Tooth movement restrictions >

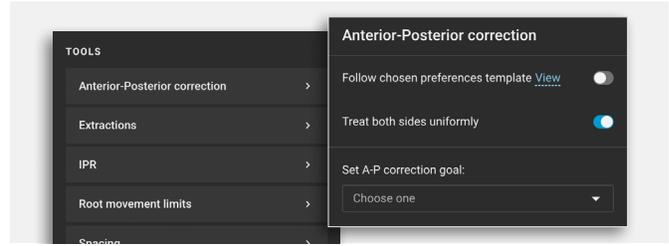

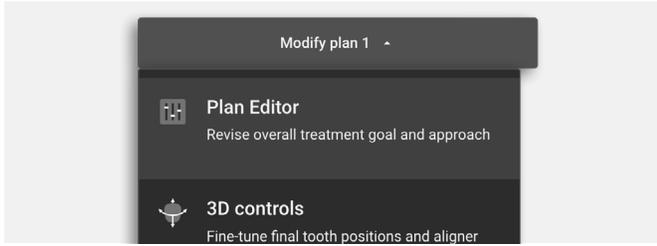

Plan Editor in ClinCheck® software allows you to make significant plan changes quickly and easily, putting power and time back in your hands.

Gain more control with Plan Editor, a new, optional tool that allows you to revise a plan's treatment goal or approach to help improve clinical outcomes. Just like the precise changes you can already make with 3D controls, you can now make more significant changes with Plan Editor and see the updates in minutes with ClinCheck® Live Update.

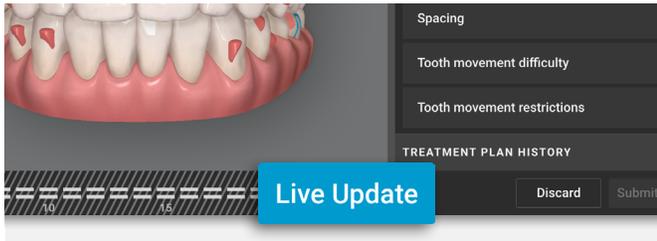

How it works

Plan Editor is only enabled with a preferences template selected, like Invisalign Personalized Plan, and is to be used for select cases where you want to modify the treatment plan goal or approach, or handle exceptions to your usual treatment preferences.

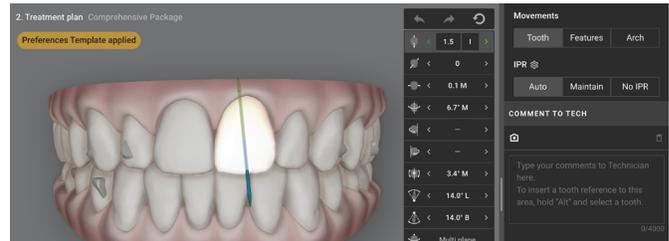

1. Choose any plan from your history, go to 'Modify Plan' and select 'Plan Editor' from the dropdown.

2. Select one or more tools to view existing preferences and toggle them off to make your modifications.

3. Make your modifications and click the Live Update button to review the changes in minutes.

4. When finished with Plan Editor changes, either fine tune your plan using 3D controls or approve your updated plan.

Key benefits

Flexibility and customization.

Make major modifications yourself, view side-by-side comparisons, and customize treatment plans for specific cases.

Efficiency and time savings.

Seeing changes in minutes with a click of the Live Update button saves time, skips written comments and helps you stay in the moment.

Greater control of your digital treatment planning.

Now you can directly edit, undo, redo, and investigate new approaches to your treatment plans like never before, and without waiting for your plan to be returned.

Align Technology is transforming orthodontic treatment planning with next-generation tools to give you the most efficient and customizable experience yet to help scale your business and free up your schedule.
