING ROADS. ALL BEEING TO BLACKTOWN COUNCIL SPECIFICIATIONS OR MINIMUM HS2. MINIMUM SIZE 375mm.

7a. ALL PRIVATE STORMWATER PIPES ⌀375 OR GREATER SHALL BE CLASS 2 (WITH HS2 SUPPORT) REINFORCED CONCRETE WITH RUBBER RING JOINTS UNLESS NOTED OTHERWISE.

7b. ALL PRIVATE PIPES UP TO AND INCLUDING ⌀300 TO BE uPVC GRADE SN8 UNO.

8. PIPE CLASS NOMINATED ARE FOR IN-SERVICE LOADING CONDITIONS ONLY. CONTRACTOR IS TO MAKE ANY NECESSARY ADJUSTMENTS REQUIRED FOR CONSTRUCTION CONDITIONS.
9. ALL CONCRETE PITS GREATER THAN 1000mm DEEP SHALL BE REINFORCED USING N12-200 EACH WAY CENTERED IN WALL AND BASE. LAP MINIMUM 300mm WHERE REQUIRED. ALL CONCRETE FOR PITS SHALL BE F'c=25 MPa. PRECAST PITS MAY BE USED WITH THE APPROVAL OF THE ENGINEER.
10. IN ADDITION TO ITEM 9 ABOVE, ALL CONCRETE PITS GREATER THAN 3000mm DEEP SHALL HAVE WALLS AND BASE THICKNESS INCREASED TO 200mm.
11. PIPES SHALL BE LAID AS PER PIPE LAYING DETAILS. PARTICULAR CARE SHALL BE TAKEN TO ENSURE THAT THE PIPE IS FULLY AND EVENLY SUPPORTED. RAM AND PACK FILLING AROUND AND UNDER BACK OF PIPES AND PIPE FAUCETS, WITH NARROW EDGED RAMMERS OR OTHER SUITABLE TAMPING DETAILS.
12. CONCRETE PIPES UNDER, OR WITHIN THE ZONE OF INFLUENCE OF PAVED AREAS SHALL BE LAID USING HS2 TYPE SUPPORT, AS A MINIMUM, IN ACCORDANCE WITH AS 3725. AGGREGATE BACKFILL SHALL NOT BE USED FOR PIPE BEDDING AND OR HAUNCH/SIDE SUPPORT.
13. WHERE PIPE LINES ENTER PITS, PROVIDE 2m LENGTH OF STOCKING WRAPPED SLOTTED ⌀100 uPVC TO EACH SIDE OF PIPE.
14. ALL SUBSOIL DRAINAGE LINES SHALL BE ⌀100 SLOTTED uPVC WITH APPROVED FILTER WRAP LAID IN 300mm WIDE GRANULAR FILTER UNLESS NOTED OTHERWISE. LAY SUBSOIL LINES TO MATCH FALLS OF LAND AND/OR 1 IN 200 MINIMUM. PROVIDE CAPPED CLEANING EYE (RODDING POINT) AT UPSTREAM END OF LINE AND AT 30m MAX. CTS. PROVIDE SUBSOIL LINES TO ALL PAVEMENT/ LANDSCAPED INTERFACES, TO REAR OF RETAINING WALLS (AS NOMINATED BY STRUCTURAL ENGINEER) AND AS SHOWN ON PLAN.
15. WHERE SUBSOIL DRAINAGE PASSES UNDER A PAVEMENT OR A SLAB, UNSLOTTED UPVC ARE TO BE PROVIDED UNLESS NOTED OTHERWISE.
16. ALL PIPE GRADES 1 IN 200 MINIMUM UNO.
17. PROVIDE STEP IRONS IN PITS DEEPER THAN 1000mm.
18. MIN. 600 COVER TO PIPE OBVERT BENEATH ROADS & MIN. 400 COVER BENEATH LANDSCAPED AND PEDESTRIAN AREAS.
19. PIT COVERS IN TRAFFICABLE PAVEMENT SHALL BE CLASS D 'HEAVY DUTY', THOSE LOCATED IN NON-TRAFFICABLE AREAS SHALL BE CLASS B 'MEDIUM DUTY' U.N.O.
20. PROVIDE CLEANING EYES (RODDING POINTS) TO PIPES AT ALL CORNERS AND T-JUNCTIONS WHERE NO PITS ARE PRESENT.
21. DOWN PIPES (DP) TO BE AS PER HYDRAULIC ENGINEERS DETAILS WITH CONNECTOR TO MATCH DP SIZE U.N.O. ON PLAN. PROVIDE CLEANING EYE AT GROUND LEVEL.
22. PIPE LENGTHS NOMINATED ON PLAN OR LONGSECTIONS ARE MEASURED FROM CENTER OF PITS TO THE NEAREST 0.5m AND DO NOT REPRESENT ACTUAL LENGTH. THE CONTRACTOR IS TO ALLOW FOR THIS.
23. WHERE CONNECTION TO EXISTING INGROUND DRAINAGE SYSTEMS, OPEN SWALES, CHANNELS OR ANY OTHER EXISTING SYSTEM, IT IS THE RESPONSIBILITY OF THE CONTRACTOR TO VERIFY THE LOCATION AND INVERT ON SITE AT THE BEGINNING OF THE CONSTRUCTION PERIOD. REFER ANY VARIANCE FROM DOCUMENTATION OR SURVEYS TO THE ENGINEER FOR CLARIFICATION.

PUMP OUT PIT DETAIL
SCALE 1:20
REFER TYPICAL PIT DETAILS FOR ALL ITEMS NOT LABELED.

BASEMENT PUMP OUT NOTES:

PUMP SYSTEM IS TO CONSIST OF DUAL ALTERNATING PUMPS. THE PUMP OUT SYSTEM SHALL BE DESIGNED TO BE OPERATED IN THE FOLLOWING MANNER:

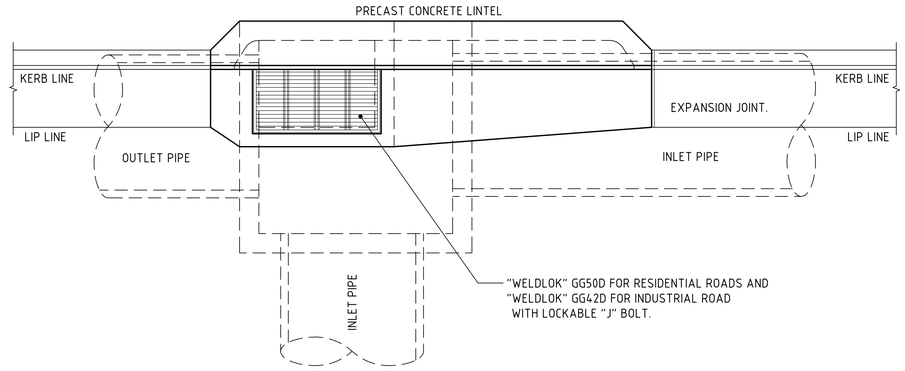

Q PUMP = 25 L/s VOLUME = 5.0 m^3 (MIN.)
THE PUMPS SHALL BE PROGRAMMED TO WORK ALTERNATIVELY SO AS TO ALLOW BOTH PUMPS TO HAVE AN EQUAL OPERATION LOAD AND PUMP LIFE.

A LOW LEVEL FLOAT SHALL BE PROVIDED TO ENSURE THAT THE MINIMUM REQUIRED WATER LEVEL IS MAINTAINED WITHIN THE SUMP AREA OF THE PIT . IN THIS REGARD THIS FLOAT WILL FUNCTION AS AN OFF SWITCH FOR THE PUMPS.

A SECOND FLOAT SHALL BE PROVIDED AT A HIGHER LEVEL, APPROXIMATELY 300mm ABOVE THE MINIMUM WATER LEVEL, WHEREBY ONE OF THE PUMPS WILL OPERATE AND DRAIN THE PIT TO THE LEVEL OF THE LOW-LEVEL FLOAT.

A THIRD FLOAT SHALL BE PROVIDED AT A HIGH LEVEL, WHICH IS APPROXIMATELY THE TOP LEVEL OF THE PIT. THIS FLOAT SHOULD START THE OTHER PUMP THAT IS NOT OPERATING AND ACTIVATE THE ALARM.

AN ALARM SYSTEM SHALL BE PROVIDED WITH A FLASHING STROBE LIGHT AND A PUMP FAILURE WARNING SIGN WHICH ARE TO BE LOCATED AT THE ENTRANCE TO THE BASEMENT LEVEL. THE ALARM SYSTEM SHALL BE PROVIDED WITH A BATTERY BACK-UP IN CASE OF POWER FAILURE.

BIO-RETENTION BASIN DETAILS

TYPICAL HALF-ROUND FLOW SPREADER DETAIL
SCALE 1:10

BIO-RETENTION NOTES :

FILTER MEDIA TO BE LOAMY SAND WITH A PERMEABILITY NOT LESS THAN 200mm/hr. FILTER MEDIA TO BE FREE OF RUBBISH, DELETERIOUS MATERIAL, TOXICANTS, DECLARED PLANTS AND LOCAL WEEDS, AND IS TO NOT BE HYDROPHOBIC.

FILTER MEDIA TO HAVE THE FOLLOWING COMPOSITION RANGE:

CLAY & SILT (<0.05mm)	<3%
VERY FINE SAND (0.05-0.15mm)	5-30%
FINE SAND (0.15-0.25mm)	10-30%
MEDIUM TO COARSE SAND (0.25-1.00mm)	40-60%
COARSE SAND (1.0-2.0mm)	7-10%
FINE GRAVEL (2.0-3.4mm)	<3%

FILTER MEDIA THAT DOES NOT MEET THE FOLLOWING CRITERIA SHALL BE REJECTED:

a. ORGANIC MATTER CONTENT TO BE IDEALLY WITHIN 1% TO 3% (W/W) AND TO BE NO GREATER THAN 5%(W/W).
b. PH TO BE BETWEEN 5.5 AND 7.5
c. PHOSPHOROUS CONTENT TO BE NO GREATER THAN 35mg/kg

FILTER MEDIA TO BE ASSESSED BY QUALIFIED HORTICULTURALIST TO ENSURE CAPABILITY OF SUPPORTING PLANT LIFE.

DRAINAGE LAYER TO BE CLEAN GRAVEL 5-7mm.

PLANTS TO BE IN ACCORDANCE WITH PENRITH CITY COUNCIL REQUIREMENTS.

PROVIDE 100mm TOPSOIL AND TEMPORARY EROSION PROTECTION (JUTEMASTER OR EQUIV) TO SWALE BATTER SLOPES AND ADJACENT LANDSCAPED AREAS. NOTE THAT NO TOPSOIL IS TO BE PLACED OVER FILTRATION MEDIA. PROVIDE SILT FENCE TO TOP OF BANK UNTIL SUCH TIME AS THIS STABILISING AND VEGETATION HAS BEEN COMPLETED.

BIO-RETENTION TO BE PARTIALLY INSTALLED, FOLLOWING COMPLETION OF ROADWORKS, WITH THE TOP 75-100mm OF FILTER MEDIA REPLACED WITH A FINE TO COARSE SAND UNDERLAIN WITH A GEOTEXTILE LAYER (REFER TO DETAIL). FOLLOWING COMPLETION OF THE UPSTREAM DEVELOPMENT AND SITE STABILISATION, THE SAND IS TO BE REMOVED, REPLACED WITH FILTER MATERIAL AND PLANTED OUT. REFER TO TEMPORARY BIO-BASIN DETAIL

PRIOR TO PLANTING, THE TOP 100mm OF THE BIORETENTION FILTER MEDIA IS TO BE AMELIORATED WITH APPROPRIATE ORGANIC MATTER, FERTILISER AND TRACE ELEMENTS TO AID PLANT ESTABLISHMENT AS PER THE TABLE BELOW:

TABLE: RECIPE FOR AMELIORATING TOP 100mm OF BIORETENTION FILTER MEDIA

CONSTITUENT	QUANTITY (kg/m2 OF FILTER AREA)
GRANULATED POULTRY MANURE FINES	50
SUPERPHOSPHATE	2

PLAN
SCALE 1:50

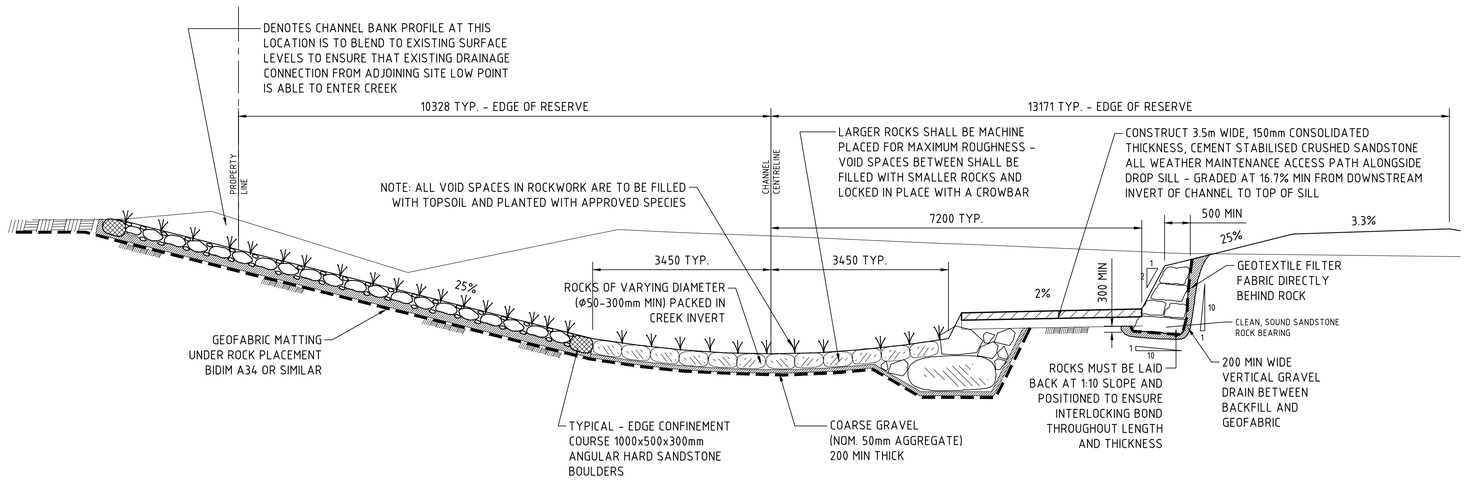

SECTION 1:50 (1 / -)

DISSIPATER NOTES:

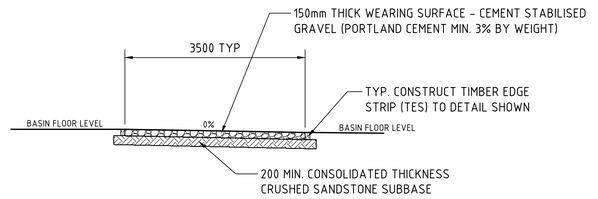

1. ALIGN STRUCTURE EVENLY WITH BANK.
2. LOCATE STRUCTURE AT INVERT LEVEL OF STREAM AND POINT IN A DOWNSTREAM DIRECTION.
3. PIPE TO REST ON, AND BE PACKED IN, BY RIP-RAP (SIZE AS NOTED).
4. DISCHARGE INTO STREAM WHERE BEDROCK IS PRESENT, OTHERWISE SCOUR PROTECT AS REQUIRED.
5. SCOUR PROTECT THE OPPOSITE BANK AS REQUIRED. SCOUR PROTECTION TO BE PROVIDED WHERE OPPOSITE BANK IS WITHIN 12-14 TIMES THE PIPE DIAMETER.
6. RIP-RAP TO CONSIST OF ANGULAR RUN-OF-QUARRY ROCK (d50= 150mm MINIMUM) AS NOTED IN THE SCHEDULE. RIP-RAP TO BE MINIMUM THICKNESS OF RIP-RAP LAYER TO BE 1.6x AVERAGE ROCK SIZE (d50).
7. RIP-RAP IS TO BE PLACED OVER A 200mm LAYER OF 140mm COBBLES OVER NEEDLE-PUNCHED GEOFAB A44.
8. PLACE ROCK SO THAT IT FORMS A DENSE, WELL-GRADED MASS OF ROCK WITH A MINIMUM OF VOIDS. THE FINISHED RIP-RAP SURFACE SHOULD BE FREE OF POCKETS OF SMALL ROCK OR CLUSTERS OF LARGE ROCKS.
9. GAPS IN RIP-RAP TO BE HAND PACKED WITH TOPSOIL & PLANTED WITH NATIVE SEDGES & RUSHES TO PROVIDE. THE INTENT IS FOR THERE TO BE NO VOIDS BETWEEN RIP-RAP BOULDERS.
10. ENSURE THE FINISHED ROCK SURFACE BLENDS WITH THE SURROUNDING GROUND LEVELS. NO OVERFALL OR PROTRUSION OF ROCK SHOULD BE APPARENT.
11. ENSURE THAT STORMWATER FROM SURROUNDING GROUND IS FREE TO ENTER THE STRUCTURE WITHOUT CAUSING UNDESIRABLE PONDING OR SCOUR.

SHEET 9

DRAWING No C013904.03-SSDA458
ISSUE C

CLAY CORE MATERIAL COMPLIANCE NOTES:

1) THE MATERIAL SHALL BE FREE OF ROCK GREATER THAN 50mm IN ANY DIRECTION.
2) THE MATERIAL SHALL BE GENERALLY FREE OF TOPSOIL, ORGANIC AND ROOT MATTER.
3) THE MATERIAL SHALL HAVE NO MORE TAHN 10% EXCEEDING 19mm PARTICLE SIZE.
4) THE MATERIAL SHALL HAVE THE PERCENTAGE FINE (PASSING 0.075mm SIEVE) MORE THAN 50 % (IN ACCORDANCE WITH AS1289)
5) THE PLASTICITY INDEX >20%, IN ACCORDANCE WITH AS1289
6) LIQUID LIMIT >40%, IN ACCORDANCE WITH AS1289
7) MAXIMUM PERMEABILITY SHALL BE $1x10^{-9}$ m/s WITH THE SAMPLE REMOULDED TO A STANDARD MAXIMUM DRY DENSITY OF 95% IN ACCORDANCE WITH AS1289.5.1.1 AT STANDARD OPTIMUM MOISTURE CONTENT IN ACCORDANCE WITH AS1289.6.7.3

CLAY CORE CONSTRUCTION WORKS ARE TO BE CARRIED OUT IN THE FOLLOWING ORDER:

1) TREES, FALLEN TIMBER & OTHER DEBRIS ARE TO BE CLEARED AND REMOVED FROM UNDER THE BASIN EMBANKMENT.
2) ALL TOPSOIL FROM UNDER THE EMBANKMENT IS TO BE REMOVED AND STOCKPILED FOR LATER REUSE.
3) OVERBURDEN FROM UNDER THE EMBANKMENT IS TO BE REMOVED UNTIL FIRM CLAY OR BEDROCK IS HAS BEEN EXPOSED.
4) A CORE TRENCH OF AT LEAST 900mm DEEP IS TO BE EXCAVATED INTO IMPERMEABLE, STABLE FOUNDATION MATERIAL CONSISTING OF EITHER CLAY OR BEDROCK.
5) THE STRIPPED AREA BELOW THE EMBANKMENT IS TO BE SLIGHTLY SCARIFIED TO A DEPTH NOT EXCEEDING 100mm.
6) THE CLAY CORE MUST BE CENTRALLY PLACED AND EXTEND FOR THE FULL LENGTH AND HEIGHT OF THE BANK.
7) CLAY CORE TO BE LAYED IN LIFTS OF NO MORE THAN 250mm, EACH LAYER IS TO BE COMPACTED WITH A SHEEPS FOOT ROLLER, TO ACHIEVE A MIN DRY DENSITY RATIO OF AT LEAST 95% STANDARD (IN ACCORDANCE WITH AS1289.5.1.1 AND 5.4.1) OR MINIMUM HILF DENSITY RATIO OF 95% (IN ACCORDANCE WITH AS1289.5.7.1) AT MOISTURE CONTENT WITHIN THE RANGE OF 0-35% (WET) OF THE STANDARD OPTIMUM MOISTURE CONTENT.
8) THE COMPLETED CORE AND EMBANKMENT SHOULD BE BUILT 5% HIGHER THAN SPECIFIED, ALLOW FOR SETTLEMENT.
9) UPON COMPLETION OF EACH STAGE OF THE CLAY CORE CONSTRUCTION, THE EXPOSED CLAY SURFACE IF THE CORE SHALL BE LIMITED FROM TRAFFIC MOVEMENTS AND MAINTAINED IN MOIST CONDITION UNTIL IT IS FULLY COVERED BY THE NEXT LAYER. IF THE SURFACE OF THE PREVIOUS PLACED LAYER HAS DRIED OUT OR WETTED UP EXCESSIVELY, THE MATERIAL IN THE AFFECTED AREA SHALL BE EXCAVATED AND CONDITIONED TO MOISTURE WITHIN THE SPECIFIED TOLERANCE OR DISCARDED.

DRAWING TITLE
STORMWATER MUSIC CATCHMENT PLAN

DRAWING No: C013904.03-SSDA473

ISSUE: A

FINISHED LEVELS PLAN NOTES:

1. LEVELS DATUM IS AUSTRALIAN HEIGHT DATUM (A.H.D.).
2. GRADING REQUIREMENTS TO BE COMPLETED IN ACCORDANCE WITH AUSTRALIAN STANDARD AS2890.1, AS2890.2 AND AS2890.6.
3. ALL CONTOUR LINES & SPOT LEVELS INDICATE FINISHED PAVEMENT LEVELS U.N.O. ON PLAN.
4. CONTOUR INTERVALS
   - THE MINOR CONTOUR INTERVAL IS 0.1m.
   - THE MAJOR CONTOUR INTERVAL IS 0.5m.
5. HARDSTAND GRADING
   - MINIMUM PAVEMENT GRADE IS TO BE 1:100 (1%).
   - GRADING OF ON-GRADE DOCKS TO BE 1:100 (1%) FALL AWAY FROM THE DOCK FACE FOR A LENGTH OF 15m U.N.O.
   - GRADING OF TRUCK CIRCULATION ZONES TO BE MINIMUM AS NOTED ABOVE, 3-4% NOMINAL AND MAX. 5%.
6. CAR PARKING AREA GRADES
   - MINIMUM PAVEMENT GRADE IS TO BE 1:100 (1%), DESIRABLE MINIMUM GRADE 1:50 (2%).
   - MAXIMUM PAVEMENT GRADE IS TO BE 1:20 (5%) N CARPARKING AREAS AND 1:25 (4%) ELSEWHERE.
   - DISABLED ACCESS PARKING ZONES AND SHARED SPACE TO BE MAXIMUM OF 1:33 (3%) IN ASPHALT PAVEMENT AND MAXIMUM OF 1:40 (2.5%) IN CONCRETE PAVEMENT.
   - CARPARK RAMP GRADES TO BE MAX 1:5 WITH 2.5m SMOOTH TRANSITION AT TOP AND BOTTOM U.N.O.
7. TRUCK RAMP GRADES
   - MAXIMUM B-DOUBLE OR 19.0m AV RAMP GRADES ARE TO BE 1:8.3 (12%) U.N.O. ON PLAN
   - PROVIDE MINIMUM 4.0m LONG TRANSITION WHERE CHANGES OF GRADE EXCEED 1:20 (5%) AT A CREST U.N.O.
   - PROVIDE MINIMUM 3.0m LONG TRANSITION WHERE CHANGE OF GRADE EXCEED 1:20 (5%) AT A SAG U.N.O.
   - TRANSITIONS ARE TO PROVIDE A SMOOTH CONTINOUS CIRCULAR AND TANGENTIAL CHANGE IN GRADE TO ENSURE NO SHARP OR ACUTE CHANGES IN GRADE ARE PRESENT.
8. WHERE FIRE BRIGADE ACCESS IS REQUIRED, MAXIMUM RAMP GRADIENTS ARE TO BE 1:6 (16.6%), DESIRABLE RAMP GRADIENTS ARE TO BE 1:8 (12.5%) WITH 7m TRANSITION TOP AND BOTTOM U.N.O. ON PLAN.
9. PERMANENT BATTER SLOPES ARE TO HAVE A MAXIMUM GRADE OF 1V:3H U.N.O. BASED ON GEOTECHNICAL ASSESSMENT. PROVIDE MINIMUM 0.5m BERM BETWEEN THE BACK OF KERB OR PAVEMENT EDGES AND THE TOP OR TOE OF A BATTER.
10. ALL BATTER SLOPE WITH GRADES AT OR EXCEEDING 1V:6H ARE TO BE TURFED IMMEDIATELY OR APPROPRIATE EROSION CONTROL IS TO BE PROVIDED TO THE SATISFACTION OF THE ENGINEER.
11. ALL FOOTPATHS ARE TO FALL AWAY FROM THE BUILDING AT 2.5% NOMINAL. GRADE.
12. ALL PAVEMENTS ARE TO BE SET AT 30mm BELOW THE FINISHED FLOOR LEVEL OF THE WAREHOUSE AND OFFICE AREAS. PROVIDE LOCAL FEATHERING AT DOORWAYS OR ROLLER SHUTTERS TO PROVIDE FLUSH FINISH AS REQUIRED.
13. WHERE NEW AND EXISTING INTERFACING IS REQUIRED, MATCH EXISTING LEVELS AND PROVIDE SMOOTH INTERFACE BETWEEN NEW AND EXISTING GRADIENTS. REFER ANY CONCERNS TO THE ENGINEER.

FINISHED LEVELS KEY PLAN
SCALE 1:1500

LEVELS NOTE:

LEVELS SHOWN TO BE +/-1000mm FROM THOSE SHOWN.
FINAL LEVELS SUBJECT TO FINAL GEOTECHNICAL INVESTIGATIONS, ARCHITECTURAL LAYOUT AND ACHIEVING A CUT TO FILL EARTHWORKS BALANCE OVER THE PROPERTY.

COSTIN ROE CONSULTING | CIVIL & STRUCTURAL ENGINEERS

DRAWING TITLE: TYPICAL GREAT WESTERN HIGHWAY SECTION

DRAWING No: C013904.03-SSDA558 ISSUE: B

RETAINING WALL SETOUT PLAN
SCALE 1:500

REINFORCED EARTH RETAINING WALL NOTES:

1. ALL COMPONENTS AND INSTALLATION SHALL COMPLY WITH AS4678 AND THE STANDARDS REFERRED TO THEREIN.
2. MINIMUM HEIGHT (H) TO GEOGRID REINFORCEMENT LENGTH (L) TO BE 1.0.
3. MINIMUM BEARING CAPACITY OF FOUNDATION (BASED ON MINIMUM H/L RATIO OF 1.0) TO BE AS FOLLOWS :
   a. H MAX. 2.0m = 100 kPa
   b. H MAX. 3.5m = 150 kPa
   c. H MAX. 5.0m = 200 kPa
   BEFORE COMMENCEMENT OF CONSTRUCTION THE FOUNDATION SHALL BE INSPECTED AND VERIFIED BY A QUALIFIED GEOTECHNICAL ENGINEER.
4. WHERE MINIMUM BEARING IS NOT ACHIEVABLE OR NOT MEETING DESIGN REQUIREMENT, THE FOUNDATION MATERIAL IS TO BE EXCAVATED AND REPLACED WITH APPROVED MATERIAL PLACED IN ACCORDANCE WITH THE FILLING SPECIFICATION TO A MINIMUM COMPACTION OF 100% SMDD AND PLACED WITHIN 2% OF OMC.
5. MINIMUM SURCHARGE LOADS TO BE APPLIED AS FOLLOWS U.N.O. ON PLAN:
   a. LIVE LOAD = 20 kPa
   b. DEAD LOAD = 5 kPa
   c. CONSTRUCTION TRAFFIC LIVE LOAD = 10 kPa
6. THE GEOGRIDS SHALL BE OF THE TYPE AND INDEX STRENGTH NOMINATED ON THE DRAWINGS. THE MINIMUM GEOGRIDS SHALL BE A SINGLE LENGTH IN THE DIRECTION OF DESIGN TENSION, NOT LAPPED, MAKING PROVISION FOR CONNECTION TO THE FACING ACROSS THE WHOLE WIDTH OF THE FACING AND PROVIDING FOR THE SPECIFIED ANCHORAGE WITHIN THE DESIGNATED ANCHORAGE ZONE. GEOGRIDS SHALL COVER THE WHOLE OF THE PLAN AREA BEHIND THE WALL FOR THE SPECIFIED ANCHORAGE LENGTH AND SHALL BE LAPPED WITH ADJACENT SECTIONS IN ACCORDANCE WITH THE MANUFACTURER'S INSTRUCTIONS.
7. MINIMUM WALL EMBEDMENT AT THE TOE OF THE WALL TO BE 300mm.
8. DESIGN LIFE OF STRUCTURE IS TO BE 100 YEARS.
9. SELECT BACKFILL MATERIAL WITHIN THE REINFORCED SOIL BLOCK SHALL BE SOUND GRANULAR MATERIAL OF NATURAL OR INDUSTRIAL ORIGIN, NON-EXPANSIVE, FREE FROM ORGANIC OR OTHER DELETERIOUS MATERIAL CONFORMING TO THE PHYSICAL, CHEMICAL AND ELECTROCHEMICAL LIMITS AS SPECIFIED AND SHALL NOT BE SUBJECT TO BREAKDOWN UNDER COMPACTION. THE SELECT BACKFILL MATERIAL IS TO HAVE THE FOLLOWING PARAMETERS.
   a. MINIMUM INTERNAL FRICTION, Ø = 34°
   b. EFFECTIVE COHESION, C'= 0 kPa
   c. UNIT WEIGHT = 21 kN/m³
   d. PH BETWEEN 4 AND 9.
10. SELECT BACKFILL IS TO BE PLACED AND COMPACTED IN LAYERS NOT MORE THAN 300mm (LOOSE). COMPACTION TO NOT LESS THAN 100% SMDD WILL BE ACHIEVED AND MATERIAL PLACED WITHIN 2% OF OMC. DENSITY TESTING SHALL BE PERFORMED IN EACH COMPACTED LIFT IN ACCORDANCE WITH AS3798.
11. PROVIDE A DRAINAGE LAYER DIRECTLY BEHIND THE FACING UNITS IN A MINIMUM 300mm WIDE 12-20mm AGGREGATE LAYER. FACING UNIT VOIDS TO BE FILLED WITH AGGREGATE. PROVIDE 100mm MINIMUM AG. DRAIN IN GEOTEXTILE SOCK AT TOE OF WALL FACING AND CONNECT TO DRAINAGE SYSTEM AT 30m MAX. SPACING.
12. THE NEED FOR A CHIMNEY DRAIN OR DRAINAGE AT THE REAR OF THE MASS SOIL BLOCK IS TO BE CONFIRMED ON SITE BY THE GEOTECHNICAL ENGINEER AND DESIGNER FOLLOWING PREPARATION OF THE FOUNDATION AND PRIOR TO CONSTRUCTION OF THE MASS SOIL BLOCK.
13. CONSTRUCTION EQUIPMENT WEIGHING MORE THAN 500kG STATIC WEIGHT IS TO BE KEPT BACK 1.5m FROM THE REAR FACE OF THE WALL FACING UNITS. COMPACTION OF THE SELECT FILL MATERIAL WITHIN THE 1.5m STRIP ADJACENT TO THE WALL SHALL BE ACHIEVED BY LIGHT MECHANICAL TAMPERS (VIBRATING PLATE, TRENCH COMPACTOR OR SIMILAR) TO GIVE THE SAME DENSITY AS IN THE REMAINDER OF THE SELECT FILL.
14. ALL DESIGN AND CONSTRUCT WALL SYSTEM TO BE COMPLETED IN ACCORDANCE WITH THESE NOTES.
15. TOP OF WALL HEIGHTS ARE NOTED TO ALIGN WITH FINISHED PAVEMENT HEIGHTS. THE CONTRACTOR AND THEIR DESIGN AND CONSTRUCT WALLING CONTRACTORS ARE TO ENSURE THAT ALL WALL STRAPS ARE INSTALLED BELOW THE DESIGN EARTHWORKS SUBGRADE. CONTRACTOR TO ALLOW FOR WALL STRAPS TO BE GRADED AWAY FROM THE FACE OF THE WALL OR OTHERWISE INSTALLED TO SUIT EARTHWORKS DESIGN LEVELS AND GRADES.
16. DIFFERENTIAL SETTLEMENT NOTE:
    FUTURE BUILDING AND SERVICE DESIGNERS TO CONSIDER DIFFERENTIAL SETTLEMENT OF REINFORCED EARTH WALL BLOCK AND GENERAL FILL AREAS. PARTICULAR ATTENTION TO BE DRAWN TO HEAVILY LOADED AREAS, OR DIFFERING LOADED AREAS (INCLUDING SPRINKLER TANK AND TRUCK PAVEMENT AREAS) AND WHERE SIGNIFICANT CHANGES IN OVERALL WALL HEIGHT OR FILL AMOUNTS ARE EXPERIENCED. IT IS THE RESPONSIBILITY OF THE FUTURE DESIGNERS TO ENSURE APPROPRIATE DESIGN CONSIDERATION TO DIFFERENTIAL SETTLEMENT ARE MADE DEPENDING ON THE DESIGN ELEMENT AND INTERACTION WITH RETAINED ELEMENTS AND GENERAL FILL MATERIAL.

RETAINING WALL NOTES:

1. ALL COMPONENTS AND INSTALLATION SHALL COMPLY WITH AS4678 AND THE STANDARDS REFERRED TO THEREIN.
2. MINIMUM BEARING CAPACITY OF FOUNDATION TO BE AS FOLLOWS :
   a. H MAX. 2.0m = 100 kPa
   b. H MAX. 3.5m = 150 kPa
   c. H MAX. 5.0m = 200 kPa
   BEFORE COMMENCEMENT OF CONSTRUCTION THE FOUNDATION SHALL BE INSPECTED AND VERIFIED BY A QUALIFIED GEOTECHNICAL ENGINEER.
3. WHERE MINIMUM BEARING IS NOT ACHIEVABLE OR NOT MEETING DESIGN REQUIREMENT, THE FOUNDATION MATERIAL IS TO BE EXCAVATED AND REPLACED WITH APPROVED MATERIAL PLACED IN ACCORDANCE WITH THE FILLING SPECIFICATION TO A MINIMUM COMPACTION OF 100% SMDD AND PLACED WITHIN 2% OF OMC.
4. MINIMUM SURCHARGE LOADS TO BE APPLIED AS FOLLOWS U.N.O.
5. ON PLAN :
   a. LIVE LOAD = 20 kPa
   b. DEAD LOAD = 5 kPa
   c. CONSTRUCTION TRAFFIC LIVE LOAD = 10 kPa
6. MINIMUM WALL EMBEDMENT AT THE TOE OF THE WALL TO BE 300mm MINIMUM UNLESS NOTED OTHERWISE.
7. DESIGN LIFE OF STRUCTURE IS TO BE 100 YEARS.
8. TIED WALLS ARE TO BE TEMPORARILY PROPPED AT TOP UNTIL SUCH TIME THE TOP OF WALL IS TIED TO THE SLAB AND 28-DAY CONCRETE STRENGTH HAS BEEN ACHIEVED.
9. CONSTRUCTION EQUIPMENT WEIGHING MORE THAN 500KG STATIC WEIGHT IS TO BE KEPT BACK 1.5m FROM THE REAR FACE OF THE WALL FACING UNITS. COMPACTION OF THE SELECT FILL MATERIAL WITHIN THE 1.5m STRIP ADJACENT TO THE WALL SHALL BE ACHIEVED BY LIGHT MECHANICAL TAMPERS (VIBRATING PLATE, TRENCH COMPACTOR OR SIMILAR) TO GIVE THE SAME DENSITY AS IN THE REMAINDER OF THE SELECT FILL.
10. ALL DESIGN AND CONSTRUCT WALL SYSTEM TO BE COMPLETED IN ACCORDANCE WITH THESE NOTES.
11. WALL ELEVATIONS ALLOW FOR NOMINAL EMBEDMENT DEPTHS. WHERE DESIGN AND CONSTRUCT (D+C) WALL SYSTEMS ARE PROPOSED IT IS THE CONTACTORS RESPONSIBILITY TO ALLOW FOR THE FINAL EMBEDMENT DEPTHS AS PER THE D+C DESIGN. ALLOWANCE FOR OVERALL WALL AREAS TO CONSIDER THE FINAL EMBEDMENT DEPTH.
12. WALL ELEVATIONS AND AREAS ARE BASED ON THE VERTICAL PLAN AREA. CONTRACTOR TO ALLOW ADDITIONAL SURFACE AREA WHERE WALLS ARE NOT VERTICAL OR HAVE BACKSLOPES.

EXISTING SERVICES NOTES:

1. DURING THE EXECUTION OF WORKS, THE CONTRACTOR SHALL MAINTAIN THE INTEGRITY OF EXISTING SERVICES. THE CONTRACTOR SHALL REPAIR ANY DAMAGE CAUSED TO THE EXISTING SERVICES TO THE SATISFACTION OF THE SUPERINTENDENT AND THE RELEVANT SERVICE AUTHORITY, AT NO COST TO THE PRINCIPAL.
2. WHERE IT IS NECESSARY TO REMOVE, DIVERT OR CUT INTO ANY EXISTING SERVICE, THE CONTRACTOR SHALL GIVE AT LEAST THREE (3) DAYS NOTICE OF ITS REQUIREMENTS TO THE SUPERINTENDENT, WHO WILL ADVISE WHAT ARRANGEMENTS SHOULD BE MADE FOR THE ALTERATION OF SUCH EXISTING WORKS.
3. EXISTING SERVICES HAVE BEEN PLOTTED FROM SUPPLIED DATA. THE ACCURACY IS NOT GUARANTEED. IT SHALL BE THE CONTRACTOR'S RESPONSIBILITY TO ESTABLISH THE LOCATION AND LEVEL OF ALL EXISTING SERVICES PRIOR TO COMMENCING WORK. ALL CLEARANCES AND APPROVALS SHALL ALSO BE OBTAINED FROM THE RELEVANT SERVICE AUTHORITY PRIOR TO THE COMMENCEMENT OF WORK.
4. ALL NEW AND EXHUMED SERVICES THAT CROSS EXISTING AND FUTURE ROADS/PAVEMENTS WITHIN THE SITE SHALL BE BACKFILLED WITH DGB20 MATERIAL TO SUBGRADE LEVEL AND COMPACTED TO 98% STANDARD DENSITY RATIO. SUBJECT TO PRIOR APPROVAL FROM RELEVANT AUTHORITY.
5. ON COMPLETION OF SERVICES INSTALLATION. ALL DISTURBED AREAS SHALL BE RESTORED TO ORIGINAL, INCLUDING KERBS, FOOTPATHS, CONCRETE AREAS, GRAVEL AREAS, GRASSED AREAS AND ROAD PAVEMENTS.
6. CARE TO BE TAKEN WHEN EXCAVATING NEAR UTILITY SERVICES. NO MECHANICAL EXCAVATION TO BE UNDERTAKEN OVER SERVICES. LIAISE WITH RELEVANT AUTHORITY.
7. THE CONTRACTOR SHALL ALLOW FOR THE CAPPING OFF, EXCAVATION AND REMOVAL IF REQUIRED OF ALL EXISTING SERVICES IN AREAS AFFECTED BY THE WORKS WITHIN THE CONTRACT AREA AS SHOWN ON THE DRAWINGS UNLESS DIRECTED OTHERWISE BY THE SUPERINTENDENT. ALL TO REGULATORY AUTHORITY STANDARDS AND APPROVAL.
8. THE CONTRACTOR IS TO MAINTAIN EXISTING STORMWATER DRAINAGE FLOWS THROUGH THE ROADS AT ALL TIMES. MAKE DUE ALLOWANCE FOR ALL SUCH FLOWS AT ALL TIMES.
9. PRIOR TO COMMENCEMENT OF ANY WORKS THE CONTRACTOR SHALL OBTAIN THE SUPERINTENDENT'S APPROVAL OF THE PROGRAM FOR THE RELOCATION/CONSTRUCTION OF TEMPORARY SERVICES.
10. CONTRACTOR SHALL CONSTRUCT TEMPORARY SERVICES AS REQUIRED TO MAINTAIN EXISTING SUPPLY TO BUILDINGS REMAINING IN OPERATION DURING WORKS TO THE SATISFACTION AND APPROVAL OF THE SUPERINTENDENT. ONCE DIVERSION IS COMPLETE AND COMMISSIONED THE CONTRACTOR SHALL REMOVE ALL SUCH TEMPORARY SERVICES AND MAKE GOOD TO THE SATISFACTION OF THE SUPERINTENDENT.
11. INTERRUPTION TO SUPPLY OF EXISTING SERVICES SHALL BE DONE SO AS NOT TO CAUSE ANY INCONVENIENCE OR DAMAGE TO THE ADJACENT RESIDENCES. CONTRACTOR TO GAIN APPROVAL OF THE SUPERINTENDENT FOR TIME OF INTERRUPTION.
12. THE CONTRACTOR SHALL UNDERTAKE A DIAL BEFORE YOU DIG (DBYD 1100) SERVICES SEARCH BEFORE THE COMMENCEMENT OF ANY WORKS.

DRAWING TITLE: RETAINING WALL PLAN
WAREHOUSE 5 & BLACKTOWN CREEK

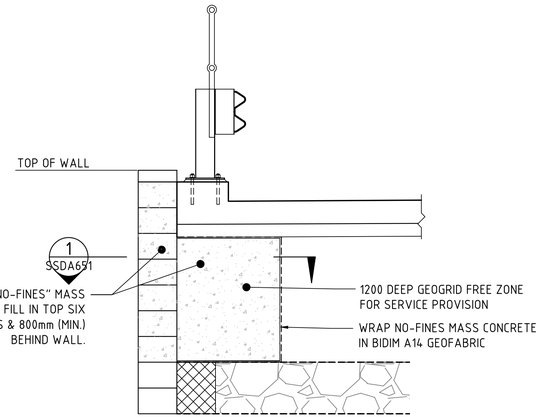

DRAWING No: C013904.03-SSDA604 ISSUE: C

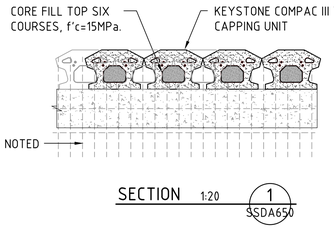

RETAINING WALL TYPE 1
(REINFORCED EARTH WALL)
SCALE 1:20

RETAINING WALL TYPE 2
(REINFORCED EARTH WALL)
SCALE 1:20

TYPICAL NO-FINES SERVICE ZONE CONFIGURATION
SCALE 1:20

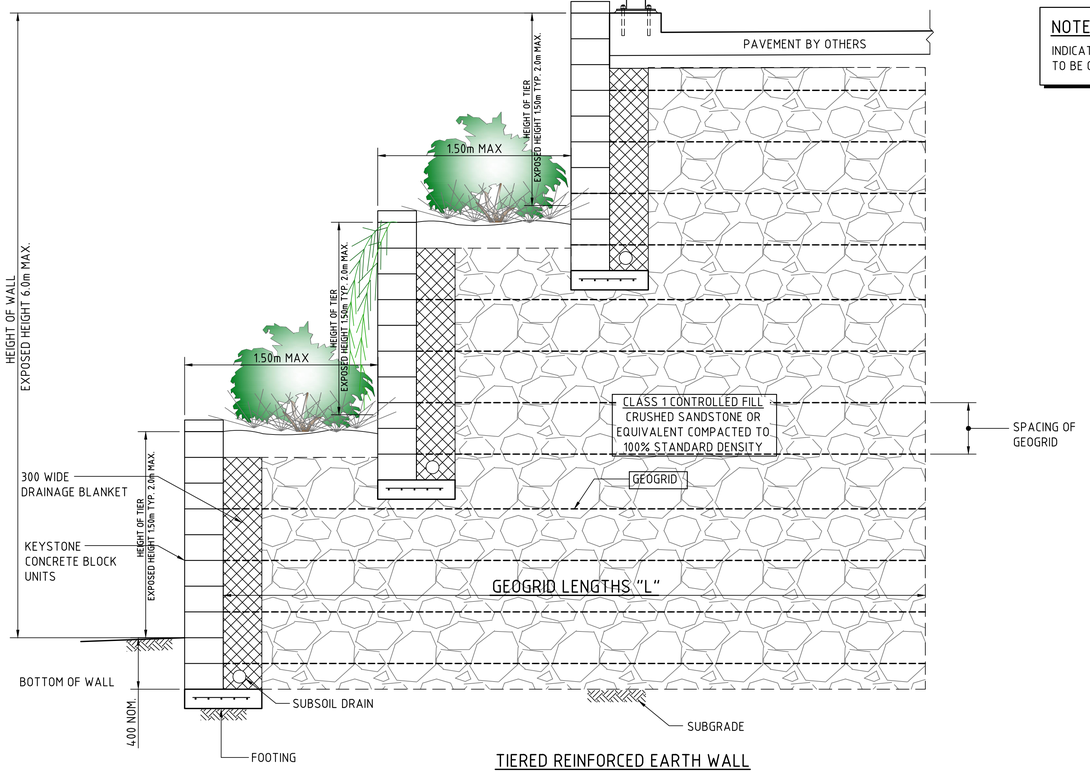

RETAINING WALL NOTES:

1. ALL COMPONENTS AND INSTALLATION SHALL COMPLY WITH AS4678 AND THE STANDARDS REFERRED TO THEREIN.
2. MINIMUM BEARING CAPACITY OF FOUNDATION TO BE AS FOLLOWS :
   a. H MAX. 2.0m = 100 kPa
   b. H MAX. 3.5m = 150 kPa
   c. H MAX. 5.0m = 200 kPa
   BEFORE COMMENCEMENT OF CONSTRUCTION THE FOUNDATION SHALL BE INSPECTED AND VERIFIED BY A QUALIFIED GEOTECHNICAL ENGINEER.
3. WHERE MINIMUM BEARING IS NOT ACHIEVABLE OR NOT MEETING DESIGN REQUIREMENT, THE FOUNDATION MATERIAL IS TO BE EXCAVATED AND REPLACED WITH APPROVED MATERIAL PLACED IN ACCORDANCE WITH THE FILLING SPECIFICATION TO A MINIMUM COMPACTION OF 100% SMDD AND PLACED WITHIN 2% OF OMC.
4. MINIMUM SURCHARGE LOADS TO BE APPLIED AS FOLLOWS U.N.O.
5. ON PLAN :
   a. LIVE LOAD = 20 kPa
   b. DEAD LOAD = 5 kPa
   c. CONSTRUCTION TRAFFIC LIVE LOAD = 10 kPa
6. MINIMUM WALL EMBEDMENT AT THE TOE OF THE WALL TO BE 300mm MINIMUM UNLESS NOTED OTHERWISE.
7. DESIGN LIFE OF STRUCTURE IS TO BE 100 YEARS.
8. TIED WALLS ARE TO BE TEMPORARILY PROPPED AT TOP UNTIL SUCH TIME THE TOP OF WALL IS TIED TO THE SLAB AND 28-DAY CONCRETE STRENGTH HAS BEEN ACHIEVED.
9. CONSTRUCTION EQUIPMENT WEIGHING MORE THAN 500KG STATIC WEIGHT IS TO BE KEPT BACK 1.5m FROM THE REAR FACE OF THE WALL FACING UNITS. COMPACTION OF THE SELECT FILL MATERIAL WITHIN THE 1.5m STRIP ADJACENT TO THE WALL SHALL BE ACHIEVED BY LIGHT MECHANICAL TAMPERS (VIBRATING PLATE, TRENCH COMPACTOR OR SIMILAR) TO GIVE THE SAME DENSITY AS IN THE REMAINDER OF THE SELECT FILL.
10. ALL DESIGN AND CONSTRUCT WALL SYSTEMS TO BE COMPLETED IN ACCORDANCE WITH THESE NOTES.

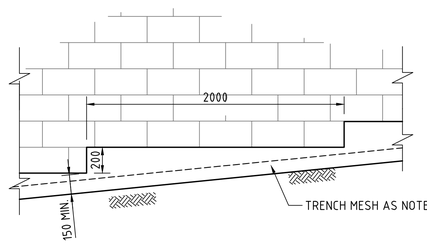

REINFORCED EARTH RETAINING WALL NOTES:

1. ALL COMPONENTS AND INSTALLATION SHALL COMPLY WITH AS4678 AND THE STANDARDS REFERRED TO THEREIN.
2. MINIMUM HEIGHT (H) TO GEOGRID REINFORCEMENT LENGTH (L) TO BE 1.0.
3. MINIMUM BEARING CAPACITY OF FOUNDATION (BASED ON MINIMUM H/L RATIO OF 1.0) TO BE AS FOLLOWS :
   a. H MAX. 2.0m = 100 kPa
   b. H MAX. 3.5m = 150 kPa
   c. H MAX. 5.0m = 200 kPa
   BEFORE COMMENCEMENT OF CONSTRUCTION THE FOUNDATION SHALL BE INSPECTED AND VERIFIED BY A QUALIFIED GEOTECHNICAL ENGINEER.
4. WHERE MINIMUM BEARING IS NOT ACHIEVABLE OR NOT MEETING DESIGN REQUIREMENT, THE FOUNDATION MATERIAL IS TO BE EXCAVATED AND REPLACED WITH APPROVED MATERIAL PLACED IN ACCORDANCE WITH THE FILLING SPECIFICATION TO A MINIMUM COMPACTION OF 100% SMDD AND PLACED WITHIN 2% OF OMC.
5. MINIMUM SURCHARGE LOADS TO BE APPLIED AS FOLLOWS U.N.O. ON PLAN:
   a. LIVE LOAD = 20 kPa
   b. DEAD LOAD = 5 kPa
   c. CONSTRUCTION TRAFFIC LIVE LOAD = 10 kPa
6. THE GEOGRIDS SHALL BE OF THE TYPE AND INDEX STRENGTH NOMINATED ON THE DRAWINGS. THE MINIMUM GEOGRIDS SHALL BE A SINGLE LENGTH IN THE DIRECTION OF DESIGN TENSION, NOT LAPPED, MAKING PROVISION FOR CONNECTION TO THE FACING ACROSS THE WHOLE WIDTH OF THE FACING AND PROVIDING FOR THE SPECIFIED ANCHORAGE WITHIN THE DESIGNATED ANCHORAGE ZONE. GEOGRIDS SHALL COVER THE WHOLE OF THE PLAN AREA BEHIND THE WALL FOR THE SPECIFIED ANCHORAGE LENGTH AND SHALL BE LAPPED WITH ADJACENT SECTIONS IN ACCORDANCE WITH THE MANUFACTURER'S INSTRUCTIONS.
7. MINIMUM WALL EMBEDMENT AT THE TOE OF THE WALL TO BE 300mm.
8. DESIGN LIFE OF STRUCTURE IS TO BE 100 YEARS.
9. SELECT BACKFILL MATERIAL WITHIN THE REINFORCED SOIL BLOCK SHALL BE SOUND GRANULAR MATERIAL OF NATURAL OR INDUSTRIAL ORIGIN, NON-EXPANSIVE, FREE FROM ORGANIC OR OTHER DELETERIOUS MATERIAL CONFORMING TO THE PHYSICAL, CHEMICAL AND ELECTROCHEMICAL LIMITS AS SPECIFIED AND SHALL NOT BE SUBJECT TO BREAKDOWN UNDER COMPACTION. THE SELECT BACKFILL MATERIAL IS TO HAVE THE FOLLOWING PARAMETERS:
   a. MINIMUM INTERNAL FRICTION, Ø = 34°
   b. EFFECTIVE COHESION, C' = 0 kPa
   c. UNIT WEIGHT = 21 kN/m³
   d. PH BETWEEN 4 AND 9.
10. SELECT BACKFILL IS TO BE PLACED AND COMPACTED IN LAYERS NOT MORE THAN 300mm (LOOSE). COMPACTION TO NOT LESS THAN 100% SMDD WILL BE ACHIEVED AND MATERIAL PLACED WITHIN 2% OF OMC. DENSITY TESTING SHALL BE PERFORMED IN EACH COMPACTED LIFT IN ACCORDANCE WITH AS3798.
11. PROVIDE A DRAINAGE LAYER DIRECTLY BEHIND THE FACING UNITS IN A MINIMUM 300mm WIDE 12–20mm AGGREGATE LAYER. FACING UNIT VOIDS TO BE FILLED WITH AGGREGATE. PROVIDE 100mm MINIMUM AG. DRAIN IN GEOTEXTILE SOCK AT TOE OF WALL FACING AND CONNECT TO DRAINAGE SYSTEM AT 30m MAX. SPACING.
12. THE NEED FOR A CHIMNEY DRAIN OR DRAINAGE AT THE REAR OF THE MASS SOIL BLOCK IS TO BE CONFIRMED ON SITE BY THE GEOTECHNICAL ENGINEER AND DESIGNER FOLLOWING PREPARATION OF THE FOUNDATION AND PRIOR TO CONSTRUCTION OF THE MASS SOIL BLOCK.
13. CONSTRUCTION EQUIPMENT WEIGHING MORE THAN 500kG STATIC WEIGHT IS TO BE KEPT BACK 1.5m FROM THE REAR FACE OF THE WALL FACING UNITS. COMPACTION OF THE SELECT FILL MATERIAL WITHIN THE 1.5m STRIP ADJACENT TO THE WALL SHALL BE ACHIEVED BY LIGHT MECHANICAL TAMPERS (VIBRATING PLATE, TRENCH COMPACTOR OR SIMILAR) TO GIVE THE SAME DENSITY AS IN THE REMAINDER OF THE SELECT FILL.
14. ALL DESIGN AND CONSTRUCT WALL SYSTEM TO BE COMPLETED IN ACCORDANCE WITH THESE NOTES.
15. TOP OF WALL HEIGHTS ARE NOTED TO ALIGN WITH FINISHED PAVEMENT HEIGHTS. THE CONTRACTOR AND THEIR DESIGN AND CONSTRUCT WALLING CONTRACTORS ARE TO ENSURE THAT ALL WALL STRAPS ARE INSTALLED BELOW THE DESIGN EARTHWORKS SUBGRADE. CONTRACTOR TO ALLOW FOR WALL STRAPS TO BE GRADED AWAY FROM THE FACE OF THE WALL OR OTHERWISE INSTALLED TO SUIT EARTHWORKS DESIGN LEVELS AND GRADES.
16. DIFFERENTIAL SETTLEMENT NOTE:
    FUTURE BUILDING AND SERVICE DESIGNERS TO CONSIDER DIFFERENTIAL SETTLEMENT OF REINFORCED EARTH WALL BLOCK AND GENERAL FILL AREAS. PARTICULAR ATTENTION TO BE DRAWN TO HEAVILY LOADED AREAS, OR DIFFERING LOADED AREAS (INCLUDING SPRINKLER TANK AND TRUCK PAVEMENT AREAS) AND WHERE SIGNIFICANT CHANGES IN OVERALL WALL HEIGHT OR FILL AMOUNTS ARE EXPERIENCED. IT IS THE RESPONSIBILITY OF THE FUTURE DESIGNERS TO ENSURE APPROPRIATE DESIGN CONSIDERATION TO DIFFERENTIAL SETTLEMENT ARE MADE DEPENDING ON THE DESIGN ELEMENT AND INTERACTION WITH RETAINED ELEMENTS AND GENERAL FILL MATERIAL.

MASONRY BLOCKWORK

M1 ALL WORKMANSHIP AND MATERIALS SHALL BE IN ACCORDANCE WITH AS 3700.

M2 STRENGTH OF BRICKS, CLASS OF BLOCKS AND TYPE OF MORTAR SHALL BE AS LISTED BELOW :

MATERIAL:	CHARACTERISTIC UNCONFINED COMPRESSIVE STRENGTH, F'_{uc}	MORTAR CLASSIFICATION:
CONCRETE BLOCKS	15 MPa	M3

M3 MORTAR ADMIXTURES SHALL NOT BE USED WITHOUT THE WRITTEN APPROVAL OF THE SUPERINTENDENT

M4 ALL MASONRY WALLS AND PIERS SUPPORTING SLABS AND BEAMS SHALL HAVE A PRE-GREASED GALVANISED STEEL SLIP JOINT BETWEEN CONCRETE SOFFIT AND THE TOP OF OF THE MASONRY ELEMENT U.N.O.

M5 ALL MASONRY SUPPORTING OR SUPPORTED BY CONCRETE FLOORS SHALL BE PROVIDED WITH VERTICAL JOINTS TO MATCH ALL CONTROL JOINTS IN THE CONCRETE.

M6 NON LOAD BEARING WALLS SHALL BE SEPARATED FROM CONCRETE ABOVE BY A 12mm THICK CLOSED CELL POLYETHYLENE STRIP.

M7 NO CHASES OR RECESSES ARE PERMITTED IN LOAD BEARING MASONRY WITHOUT THE APPROVAL OF THE ENGINEER.

M8 PROVIDE CLEANOUT HOLES AT BASE OF ALL WALLS. ROD CORE HOLES TO REMOVE PROTRUDING MORTAR FOLLOWING APPROVAL FROM THE ENGINEER.

M9 CORE FILLING GROUT TO HAVE A CHARACTERISTIC STRENGTH OF 20 MPa, 10mm AGGREGATE, 230mm SLUMP. GROUT FILL ALL BLOCK CORES.

M10 PROVIDE 65mm COVER TO REINFORCING BARS FROM THE OUTSIDE FACE OF THE BLOCKWORK IF REINFORCEMENT IS NOT TO BE PLACED CENTRALLY.

M11 PROVIDE VERTICAL CONTROL JOINTS AT 10 METRE MAX CENTRES, AND AT 5 METRE MAXIMUM FROM CORNERS IN ALL BRICKWORK WALLS

M12 PROVIDE VERTICAL CONTROL JOINTS AT 8 METRE MAX CENTRES, AND AT 4 METRE MAXIMUM FROM CORNERS IN ALL CONCRETE BLOCK WALLS.

M13 BACKFILL TO RETAINING WALLS TO BE FREE DRAINING GRANULAR MATERIAL U.N.O. PROVIDE SUBSOIL DRAIN BEHIND WEEP HOLES.

M14 DO NOT CONSTRUCT MASONRY WALLS ON SUSPENDED CONCRETE UNTIL SLAB HAS BEEN STRIPPED AND DE-PROPPED.

M15 ALL CAVITY CONSTRUCTION TO HAVE GALVANISED OR STAINLESS STEEL WALL TIES INSTALLED AS PER AS 3700

PILE	80	20	SL	NIL	32
SHOT CRETE	230	10	SL	NIL	32
CAPPING	80	20	GP	NIL	32

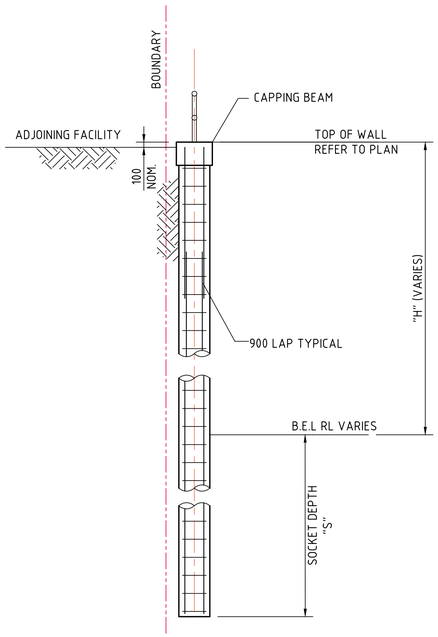

NOTE:
SOCKET DEPTH NOTED IS MINIMUM INTO CLASS IV ROCK OR HIGHER. THIS IS TO BE CONFIRMED BY GEOTECHNICAL ENGINEER DURING INSTALLATION. IF SOFTER ROCK IS ENCOUNTERED, ENGINEER TO BE NOTIFIED IMMEDIATELY AND WILL ADVICE OF ADJUSTED SOCKET DEPTH.

NOTE:
THE DETAILS ON THIS DRAWING ARE INDICATIVE ONLY AND ARE SUBJECT TO DETAIL DESIGN.

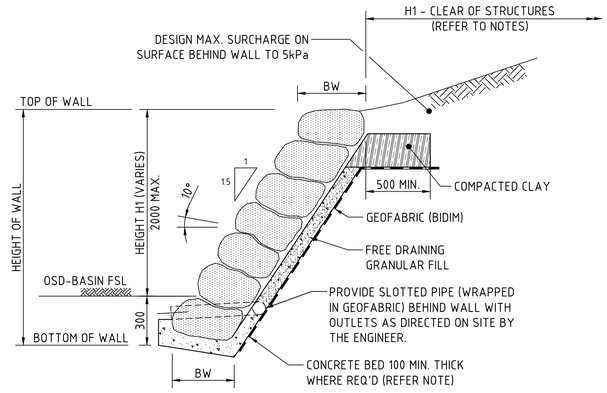

NOTE :
INDICATIVE REINFORCEMENT LENGTHS SHOWN. DESIGN TO BE CONFIRMED / PROVIDED BY D+C CONTRACTOR.

DETAIL OF 700x550 CAPPING BEAM
SCALE 1:20

CONTIGUOUS PILE WALL TYPICAL SECTION
SCALE 1:50

BOULDER RETAINING WALL
SCALE 1:20

BOULDER RETAINING WALL NOTES

MINIMUM BEARING CAPACITY OF FOUNDATION TO BE 100kPa ASSUMING THE FOLLOWING:
- CLAY FOUNDATION Cu=50kPa, ⌀=0

SLIDING STABILITY IS BASED ON THE FOLLOWING
- FRICTION ANGLE OF BOULDER WALL : NOT LESS THAN 40°
- EFFECTIVE FRICTION ANGLE OF SOIL SUBGRADE: NOT LESS THAN 30° FOR SOIL OR 35° FOR ROCK

SOIL AND ROCK DESIGN PARAMETERS SHALL BE CONFIRMED BY GEOTECHNICAL ENGINEER PRIOR TO PLACEMENT OF BOULDERS OR CONCRETE BED.

BOULDERS TO BE A NOMINAL 750mm DIA. (400mm DIA. UP TO 800mm DIA.) PLACED ON THEIR BROADEST BASE. BOULDERS TO BE PLACED IN AN INTERLOCKING ARRANGEMENT ON THE CONTACT SURFACES DIPPING TOWARDS BACK OF THE WALL AT 10° AND SHALL BE INSPECTED BY THE ENGINEER DURING CONSTRUCTION

DENSITY OF INDIVIDUAL BOULDERS SHALL BE MINIMUM 2.5 TONNES/m

FOR WALLS ABOVE 1000mm IN HEIGHT, THE FIRST LAYER OF BOULDERS ARE TO SET IN A BED OF N15 CONCRETE AND THE JOINTS BETWEEN SHALL BE FILLED WITH CONCRETE TO A LEVEL EQUAL TO THE SURFACE LEVEL OF THE TOE OF THE WALL.

NO STRUCTURE TO BE BUILT WITHIN H1 FROM THE BACK OF THE TOP OF THE WALL (WHERE H1=HEIGHT OF WALL), UNLESS THE STRUCTURE IS FOUNDED ON ROCK WITH SBV>150kPA

CONSTRUCTION METHODS AND SEQUENCE TO ENSURE THAT DESIGN MAX. SURCHARGE OF 5kPa IS NOT EXCEEDED.

CONSTRUCTION TO BE IN ACCORDANCE WITH AS 4678:2002

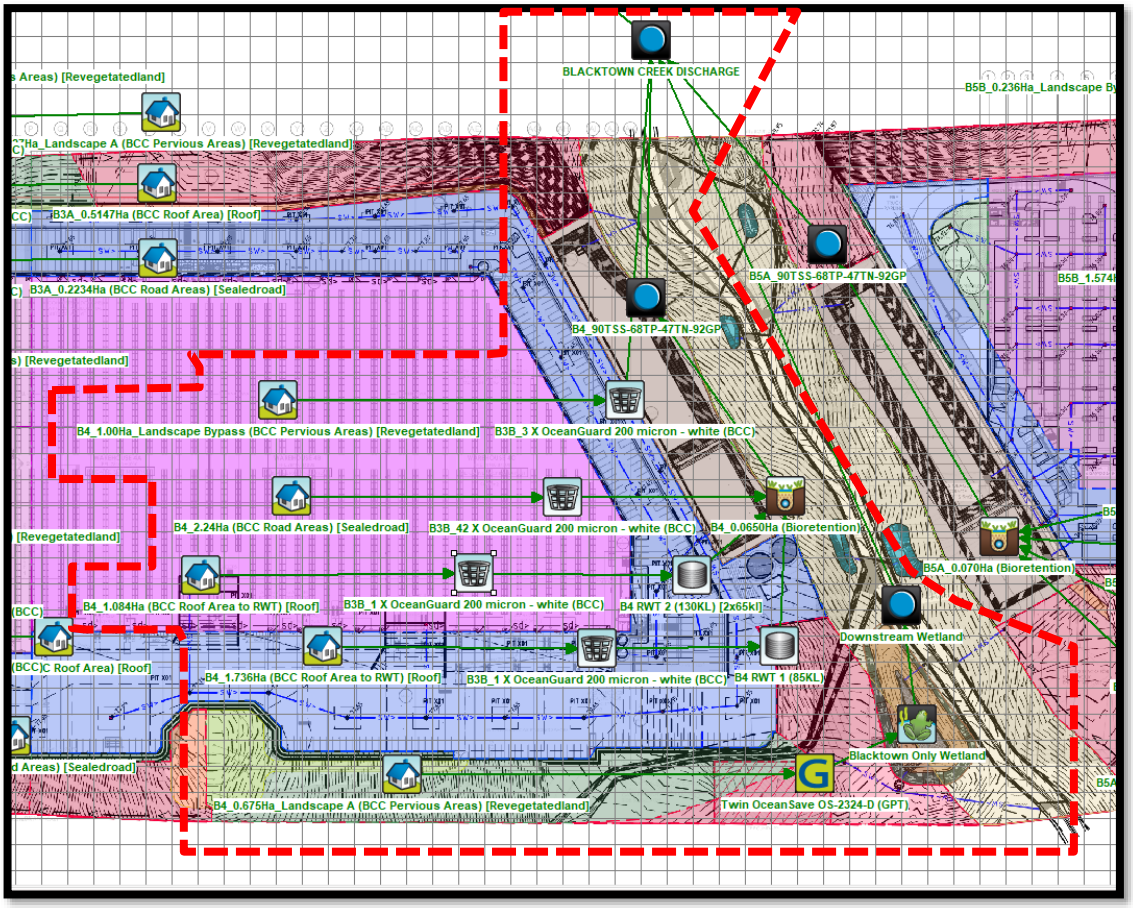

Figure 6.5. MUSIC model layout (Catchment 4)

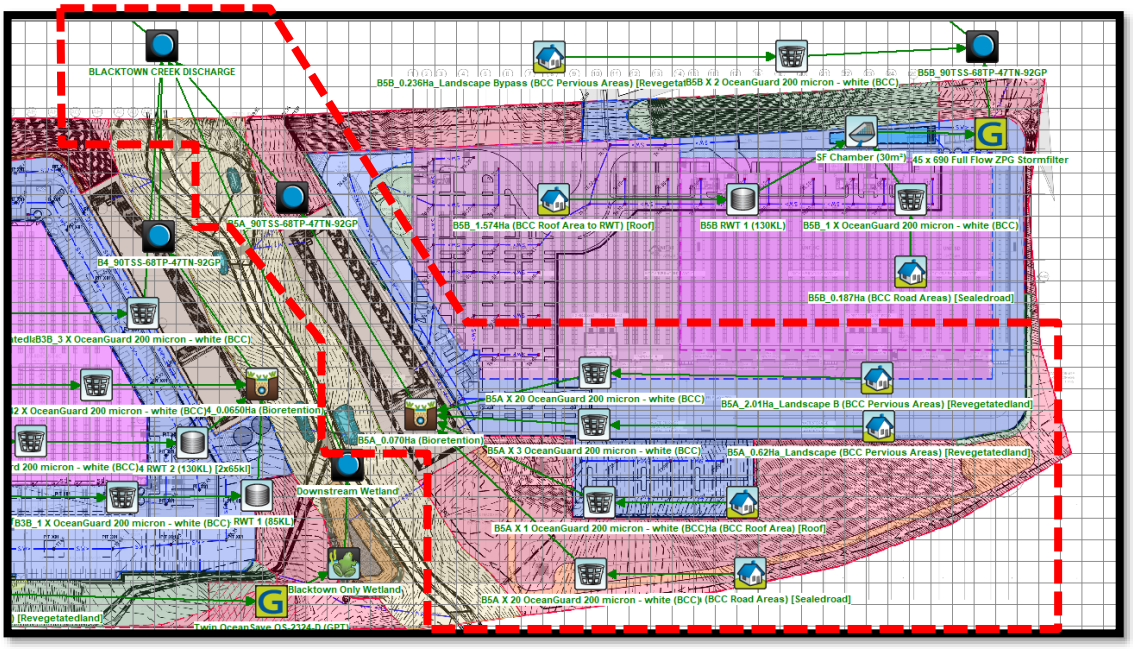

Figure 6.6. MUSIC model layout (Catchment 5A)

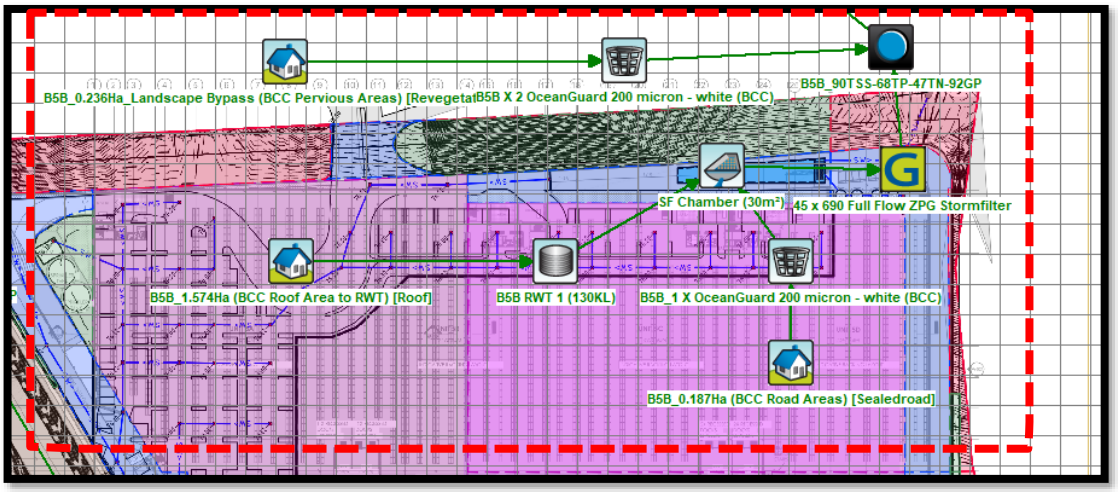

Figure 6.7. MUSIC model layout (Catchment 5B)

B.1 Introduction

The MUSIC modelling software was chosen to model water quality. This model has been released by the Cooperative Research Centre for Catchment Hydrology (CRCCH) and is a standard industry model for this purpose. MUSIC (the Model for Urban Stormwater Improvement Conceptualisation) is suitable for simulating catchment areas of up to 100 km^2 and utilises a continuous simulation approach to model water quality.

By simulating the performance of stormwater management systems, MUSIC can be used to predict if these proposed systems and changes to land use are appropriate for their catchments and are capable of meeting specified water quality objectives (CRC 2002). The water quality constituents modelled in MUSIC and of relevance to this report include Total Suspended Solids (TSS), Total Phosphorus (TP) and Total Nitrogen (TN).

The pollutant retention criteria set out in Blacktown City Council's Huntingwood Precinct DCP and nominated in **Section 4.1** of this report were used as a basis for assessing the effectiveness of the selected treatment trains.

The MUSIC model "*Co13904_03_Huntingwood Precinct_REV08.sqz*" was set up to examine the effectiveness of the water quality treatment train and to predict if council requirements have been achieved. The model was set up using the latest Blacktown City Council *MUSICLINK* parameters for clay soil and the layout of the MUSIC model is presented in this **Appendix B** and **Section 3** of the report.

Modelling parameters used are based on the latest Blacktown City Council *MUSICLINK* parameters.

B.2 Rainfall Data

As per the recommendation of Council, six-minute pluviographic data for the Sydney Meteorological Office Station was sourced from the Bureau of Meteorology (BOM) as nominated below. Evapo-transpiration data for the period was sourced from the Sydney Monthly Areal PET data set supplied with the MUSIC software.

Input	**Data Used**
Rainfall Station	67035 Liverpool (Whitlam)
Rainfall Period	1 January 1967 – 31 December 1976
	(10 years)
Mean Annual Rainfall (mm)	857
Evapotanspiration	Sydney Monthly Areal PET
Model Timestep	6 minutes

B.3 Rainfall Runoff Parameters

Parameter	**Value**
Rainfall Threshold	1.40
Soil Storage Capacity (mm)	170

Initial Storage (% capacity)	30
Field Capacity (mm)	70
Infiltration Capacity Coefficient a	210
Infiltration Capacity exponent b	4.7
Initial Depth (mm)	10
Daily Recharge Rate (%)	50
Daily Baseflow Rate (%)	4
Daily Seepage Rate (%)	0

B.4 Pollutant Concentrations & Source Nodes

Pollutant concentrations for source nodes are based on parameters adopted by the SCA as per **Table B.1**.

Flow Type	Surface Type	TSS (log_{10} values)		TP (log_{10} values)		TN (log_{10} values)	
		Mean	Std Dev.	Mean	Std Dev.	Mean	Std Dev.
Baseflow	Roof	1.20	0.17	-0.85	0.19	0.11	0.12
	Roads	1.20	0.17	-0.85	0.19	0.11	0.12
	Landscaping	1.2	0.17	-0.85	0.19	0.11	0.12
Stormflow	Roof	1.30	0.32	-0.89	0.25	0.30	0.19
	Roads	2.43	0.32	-0.30	0.25	0.34	0.19
	Landscaping	2.15	0.32	-0.6	0.25	0.30	0.19

Table B.1. Pollutant Concentrations

The MUSIC model has been setup with a treatment train approach based on the pollutant concentrations in **Table B.1** above and using the Blacktown Council specific MUSIC nodes. The MUSIC-Link generated report can be found attached to the end of this Appendix B, showing the relevant stormwater catchment nodes and sizes and their configuration within the MUSIC model.

B.5 Treatment Nodes

Gross Pollutant Trap and Siphon-Actuated Filtration device treatment nodes have been used in the modelling of the development as provided by the suppliers of the products based on testing completed by the product manufacturers. Detention basin nodes were also introduced to the model using typical parameters contained in MUSIC modelling guidelines.

Gross Pollutant Trap

Parameter	**Value**
Treatable Flow	0.020m^3/s (per OceanGuard)
Pollutant Reductions	
Per Ocean Protect Technical Guidelines	

Filtration Device (Ocean Protect StormFilters)

Parameter	**Value**
Treatable Flow	0.0016m^3/s (per ZPG Cartridge)
Pollutant Reductions	
Per Ocean Protect Technical Guidelines	

B.6 Results

Table B.2 shows the results of the MUSIC analysis. The reduction rate is expressed as a percentage and compares the post-development pollutant loads without treatment versus post-development loads with treatment.

	Source	Residual Load	% Reduction
Total Suspended Solids (kg/yr) (TSS)	23000	2170	90.6
Total Phosphorus (kg/yr) (TP)	47	14.7	68.6
Total Nitrogen (kg/yr) (TN)	314	165	47.3
Gross Pollutants (kg/yr) (GP)	3340	0	100

Table B.2. MUSIC analysis results

The model results indicate that, through the use of the STM in the treatment train, pollutant load reductions for Total Suspended Solids, Total Phosphorous, Total Nitrogen and Gross Pollutants will meet the requirements of Council's *DCP* on an overall catchment basis.

B.7 Modelling Discussion

MUSIC modelling has been performed to assess the effectiveness of the selected treatment trains and to ensure that the pollutant retention requirements of Council have been met.

The MUSIC modelling has shown that the proposed treatment train of STM will provide stormwater treatment which will meet Council's requirements in an effective and economical manner.

Hydrocarbon and oil & grease removal cannot be modelled with MUSIC software. As an industrial estate with users for individual development sites not known, the exact levels of hydrocarbons would not be known however given the expected use of the site as a warehouse distribution centre these pollutants would not be expected to be large. Potential sources of hydrocarbons and/or oil & grease which drain to the stormwater system would be limited to leaking engine sumps or for accidental fuel spills/leaks and leaching of bituminous pavements (car parking only). The potential for these pollutants is low and published data from the CSIRO indicates that average concentrations from industrial sites are in the order of 10mg/L and we would expect source loading from this site to be near to or below this concentration. Hydrocarbon pollution would also be limited to surface areas which will be treated via OceanProtect OceanGuard absorbent material which are predicted to reduce this pollutant.

Further, the provision of an oil baffle within the treatment system which captures and contains hydrocarbons and oils has been included. This is considered a deemed to comply solution by Blacktown City Council.

Given the expected low source loadings of hydrocarbons and oil/grease and removal efficiencies of the treatment devices and filtration systems we consider that the requirements of the Council have been met.

Appendix C

STORMWATER SYSTEM

DRAFT MAINTENANCE SCHEDULE

MAINTENANCE ACTION	FREQUENCY	RESPONSIBILITY	PROCEDURE
SWALES/ LANDSCAPED AREAS			
Check density of vegetation and ensure minimum height of 150mm is maintained. Check for any evidence of weed infestation	Six monthly	Maintenance Contractor	Replant and/or fertilise, weed and water in accordance with landscape consultant specifications
Inspect swale for excessive litter and sediment build up	Six monthly	Maintenance Contractor	Remove sediment and litter and dispose in accordance with local authorities' requirements.
Check for any evidence of channelisation and erosion	Six monthly/ After Major Storm	Maintenance Contractor	Reinstate eroded areas so that original, designed swale profile is maintained
Weed Infestation	Three Monthly	Maintenance Contractor	Remove any weed infestation ensuring all root ball of weed is removed. Replace with vegetation where required.
Inspect swale surface for erosion	Six Monthly	Maintenance Contractor	Replace topsoil in eroded area and cover and secure with biodegradable fabric. Cut hole in fabric and revegetate.
INLET & JUNCTION PITS			
Inside of pits	Six Monthly	Maintenance Contractor	Remove grate and inspect internal walls and base, repair where required. Remove any collected sediment, debris, litter.

MAINTENANCE ACTION	FREQUENCY	RESPONSIBILITY	PROCEDURE
Outside of pits	Four Monthly/ After Major Storm	Maintenance Contractor	Clean grate of collected sediment, debris, litter and vegetation.
PROPRIETARY TREATMENT DEVICES (OceanGuards & StormFilters)			
Refer to Manufacturers Operation and Maintenance Manual	Annually	Maintenance Contractor	Refer to Manufacturers Operation and Maintenance Manual
RAINWATER TANK			
Check for any clogging and blockage of the first flush device	Monthly	Maintenance Contractor	First flush device to be cleaned out
Check for any clogging and blockage of the tank inlet -leaf/litter screen	Six monthly	Maintenance Contractor	Leaves and debris to be removed from the inlet leaf/litter screen
Check the level of sediment within the tank	Every two years	Maintenance Contractor	Sediment and debris to be removed from rainwater tank floor if sediment level is greater than the maximum allowable depth as specified by the hydraulic consultant
STORMWATER SYSTEM			
General Inspection of complete stormwater drainage system	Bi-annually	Maintenance Contractor	Inspect all drainage structures noting any dilapidation in structures and carry out required repairs.
TANKS			

MAINTENANCE ACTION	FREQUENCY	RESPONSIBILITY	PROCEDURE
Inspect and remove any blockage from orifice	Six Monthly	Maintenance Contractor/ Owner	Remove grate and screen to inspect orifice.
Inspect trash screen and clean	Six Monthly	Maintenance Contractor/ Owner	Remove grate and screen if required to clean it.
Inspect flap valve and remove any blockage.	Six Monthly	Maintenance Contractor/ Owner	Remove grate. Ensure flap valve moves freely and remove any blockages or debris.
Inspect pit sump for damage or blockage.	Six Monthly	Maintenance Contractor/ Owner	Remove grate & screen. Remove sediment/ sludge build up and check orifice and flap valve are clear.
Inspect storage areas and remove debris/ mulch/ litter etc likely to block screens/ grates.	Six Monthly	Maintenance Contractor/ Owner	Remove debris and floatable materials.
Check attachment of orifice plate and screen to wall of pit	Annually	Maintenance Contractor	Remove grate and screen. Ensure plate or screen mounted securely, tighten fixings if required. Seal gaps if required.
Check orifice diameter is correct and retains sharp edge.	Five yearly	Maintenance Contractor	Compare diameter to design (see Work-as-Executed) and ensure edge is not pitted or damaged.
Check screen for corrosion	Annually	Maintenance Contractor	Remove grate and screen and examine for rust or corrosion, especially at corners or welds.

MAINTENANCE ACTION	FREQUENCY	RESPONSIBILITY	PROCEDURE
Inspect overflow weir and remove any blockage	Six monthly	Maintenance Contractor/ Owner	Ensure weir is free of blockage.
Inspect walls for cracks or spalling	Annually	Maintenance Contractor	Remove grate to inspect internal walls, repair as necessary.
Check step irons	Annually	Maintenance Contractor	Ensure fixings are secure and irons are free from corrosion.

Appendix D

DRAFT SOIL AND WATER MANAGEMENT PLAN

C.1 Introduction

An erosion and sediment control plan (ESCP) is shown on drawings **Co13904.03-SSDA200-SSDA202** with details on **SSDA250**. These are conceptual plans only providing sufficient detail to clearly show that the works can proceed without undue pollution to receiving waters. A detailed plan will be prepared once consent is given and before works start.

The ESCP considers initial site establishment, requirements during construction of the development, and completion of development.

C.2 General Conditions

1. The ESCP will be read in conjunction with the engineering plans, and any other plans or written instructions that may be issued in relation to development at the subject site.
2. Contractors will ensure that all soil and water management works are undertaken as instructed in this specification and constructed following the guidelines stated in *Managing Urban Stormwater, Soils and Construction (2004) "The Blue Book"* and Cumberland City Council specifications.
3. All subcontractors will be informed of their responsibilities in minimising the potential for soil erosion and pollution to down slope areas.

C.3 Land Disturbance

1. Where practicable, the soil erosion hazard on the site will be kept as low as possible and as recommended in Table C.1.

Land Use	Limitation	Comments
Construction areas	Limited to 5 (preferably 2) metres from the edge of any essential construction activity as shown on the engineering plans.	All site workers will clearly recognise these areas that, where appropriate, are identified with barrier fencing (upslope) and sediment fencing (downslope), or similar materials.
Access areas	Limited to a maximum width of 5 metres	The site manager will determine and mark the location of these zones onsite. They can vary in position so as to best conserve existing vegetation and protect downstream areas while being considerate of the needs of efficient works activities. All site workers will clearly recognise these boundaries.
Remaining lands	Entry prohibited except for essential management works	

Table C.1 Limitations to access

C.4 Erosion Control Conditions

1. Clearly visible barrier fencing shall be installed as shown on the plan and elsewhere at the discretion of the site superintendent to ensure traffic control and prohibit unnecessary site disturbance. Vehicular access to the site shall be limited to only those essential for construction work and they shall enter the site only through the stabilised access points.
2. Soil materials will be replaced in the same order they are removed from the ground. It is particularly important that all subsoils are buried and topsoils remain on the surface at the completion of works.
3. Where practicable, schedule the construction program so that the time from starting land disturbance to stabilisation has a duration of less than six months.
4. Notwithstanding this, schedule works so that the duration from the conclusion of land shaping to completion of final stabilisation is less than 20 working days.
5. Land recently established with grass species will be watered regularly until an effective cover has properly established and plants are growing vigorously. Further application of seed might be necessary later in areas of inadequate vegetation establishment.
6. Where practical, foot and vehicular traffic will be kept away from all recently established areas
7. Earth batters shall be constructed in accordance with the Geotechnical Engineers Report or with as law a gradient as practical but not steeper than:

Unit	Temporary	Permanent
SOIL UNITS, e.g. ENGINEERED FILL / NATURAL SOIL	2H : 1V	2.5H : 1V
BEDROCK A	1.5H : 1V	2.0H : 1V
BEDROCK B	0.5H : 1V	1H : 1V

8. All earthworks, including waterways/drains/spillways and their outlets, will be constructed to be stable in at least the design storm event.
9. During windy weather, large, unprotected areas will be kept moist (not wet) by sprinkling with water to keep dust under control. In the event water is not available in sufficient quantities, soil binders and/or dust retardants will be used or the surface will be left in a cloddy state that resists removal by wind.

C.5 Pollution Control Conditions

1. Stockpiles will not be located within 5 metres of hazard areas, including likely areas of high velocity flows such as waterways, paved areas and driveways. Silt/ sediment fences and appropriate stabilisation of stockpiles are to be provided as detailed on the drawings.
2. Sediment fences will:
   a) Be installed where shown on the drawings, and elsewhere at the discretion of the site superintendent to contain the coarser sediment fraction (including aggregated fines) as near as possible to their source.
   b) Have a catchment area not exceeding 720 square meters, a storage depth (including both settling and settled zones) of at least 0.6 meters, and internal dimensions that provide maximum surface area for settling, and
   c) Provide a return of 1 metre upslope at intervals along the fence where catchment area exceeds 720 square meters, to limit discharge reaching each section to 10 litres/second in a maximum 20-year t_c discharge.
3. Sediment removed from any trapping device will be disposed in locations where further erosion and consequent pollution to down slope lands and waterways will not occur.
4. Water will be prevented from directly entering the permanent drainage system unless it is relatively sediment free (i.e. the catchment area has been permanently landscaped and/or likely sediment has been treated in an approved device). Nevertheless, stormwater inlets will be protected.
5. Temporary soil and water management structures will be removed only after the lands they are protecting are stabilised.

C.6 Waste Management Conditions

Acceptable bind will be provided for any concrete and mortar slurries, paints, acid washings, lightweight waste materials and litter. Clearance service will be provided at least weekly.

C.7 Site Inspection and Maintenance

1. A self-auditing program will be established based on a Check Sheet. A site inspection using the Check Sheet will be made by the site manager:
   - At least weekly.
   - Immediately before site closure.
   - Immediately following rainfall events in excess of 5mm in any 24-hour period.

The self-audit will include:

- Recording the condition of every sediment control device
- Recording maintenance requirements (if any) for each sediment control device
- Recording the volumes of sediment removed from sediment retention systems, where applicable

- Recording the site where sediment is disposed
- Forwarding a signed duplicate of the completed Check Sheet to the project manager/developer for their information

2. In addition, a suitably qualified person will be required to oversee the installation and maintenance of all soil and water management works on the site. The person shall be required to provide a short monthly written report. The responsible person will ensure that:
   - The plan is being implemented correctly
   - Repairs are undertaken as required
   - Essential modifications are made to the plan if and when necessary

The report shall carry a certificate that works have been carried out in accordance with the plan.

3. Waste bins will be emptied as necessary. Disposal of waste will be in a manner approved by the Site Superintendent.
4. Proper drainage will be maintained. To this end drains (including inlet and outlet works) will be checked to ensure that they are operating as intended, especially that,
   - No low points exist that can overtop in a large storm event
   - Areas of erosion are repaired (e.g. lined with a suitable material) and/or velocity of flow is reduced appropriately through construction of small check dams of installing additional diversion upslope.
   - Blockages are cleared (these might occur because of sediment pollution, sand/soil/spoil being deposited in or too close to them, breached by vehicle wheels, etc.).
5. Sand/soil/spoil materials placed closer than 2 meters from hazard areas will be removed. Such hazard areas include and areas of high velocity water flows (e.g. waterways and gutters), paved areas and driveways.
6. Recently stabilised lands will be checked to ensure that erosion hazard has been effectively reduced. Any repairs will be initiated as appropriate.
7. Excessive vegetation growth will be controlled through mowing or slashing.
8. All sediment detention systems will be kept in good, working condition. In particular, attention will be given to:
   a) Recent works to ensure they have not resulted in diversion of sediment laden water away from them
   b) Degradable products to ensure they are replaced as required, and
   c) Sediment removal, to ensure the design capacity or less remains in the settling zone.
9. Any pollutants removed from sediment basins or litter traps will be disposed of in areas where further pollution to down slope lands and waterways should not occur.
10. Additional erosion and/or sediment control works will be constructed as necessary to ensure the desired protection is given to down slope lands and waterways, i.e. make ongoing changes to the plan where it proves inadequate in practice or is subjected to changes in conditions at the work site or elsewhere in the catchment.

11. Erosion and sediment control measures will be maintained in a functioning condition until all earthwork activities are completed and the site stabilised
12. Litter, debris and sediment will be removed from the gross pollutant traps and trash racks as required.

EROSION AND SEDIMENT CONTROL
WEEKLY SITE INSPECTION SHEET

LOCATION . . . . . .
INSPECTION OFFICER . . . . . **DATE** . . . . . .
SIGNATURE . . . . . .

Legend: □ OK □ Not OK N/A Not applicable

Item	Consideration	Assessment
1	Public roadways clear of sediment.	. . . . .
2	Entry/exit pads clear of excessive sediment deposition.	. . . . .
3	Entry/exit pads have adequate void spacing to trap sediment.	. . . . .
4	The construction site is clear of litter and unconfined rubbish.	. . . . .
5	Adequate stockpiles of emergency ESC materials exist on site.	. . . . .
6	Site dust is being adequately controlled.	. . . . .
7	Appropriate drainage and sediment controls have been installed prior to new areas being cleared or disturbed.	. . . . .
8	Up-slope "clean" water is being appropriately diverted around/through the site.	. . . . .
9	Drainage lines are free of soil scour and sediment deposition.	. . . . .
10	No areas of exposed soil are in need of erosion control.	. . . . .
11	Earth batters are free of "rill" erosion.	. . . . .
12	Erosion control mulch is not being displaced by wind or water.	. . . . .
13	Long-term soil stockpiles are protected from wind, rain and stormwater flow with appropriate drainage and erosion controls.	. . . . .
14	Sediment fences are free from damage.	. . . . .
15	Sediment-laden stormwater is not simply flowing "around" the sediment fences or other sediment traps.	. . . . .
16	Sediment controls placed up-slope/around stormwater inlets are appropriate for the type of inlet structure.	. . . . .
17	All sediment traps are free of excessive sediment deposition.	. . . . .
18	The settled sediment layer within a sediment basin is clearly visible through the supernatant prior to discharge such water.	. . . . .
19	All reasonable and practicable measures are being taken to control sediment runoff from the site.	. . . . .
20	All soil surfaces are being appropriately prepared (i.e. pH, nutrients, roughness and density) prior to revegetation.	. . . . .
21	Stabilised surfaces have a minimum 70% soil coverage.	. . . . .
22	The site is adequately prepared for imminent storms.	. . . . .
23	All ESC measures are in proper working order.	. . . . .

Date of issue	02/08/2022

Content and guidance

Any Environmental Impact Statement (EIS) must meet the minimum form and content requirements as prescribed by Part 8 of the *Environmental Planning and Assessment Regulation 2021* (EP&A Regulation) and the *State Significant Development Guidelines*.

Relevant policies and guidelines can be found at https://www.planningportal.nsw.gov.au/major-projects/assessment/policies-and-guidelines.

Key issues and documentation

Issue and Assessment Requirements	Documentation
1. Statutory Context • Address all relevant legislation, environmental planning instruments (EPIs) (including drafts), plans, policies and guidelines. • Identify compliance with applicable development standards and provide a detailed justification for any non-compliances. • If the development is only partly State significant development (SSD) declared under Chapter 2 of SEPP (Planning Systems) 2021, provide an explanation of how the remainder of the development is sufficiently related to the component that is SSD. • Address the requirements of any approvals applying to the site, including any concept approval or recommendation from any Gateway determination.	• Address in EIS
2. Capital Investment Value and Employment	• Cost Summary

Issue and Assessment Requirements	Documentation
• Provide a detailed calculation of the capital investment value (CIV) of the development, prepared by a qualified quantity surveyor in accordance with planning circular *Calculation of Capital Investment Value (PS 21-020)*. • Provide an estimate of the retained and new jobs that would be created during the construction and operational phases of the development, including details of the methodology to determine the figures provided.	Report

3. Design Quality
• Demonstrate how the development will achieve:
  ○ design excellence in accordance with any applicable EPI provisions.
  ○ good design in accordance with the seven objectives for good design in *Better Placed*.
• Where required by an EPI or concept approval, demonstrate that the development has been subject to a competitive design process, or reviewed by the State Design Review Panel (SDRP) consistent with the *NSW SDRP: Guidelines for Project Teams*. Recommendations are to be addressed prior to lodgement.
	• Address in EIS
	If required:
	• Design Review Report (where the project has been reviewed by the SDRP)
	• Design Excellence Strategy (where design excellence is required by an EPI)
	• Competition Report (where a competitive design process has been held)

4. Built Form and Urban Design • Explain and illustrate the proposed built form, including a detailed site and context analysis to justify the proposed site planning and design approach. • Demonstrate how the proposed built form (layout, height, bulk, scale, separation, setbacks, interface and articulation) addresses and responds to the context, site characteristics, streetscape and existing and future character of the locality. • Demonstrate how the building design will deliver a high-quality development, including consideration of façade design, articulation, materials, finishes, colours, any signage and integration of services. • Assess how the development complies with the relevant accessibility requirements.	• Architectural drawings • Design Report • Survey Plan • Building Code of Australia Compliance Report • Accessibility Report
5. Visual Impact • Provide a visual analysis of the development from key viewpoints, including photomontages or perspectives showing the proposed and likely future	• Visual Analysis • Visual Impact Assessment

Issue and Assessment Requirements	Documentation
development. • Where the visual analysis has identified potential for significant visual impact, provide a visual impact assessment that addresses the impacts of the development on the existing catchment.	
6. Traffic, Transport and Accessibility • Provide a transport and accessibility impact assessment, which includes: ○ details of all traffic types and volumes likely to be generated during construction and operation, including a description of key access and haul routes. ○ an assessment of the predicted impacts of this traffic on road safety and the capacity of the road network, including consideration of cumulative traffic impacts on existing performance levels of nearby intersections (using industry standard modelling). ○ plans demonstrating how all vehicles likely to be generated during construction and operation and awaiting loading, unloading or servicing can be accommodated on the site to avoid queuing in the street network. ○ details and plans of any proposed internal road network, loading dock provision and servicing, on-site parking provisions, and sufficient pedestrian and cyclist facilities, in accordance with the relevant Australian Standards. ○ swept path analysis for the largest vehicle requiring access to the development. ○ details of road upgrades, infrastructure works, or new roads or access points required for the development if necessary. • Provide a Construction Traffic Management Plan detailing predicted construction vehicle, routes, access and parking arrangements, coordination with other construction occurring in the area, and how impacts on existing traffic, pedestrian and bicycle networks would be managed and mitigated.	• Transport and Accessibility Impact Assessment • Construction Traffic Management Plan • Green Travel Plan or equivalent
7. Trees and Landscaping • Provide a detailed site-wide landscape plan, that: ○ identifies the number and location of trees to be removed and retained, and how opportunities to retain significant trees have been explored and/or informs the plan. ○ details the proposed site planting, including location, number and species of plantings, heights of trees at maturity and proposed canopy coverage (as a percentage of the site area).	• Landscape Plan

Issue and Assessment Requirements	Documentation
○ demonstrates how the proposed development would: ▪ contribute to long term landscape setting in respect of the site and streetscape. ▪ mitigate the urban heat island effect and ensure appropriate comfort levels on-site. ▪ contribute to the objective of increased urban tree canopy cover. ▪ maximise opportunities for green infrastructure, consistent with *Greener Places* and having regard to any bush fire risk.	
8. Ecologically Sustainable Development (ESD) • Identify how ESD principles (as defined in section 193 of the EP&A Regulation) are incorporated in the design and ongoing operation of the development. • Demonstrate how the development will meet or exceed the relevant industry recognised building sustainability and environmental performance standards. • Demonstrate how the development minimises greenhouse gas emissions (reflecting the Government's goal of net zero emissions by 2050) and consumption of energy, water (including water sensitive urban design) and material resources.	• ESD Report
9. Biodiversity • Assess any biodiversity impacts associated with the development in accordance with the *Biodiversity Conservation Act 2016* and the *Biodiversity Assessment Method 2020*, including the preparation of a Biodiversity Development Assessment Report (BDAR), unless a waiver is granted, or the site is on biodiversity certified land. • If the development is on biodiversity certified land, provide information to identify the site (using associated mapping) and demonstrate the proposed development is consistent with the relevant biodiversity measure conferred by the biodiversity certification.	• Biodiversity Development Assessment Report or BDAR Waiver
10. Air Quality • Identify significant air emission sources at the proposed development (during construction and operation), assess their potential to cause adverse off-site impacts, and detail proposed management and mitigation measures that would be implemented. Where air emissions during operation have the potential to cause adverse off-site impacts, provide a quantitative air quality impact assessment prepared in accordance with the relevant NSW	• Address in EIS If required: • Air Quality Impact Assessment

Issue and Assessment Requirements	Documentation
Environment Protection Authority (EPA) guidelines.	
11. Noise and Vibration • Provide a noise and vibration assessment prepared in accordance with the relevant EPA guidelines. The assessment must detail construction and operational noise and vibration impacts on nearby sensitive receivers and structures and outline the proposed management and mitigation measures that would be implemented.	• Noise and Vibration Impact Assessment

12. Ground and Water Conditions
• Assess potential impacts on soil resources and related infrastructure and riparian lands on and near the site, including soil erosion, salinity and acid sulfate soils.
• Provide a Surface and Groundwater Impact Assessment that assesses potential impacts on:
  ○ surface water resources (quality and quantity) including related infrastructure, hydrology, dependent ecosystems, drainage lines, downstream assets and watercourses.
  ○ groundwater resources in accordance with the *Groundwater Guidelines*.
	• Geotechnical Assessment
	• Surface and Groundwater Impact Assessment
	• Salinity Management Plan and/or Acid Sulfate Soils Management Plan

13. Water Management
• Provide an Integrated Water Management Plan for the development that:
  ○ is prepared in consultation with the local council and any other relevant drainage or water authority.
  ○ outlines the water-related servicing infrastructure required by the development (informed by the anticipated annual and ultimate increase in servicing demand) and evaluates opportunities to reduce water demand (such as recycled water provision).
  ○ details the proposed drainage design (stormwater and wastewater) for the site including any on-site detention facilities, water quality management measures and nominated discharge points, on-site sewage management, and measures to treat, reuse or dispose of water.
  ○ demonstrates compliance with the local council or other drainage or water authority requirements and avoids adverse downstream impacts.
• Where water and drainage infrastructure works are required that would be handed over to the local council, or other drainage or water authority, provide full hydraulic details and detailed plans and specification of proposed works that have been prepared in consultation with, and comply with the relevant standards of, the local council or other drainage or water authority.
	• Integrated Water Management Plan

Issue and Assessment Requirements	Documentation
14. Flooding Risk • Identify any flood risk on-site having regard to adopted flood studies, the potential effects of climate change, and any relevant provisions of the *NSW Floodplain Development Manual*. • Assess the impacts of the development, including any changes to flood risk on-site or off-site, and detail design solutions and operational procedures to mitigate flood risk where required.	• Flood Risk Assessment
15. Hazards and Risks • Where there are dangerous goods and hazardous materials associated with the development provide a preliminary risk screening in accordance with Chapter 3 of SEPP (Resilience and Hazards) 2021. • Where required by SEPP (Resilience and Hazards) 2021, provide a Preliminary Hazard Analysis prepared in accordance with *Hazardous Industry Planning Advisory Paper No.6 – Guidelines for Hazard Analysis* and *Multi-Level Risk Assessment*. • If the development is adjacent to or on land in a pipeline corridor, report on consultation outcomes with the operator of the pipeline, and prepare a hazard analysis.	• Preliminary Hazard Analysis If required: • Hazard Analysis (Pipeline)
16. Contamination and Remediation • In accordance with Chapter 4 of SEPP (Resilience and Hazards) 2021, assess and quantify any soil and groundwater contamination and demonstrate that the site is suitable (or will be suitable, after remediation) for the development.	• Preliminary Site Investigation If required: • Detailed Site Investigation • Remedial Action Plan • Preliminary Long-term Environmental Management Plan
17. Waste Management • Identify, quantify and classify the likely waste streams to be generated during construction and operation. • Provide the measures to be implemented to manage, reuse, recycle and safely dispose of this waste. • Identify appropriate servicing arrangements for the site. • If buildings are proposed to be demolished or altered, provide a hazardous	• Waste Management Plan • Hazardous Material Survey

Issue and Assessment Requirements	Documentation
materials survey.	
18. Aboriginal Cultural Heritage • Provide an Aboriginal Cultural Heritage Assessment Report prepared in accordance with relevant guidelines, identifying, describing and assessing any impacts on any Aboriginal cultural heritage values on the land.	• Aboriginal Cultural Heritage Assessment Report
19. Environmental Heritage • Where there is potential for direct or indirect impacts on the heritage significance of environmental heritage, provide a Statement of Heritage Impact and Archaeological Assessment (if potential impacts to archaeological resources are identified), prepared in accordance with the relevant guidelines, which assesses any impacts and outlines measures to ensure they are minimised and mitigated.	• Statement of Heritage Impact • Archaeological Assessment
20. Social Impact • Provide a Social Impact Assessment prepared in accordance with the *Social Impact Assessment Guidelines for State Significant Projects*.	• Social Impact Assessment
21. Infrastructure Requirements and Utilities • In consultation with relevant service providers: o assess the impacts of the development on existing utility infrastructure and service provider assets surrounding the site. o identify any infrastructure required on-site and off-site to facilitate the development and any arrangements to ensure that the upgrades will be implemented on time and be maintained. o provide an infrastructure delivery and staging plan, including a description of how infrastructure requirements would be co-ordinated, funded and delivered to facilitate the development.	• Infrastructure Delivery, Management and Staging Plan
22. Bush Fire Risk • If the development is on bush fire prone land, or a bush fire threat is identified on or adjoining the site, provide a bush fire assessment that details proposed bush fire protection measures and demonstrates compliance with *Planning for Bush Fire Protection*.	• Bush Fire Assessment

Issue and Assessment Requirements	Documentation
23. Construction, Operation and Staging • If staging is proposed, provide details of how construction and operation would be managed and any impacts mitigated.	• Address in EIS
24. Contributions and Public Benefit • Address the requirements of any relevant contribution plan(s), planning agreement or EPI requiring a monetary contribution, dedication of land and/or works-in-kind and include details of any proposal for further material public benefit. • Where the development proposes alternative public benefits or a departure from an existing contributions framework, the local council, the Department and relevant State agencies are to be consulted prior to lodgement and details, including how comments have been addressed, are to be provided.	• Address in EIS
25. Engagement • Detail engagement undertaken and demonstrate how it was consistent with the *Undertaking Engagement Guidelines for State Significant Projects*. Detail how issues raised and feedback provided have been considered and responded to in the project. In particular, applicants must consult with: o the relevant Department assessment team. o any relevant local councils. o any relevant agencies (including the Western Parkland City Authority for development within the Western Parkland City). o the community. o if the development would have required an approval or authorisation under another Act but for the application of s 4.41 of the EP&A Act or requires an approval or authorisation under another Act to be applied consistently by s 4.42 of the EP&A Act, the agency relevant to that approval or authorisation.	• Engagement Report

BLACKTOWN COUNCIL CORESPONDENCE

E-MAIL DATED 25 March 2022 (Mr Christophe Ferguson)

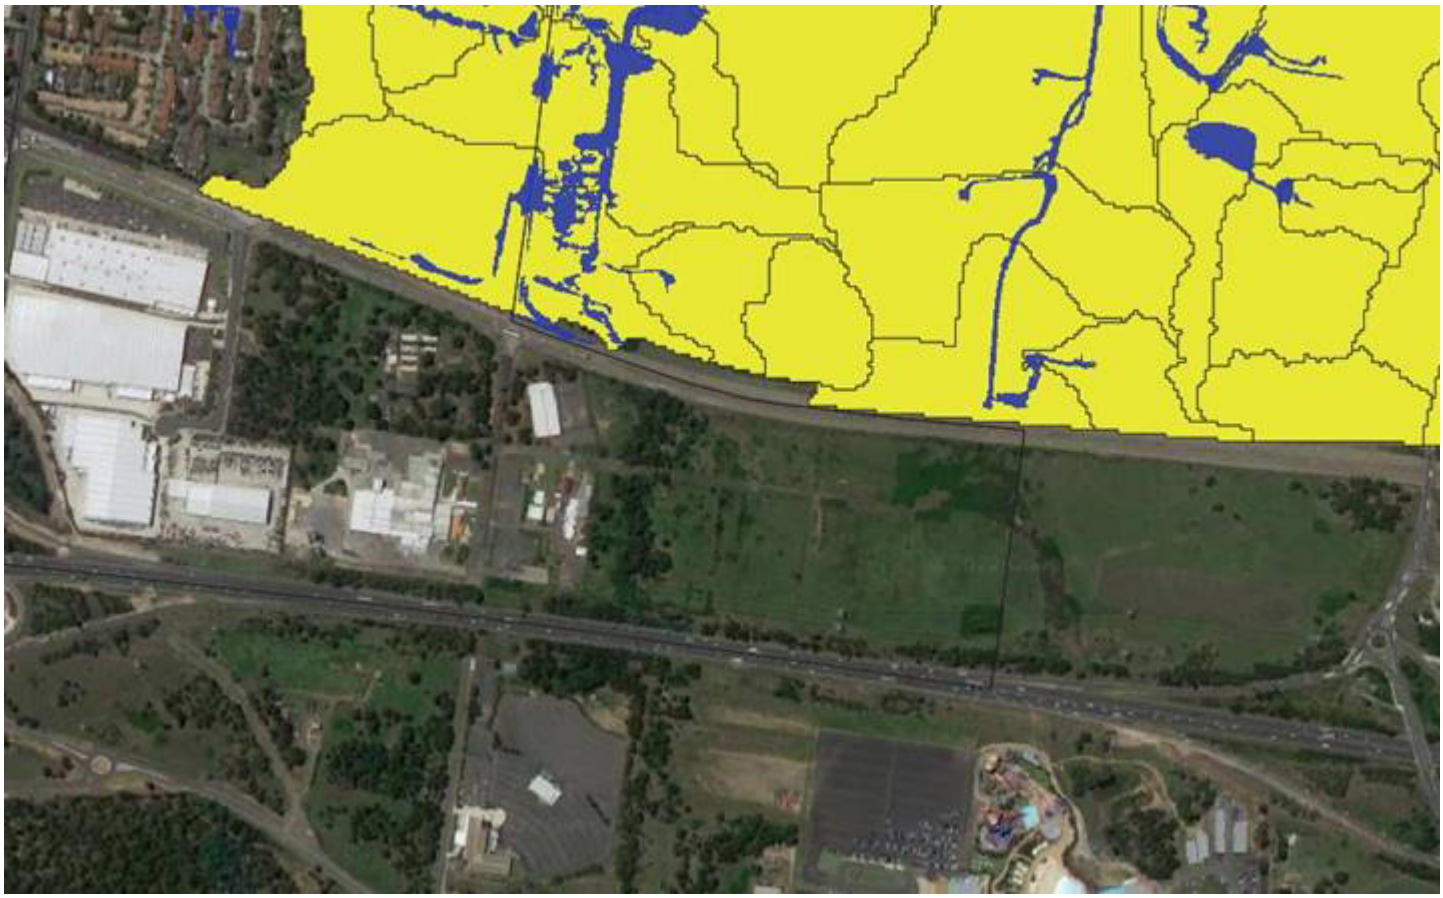

Referenced: *Augusta Street Blacktown - Flood Information*

Lourens de Villiers

From: Christophe Ferguson <Christophe.Ferguson@blacktown.nsw.gov.au>
Sent: Friday, 25 March 2022 4:11 PM
To: Lourens de Villiers
Cc: Flood Advice
Subject: Augusta Street Blacktown - Flood Information

Hi Lourens

The area in question does fall within the catchment of the UPRCT, however our Overland Flow Study flood extents (shown in blue below) and XP-RAFTS catchments (shown in yellow) do not cover your site. We would be happy to provide our latest Lidar data to assist you in the preparation of your own hydrologic and hydraulic assessment. Please note that with regards to flood related assessments, Blacktown Council requires new assessments to be undertaken using ARR 2019. If you would like to request LiDAR/ALS tiles, please email floodadvice@blacktown.nsw.gov.au

Kind Regards

Christophe Ferguson | Floodplain Officer
Blacktown City Council | PO Box 63 Blacktown NSW 2148

Hi Lourens,

Thank you for your patience.

I have directed this request to my supervisor as they have the proper expertise to best try and satisfy your initial request. We shall respond in due course.

Kind Regards

Christophe Ferguson | Floodplain Officer

Hi Lourens,

Thank you for your email and for your time on the phone earlier.

As Christophe has been looking after your request unfortunately, I am unable to assist further with providing the information in his absence.

However, please be advised that I will follow up your query with Christophe upon his return next week.

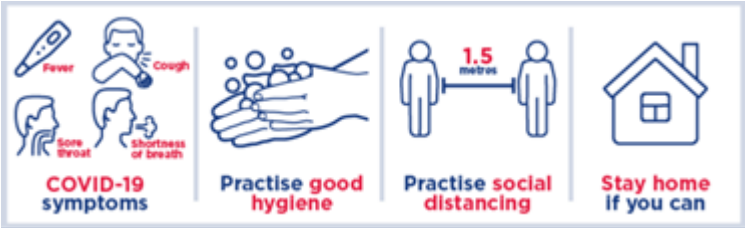

Kind Regards,

Amanda Schembri
Floodplain Support Officer

Good Morning Amanda,

Kindly refer to my e-mail below.

I have spoken to Lee Toscan last week, who confirmed that Christophe have received my e-mail below and was busy obtaining the information. Would you be able to assist me in Christophe's absence?

Kind Regards

Best Regards,

Lourens de Villiers

Subject: Flood Hydrograph information and Flood Advice Letter: Augusta Street, Blacktown, NSW, 2148 [Filed 07 Mar 2022 08:31]

Good morning, Christophe,

I spoke to Fay Buttler this morning, who referred me to you wrt the below information. I have also sent an e-mail to floodadvice@blacktown.nsw.gov.au on Friday, 25 Feb 2022, requesting this information, but have not yet received any feedback or direction to obtain this information.

I am in the process of obtaining stormwater and flood information for a site located as shown on the figure 1 below, and I am hoping you could kindly assist me with this information or directing me to the correct person who could assist me with obtaining this data.

I am specifically looking for the following information:

1. To obtain the 1% AEP and PMF hydrographs around this site (locations A-F shown on the figure below)
2. To obtain information on flooding and flood levels

Site Information:
Address: Augusta Street, Blacktown, NSW, 2148.
Coordinate: 33°48'8.23"S, 150°54'24.95"E
Google Maps link: https://goo.gl/maps/Jdpciz7Z5tBJSvEL9

Figure 1 - Location of Site and locations where flood hydrographs are required

Looking forward to hearing from you, and please do not hesitate to let me know if you require more information from my side. I will give you a call a bit later this afternoon to discuss this request if needed.

Thank you in advance.

This email and any files transmitted with it may be confidential and contain privileged information. It is intended solely for the use of the addressee only. If you are not the intended recipient you must not use,

disclose or copy this communication. If you have received this email in error please delete it and notify the sender. This footnote also confirms that this email message has been swept for the presence of computer viruses.

Subject: Hyder Stormwater Report Augusta Street Blacktown

Hi Lourens,

Thank you for your email.

The "*Hyder Consulting. 2007. Huntingwood East Precinct Civil Infrastructure and Stormwater Report*" was prepared by **Hyder Consulting** for **DBL Property Pty Ltd**.

As the report is not a Council document, we kindly suggest contacting either *Hyder Consulting* or *DBL Property Pty Ltd* to obtain.

We hope this has provided some clarification.

Kind Regards

Good morning Amanda,

With reference to our telephonic conversation last week regarding the below "*Hyder Consulting. 2007. Huntingwood East Precinct Civil Infrastructure and Stormwater Report*", could you kindly confirm that for whom this report was completed?

You mentioned that it was completed for DPI, could you confirm whether this is the Dept. of Primary Industries or a different private company?

Thank you

Subject: Hyder Stormwater Report: Augusta Street, Blacktown, NSW, 2148

Good morning,

Thank you for taking my call this morning.

As discussed, we are busy doing an internal flood study of the sites along Augusta Street in the Blacktown LGA, within the Huntingwood Precinct. Your Huntingwood Precinct DCP (together with various other available reports) make several references to a Stormwater report for this Huntingwood Precinct completed by Hyder Consulting.

The report that we are looking for is referenced as "*Hyder Consulting. 2007. Huntingwood East Precinct Civil Infrastructure and Stormwater Report*" in the Huntingwood Precinct DCP, but there are also mention of this report as being completed in January 2010.

Could you kindy assist us with obtaining access to this report?

Please refer to our historical e-mail below for details about the location of the site.

Thank you in advance.

Hi Lourens

For Huntingwood development it is the higher volume of:

1. Councils OSD spreadsheet as you have attached v1.9 is still suitable; or
2. Pre to post modelling with runoff volumes to be maintained.

Also please refer to Huntingwood DCP

Appendix I

FLOOD ASSESSMENT

I.1. INTRODUCTION

I.1.1. Introduction

This Appendix is provided to confirm technical parameters adopted in the *Overland Flow Assessment*, as summarised in **Section 7** of this report, for the proposed industrial estate development. The *Study Area* has been identified by Blacktown City Council as being unaffected by overland flow through Blacktown Creek and the unnamed creek along the west of the site. The scope and primary objectives of the overland flow assessment, are as follows:

- Determine the design flows generated by the contributing external catchments for the 1% AEP & PMF; Hydrology would be based on RAFTS modelling.
- Assess the pre-development overland flow path through the development site for the 1% AEP storm event;
- Assess the post-development levels on the effect of overland flow around the development site for the listed range of storms including 1% AEP storm event so that potential impacts on the development can be assessed and mitigated;
- Confirm that there is no adverse impact to upstream, downstream and adjacent properties as a result of the development; and
- Confirm flood planning levels applicable to the development.

Appendix I provides technical detail to the summary and conclusions discussed in the **Section 7** of this report.

I.1.2. Survey/DTM

Survey is required to define the physical attributes of the floodplain topography including the channel cross sections and the associated floodplain levels.
The pre-development scenario survey has been compiled based on a detail site survey for areas within the site, and for areas external to the site where detail survey is not available, digital terrain information has been obtained through government sources in the form of ALS survey. The on-ground survey information was completed in and around the study area to properly define the existing overland flow path cross section and features.
For assessment of the post-development scenario, the proposed development levels and drainage system (where appropriate) were then added to the pre-developed survey surface to create a post developed surface to use in the TUFLOW model and scenario modelling. This DTM was imported to the TUFLOW model to simulate land filling and proposed compensation areas in and around the flood affected land.
The surveys and design surfaces were used as the basis for the digital terrain model (DTM) used in the hydraulic modelling of the pre and post development scenario respectively.

I.1.3. Previous Studies

Hyder have undertaken a flood study of the the development site and the surrounding area in January 2010 (document ref: DN00214). The study was completed in support of a rezoning application for the Huntingwood East Precinct.
The site is located within the Industrial Zone and an excerpt of the flood model output is shown in **Figure I1.1**. Two creeks run through the development site, Blacktown Creek on the east, and an unnamed swale (hereon referred to as the Drainage Swale) to the west.

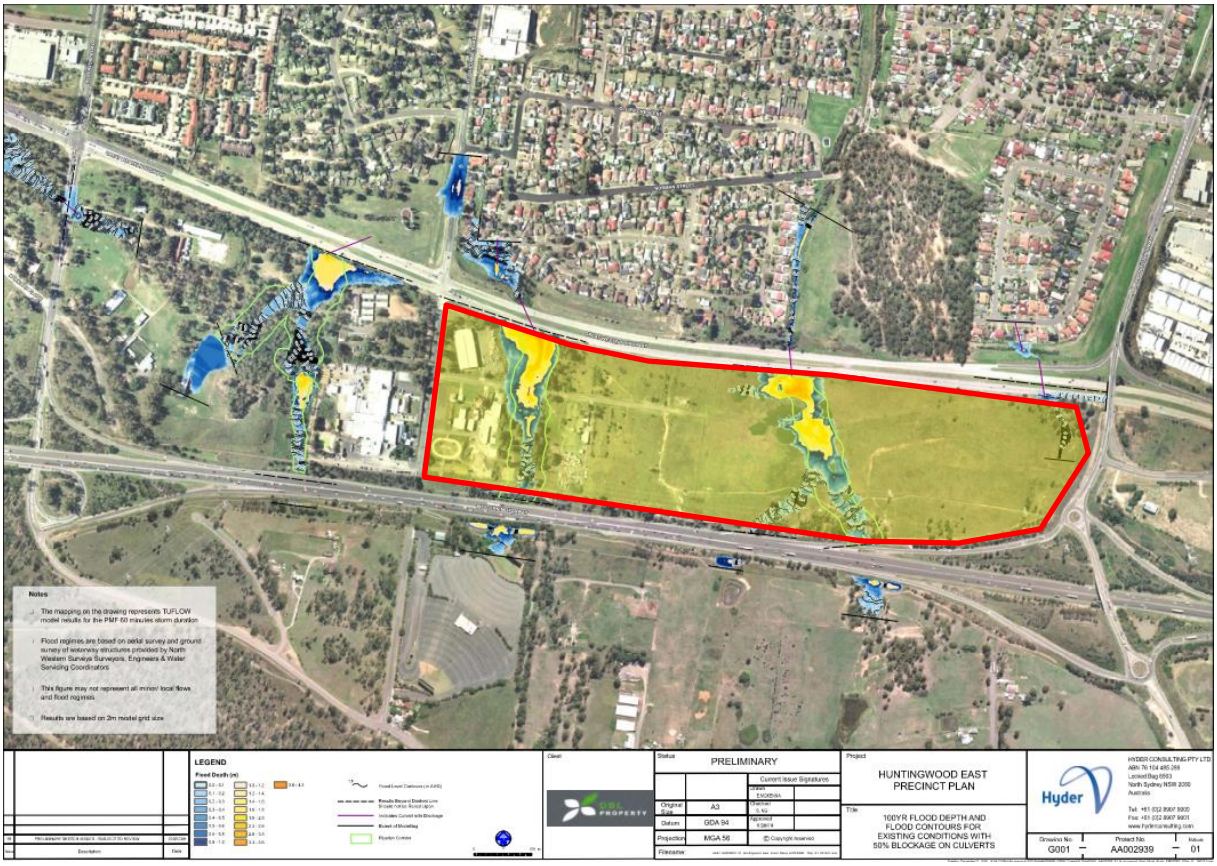

Figure I1.1. Excerpt of Drawing G001 of Hyder 2010 Study

I.2 CATCHMENT INVESTIGATION & HYDROLOGY

I.2.1. Contributing Catchment Definition

Three major upstream catchments on the southern side of the M4 Motorway contribute to the overland flows through the site. The contributing catchments comprises a combination of undeveloped and commercial land use, totalling approximately 55Ha.
Figure I2.1 & Figure I2.2 contains catchment breakdowns of the pre and post development conditions as defined in the flood model.

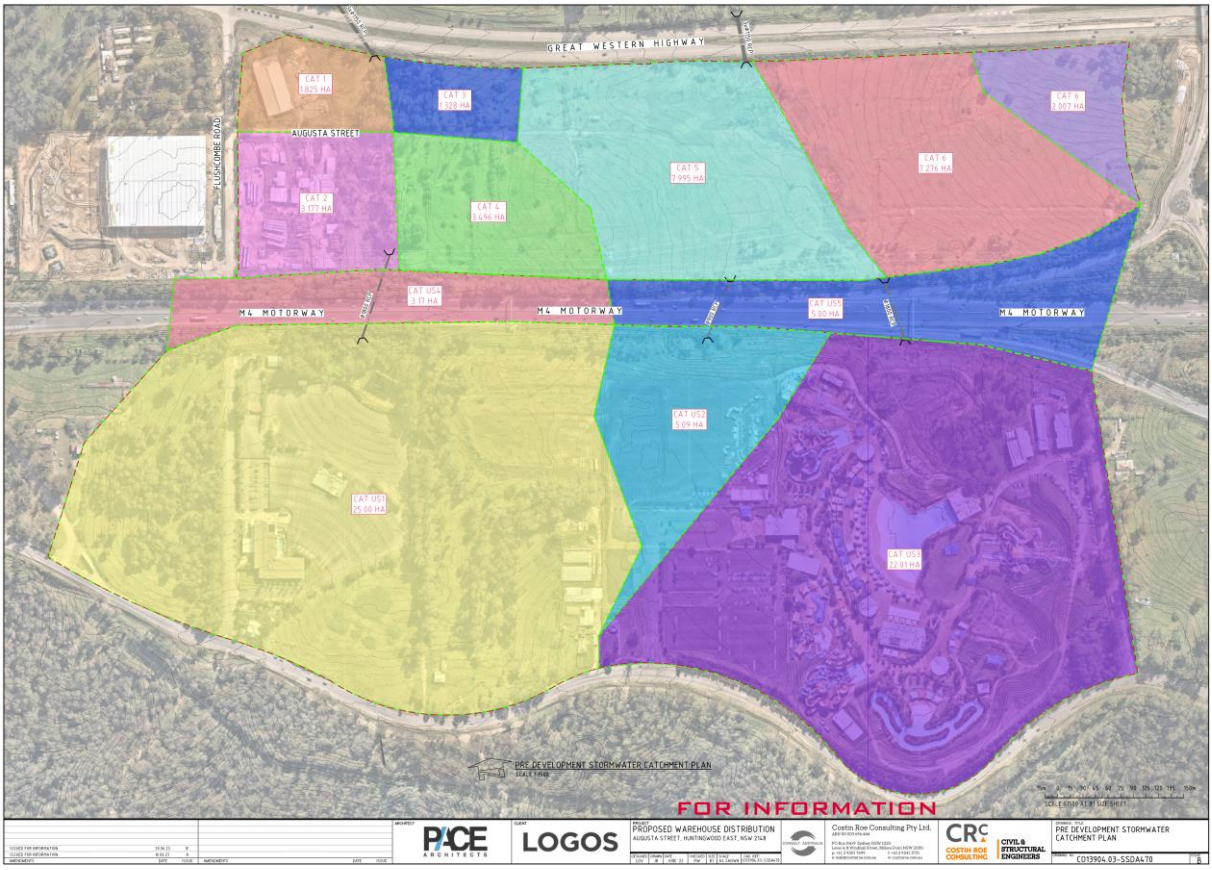

Figure I2.1. Pre-development Flood Model Catchment Plan.

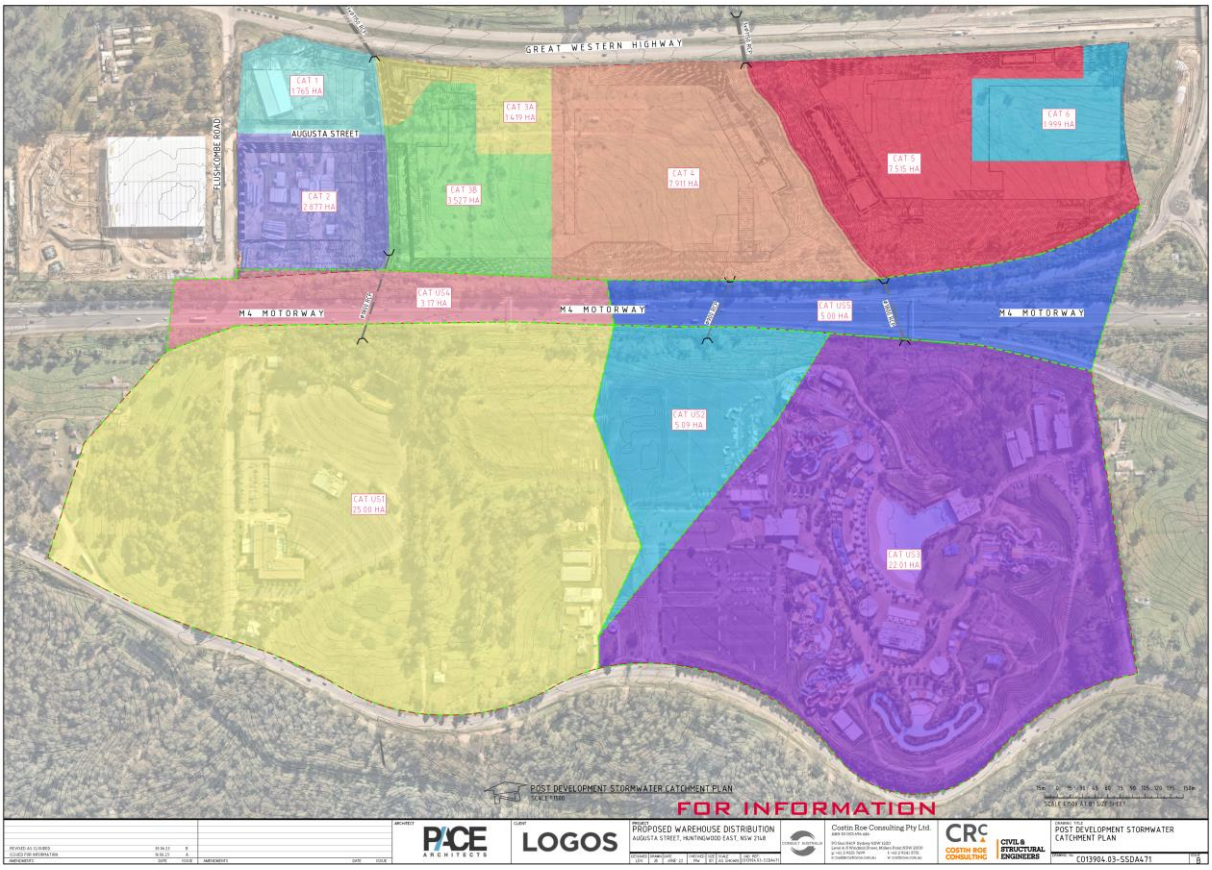

Figure I2.2 Post-development Flood Model Catchment Plan

I.2.2. Hydrological Assessment of Existing Catchment

Flood hydrographs were assessed using a DRAINS model based on the contributing catchments. The inflow hydrographs for catchments in the pre & post development conditions were extrapolated from the DRAINS model for the 1% AEP event. Inflow hydrographs for the upstream catchments on the opposite side of the M4 Motorway are shown in **Figure I2.3 to I2.5**. Hydrographs for the pre-developed site catchments for the 1% AEP event are provided in **Figures I2.6 to I2.11**. Hydrographs for the post-development site condition have taken into consideration the attenuation of discharge by the proposed OSD basins on each lot. These basins have been sized using the UPRCT Deemed-to-Comply spreadsheet, modelled in DRAINS, and hydrographs of their attenuated discharge have been extracted and shown in **Figure I2.12 to I2.17**.

Rainfall intensities and temporal patterns were derived from the Bureau of Meteorology online IFD tool and Australian Rainfall and Runoff. It was determined that the critical storm duration which produces peak flows for the contributing catchments is the 20 minute storm event.

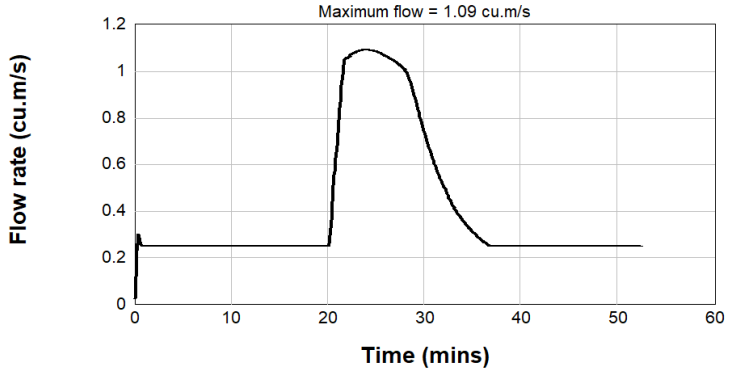

Figure I2.16 1% AEP Inflow Hydrograph – Post-dev Lot 4

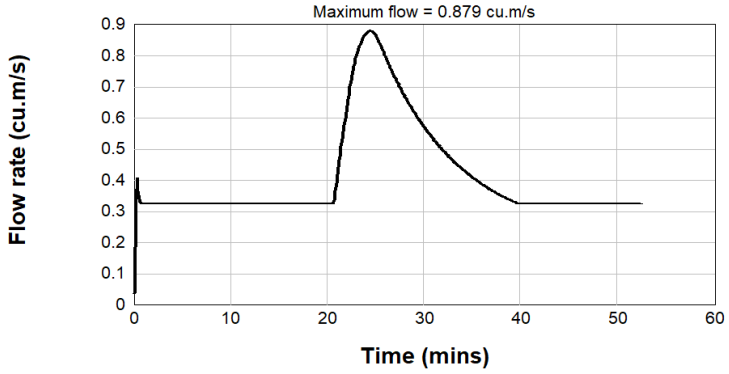

Figure I2.17 1% AEP Inflow Hydrograph – Post-dev Lot 5A

I.3 HYDRODYNAMIC MODEL DEVELOPMENT

I.3.1. Extent and Topography

The model extent is shown in **Figure I3.1** of this appendix. The model begins approximately 150m upstream of the development and extends approximately 300m downstream of the development site.

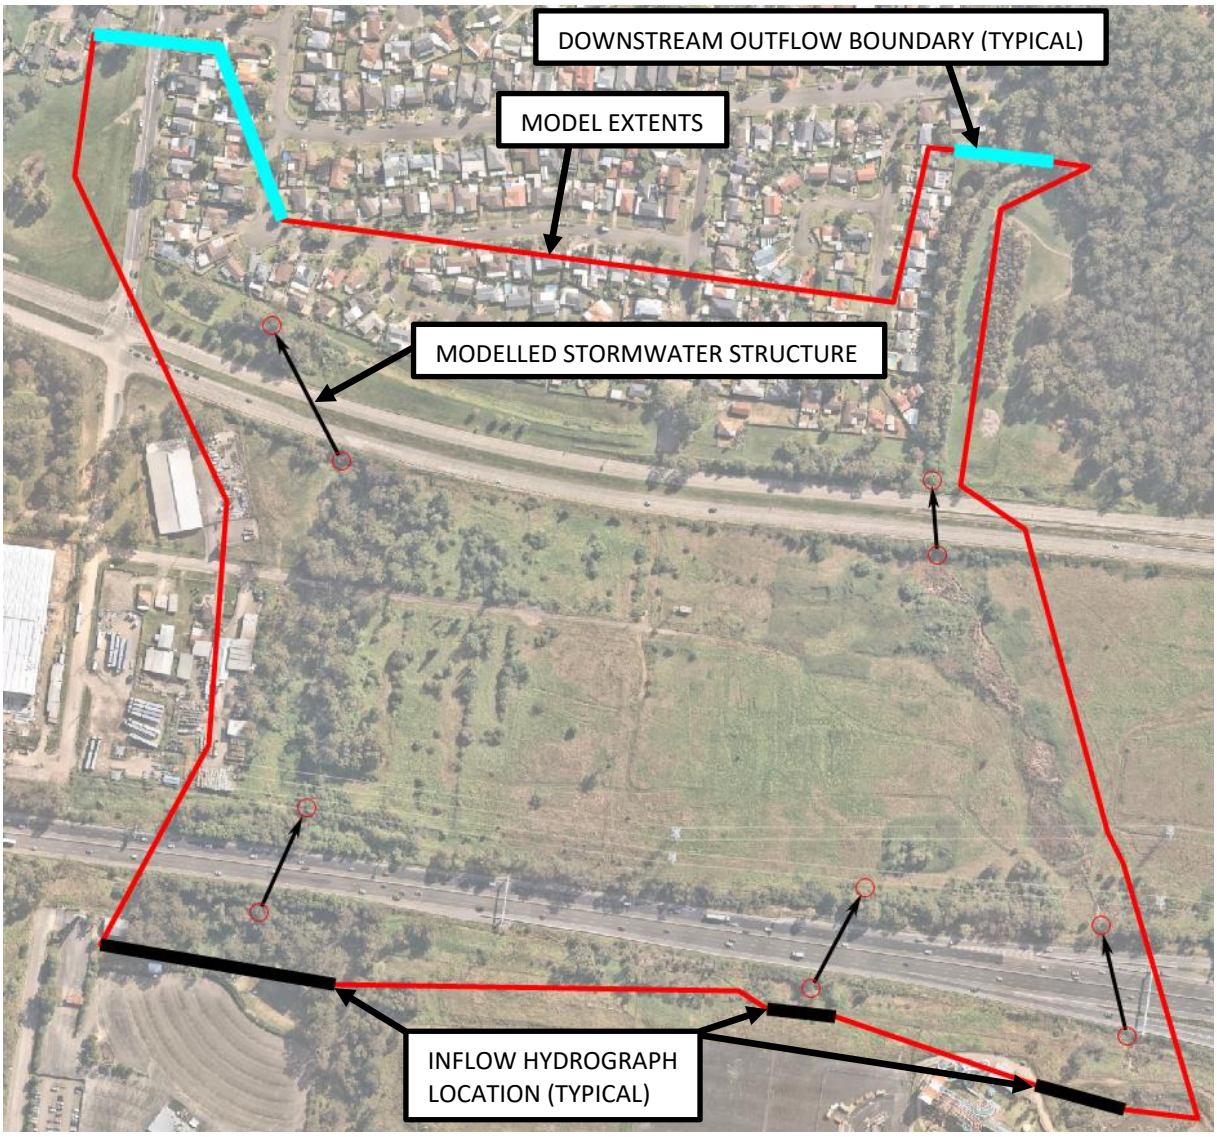

Figure I3.1: Model Extent and Model Boundary Locations

Inflow Boundaries

Design inflow hydrographs for the model have been included at the location approximately 150m upstream of the development site. Flows are based on hydrology as discussed in **Section I.2.2** of this Appendix.

The upstream boundary was located sufficiently upstream of the development to ensure the extent of predicted impacts from the development would be covered and any modelling iterations would be resolved clear of the development affectation zone.

Downstream Water Level Boundaries

The downstream water levels have been based on a normal outflow and design gradient of 1%.

Surrounding/ Modelled Stormwater Network

Modelling of the surrounding stormwater network has been based on survey information by North Western Surveys (document ref: 13989/005-01 dated November 2009) and Whelans (document ref: D336-002b dated April 2007).

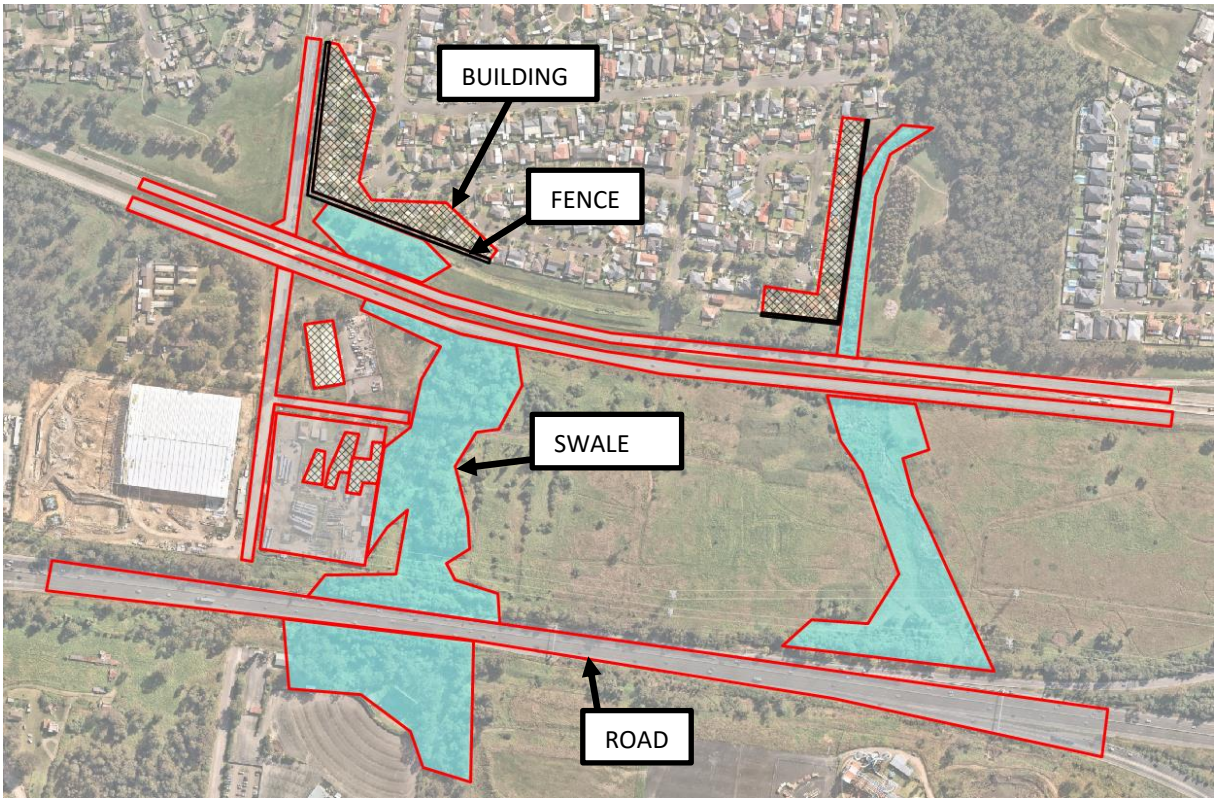

Several reinforced concrete pipes have been identified underneath the M4 Motorway and the Great Western Highway at the upstream and downstream ends of the site's creeks. Existing 2x900mm diameter reinforced concrete pipes have been modelled where the Drainage Swale crosses under Augusta Street in the pre-developed condition. As part of the proposed works, these pipes are to be replaced by 2x1200mm diameter pipes, which have been modelled in the post-development condition.

I.3.3. Channel and Floodplain Roughness

Roughness values adopted in the model are contained in **Table I2** below. These are generally consistent with previous studies completed within the Council area and have been adopted in this overland flow study. Refer to **Figure I3.2** for a breakdown of the adopted roughness values over the study area.

Table I2. Adopted TUFLOW Element Roughness Values

Model Element	Description	Roughness Parameter Value
1	Grassland (default)	0.035
2	Road	0.02
3	Swale	0.08
4	Building	0.1
5	Fence	2.0

I.3.4. Model Validation

Model validation has been completed by comparing results of the TUFLOW modelling against the results contained in the Hyder study from 2010. Model parameters were adjusted as required to achieve acceptable agreement between the model output. The process for the validation was as follows:

- Establish hydrology, peak flows and hydrograph for modelled events;
- Establish TUFLOW Model using defined parameters;
- Compare results of TUFLOW modelling with the Hyder Figures including flood depths, flood levels, flood extents and hydraulics. The comparison is made at the peak of the predicted parameters;

- Adjust roughness factors to align TUFLOW flood extent to align with the Hyder results.

Hydrology and peak flows were established as described in **Section J.2.2** of this report.
A number of trial models and iterations of the TUFLOW model were performed. Adjustment of roughness parameters were used to align the flood levels with those compiled in the Hyder figures.
The comparison of the flood level results shows general alignment of those produced in the TUFLOW model when compared with those of the council figures. The predicted flood extent is consistent between the two models for the flood event modelled.
Given the differences in modelling techniques, parameters, predicted model accuracy (+/- 0.2m) and model components these differences are considered acceptable for the base model and for continuation of post-developed scenario modelling.

I.3.5. Proposed Overland Flow Management Strategy

Flows from within the development sites have been only considered in the sizing of the stormwater system and erosion control for the development sites. The proposed buildings will be set at the 1% AEP level plus 0.5m freeboard per council policy.
Blacktown City Council require that overland flows from the upstream catchment to be conveyed through the site. Council also requires proof that the proposed development does not increase the flood risk to the surrounding properties. Further, the TUFLOW modelling and assessment confirms there is negligible impact on upstream, downstream and/ or adjoining sites as a result of the proposed developments.

I.4 MODEL OUTPUT

Model output for pre and post development conditions for the Catchment flooding events on site as discussed in earlier sections have been included in the following Figures.
We note the below figures represent predicted values at the peak of each event. The figures represent predicted values at the peak of the 1% AEP.

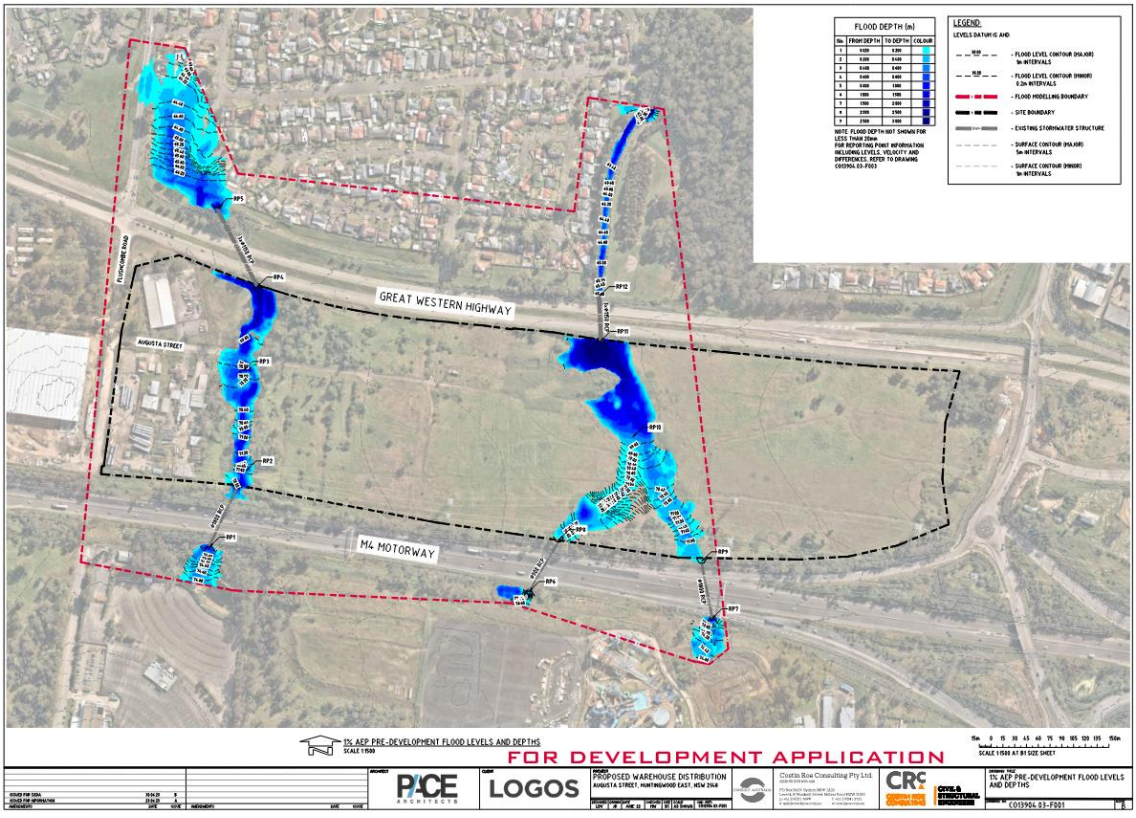

Figure J4.1: 1% AEP Flood Depths – Pre-Development

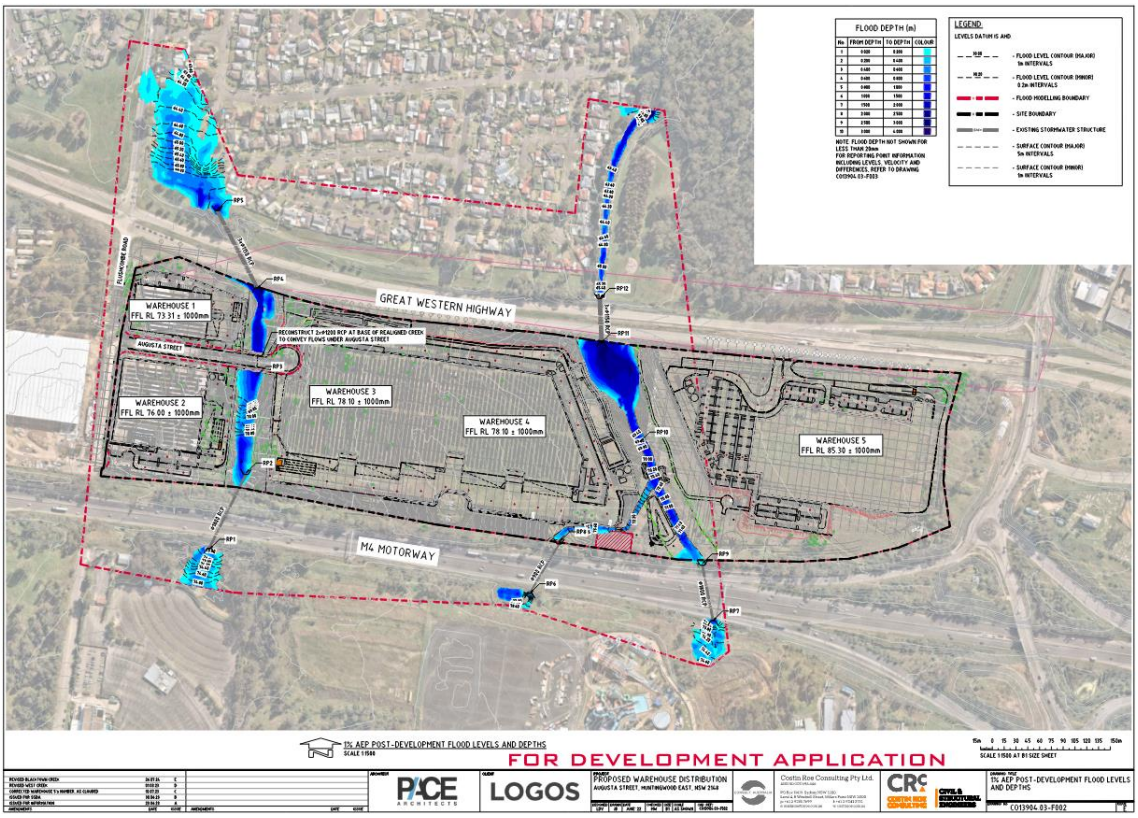

Figure I4.2: 1% AEP Flood Depths – Post Development

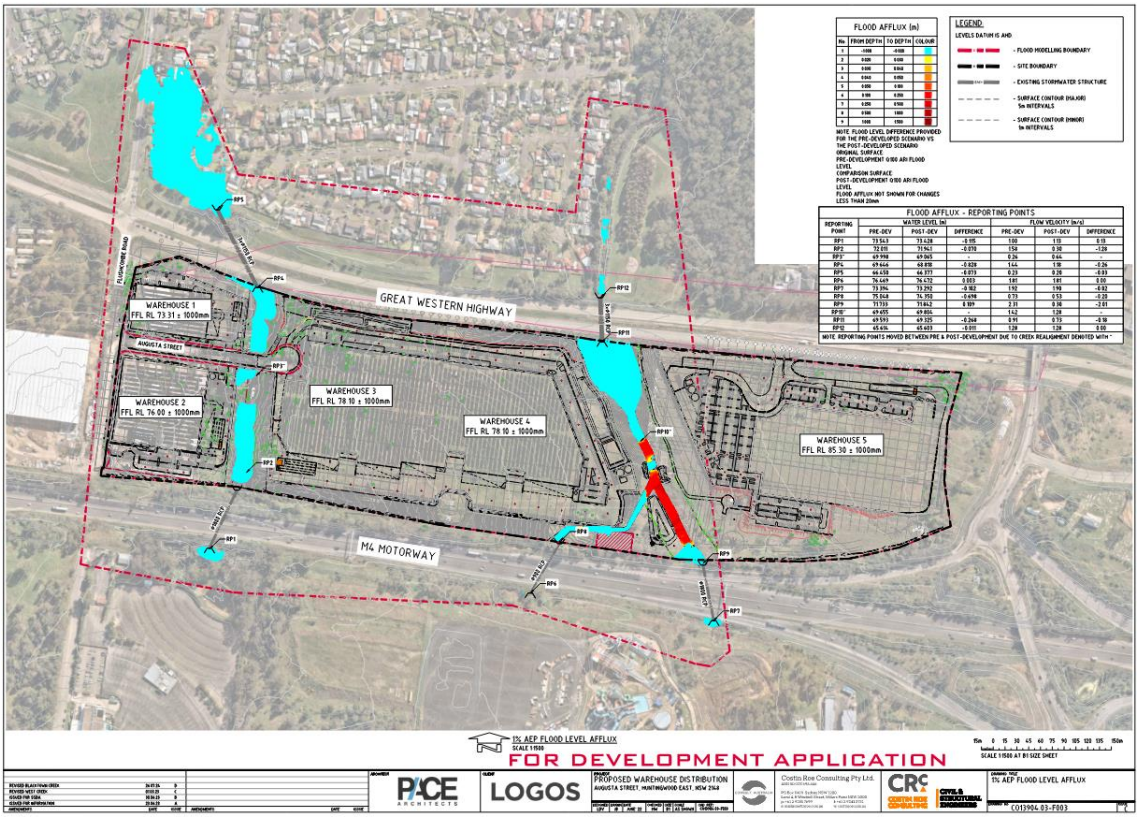

Figure I4.3: 1% AEP Flood Afflux Plan

I.1. FLOOD ASSESSMENT DISCUSSION

This Appendix to the *Civil Engineering Report* for Augusta Street Warehouse & Distribution Centre, NSW, has been prepared to assess the effect of flooding on the proposed development, and also to confirm no affectation on upstream downstream or adjoining properties.

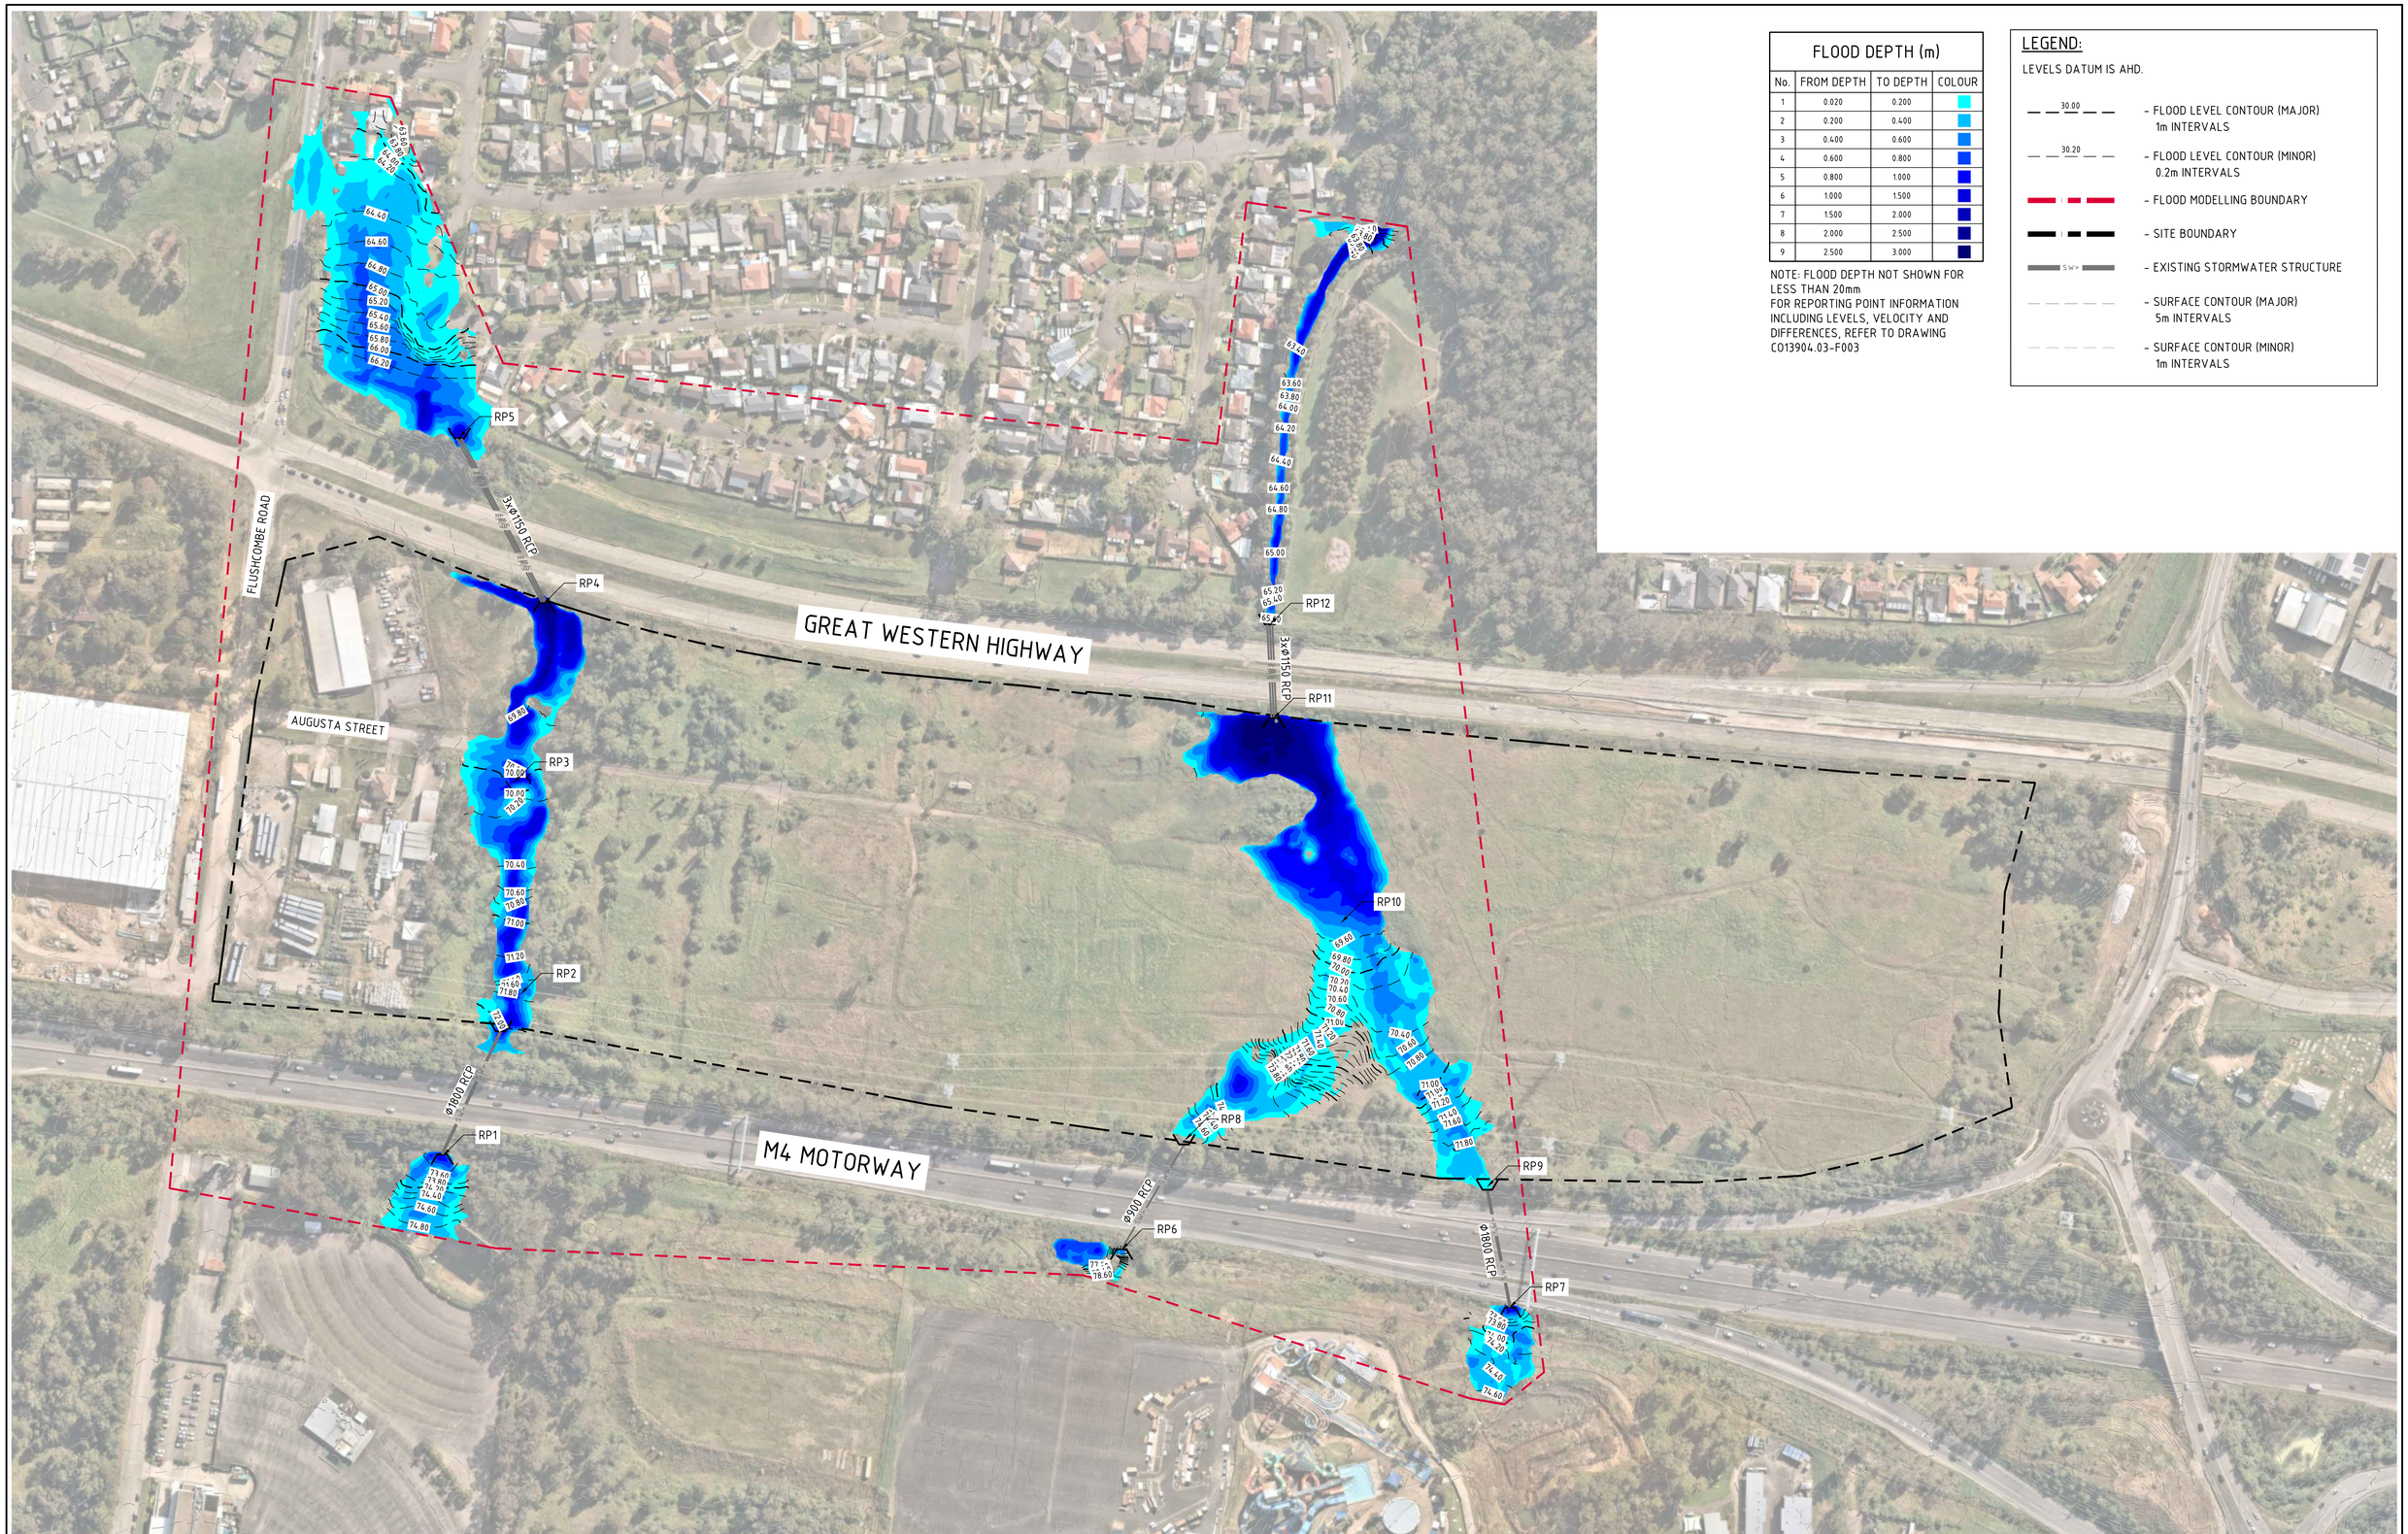

A TUFLOW hydrodynamic flood model has been completed and the pre and post development flood events assessed for the 1% AEP rainfall event.

The assessment shows a reduction in post development 1% AEP flood levels, hence meeting impact requirements.

The assessment shows the proposed building achieves flood planning and freeboard requirements. This Appendix confirms the technical input and detailed output completed as part of the assessment. **Appendix I** is to be read in conjunction with **Section 7** of this report.

BLACKTOWN CITY COUNCIL – ON-SITE DETENTION DEEMED TO COMPLY TOOL – RESULTS

Blacktown City Council - On-site Detention Deemed to Comply Tool

Select project to Load or Delete:

v1.9

Project Details:

Project Title	WAREHOUSE 1
Address	Augusta Street, Blacktown
Reference Number	SSD-36138263

General Site Data:

Site Area (m^2)	11580 m^2
Area Draining to OSD (m^2)	11580 m^2

On-Site Detention Data:

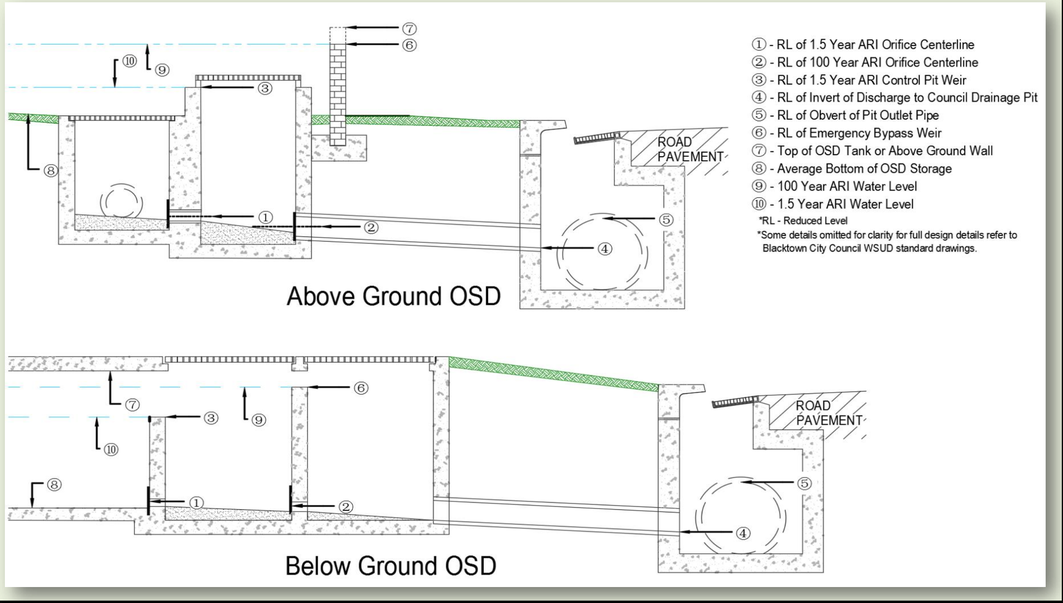

OSD Location	Below Ground
OSD Discharge Location	West Creek
RL of Bottom of OSD Storage Area	69.150
RL of Top of OSD Storage Area	72.160
Length of Emergency Overflow Weir (m)	3.00 m

Filter Cartridges:

Will filter cartridges be used to manage water quality?	Yes
Design flow from Filter Cartridges (L/s)	55.28 L/s
Filter Cartridges flow with 100 Year ARI Head (L/s)	106.05 L/s

Discharge Data:

RL of 1.5 Year ARI Orifice Centreline	69.130
Number of Orifices	1
RL of 100 Year ARI Orifice Centreline	68.930
Number of Orifices	1
RL of Invert of Discharge to Council Drainage Pit	68.800

Below Ground OSD Summary with calculated values

Site:	
Site Area	11580 m^2
Site Area NOT Draining to OSD	0 m^2
Reduced Levels (AHD):	
RL of Top of Tank	72.16
RL of Bottom of OSD Tank	69.15
RL of 1.5 Year ARI Overflow Weir	70.995
RL of Emergency Overflow Weir	71.95
RL of 1.5 Year ARI Orifice Centerline	69.13
RL of 100 Year ARI Orifice Centreline	68.93
RL of Invert of Discharge to Council Drainage Pit	68.8
	0
Minium RL of Garage Floor	72.25
Minium RL of House Floor	72.35
OSD Volume:	
Required Storage BELOW 1.5 Year ARI Overflow Weir	347.4 m^3
Required Storage BELOW Emergency Overflow Weir	526.9 m^3
Discharge Details:	
Using Filter Cartridges to Manage Water Quality	Yes
Discharge Location	West Creek
Length of Emergency Overflow Weir	3.00 m
Maximum 1.5 Year ARI Site Discharge	55.28 L/s
1.5 Year ARI Orifice Discharge	No Orifice Needed
Maximum 100 Year ARI Site Discharge	220.02 L/s
100 Year ARI Orifice Discharge	113.97 L/s
Filter Cartridges design flow	55.28 L/s
Filter Cartridges Discharge with Additional Head	106.05 L/s
Orifice Details:	
Number of 1.5 Year ARI Orifices	1
Number of 100 Year ARI Orifices	1
1.5 Year ARI Orifice Size (mm)	No Orifice Needed
100 Year ARI Orifice Size (mm)	176.0 mm

Notifications:

Access grates to be provided such that the maximum reach from any point in the tank to the neaest grate is 6.0m. As there is no 1.5year ARI orifice the under drain flow from the filter cartridges will control the minorstorms. To ensure the storage can drain the base of the tank is to be configured to direct flows through the Non-Return flap to the filter storage chamber.

Blacktown City Council - On-site Detention Deemed to Comply Tool

v1.9

Project Details:

Project Title	WAREHOUSE 2
Address	Augusta Street, Blacktown
Reference Number	SSD-36138263

General Site Data:

Site Area (m^2)	20845 m^2
Area Draining to OSD (m^2)	20400 m^2

On-Site Detention Data:

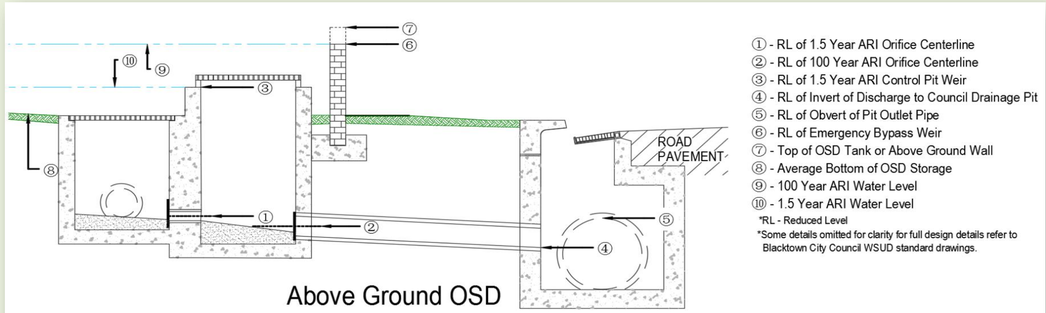

OSD Location	Below Ground
OSD Discharge Location	West Creek
RL of Bottom of OSD Storage Area	72.000
RL of Top of OSD Storage Area	74.570
Length of Emergency Overflow Weir (m)	3.00 m

Filter Cartridges:

Will filter cartridges be used to manage water quality?	Yes
Design flow from Filter Cartridges (L/s)	78.98 L/s
Filter Cartridges flow with 100 Year ARI Head (L/s)	155.84 L/s

Discharge Data:

RL of 1.5 Year ARI Orifice Centreline	71.970
Number of Orifices	1
RL of 100 Year ARI Orifice Centreline	71.770
Number of Orifices	1
RL of Invert of Discharge to Council Drainage Pit	70.210

① - RL of 1.5 Year ARI Orifice Centerline
② - RL of 100 Year ARI Orifice Centerline
③ - RL of 1.5 Year ARI Control Pit Weir
④ - RL of Invert of Discharge to Council Drainage Pit
⑤ - RL of Obvert of Pit Outlet Pipe
⑥ - RL of Emergency Bypass Weir
⑦ - Top of OSD Tank or Above Ground Wall
⑧ - Average Bottom of OSD Storage
⑨ - 100 Year ARI Water Level
⑩ - 1.5 Year ARI Water Level
*RL - Reduced Level
*Some details omitted for clarity for full design details refer to Blacktown City Council WSUD standard drawings.

Below Ground OSD Summary with calculated values

Site:	
Site Area	20845 m^2
Site Area NOT Draining to OSD	445 m^2
Reduced Levels (AHD):	
RL of Top of Tank	74.57
RL of Bottom of OSD Tank	72

Re: Response to Submissions (RtS) - SSD- 36138263
Augusta Street Warehouse and Distribution Centre, Augusta Street, Blacktown, NSW

In response to the letter from Blacktown City Council dated 17 November 2023, referenced MC-23-00005, we provide the following responses to the Civil Engineering and Drainage matters:

18. Engineering Matters	**CRC Response**
The limit of works on Flushcombe Road is to extend up to the Great Western Highway Intersection.	The Flushcombe Road intersection with the Great Western Highway is designed by MU Group. The design of Flushcombe Road will tie into the extent of MU Group's design.
27. Drainage Matters	**CRC Response**
The following supporting documents shall be provided in electric formal for assessment: i. The OSD spreadsheet shall be provided. ii. MUSIC model shall be provided to confirm the reduction target and the non-potable reuse target are achieved. iii. DRAINS model to confirm the drainage design on both internal and external of the site iv. Tuflow model to show the waterway in both pre and post development	 i. Electronic format OSD Spreadsheets have been submitted with the updated package and report ii. MUSIC Model has been submitted with the updated package and report iii. DRAINS model has been submitted with the updated package and report iv. Tuflow model (Software - XPStorm) has been submitted with the updated package and report
The submitted Civil Work package, Costin Roe Consulting, Job NumberC013904.03, Revision 3 and dated 08/09/23 shall be amended: i. the details of the proposed OSD and storm filter tank shall be provided including details of the	 i. Refer to drawings SSDA460-465 & SSDA550-553 for the typical OSD and stormfilter tank details.

Member of: CONSULT AUSTRALIA

control pit, orifice level weir level and cross-section of the tanks etc in both warehouse 1 & 2. The required details can be found in Council's Engineering Guideline for Development and WSUD Standard drawin A(BS)175M.	
ii. the details of the proposed bioretention & detention basin shall be provided including details of the control pit, orifice level weir level and cross-section of the basins etc in both warehouse 3 & 4. The required details can be found in Council's Engineering Guideline for Development and WSUD Standard drawing A(BS)175M. Secondly, the longitude section of the access track shall be provided to prove the gradient is not more the 10%. Furthermore, the solar access of the both basins are uncertain. The consultant shall confirm the basin meet the minimum solar access.	ii. (a) Refer to drawings SSDA454, SSDA460-465 & SSDA550-553 for the typical above ground OSD basins- and bioretention details. ii. (b) All access tracks will be designed to have a gradient of no more than 10% during the detail design stage ii. (c) The interface between the open basins and surrounding levels have been revised. Refer to the typical sections through the basins (SSDA460-465 & SSDA550-553) for interface details.
iii. The details of the permanent ponds and wetland are insufficient for assessment. More details must be provided.	iii. Refer to drawing SSDA552 for sections through Wetland. Wetland will be designed in accordance with Blacktown Council's typical WSUD details and guidelines during the detail design stage. Refer to drawings SSDA458 for typical frog pond details.
iv. All pipeline details were not included in the submitted plan.	iv. Refer to the provided electronic DRAINS model for all pipeline details.
v. The details of rehabilitated creek must be provided including cross-sections, longitudinal section with 1% AEP and PMF water level.	v. Refer to the sections through Blacktown Creek and the unnamed western swale on drawings SSDA550-553
vi. The detail of the culvert on Augusta Street must be provided	vi. Refer to drawing SSDA 756 for the proposed culvert under Augusta Street. To be progressed and designed during the detail design stage.

Yours faithfully,
COSTIN ROE CONSULTING PTY LTD

LOURENS DE VILLIERS
Senior Design Engineer

Dear Sir,

Re: Response to Submissions (RtS) - SSD- 36138263
Augusta Street Warehouse and Distribution Centre
Augusta Street, Blacktown, NSW

In response to the letter from Blacktown City Council dated 12 April 2024 referenced MC-23-00005, we provide the following responses to the Civil Engineering and Drainage matters.

	Item & Response	
No	**DRAINAGE MATTERS** **BCC Comment**	
13	**Supporting documents shall be provided in electric format for assessment:**	**CRC Response**
(a)	The OSD spreadsheet shall be provided	The electronic excel spreadsheets have been shared with the applicant to be made available to BCC
(b)	MUSIC model shall be provided to confirm the reduction target and the non-potable reuse target are achieved.	The electronic version of the MUSIC model has been shared with the applicant to be made available to BCC

Member of: CONSULT AUSTRALIA

(c)	DRAINS model to confirm the drainage design on both internal and external of the site.	The electronic version of the DRAINS model has been shared with the applicant to be made available to BCC
(d)	Tuflow model to show the waterway in both pre and post development.	The electronic version of the Tuflow model has been shared with the applicant to be made available to BCC
14	**The submitted Civil Work package, Costin Roe Consulting, Job Number C013904.03, Revision E and dated 06/03/24 shall be amended:**	**CRC Response**
a)	the details of the proposed OSD and storm filter tank shall be provided including details of the control pit, orifice level weir level and cross-section of the tanks etc in both warehouse 1, 2 & 3. The required details can be found in Council's Engineering Guideline for Development and WSUD Standard drawing A(BS)175M.	Reference should be made to drawing CO13904.03-SSDA461, that formed part of the latest submission, for a summary of the proposed OSD and storm filter tanks, control pits, orifice level weir levels, designed in accordance with Council's Engineering Guideline for Development and WSUD Standards.
b)	the details of the proposed bioretention & detention basin shall be provided including details of the control pit, orifice level weir level and cross-section of the basins etc in both warehouse 3, 4, 5 & 6. The required details can be found in Council's Engineering Guideline for Development and WSUD Standard drawing A(BS)175M. Secondly, the longitude section of the access track shall be provided to prove the gradient is not more the 10%.	Reference should be made to drawing CO13904.03-SSDA465, that formed part of the latest submission, for a summary of the proposed bioretention & detention basin, control pits, orifice level weir levels, designed in accordance with Council's Engineering Guideline for Development and WSUD Standards. Maintenance access tracks will be designed during the detail design stage. A note is added to all stormwater drainage drawings at basins noting that all access tracks will be designed to have a maximum gradient of 10%.

	Furthermore, the solar access of both basins is uncertain. The consultant shall confirm the basin meet the minimum solar access.	Solar access have been reviewed and response provided in **Enclosure 1** to this letter.
c)	The details of the permanent ponds and wetland are insufficient for assessment. More details must be provided.	*Response* Reference should be made to drawings SSDA460 to SSDA465 as well as drawings SSDA550 to SDDA553, that formed part of the latest submission, showing additional details and sections through all permanent basins, creeks, watercourses and wetlands. Reference should be made to drawing SSDA466, provided additionally with this RTS response, for more details on the wetlands. Drawings SSDA454 to SSDA458 provide typical bioretention and frog pond details.
d)	All pipeline details were not included in the submitted plan.	*Response* Reference should be made to drawings SSDA400 to SSDA415, that formed part of the latest submission, for proposed pipeline layout and some pipe sizes, and further reference should be made to the DRAINS model provided for pipe inverts and details.

This letter is provided by Costin Roe Consulting Pty Ltd. Please contact the undersigned if clarification of any of the above items are required.

Yours faithfully,
COSTIN ROE CONSULTING PTY LTD

Encl. 1. Solar Access Response

ENCLOSURE 1
Solar Access Response

Solar access to the bioretention basins has been reviewed with consideration to section 11.8.4 of Blacktown City Council's *WSUD developer handbook* and the findings have been summarised below. Minimum solar access achieved. An additional review of the architectural shadow study (referenced 220207-DA-003, dated Aug 2023) have been conducted and shows that only the proposed warehouse on Lot 5 cast a shadow for a short period of time over basin 3.

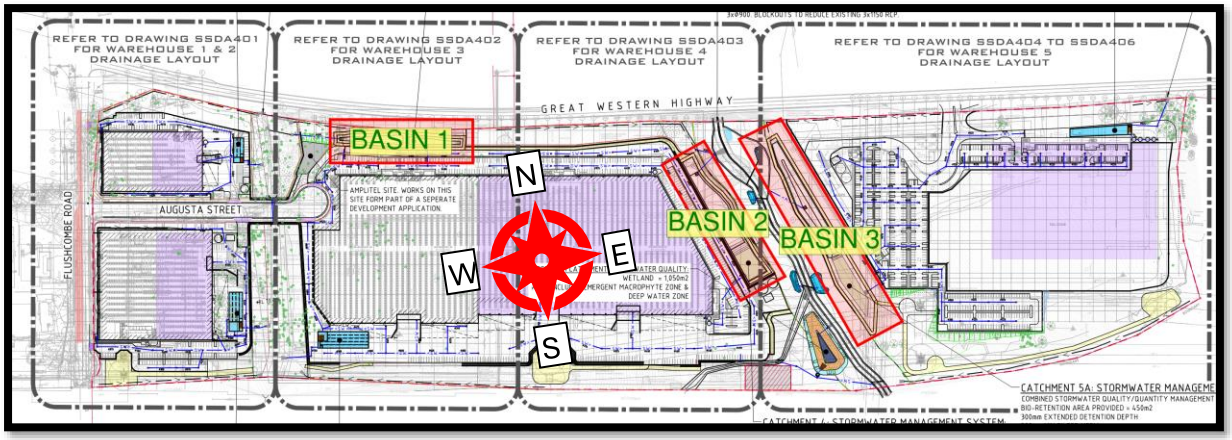

Figure 1 – Key Plan showing Basins 1 to 3.

BASIN 1

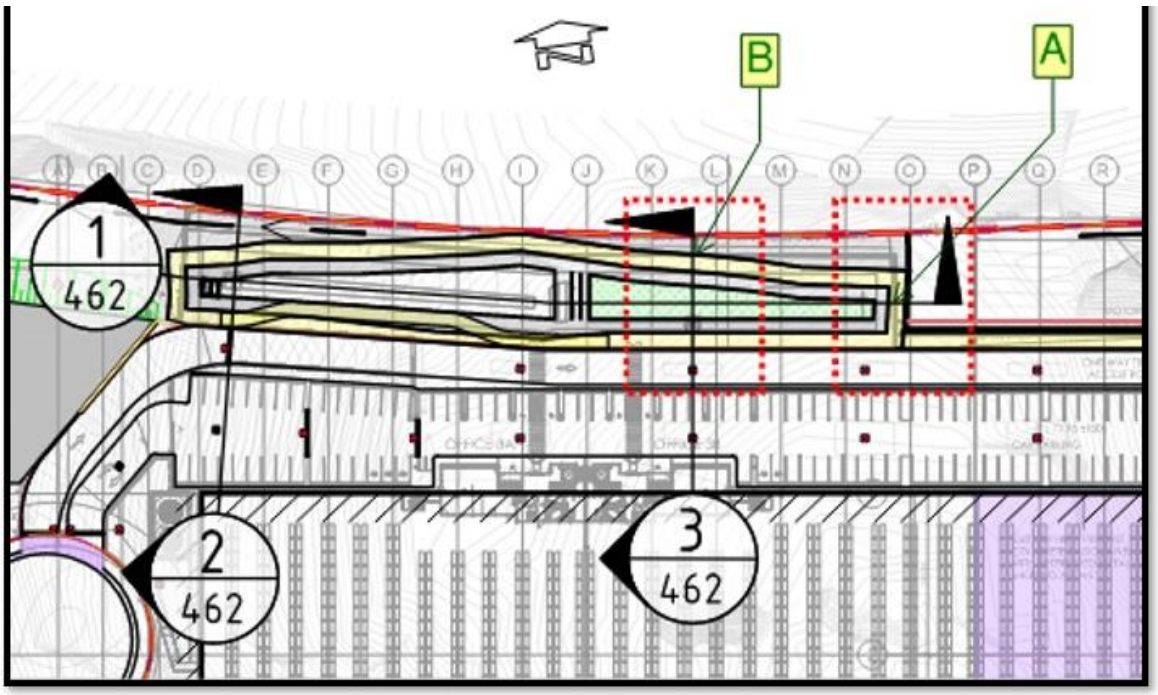

Figure 2 – Basin 1 and areas where solar access is reviewed in section.

Section A:
Minimum Solar Access considered to be achievable. Retaining wall heights to be confirmed during detail design stage. Estimated 1 in 1.5 mid-winter shadow line considered to be clear of bioretention basins based on the concept retaining wall heights.

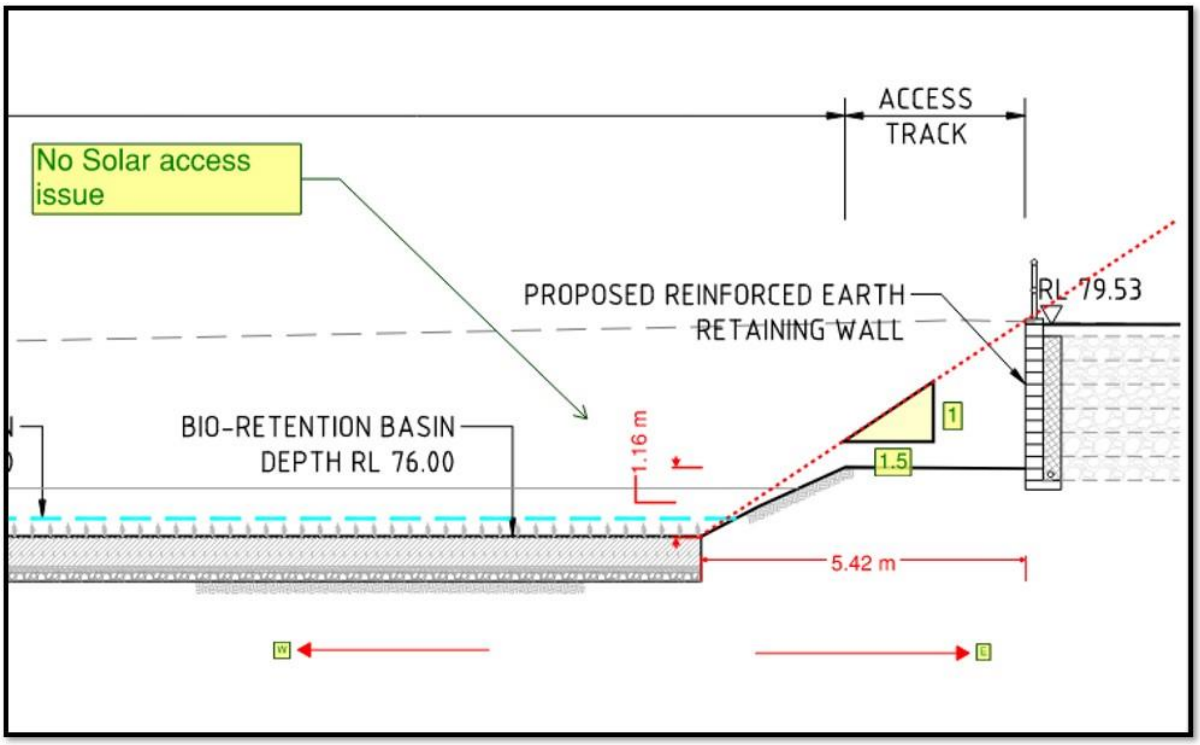

Figure 3 – Section A through Basin 1

Section B:
Minimum Solar Access considered to be achievable, no high structures towards the north of the proposed bioretention along this section.

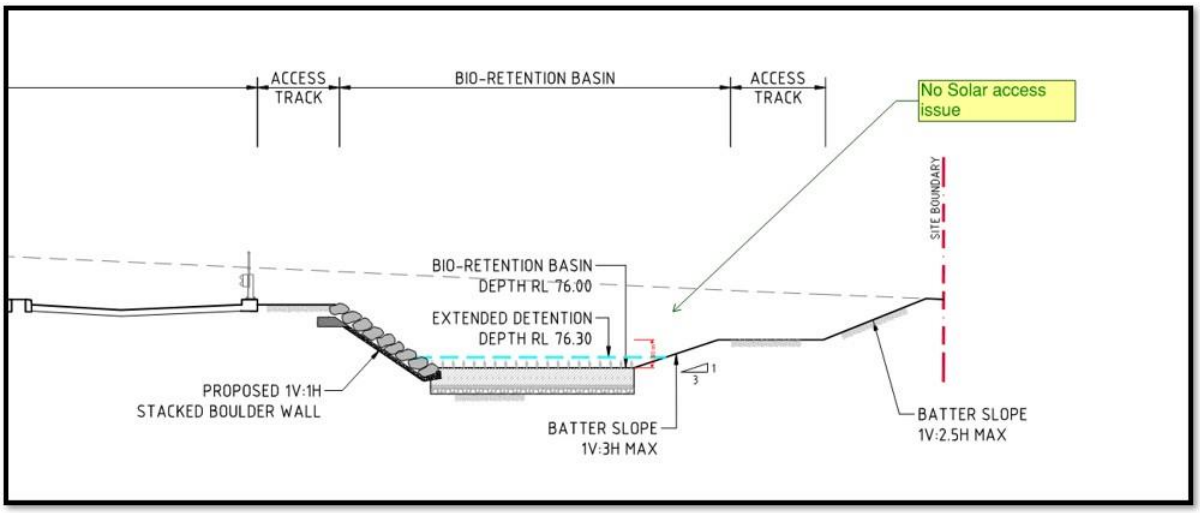

Figure 4 – Section B through Basin 1

BASIN 2 & 3:

An additional review of the architectural shadow study (referenced 220207-DA-003, dated Aug 2023) have been conducted. Bioretention Basin number 3 experience shadowing from warehouse 5 between 9am and 12pm. Refer to figure

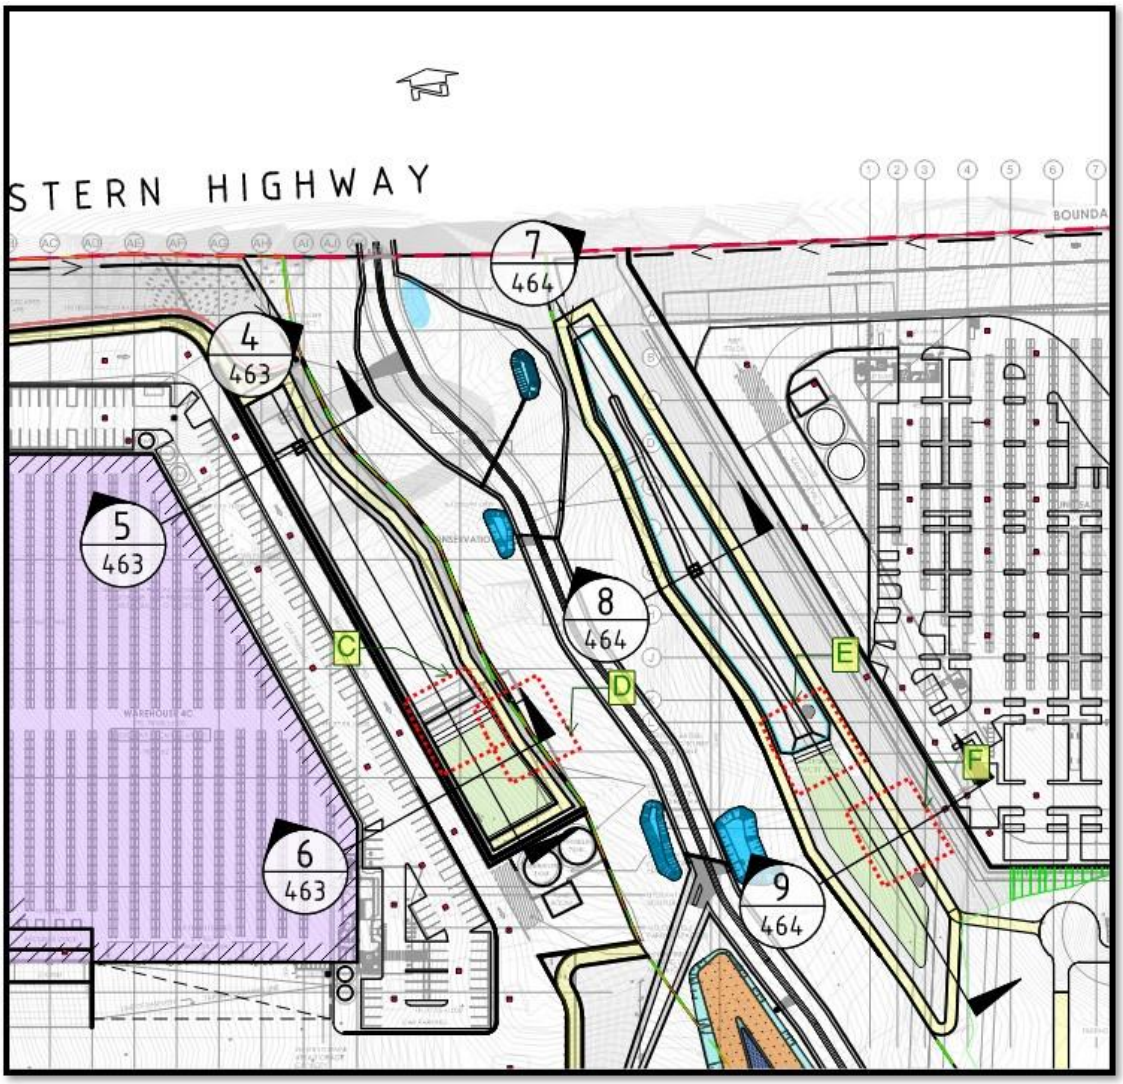

Figure 5 – Basin 2 & 3 and areas where solar access is reviewed in section.

Figure 6 – Shadow Study Key Plan and impact shown in bioretention basin 3
(Reference - 220207-DA-003, dated Aug 2023)

Section C:
Minimum Solar Access considered to be achievable, no high structures towards the north of the proposed bioretention along this section.

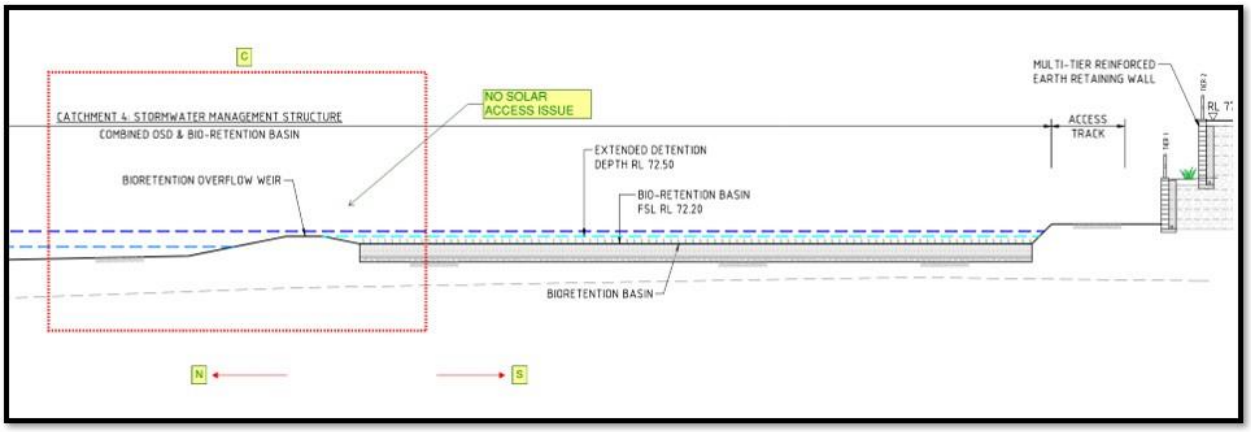

Figure 7 – Section C through Basin 2

Section D:

Minimum Solar Access considered to be achievable, no high structures towards the north of the proposed bioretention along this section.

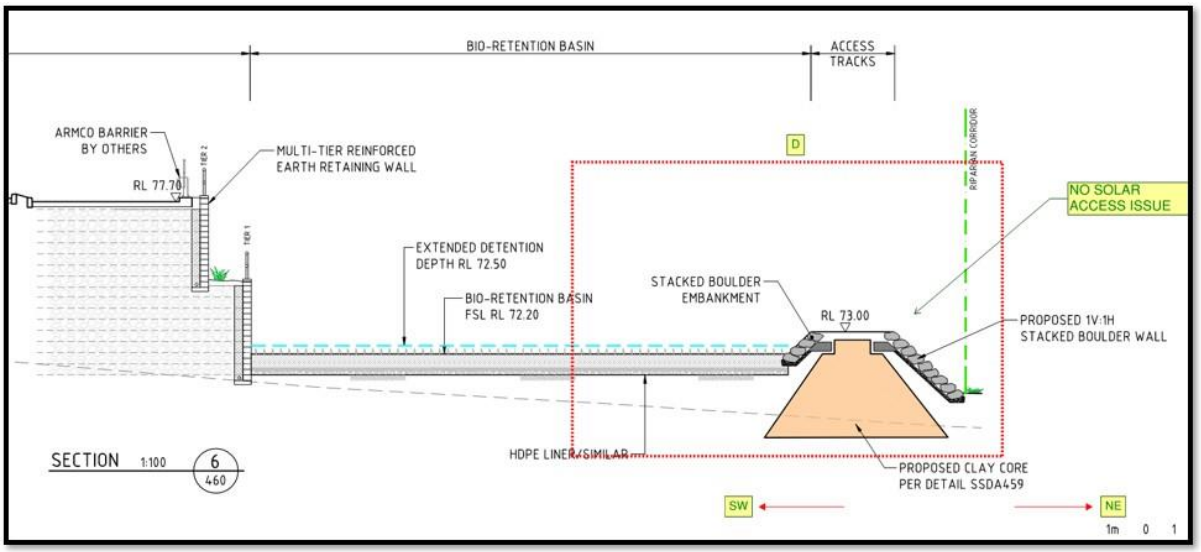

Figure 8 – Section D through Basin 2

Section E:

Minimum Solar Access considered to be achievable.

SYDNEY NSW 2000

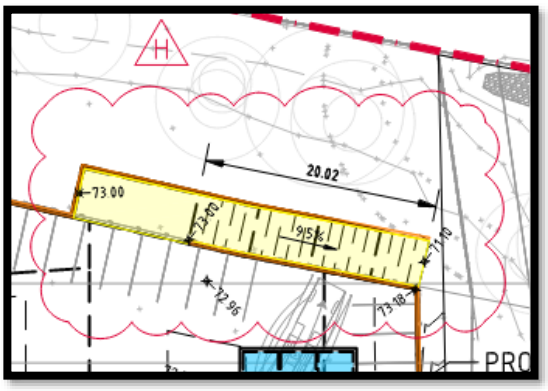

Dear Sir,

Re: Response to Submissions (RtS) - SSD- 36138263
Augusta Street Warehouse and Distribution Centre
Augusta Street, Blacktown, NSW

In response to the letter from Blacktown City Council dated 17 June 2024 referenced MC-23-00005, we provide the following responses to the Civil Engineering and Drainage matters.

	Item & Response	
No	**ENGINEERING ISSUES**	
	BCC Comment	**CRC Response**
1	The infrastructure to be covered by the VPA is to be provided so that the extent of engineering works to be conditioned by this consent can be ascertained.	The infrastructure located within the boundary of both Flushcombe Road (half-road) and Augusta Street. Refer to **Enclosure 1** for a sketch showing the extent discussed above.
No	**DRAINAGE ISSUES**	
	BCC Comment	**CRC Response**
1	In the submitted OSD spreadsheet, the bypass areas are not consistent with the submitted plan. The applicant must demonstrate the actual catchment areas where discharged into the OSD tank and basin and the actual bypass area to the OSD. A catchment plan shall be provided.	Reference should be made to the new drawing added to the SSDA package, CO13904.03-SSDA472, showing the OSD catchment areas. The undeveloped pervious areas are not included in the OSD calculations.

2	In the plan SSDA410, there is a low flow diversion rock wall to divert the flow into the GPT and wetland. The detail of the rock wall, including level and section, must be provided to demonstrate the sufficient flow into the GPT and wetland.	Reference should be made to new drawing CO13904.03-SSDA467 for the proposed boulder diversion wall, diverting the low flows from the upstream catchments to the proposed new GPT prior to discharge into the wetland.
3	In lot 1, the details of the proposed OSD and storm filter tank shall be provided when there is not 1.5-year ARI orifice. The details can be found in Council's Engineering Guideline for Development and WSUD Standard drawing A(BS)175M.	Reference should be made to new drawing CO13904.03-SSDA464 for the updated details of the proposed OSD and storm filter tanks when there is not 1.5-year ARI orifice in accordance with the Council's Engineering Guideline for Development and WSUD Standard drawing A(BS)175M.
4	The longitude section of the access track shall be provided to prove the gradient is not more the 10%. Also, the access track must be at least 4 meter wide.	We note the request to provide longitudinal sections of the access tracks across the site. We have provided the necessary (requested) information in the updated drawing package in the format discussed below. The drawing package has been updated to indicate the conceptual finished surface levels at both the top and bottom of each ramp/track as well as a dimension indicating the concept length of the track. Additionally, the maximum slope of each access track is shown along the tracks (see drawings C501, C502, C503, and C504). This confirms that all access tracks will comply with the maximum gradient requirement of 10%. Extraction of long sections along these access tracks will require a certain level of 3D design deemed to be a detail design item. Please refer to the example below for the format in which these ramp grades are indicated.

		 **EXAMPLE OF ACCESS TRACK GRADES DEPICTION EXTRACTED FROM DRAWING PACKAGE** All access tracks have been revised to be 4m wide. Refer to Enclosure 2 for drawings C501 to C504 with updated maintenance access tracks shown and clouded for ease of reference.

This letter is provided by Costin Roe Consulting Pty Ltd. Please contact the undersigned if clarification of any of the above items are required.

Yours faithfully,
COSTIN ROE CONSULTING PTY LTD

Re: Proposed Temporary Crossing of Blacktown Creek
SSD-36138263
Augusta Street Warehouse and Distribution Centre
Augusta Street, Blacktown, NSW

Dear Sir,

Costin Roe Consulting Pty Ltd (CRC) has been commissioned by The Trustee for Huntingwood Property Trust to prepare this memorandum to provide the relevant details, mitigation- and management measures on the proposed temporary Blacktown Creek construction crossing.

The associated Civil Engineering report have been completed in accordance with the technical requirements of the Secretary's Environmental Assessment Requirements (SEARs), and in support of the State Significant Development Application (SSD- 36138263) for the proposed Augusta Street warehouse and distribution centre at Augusta Street, Blacktown.

This memorandum provides an assessment of the civil engineering characteristics of the proposed temporary Blacktown Creek crossings and associated mitigation- and management measures to be considered.

Existing Blacktown Creek:

The existing Blacktown creek is located central to the proposed Huntingwood Industrial estate's Lot 4 and Lot 5 as seen in **Figure 1** below. In the current state of the site, the only access from the central lot east of Blacktown Creek to the lot on the western side is via the existing creek crossing to the south. No access is available from the Great Western Highway or the Western Motorway.

The Biodiversity Development Assessment Report by Anne Clements & Associates state that Blacktown Creek (1st order watercourse) is dominated by exotic weeds and the riparian zone of Blacktown Creek is treeless and swampy.

The existing Blacktown Creek will be rehabilitated and realigned. Alterations would therefore be required along Blacktown Creek during the development of the proposed Huntingwood Industrial estate.

Member of:
CONSULT AUSTRALIA

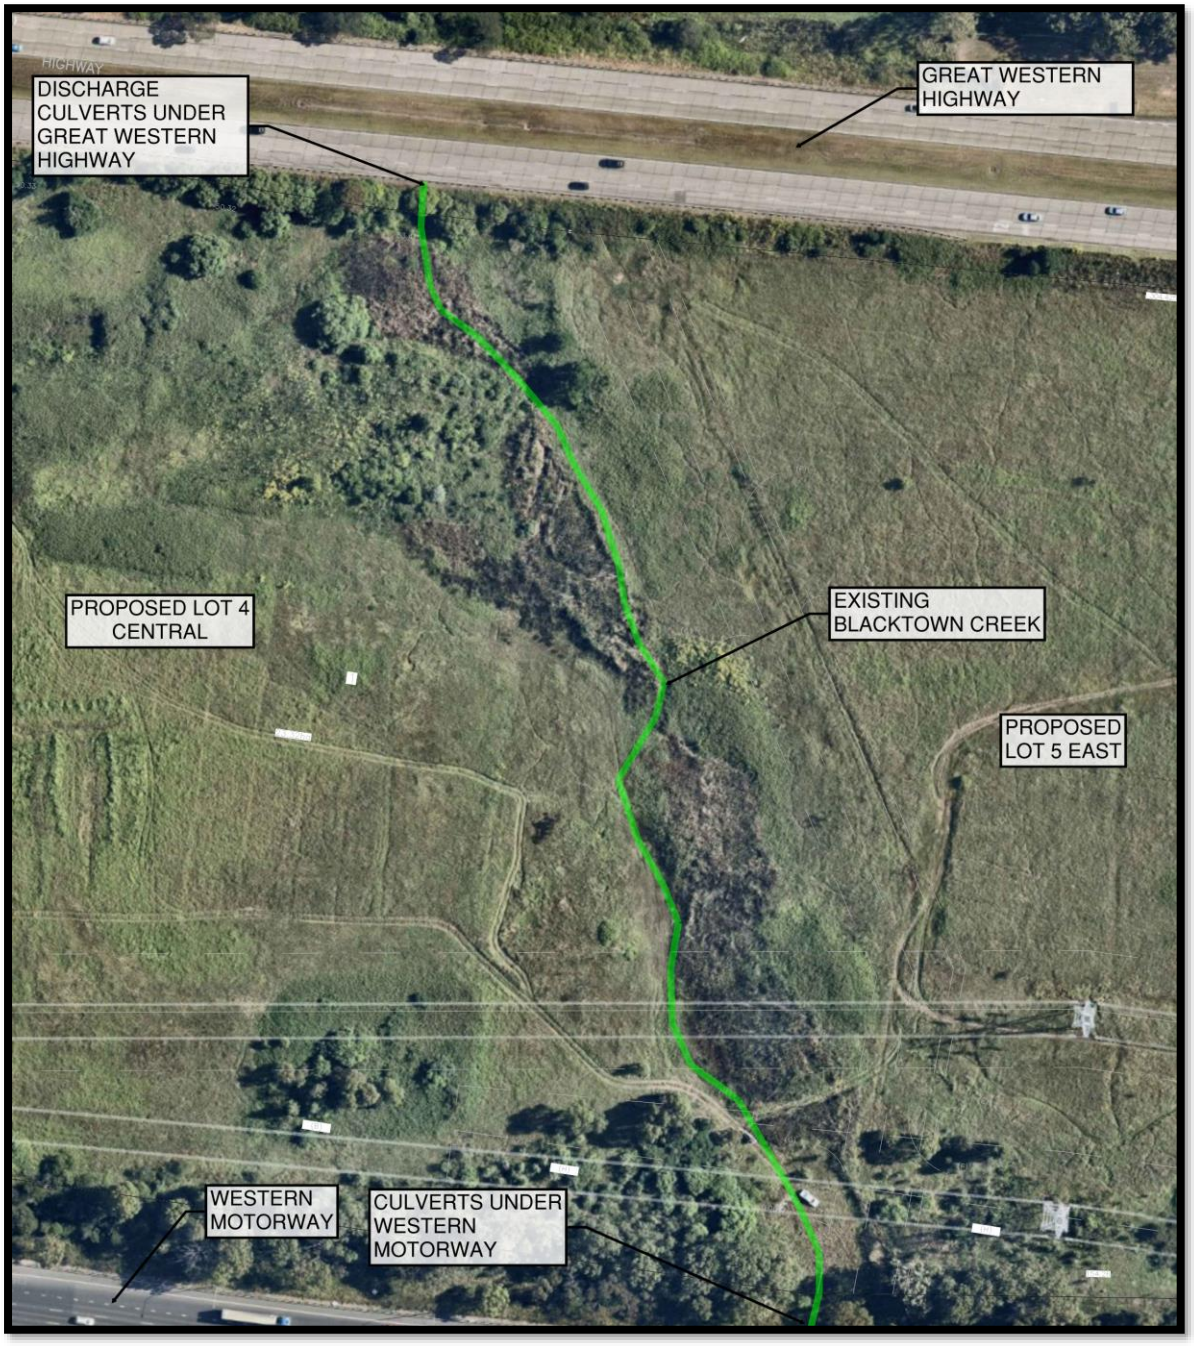

Figure 1 – Existing Blacktown Creek located central to Lot 4 and Lot 5

Proposed temporary Blacktown Creek Crossing:

Reference should be made to drawing **CO13904.03-SSDA190** and also the erosion and sediment control series of drawings, **CO13904.03-SSDA200 to SSDA251**.

Refer to **Figure 2** below for an indication of the of the two temporary crossings' locations over Blacktown Creek for construction purposes.

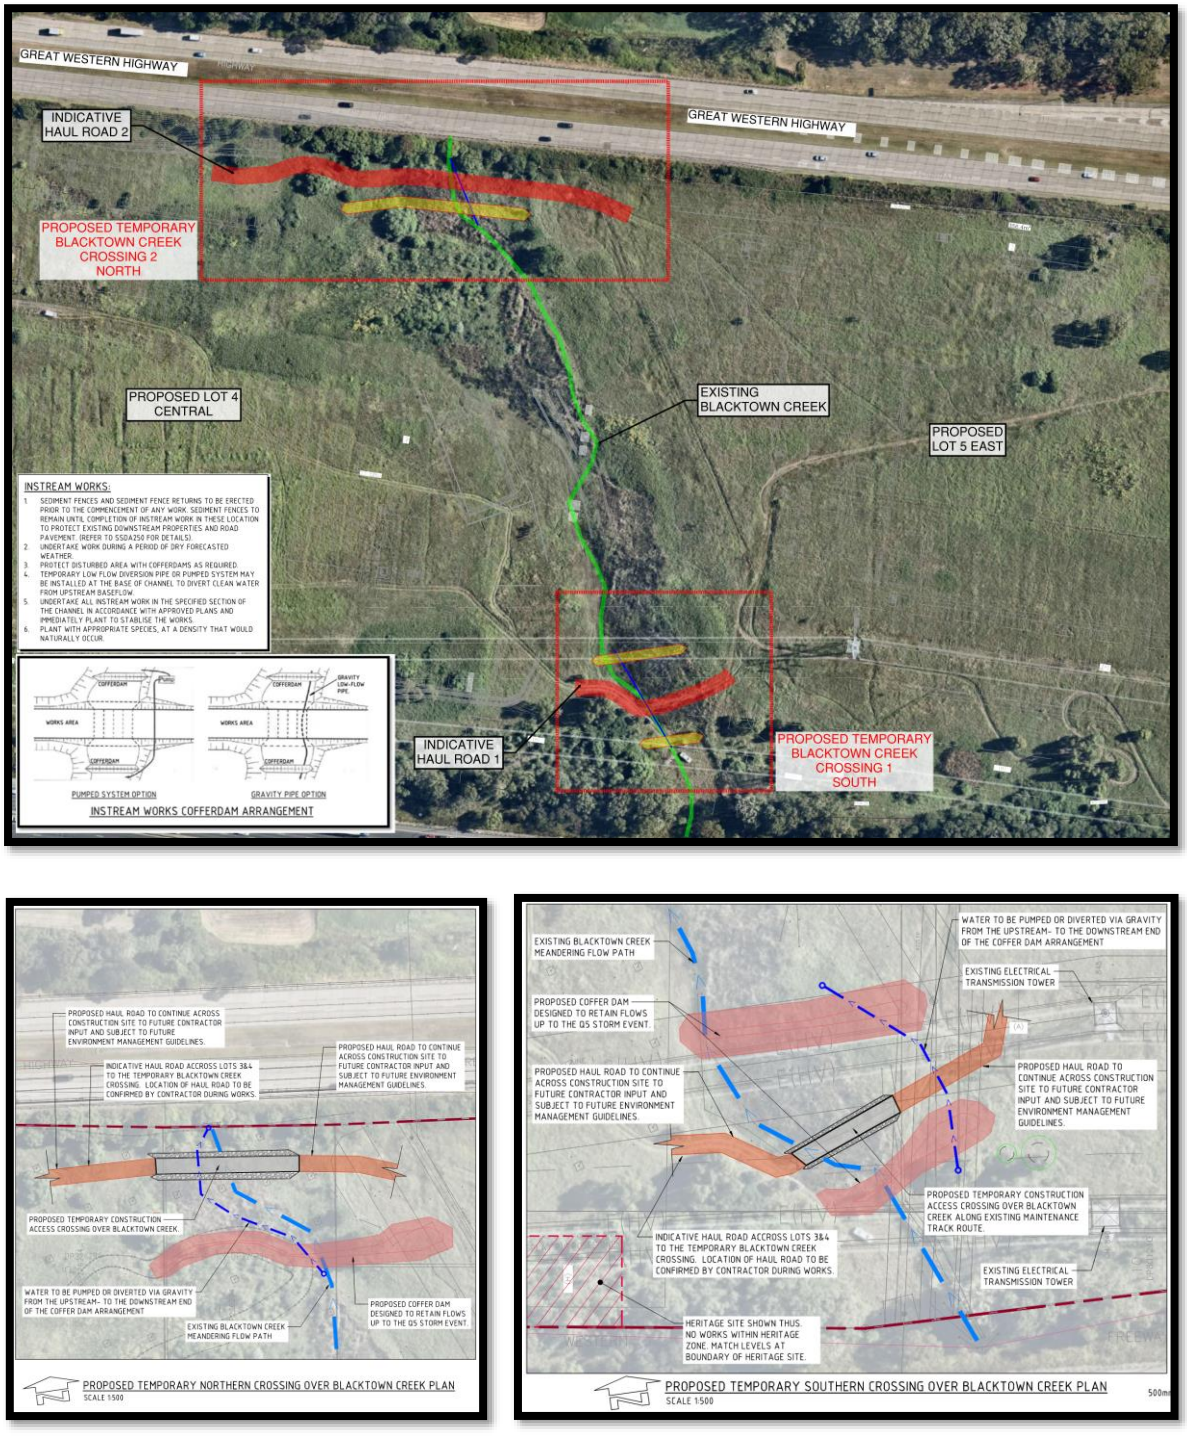

Figure 2 - Proposed optional temporary Blacktown Creek construction access crossings from the eastern lots to the western lot.

Proposed temporary crossing number 1, located south of Blacktown Creek, follows an existing maintenance track across the creek. However, this route crosses a proposed future wetland area and, therefore, cannot remain in place throughout the lifetime of the construction works.

Conversely, temporary crossing number 2, situated north of Blacktown Creek, is the preferable option as it can remain in place throughout the entire construction process, until the future intersection from proposed Lot 5 (west) with the Great Western Highway is constructed.

The temporary haul road crossings are expected to be made up of approximately 300mm thick road base. The contractor would be responsible for continuous maintenance of the temporary crossing throughout the construction period. The coffer dams will be sized to accommodate the 20% AEP storm event and the proposed temporary access track set at the 5% AEP storm event's estimate flood level. See **Figure 3** below. Cofferdams will be designed to allow sufficient storage upstream of cofferdams to ensure sufficient discharge from coffer dam to downstream of the access track without upstream impact to the creek or existing infrastructure.

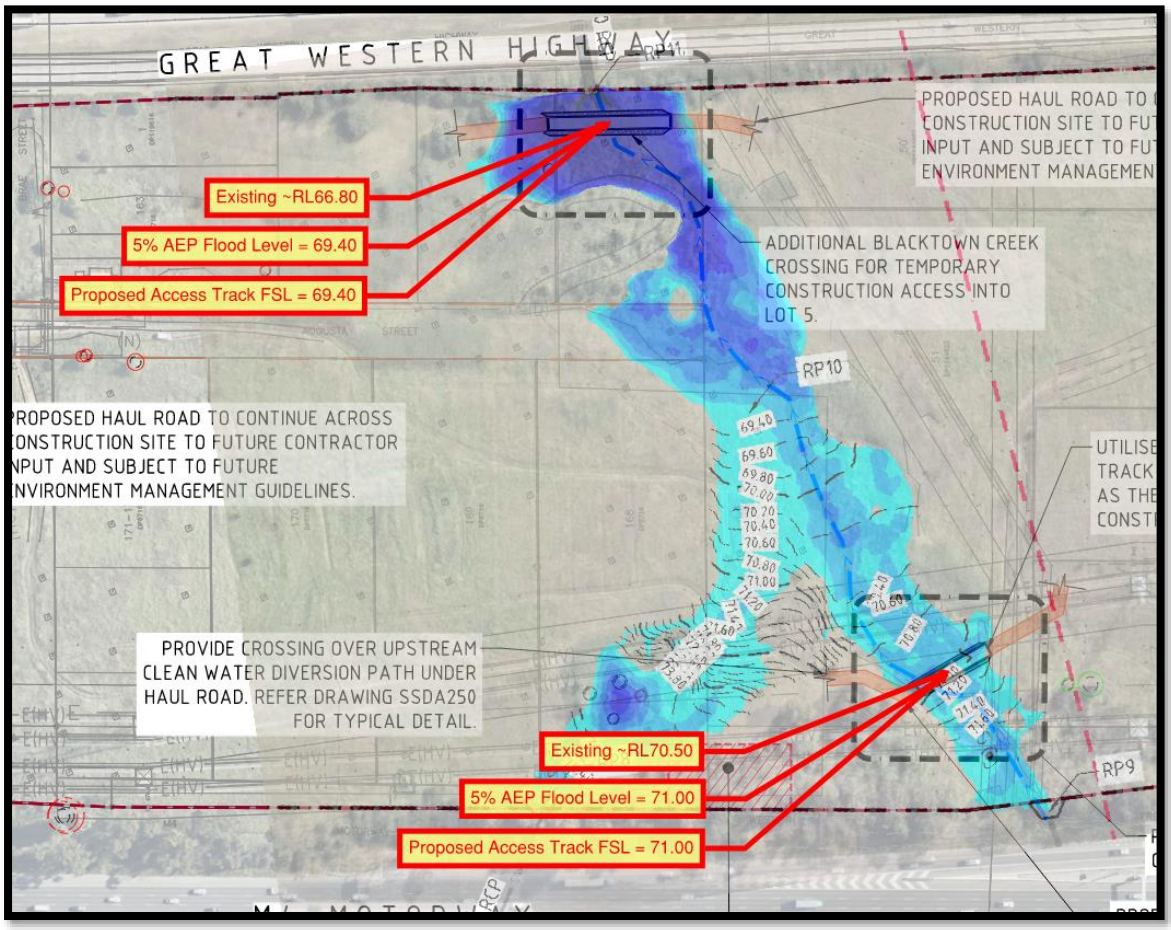

Figure 3 – 5% AEP Flood levels overlay onto proposed temporary access crossings (location of crossing to be set at detail design subject to Contractor input and the final ESCP and temporary works methodology.)

Sediment fences and sediment fence returns should be erected prior to the commencement of any work with Blacktown Creek. Sediment fences should remain in place until completion of the instream work associated with the construction of the temporary crossings, in these locations, to protect existing downstream infrastructure and vegetation. It is proposed that work is undertaken during a period of dry forecasted weather.

Refer to **Figure 4** below of proposed coffer dam arrangement to protect the disturbed area. A temporary low flow diversion pipe or pumped system should be installed at the base of the channel to divert clean water from the upstream baseflow. Figure 3 is showing potential options for the diversions of runoff through the works area based on recommendations of the IECA *(White Book – IECA.* Similar alternate works methodology may be employed in the final detail design subject to Contractor input and the final ESCP and temporary works methodology.

It is proposed that all instream works are undertaken in the specified section of Blacktown Creek in accordance with the abovementioned series of erosion and sediment control plans and immediately plant the works with appropriate species, at a density that would naturally occur, to stabilise the works.

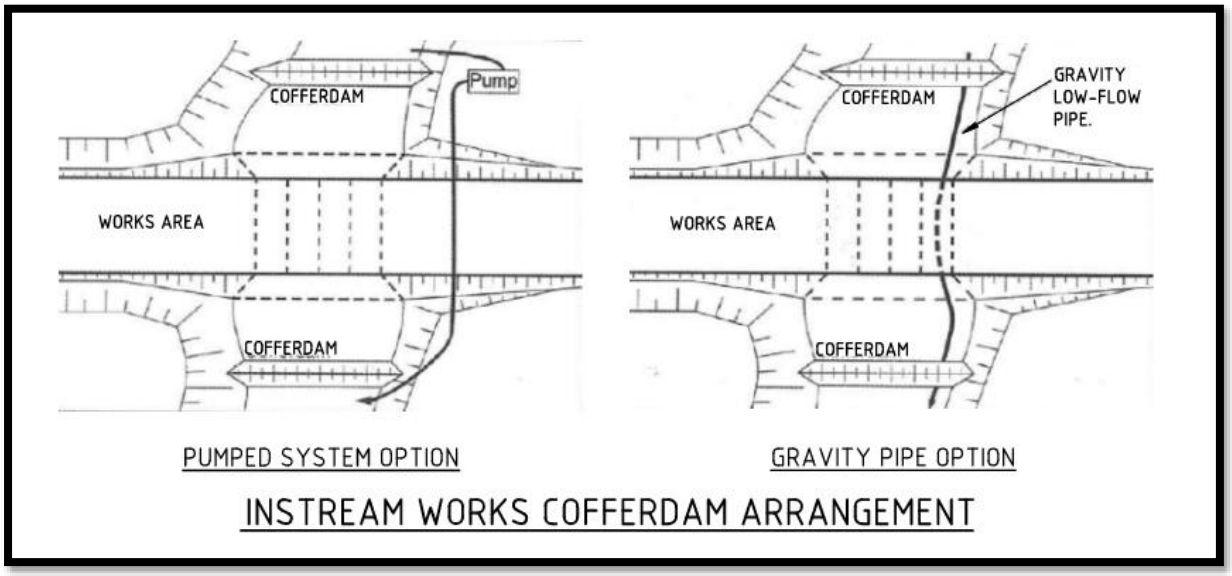

Figure 4 - Potential in-stream works cofferdam arrangements

Upon completion of the works and the provision of alternate access to Lot 5 (west), the instream works, and temporary access crossing need to be demolished and removed with minimal disturbance to the surroundings. The materials should be disposed of off-site. Following this, the rehabilitation of Blacktown Creek should be finalised in these locations and restored to its natural planted condition as per the proposed design.
