

EQUIFIRST
feeding your dream

dreams come true

Extensive product range

Stringent requirements are always imposed on horse feed with regard to the quality and correct dosage of the nutrients. EquiFirst has aligned its product range of 36 products even better to the needs of individual horses.

Passionate team

You and the EquiFirst team share a passion that determines an important part of our lives: our infinite love of horses! The name EquiFirst perfectly reflects our ambition: we want to be your “first” point of contact for all questions related to horse feed.

Our own R&D

EquiFirst has its own R&D department that cooperates closely with universities and specialist equine veterinary clinics. Our products are subjected to thorough and lengthy testing by professionals before they are put on the market.

Quality

The people of EquiFirst have been active in the equine sector for more than 30 years now. The foundation of our success is formed by offering reliable products with a high standard of quality. A solid quality control system combined with a passionate staff guarantee this high standard of quality, in compliance with FEI standards and the horse racing code.

what makes EquiFirst so special?

The symbol on the packaging directly displays the most important product feature.

Our product range: page

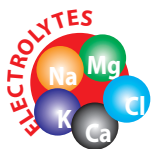

An extrusion (prepared under high pressure and at high temperatures) based on linseed, source of omega-3 fatty acids, chicory (from which the probiotic inulin is derived), slow-release sugars (EquiSweet) and grains. Contains vitamin E (1,000 mg) and organically bound selenium.

Rice bran is source of fat and fibre. This is a very safe and excellent alternative energy supplier of sugars and starch. This raw material contains gamma-oryzanol, which supports good muscular development in sports horses.

Nettle is rich in minerals (calcium, potassium, magnesium, iron, phosphorus) and trace elements and silicon in particular. Nettle has many favourable properties. It supports good digestion, resistance and circulation, and has a purifying effect.

The added electrolytes ensure that any deficiencies that may have arisen in important minerals such as sodium, calcium, magnesium, potassium and chloride, resulting from acute sweating, are quickly alleviated. This product is therefore highly recommended in hot weather and for horses undergoing intensive training.

Sugars that have a low glycemic index in the form of EquiSweet. EquiSweet is a healthy sugar syrup that ensures progressive and gradual energy delivery.

The added probiotic is a very specific strain of lactobacilli. The peptides they produce have a selective effect on the intestinal flora and will consequently help to maintain the natural balance of the intestinal flora.

A specially-developed complex with an optimal ratio of copper, zinc and manganese promoting the best possible development of joints, cartilage, tendons and bones.

Extra-high vitamin, mineral and trace element contents, including Vitamin E and organically bonded selenium, assist in optimum muscle development, skeletal maintenance and heightened vitality, resistance and endurance.

Soya flakes contain good-quality proteins (essential amino acids). As they have been cooked and crushed, they are easy and safe to digest. Moreover, they are originating from GMO-free seeds.

It is very important that the product is soaked for at least 15 minutes in twice as much water as product prior to feeding.

“Original” is the basic product range of EquiFirst. It is composed of various types of feed that perfectly meet the needs of horses and ponies with normal workloads. What is typical of these products is that they contain a lot of fibre and all the vitamins, minerals and trace elements the animals need.

Condition Cube

Condition Cube is a pellet for horses and ponies with normal workloads. This pellet contains a lot of fibre but is low in sugar and starch. The product has a low energy and protein content, however contains the required vitamins, minerals, and trace elements.

6
mm

Condition Mix

Condition Mix is a flaked mix for horses and ponies with normal workloads. This mix forms a perfect combination of easily-digestible energy, proteins and fibres. This product contains all the necessary vitamins, minerals and trace elements and offers the perfect solution for a well-balanced ration and a healthy horse.

- Maintenance feed without oats
- Easy-to-digest
- Naturally balanced

- Maintenance feed
- Low energy value
- High fibre

Sports & Leisure

The EquiFirst "Sport & Leisure" range is rich in fibre and contains muesli's as well as pellets. This premium range is suitable for horses and ponies that have normal to heavy workloads or have highly

specific feed needs. We use the best nutrients in perfectly balanced and safe quantities to offer the horse a well-balanced feed.

Vital Cube

Vital Cube is a pellet without oats, specifically developed for sports and recreational horses and ponies. This pellet contains all the necessary vitamins, minerals and trace elements and offers the perfect solution for horses with a normal to heavy workload.

Vital Mix

Vital Mix is a flaked mix without oats for sports and recreational horses and ponies. The product is enriched with Linamix® and perfectly combines various sources of energy, protein and fibre. This non-heating mix contains all the necessary vitamins, minerals and trace elements and is the ideal mix for horses and ponies with a normal to heavy workload.

20 kg

- For perfect vitality
- Without oats

Herbs & Fibre Mix

Herbs & Fibre Mix is a healthy and structurally-rich mix consisting of alfalfa, cracked and puffed grains and spelt, but without oats. This structurally-rich mix stimulates horses' chewing behaviour. It is a tasty and easily-digestible product rich in omega-3 fatty acids derived from extruded linseed. The mix contains a mixture of carefully-selected herbs such as hawthorn, lemon balm, mallow, peppermint, oregano and marigold. This mix is low in sugar.

Healthy Fibre Mix

Rice bran: to support muscle building

Healthy Fibre Mix is a mix which contains a lot of fibre, fat and vitamins, but extremely little sugar and starch. This mix has been composed without grains and is particularly suitable for horses that are susceptible to problems associated with sugar, the digestive system and muscles. This mix consists of ingredients such as alfalfa, red beet flakes, chicory pulp and rice starches. The chicory pulp contains inulin which gives it a prebiotic effect.

20 kg

- Formulated without grains
- Digestion & muscle care

Fibre All-in-one

Fibre All-in-one is a complete feed for horses and ponies with normal workloads. It is a perfect mix of roughage and concentrated feed. This mix satisfies the need for fibre, protein and energy excellently and ensures optimum and safe digestion.

Opti Fibre

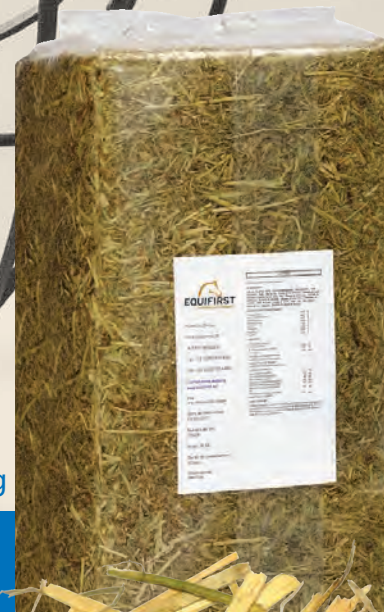

Opti Fibre is a complete feed for sports and recreational horses. The product is enriched with Linamix® and forms the perfect combination of high-quality roughage and excellent concentrated feed. This high-fibre mix excellently satisfies the need for energy, fibre, fats and protein and ensures optimum and safe digestion for (sports) horses and ponies.

Senior Mash

Senior Mix

Senior Mash is a fibre-rich mash that was developed especially for older horses and ponies with dental problems. This mash contains ingredients such as Timothy grass, dehydrated chicory pulp (naturally rich in inulin = prebiotic), pea flakes, soya bean flakes and carrot pieces. This mash is typified by its high fibre content and a composition of high-quality nutrients to optimise muscle mass. This feed must be soaked (15 minutes)!

Senior Mix is a flaked mix that was specifically developed for older horses and ponies. This high-quality feed contains Linamix®, soya bean flakes and nettle. It is intended to keep the horse in a good general condition and excellent health. Soya is naturally rich in essential amino acids and, due to its flaked consistency, safe digestion is guaranteed.

The background of the advertisement is a high-quality photograph of a horse and rider in action. The rider is wearing a bright red jacket and white breeches with blue piping. They are jumping a white horse over a red and white striped obstacle. The horse is in mid-air, and the rider is in a classic jumping position. The background is a clear blue sky with some blurred vertical elements, possibly other jumps or trees.

Energy

The EquiFirst “Energy” range contains both flaked mixes and pellets for horses with intensive workloads. This range was developed specifically to meet the needs of every horse, in all disciplines

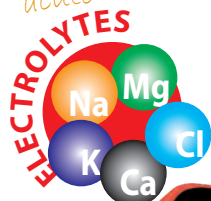

and at a high level. We use the best ingredients and guarantee food safety, compliance with FEI standards and the horse racing code.

Sport plus Cube

Sport plus Cube is a pellet especially developed for horses intended for competition. This energy-rich food with omega-3 and 6 fatty acids contains additional Vitamin E as well as organically-bonded selenium and magnesium to benefit the muscles. The added electrolytes ensure that any deficiencies in important minerals will quickly be alleviated. The added yeast supports the digestive process.

Alleviate (mineral) deficiencies resulting from acute sweating

Omega 3 Mix

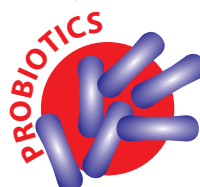

Omega 3 Mix is a flaked mix without oats. This product was specifically developed for racehorses and performance-oriented competition horses that have to do strenuous activity for long periods. This mix has a very high Linamix® content and stimulates the supply of energy via omega-3-type fatty acids and slow-release sugars. This non-heating mix contains all the necessary vitamins, minerals and trace elements and is suitable for horses with an intense workload over a long period.

20 kg

Racing Mix

help to maintain
the natural balance
of the intestinal
flora

Racing Mix is an incredibly tasty flake mix made using extremely easy-to-digest cereal flakes (spelt, corn, barley) and black oats. This mix is specially developed for racehorses, but is also highly suited for horses that need extra power. The pellet, which is extra small and flavoursome, is rich in high-quality proteins, vitamins, minerals, and trace elements. It is also enriched with an especially powerful pre- and probiotic.

Frysk Mix

Frysk Mix is a flaked mix that was specially developed for Friesian and baroque horses. The product is suitable for horses that need a great deal of endurance, e.g. for dressage or driving trials. It is enriched with Linamix® and soya flakes and provides first-class nutrients, such as omega-3, and a particularly complete range of amino acids. As well as vitamins, minerals and trace elements, it also contains added copper and zinc. The pectin supplement guarantees good intestinal transit and the low sugar and carbohydrate content ensures safe digestion.

Balance Cube

Balance Cube is a pellet specially developed to balance a grain ration or to supply regular rations with extra vitamins. This tasty pellet is particularly rich in vitamins, minerals and trace elements.

* Mix Balance Cube in a proportion of between 30% and 50% with cereal grains. The mix obtained can be fed at a rate of 0.7 to 1 kg per 100 kg of body weight per day.

- For an optimal start

Specialties

The EquiFirst "Specialties" range is a range of special feeds composed of flakes, pellets, extrusions and fibres. These feeds can be used as a premium feed

or as a meal substitute. The special feeds are even more specifically aligned to the needs of every horse or pony.

Linamix®

Linamix® is an extruded (prepared under pressure) supplement with linseed, chicory, slow-release sugars and grains. The product is suited as a feed supplement. This premium feed offers an exceptionally high quality of fats, from linseed, and inulin (a prebiotic) from chicory. This product helps to improve the general condition of the horse and also promotes intestinal transit. Additionally, it contains two antioxidants (Vitamin E and organically bound selenium) making it excellently suited to improving the condition and health of your horse.

*contains linseed:
natural source
of Omega-3*

Booster Mix

Booster Mix is a mix of Linamix®, soya flakes and nettle pellets. This premium feed is a sophisticated feed supplement that promotes fast recovery and good muscle development. It is administered together with the feed or ideally soon after exercise (30 minutes). This non-heating feed is the natural solution for good muscle development in sports horses.

Recover Mash

Recover Mash is a mash without oats, but with a high vitamin and mineral content. This mash is extremely easy to digest thanks to the flaked grains, dehydrated carrots and garlic, pea flakes and wheat bran. It contains Linamix®, which promotes the supply of omega-3-type fatty acids and prebiotics via the inulin that is naturally present in chicory. It is particularly well-suited to horses following heavy exertion, during periods of short-term stress (transport) and to support recovery after extremely heavy exertion. Recover Mash must be fully soaked, preferably in hot water.

- Prebiotics & probiotics

4 kg

- For total hoof care
- Biotin, zinc, copper & manganese

3 kg

- For flexible joints
- Preventive & curative care
- MSM, glucosamine & collagen

Digestive Support

SpecialCare Digestive Support is a feed supplement that promotes digestion. It has been developed to regulate digestion and maintain an optimum balance of intestinal flora.

Hoof Support

SpecialCare Hoof Support is a feed supplement that supports the development of the hooves. The product contains, among other things, biotin, methionine and trace elements such as copper, zinc and manganese. These components stimulate the optimum growth and good elasticity of the hoof and thus reduces the risk of brittle, fragile hooves.

Joint Support

SpecialCare Joint Support is a feed supplement that improves the quality of the joints. It contains MSM and glucosamine that support the structure of the cartilage and other connective tissues.

Muscle Support

SpecialCare Muscle Support is a feed supplement for horses currently in training. Muscles can acidify during physical exertion due to a build-up of muscle waste substances (such as lactic acid). The natural antioxidants and vitamin E help to neutralise and remove these wastes from the muscles. The magnesium included in this supplement contributes to muscle coordination. Muscle Support promotes stamina and helps horses to move more flexibly.

Nerv Support

SpecialCare Nerv Support is a feed supplement that is suitable for nervous or stress-prone horses. This supplement contains magnesium and L-tryptophan. Magnesium is an important mineral for the muscular and nervous system, bones, water and energy management, and the metabolism. This supplement reduces nervousness and stress, which calms the horse and allows for more control.

Vitamin Support

SpecialCare Vitamin Support contains a high dose of vitamins, minerals and trace elements that can be given as a supplement to the (grain) ration. It helps to support the immune system and energy levels. Vitamin Support contains the OS complex for uninterrupted bone growth, optimal hardening of bones and support for tendons and ligaments for healthy motor functioning. This supplement is also intended to alleviate a proven deficiency or to help the horse recover after strenuous activities.

4 kg

- Reduces oxydative stress
- Vitamin E & selenium

4 kg

- To reduce stress
- Magnesium
- L-tryptophan

4 kg

- Complete vitamin and mineral supplement
- OS complex

Horse treats

The Horse Treats are delicious grain-based horse treats, available in 4 flavours. They are well accepted by horses thanks to their delicious taste and aroma and are therefore excellently suited as a reward.
