MOBILE AUTOMATION  
MADE AWESOME

# ABOUT THE SPEAKER

**Dan Cuellar**  
**@thedancuellar**

- Creator of Appium
- Head of Software Testing at FOODit
- Previously at Shazam, Zoosk, and Microsoft
- BS in Computer Science from Carnegie Mellon

# AGENDA

- What is Appium?
- What's New in Appium 1.6?
- Automate Desktop Apps with Appium (live demo)
- Mobile App Automation with Appium (sample code)
- Appium Tips & Tricks (sample code)
- Robots!

appium

# Evolution

# THE MOST TERRIFYING 5 WORDS IN TESTING

Available on the  
**App Store**

# THIS ALL SOUNDS FAMILIAR

# EVERYTHING IS NOT AWESOME

# WHAT IS APPIUM

- An implementation of the Selenium JSON-wire protocol that controls native and hybrid iOS and Android application
- The most popular open source mobile functional testing framework

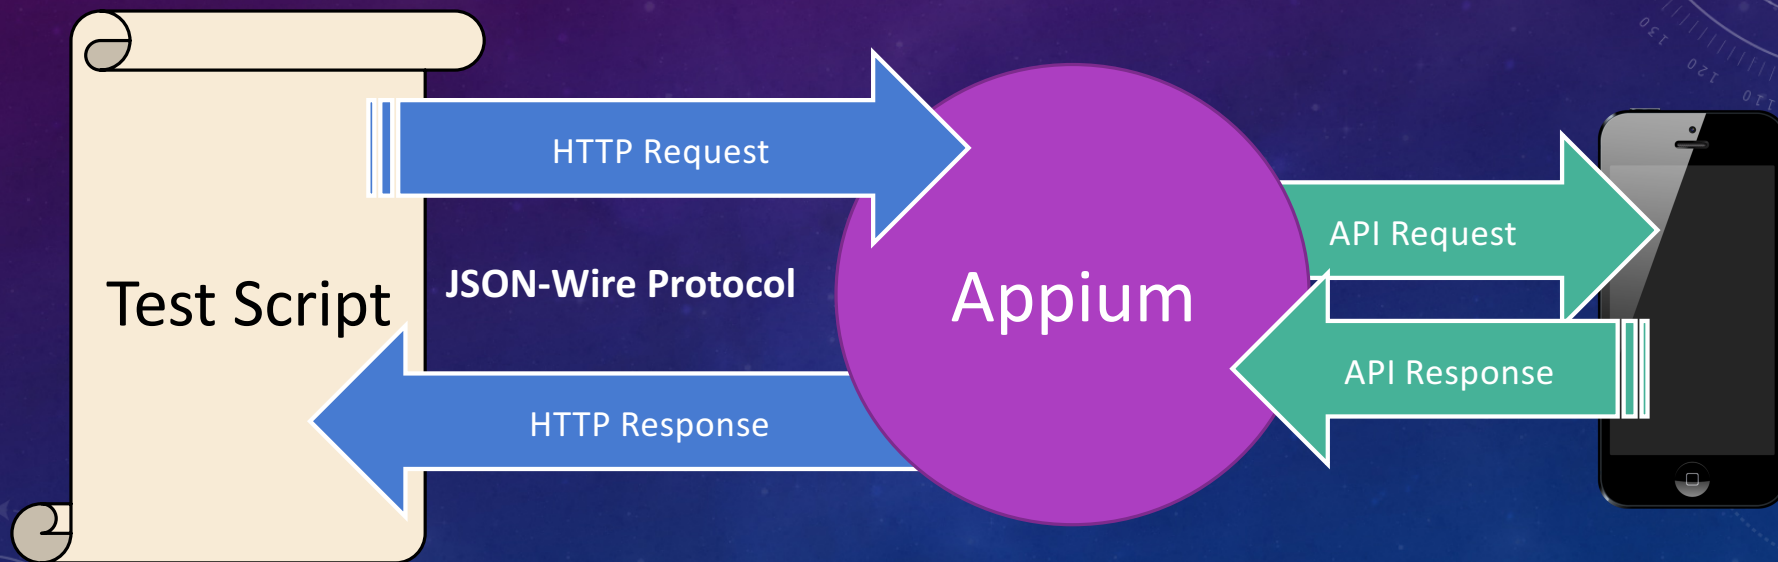

# APPIUM PHILOSOPHY

- Use standardized and sanctioned APIs and techniques
- Code in the language of your choice
  - Java, C#, Python, Ruby, Objective-C, JavaScript, PHP, and more
- Do not modify the application under test
- Keep it free and open source

# HOW DOES IT WORK?

# BY THE NUMBERS

In the last 4 years:

- Over 4,500 Stars, 2,000 Forks on GitHub
- Over 200 Contributors and 5,000 commits
- Over 150,000 downloads of Appium 1.0
- Over 4,000 issues closed

# What's New

# WHAT'S NEW IN APPIUM 1.6?

- Windows Universal App Support
- JS.Foundation
- XCUITest iOS Backend for iOS 9.3 and 10+
- You.i.TV platform support
- UIAutomator 2 Support (beta)

# WHAT'S COMING NEXT

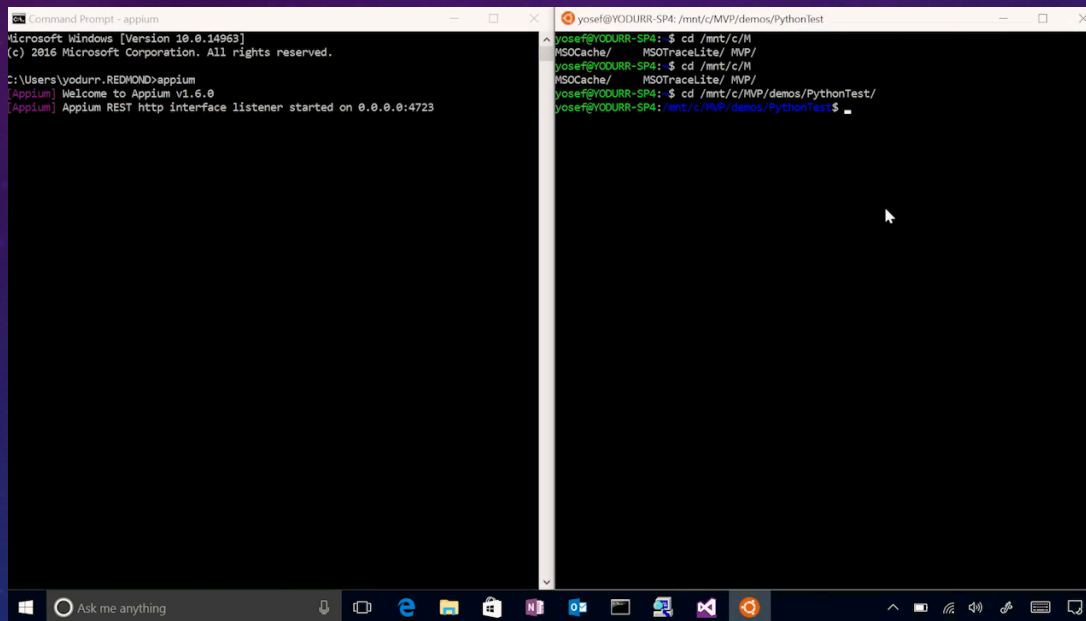

- Mac application support
- New GUIs
- Better docs and onboarding material

# Desktop Apps

# HELL HAS FROZEN OVER

The image shows two terminal windows side-by-side. The left window is a Windows Command Prompt titled 'appium'. It displays the following text: 'Microsoft Windows [Version 10.0.14963] (c) 2016 Microsoft Corporation. All rights reserved. C:\Users\yodurr.REDMOND>appium [Appium] Welcome to Appium v1.6.0 [Appium] Appium REST http interface listener started on 0.0.0.0:4723'. The right window is a Linux terminal titled 'yosef@YODURR-SP4: /mnt/c/MVP/demos/PythonTest'. It shows a series of directory navigation commands: 'cd /mnt/c/M', 'MSOCache/ MSOTraceLite/ MVP/', 'cd /mnt/c/M', 'MSOCache/ MSOTraceLite/ MVP/', 'cd /mnt/c/MVP/demos/PythonTest/', and 'yosef@YODURR-SP4: /mnt/c/MVP/demos/PythonTest\$'. The Windows taskbar is visible at the bottom of the screenshot.

# Windows Support

Microsoft

# Mac Apps

<https://github.com/appium/appium-for-mac><sup>19</sup>

# The Basics

# SETUP CAPABILITIES – IOS

@Before

```
public void setUp() throws Exception {
```

```
    // set up appium
```

```
    File app = new File("/path/to/your/TestApp.app");
```

```
    DesiredCapabilities capabilities = new DesiredCapabilities();
```

```
    capabilities.setCapability("platformVersion", "10.0.1");
```

```
    capabilities.setCapability("deviceName", "iPhone 7s");
```

```
    capabilities.setCapability("app", app.getAbsolutePath());
```

```
    capabilities.setCapability("automationName", "xcuitest");
```

```
    driver = new IOSDriver<WebElement>(new URL("http://127.0.0.1:4723/wd/hub"), capabilities);
```

```
}
```

# SETUP CAPABILITIES - ANDROID

@Before

```
public void setUp() throws Exception {
```

```
    // set up appium
```

```
    File app = new File("/path/to/my/test-app.apk");
```

```
    DesiredCapabilities capabilities = new DesiredCapabilities();
```

```
    capabilities.setCapability("deviceName", "Android Emulator");
```

```
    capabilities.setCapability("automationName", "uiautomator2");
```

```
    capabilities.setCapability("platformVersion", "6.0");
```

```
    capabilities.setCapability("app", app.getAbsolutePath());
```

```
    capabilities.setCapability("appPackage", "com.yourcompany.testapp");
```

```
    capabilities.setCapability("appActivity", ".HomeScreenActivity");
```

```
    driver = new AndroidDriver<WebElement>(new URL("http://127.0.0.1:4723/wd/hub"),  
capabilities);
```

```
}
```

# THE CODE – FINDING ELEMENTS

```
WebElement el = driver.findElement(By.className("XCUIElementTypeButton"));
```

```
WebElement el = driver.findElement(By.xpath("//XCUIElementTypeTextField[1]"));
```

```
WebElement el = driver.findElement(MobileBy.AccessibilityId("Done"));
```

# THE CODE – ACTIONS

```
el.click();
```

```
el.sendKeys("Hello World");
```

```
// 2 finger tap
```

```
action0 = TouchAction().tap(el)
```

```
action1 = TouchAction().tap(el)
```

```
MultiAction().add(action0).add(action1).perform()
```

# AUTOMATING WEB-VIEWS

Each webview in your app is a context. Change context and automate as you would a webpage using regular selenium syntax.

```
driver.context(contextName);  
WebElement el = driver.findElement(By.cssSelector(".awesome"));  
el.click();
```

# CONTEXTS

Native Context

Web Context

# Advanced

# SMS as Alert

# Slow iOS Simulator

- Xcode 7 and iOS 9 do not support installing the speedup tool automatically that previous versions of Appium used
- No worries, you can install it manually
  - [https://github.com/appium/appium/blob/master/docs/en/advanced-concepts/iwd\\_xcode7.md](https://github.com/appium/appium/blob/master/docs/en/advanced-concepts/iwd_xcode7.md)
- Now your iOS tests will be fast again

# Capabilities

- iOS and Android
  - **autoWebView** – start in the webview context (really useful for Cordova apps)
- Android
  - **ignoreUnimportantViews** – can speed up your Android tests
  - **nativeWebScreenshot** – takes the screenshot from UIAutomator instead of chromedriver

# Capabilities

- iOS
  - **locationServicesAuthorized** – pre-authorizes location services (prevents an alert)
  - **Auto[Accept|Dismiss]Alerts** – useful to prevent alerts
  - **nativeWebTap** – uses non-javascript taps on web content
  - **safariIgnoreFraudWarning** – allows https without proper certs
  - **interKeyDelay** - time between keystrokes
  - **sendKeysStrategy** – (oneByOne, grouped, or setValue)

# Network Conditioning

`driver.setNetworkConnection(value)` [Android only]

Value (Alias)	Data	Wifi	Airplane Mode
0 (None)	0	0	0
1 (Airplane Mode)	0	0	1
2 (Wifi only)	0	1	0
4 (Data only)	1	0	0
6 (All Network on)	1	1	0

# Part Deux

# Robots

# ROBOTS

# HOW DOES IT WORK?

- **Calibrate the robot to map points in the physical world to points on a device screen**
  - Run an app on the device with Appium that can tell you what coordinates are being touched
  - Touch three places on the device and record the physical and device-centric coordinates
  - Build a matrix to translate any point between the two systems
- **Intercept touch actions with the Appium Server and send them to the robot**

# THE MATH

$$\begin{aligned}x' &= ax + by + c \\y' &= bx - ay + d\end{aligned}$$

$$\begin{aligned}x'_1 &= +ax_1 + by_1 + c \\y'_1 &= -ay_1 + bx_1 + d \\x'_2 &= +ax_2 + by_2 + c \\y'_2 &= -ay_2 + bx_2 + d\end{aligned}$$

$$\begin{bmatrix} x'_1 \\ y'_1 \\ x'_2 \\ y'_2 \end{bmatrix} = \begin{bmatrix} x_1 & y_1 & 1 & 0 \\ -y_1 & x_1 & 0 & 1 \\ x_2 & y_2 & 1 & 0 \\ -y_2 & x_2 & 0 & 1 \end{bmatrix} \begin{bmatrix} a \\ b \\ c \\ d \end{bmatrix} \Rightarrow \mathbf{u} = \mathbf{M}\mathbf{v}$$

$$\mathbf{u} = \mathbf{M}\mathbf{v} \Rightarrow \mathbf{v} = \mathbf{M}^{-1}\mathbf{u}$$

The background is a gradient from dark purple at the top to dark blue at the bottom, filled with a pattern of small white stars. Overlaid on this are several faint, light-colored technical diagrams. On the right side, there are two circular gauges or dials with numerical scales (e.g., 80, 90, 100, 110, 120, 130, 140, 150, 160, 170, 180, 190, 200, 210) and arrows. On the left and bottom, there are dashed lines and circular paths, some with arrows indicating direction.

# Questions?

# Takeaway

# PERSONAL TAKEAWAY

“Life can be much broader once you discover one simple fact: Everything around you that you call life was made up by people that were no smarter than you and you can change it, you can influence it, you can build your own things that other people can use.

Once you learn that, you'll never be the same again.”

-Steve Jobs
