Ultradent is a global culture where differences are sought after, welcomed, and embraced.

Our call-to-action invites employees, friends, and family to:

Seek out the excluded
Enhance the team
Welcome feedback humbly
Share feedback fearlessly
Amplify all voices
Embrace our differences

A STRONG CODE OF ETHICS AND CORE VALUES

Our culture shows in our products, the services we provide, and the influence we have to improve oral health globally. We want to bring smiles to all human beings.

INTEGRITY • QUALITY • HARD WORK • INNOVATION • CARE

POLICIES

Ultradent is committed to products that strengthen the clinician's ability to administer professional state-of-the-art patient care. This may involve the development of new products or a refinement of existing materials and techniques.

Our highest priority is to meet your needs with quality products and service. We appreciate your suggestions, questions, and comments. This catalog and the products described herein are intended for lawful distribution in the USA. In certain countries outside the USA, differing legal requirements may limit the availability of certain products or provide for different product indications and claims under labeling compatible with local conditions. For more detailed procedures and precautions, refer to individual product instructions or packaging.

RETURN POLICY

Items returned within 30 days of purchase with a return authorization number on the outside and inside of the return box will be credited 100%. Product returned between 31 and 60 days from purchase date is subject to a 20% restocking fee. Ultradent will not accept returns after 60 days, with the exception of machines under warranty. Errors in shipment must be reported within 14 days of invoice date.

Errors in shipment must be reported within 14 days of invoice date. All return authorization numbers become invalid 90 days after date of issue. A return authorization number must accompany returns to receive proper credit; please contact Customer Service at 800.552.5512 for assistance.

All products are latex free with the exception of DermaDam latex rubber dam.

-All products may not be available in all countries.

ULTRADENT IS PROUD TO OFFER CE MARK CERTIFIED PRODUCTS FOR EUROPE.

Where appropriate, Ultradent products sold in Europe bear the CE Mark, indicating that our products comply with the strict European Community laws (directives).

SHELF LIFE AND STORAGE

All product shelf life is based on date of manufacture. See product packaging for more information and storage instructions.

WARRANTIES

Please see product IFU for warranty information if applicable.

PACKAGING

At Ultradent we are committed to environmental concerns. For that reason we try to use as little plastic as possible in our packaging. However, for your safety and the proper preservation of our chemicals, many times we must include a secondary plastic package.

Our highest priority is to meet your needs with quality products and service. We appreciate your suggestions, questions, and comments. This catalog and the products described herein are intended for lawful distribution in the USA. In certain countries outside the USA, differing legal requirements may limit the availability of certain products or provide for different product indications and claims under labeling compatible with local conditions. For more detailed procedures and precautions, refer to individual product instructions or packaging.

RETURN POLICY

-All products are latex free with the exception of DermaDam latex rubber dam.

-All products may not be available in all countries.

ULTRADENT IS PROUD TO BE ISO 13485 CERTIFIED.

Ultradent is certified to MDSAP by an independent Auditing Organization, which assures that the quality system meets the requirements of ISO 13485.

AWARDS

Ultradent is “Great Place to Work Certified” and ranks #9 “Best Workplace in Manufacturing and Production in 2021” by Fortune Magazine.

Ultradent is driven to improve oral health globally and prioritizing our workplace culture is vital to this mission. We cherish the success of our team members and being selected as a prestigious Top Manufacturer validates many of the progressive initiatives we utilize to create this unique environment. “We are very honored to be ranked among such prestigious companies as those recognized as Fortune’s best” says Ultradent President and CEO, Dirk Jeffs. The selection comes after a rigorous evaluation of company culture and extensive employee feedback.

All UPI syringes are stamped with an expiration date consisting of one letter and 3 numbers. The letter is a lot number used for manufacturing purposes, and the 3 numbers are the expiration date. The first 2 numbers are the month, and the third number is the last number of the year.

In 1976, after graduating from Loma Linda University and beginning his own practice, Dr. Dan Fischer invented his groundbreaking Astringedent™ hemostatic solution in response to the need for a tissue management product that achieved more rapid, profound hemostasis. Astringedent hemostatic with the Metal Dento-Infusor™ tip and Ultrapak™ cord became the backbone of Ultradent's chemical tissue management system. For the first time, clinicians could quickly and predictably achieve profound hemostasis. The success of Astringedent hemostatic fueled Dr. Fischer's desire to continue developing innovative, advanced solutions—leading to the founding of Ultradent Products, Inc. Now, marking its 44th year as a family-owned, international dental supply and manufacturing company, Ultradent has continued its vision to improve oral health globally by creating better dental products that continue to set new industry standards. Dr. Fischer has numerous patents to his name.

Ultradent currently researches, designs, manufactures, and distributes more than 500 materials, devices, and instruments used by dentists around the world. This includes its renowned, industry-leading Opalescence™ Tooth Whitening System, and the groundbreaking Opalescence Go™ professional take-home whitening system. Ultradent's product family also includes the award-winning VALO® LED curing light, UltraSeal XT™ hydro pit and fissure sealant, and Ultra-Etch™ etchant. Recent innovations include the Uveneer™ direct composite template system, which creates natural-looking, high-quality direct composite veneers quickly and easily. This past year we were proud to introduce Jiffy™ finishing strips, Thermo Clone™ Clear bite registration, the NaviTip™ 29 ga Sideport tip, the Lotus™ disposable prophy angle, and Enamelast™ Flavor Free fluoride varnish.

Ultradent has been the recipient of Small Business Administration’s Exporter of the Year and Direct Distributor of the Year awards. Most recently, Ultradent was the recipient of the Health Care Heroes award in the category of Corporate Achievement. Ultradent and Dr. Fischer have been recognized for outstanding industry leadership and for making defining contributions to the dental community. In 2013, the Utah Governor’s Office of Economic Development named Dr. Fischer “International Man of the Year” for his contributions to sustaining economic and cultural relations between the state of Utah and the European Union.

Dr. Fischer strives continuously to “Improve Oral Health Globally.” Beyond the dental community, Ultradent donates products to humanitarian efforts locally, nationally, and internationally. Additionally, Ultradent sponsors a nonprofit organization, the Diversity Foundation, a progressive outreach program committed to preventing hate crimes and intolerance. This program promotes diversity and fosters multicultural awareness among individuals from all backgrounds.

Dr. Fischer lives his life according to the same values that guide Ultradent: integrity, quality, hard work, innovation, and care. He enjoys tending to his garden and spending time with his wife, children, and lots of grandchildren.

**800.552.5512**
**UltraTemp™**

POLYCARBOXYLATE, NON-EUGENOL
TEMPORARY LUTING/FILLING MATERIAL

- Non-eugenol formula won’t interfere with resin bonding
- Easily removed by water prior to setting/curing
- Convenient dual-barrel syringe delivery of paste-to-paste formulas
- Mixing tips provide even mixing for reliable adhesion
- Provides optimal sealing capabilities once cured
- Able to withstand normal biting and chewing forces
- Hydrophilic chemistry ensures a quality seal
- Use to cover access for intercoronal whitening

UltraTemp™ luting material is a hydrophilic, polycarboxylate chemistry that ensures low irritation to pulp and a quality seal. It can be easily removed with water prior to setting. UltraTemp luting/filling material is suggested for routine 1–2 week temporization of custom-fabricated provisionals or standard preformed provisionals. It can also be used to seal the access opening of walking bleach cases.

**TEMPORARY PROVISIONAL LUTING**

1. Prior to complete set, remove excess UltraTemp luting/filling material easily with a moist cotton swab or gauze. After 2–3 minutes of set time, remove any residual subgingival cement with an explorer.

2. Upon provisional removal two weeks post-op, cement clings to both provisional and preparation. This is one indicator of a quality sealing cement.

3. Flake off residual cement with a hand instrument.

4. Use Consepsis™ Scrub antibacterial slurry with a rubber cup or STARbrush™ intercoronal brush to remove residual cement.

**WALKING BLEACH CASE**

1. After following the instructions to place Opalescence™ Endo 35% hydrogen peroxide non-vital “walking bleach” to the tooth, place a small piece of cotton over whitening gel. Then deliver UltraTemp luting/filling material into the chamber with an Ultradent Intraoral tip.

2. Easily wipe away excess with a wet cotton ball or gauze before it sets.

3. Finished. Repeat every 1–5 days until desired results are achieved.

**DO NOT REFRIGERATE**

**5916 - UltraTemp Regular Set Kit (2-to 3-Minute Set Time)**

1 x 5 ml syringe
20 x Mixing tips

ClearTemp™ LC
TEMPORARY VENEER CEMENT

• Translucent shade is designed for temporary anterior veneers
• Light-cured resin formula provides a quality seal and exceptional retention
• Fluoresces under black light facilitating complete removal
• Ergonomic contra-angle syringe delivery aids in precise placement

ClearTemp LC temporary veneer cement is designed specifically for temporary veneers. Its proprietary, light-cured resin formula provides the additional strength required to keep provisional veneers in place. For luting temporary veneers, nothing will hold as strong or look as natural as ClearTemp LC temporary veneer cement.

ESTHETIC

Today’s provisionals look more natural than ever. ClearTemp LC cement helps create a short-term smile that patients will be proud to reveal.

COMPARE

A traditional temporary cement shows through the provisional crown on #8. ClearTemp LC cement does not show through the provisional veneer on #9.

FLUORESCING PROPERTIES

ClearTemp LC cement fluoresces under black light for easy detection. Use black light to ensure complete removal of ClearTemp LC cement. This is an important step that minimizes potential to damage final restoration. Use the VALO™ Black Light Lens attachment or UltraSeal™ XT hydro black light keychain for high visibility.

PROCEDURE

1. Remove product from refrigerator and bring to room temperature. Clean, rinse, and lightly dry preparation. Express enough ClearTemp LC cement to coat inside surface of provisional.

2. Seat temporary veneer.

3. Remove flash.

4. Light cure with VALO curing light on Standard Power mode for 10 seconds.

REMOTION

5. Use a hand instrument at acrylic margin to break seal and remove provisional. ClearTemp LC cement is very strong and has high adhesion, so temporary veneers may break upon removal. Flake off bulk residual cement with a blunt hand instrument.

6. Illuminate tooth surface with black light to reveal remaining ClearTemp LC cement. Remove any remaining cement and recheck. Scour prep with pumice-type slurry and cup or brush. Rinse thoroughly and prepare for final cementation.

Note: Due to its high bond strength compared to other temporary cements, ClearTemp LC temporary veneer cement should be used for temporary veneers ONLY and never for temporization of permanent restorations, full coverage crowns, inlays, or onlays.

Note: We recommend PermaShade™ LC veneer cement for luting permanent veneers. See the next page.

3518 - ClearTemp LC Syringe 4pk
0.67 g syringes

1. realityesthetics.com
PermaShade™ LC
LIGHT-CURE VENEER LUTING RESIN

- Medium viscosity keeps veneer from drifting prior to cure
- Use for porcelain, zirconia, composite, and other indirect veneers
- Upon curing, low shrinkage stress prevents strain on the veneer
- Available in four VITA* shade options: Translucent, Opaque White, A2, and B1

PermaShade LC luting resin is a light-cured luting resin used exclusively for cementing translucent prosthetics where light can transmit and shade matching is important. Its ergonomic contra-angle syringe makes luting delicate prosthetics more convenient than other delivery methods. With enduring color stability and low shrinkage, PermaShade LC luting resin is ideal for creating a long-lasting, esthetic smile.

Unique and ergonomic contra-angle syringe allows for precise, controlled delivery.

Note: for optimal handling, bring PermaShade LC resin to room temperature before use.

3517 - PermaShade LC Kit
4 x 0.95 g PermaShade LC Trans syringes
3 x Each 0.95 g PermaShade LC A2, B1, and Opaque White syringes

* Trademark of a company other than Ultradent. 1. Data on file.
**PermaFlo™ DC**

*DUAL-CURE COMPOSITE LUTING/RESTORATIVE RESIN*

- Multiple uses including post cementation, core buildup, and luting
- Wear resistant
- Maximum strength
- Radiopaque
- Low polymerization shrinkage
- Self-mixing
- 2.5 minutes working time, 5–8 minutes chemical set time
- Total-etch or self-etch compatible

PermaFlo DC luting resin is a highly filled, small-particle, dual-cure resin that flows easily through a small-orifice tip, making post luting simple and convenient. It has a low film thickness of only 8 µm.

PermaFlo DC luting resin is recommended for permanent cementation of transparent or opaque crowns, etc. You can use the same mix and delivery method to lute posts and fabricate core buildups. Its optimal viscosity flows easily into the depths of the post preparation and then intimately around protruding, direct-placed posts. To stop material flow during core buildup, tack with a curing light. PermaFlo DC resin is compatible with Peak™ Universal Bond adhesive for light-cured bonding and luting.

* 1 x 5 ml PermaFlo DC syringe
* 20 x Mixing tips
* 20 x Intraoral tips

PermaFlo DC resin has the lowest film thickness known for a composite luting resin.

---

**USES**

- The Intraoral tip snaps onto the dual-barrel mixing tip for precise placement of luting material.
- Adhesive luting for crowns, bridges, inlays, and onlays. With syringe/tip delivery, a crown is loaded from depth of crown to ensure no air entrapment.

---

**MULTIPLE OPTIONS**

Failure is **NOT** one of them

- Post Cementation
- Core Buildup
- Luting

---

**PROCEDURE**

- **PermaFlo DC** resin is a versatile dual-cure resin formula that can be used to cement endodontic posts and fabricate core buildups.

ENDODONTIC POST CEMENTATION GUIDE USING PERMAFLO DC

1. Determine post size and length using a try-in post or X-ray and clinical judgment.
2. Place a rubber stop on UniCore™ Drill at desired length.
3. Position UniCore tip in the pilot hole. Using light pressure, follow the obturation material to the length indicated by rubber stop. Keeping the drill at full speed, withdraw from the canal.
4. Use TriAway™ Adapter with Endo-Eze™ 22 ga tip to clean debris out of post space from bottom up with water and suction.
5. Verify post size and length by placing the corresponding UniCore Post. Clean post with isopropyl alcohol after try-in.

1. Determine post size and length using a try-in post or X-ray and clinical judgment.
2. Place a rubber stop on UniCore™ Drill at desired length.
3. Position UniCore tip in the pilot hole. Using light pressure, follow the obturation material to the length indicated by rubber stop. Keeping the drill at full speed, withdraw from the canal.
4. Use TriAway™ Adapter with Endo-Eze™ 22 ga tip to clean debris out of post space from bottom up with water and suction.
5. Verify post size and length by placing the corresponding UniCore Post. Clean post with isopropyl alcohol after try-in.

5. Verify post size and length by placing the corresponding UniCore Post. Clean post with isopropyl alcohol after try-in.

CHOOSE THE ETCH AND RINSE TECHNIQUE

7. Use 30 ga NaviTip™ FX™ tip or Micro Applicator to place Peak™ Universal Bond adhesive. Scrub full length of post space and entire tooth prep for 10 seconds.
8. Remove excess Peak Universal Bond adhesive using the Triway Adapter with Endo-Eze™ 22 ga tip and suction. Continue for 10 seconds using full air pressure, then air thin adhesive on coronal surface for 10 seconds.
9. Light cure adhesive for 20 seconds. If close to gingiva, use two 10-second intervals or 6 seconds Xtra Power mode on VALO™ curing light.
10. Verify UniCore Post will seat prior to placing luting cement.
11. Load PermaFlo DC cement into the Skini Syringe with the pink Endo-Eze™ 20 ga tip. Verify mix and flow.

OR

6a. Attach 30 ga NaviTip™ FX™ Brush tip to Peak™ SE primer syringe. Apply to post space and coronal preparation for 20 seconds using agitating action.
Blow out excess from bottom up using TriAway Adapter with Endo-Eze 22 ga tip and suction. Do not over-dry.

7. Use 30 ga NaviTip™ FX™ tip or Micro Applicator to place Peak™ Universal Bond adhesive. Scrub full length of post space and entire tooth prep for 10 seconds.
8. Remove excess Peak Universal Bond adhesive using the Triway Adapter with Endo-Eze™ 22 ga tip and suction. Continue for 10 seconds using full air pressure, then air thin adhesive on coronal surface for 10 seconds.
9. Light cure adhesive for 20 seconds. If close to gingiva, use two 10-second intervals or 6 seconds Xtra Power mode on VALO™ curing light.
10. Verify UniCore Post will seat prior to placing luting cement.
11. Load PermaFlo DC cement into the Skini Syringe with the pink Endo-Eze™ 20 ga tip. Verify mix and flow.

12. Deliver mixed PermaFlo DC cement into post space beginning apically and moving coronally.
13. Insert post slowly and seat to predetermined depth.
14. Tack cure PermaFlo DC cement in canal for 5 seconds.
15. Express PermaFlo DC cement around post for core buildup. Incrementally build up core and light cure for 10 seconds between layers. If cement starts to slump, tack cure between layers. Incrementally build up core.
UltraCem™
RESIN-REINFORCED GLASS IONOMER CEMENT

- High bond strengths
- Sustained fluoride release
- Flowable viscosity and low film thickness won’t compromise fit or occlusion
- 1- to 3-minute working time, 5-minute set time
- Radiopacity >1 mm aluminum
- More retentive than other leading RMGI cements on precious alloy crowns

UltraCem resin-reinforced glass ionomer cement offers the best of both worlds in a luting cement: efficient delivery and unsurpassed performance. Its advanced chemistry boasts the highest bond strengths in its category, while its unique SpeedMix™ syringe ensures the ultimate luting convenience. UltraCem cement is also available in a traditional hand-mix bottle kit, an economical choice that gives clinicians control over the viscosity and amount of material used.

UltraCem resin-reinforced glass ionomer cement is used as a luting cement for indirect restorations (including inlays, onlays, crowns, and bridges) made of metal, porcelain fused to metal, zirconia, and resin. It may also be used for cementation of orthodontic bands.

Note: Never use phosphoric acid to clean zirconia, as it will significantly reduce bond strengths. Do not use a zirconia primer with UltraCem cement.

Note: Never use phosphoric acid to clean zirconia, as it will significantly reduce bond strengths. Do not use a zirconia primer with UltraCem cement.

UltraCem™ SpeedMix™ Syringe

- Faster and easier than hand mixing
- No need for trituration equipment
- No additional tips or parts required
- Consistent mixing ratios every time
- Unit-dose delivery for low risk of contamination
- Effectively mixes and delivers a superior liquid-powder formula in seconds with no mess

1. Flick/tap barrel 4 times to fluff powder.

2. Press white stem firmly into green stem to push liquid into powder chamber.

3. Leave metal rod in place; grasp plastic delivery/mixing tip and mix chemical 10 to 15 times vigorously back and forth.

4. Fully extend delivery tip and remove the metal wire to express. Discard metal rod.

5. Discard yellow clip.

6. Yellow wire plug and clip are removed after mixing for immediate delivery.

7. Express material into prosthesis.

Peak™ Universal Bond
LIGHT-CURED ADHESIVE

- Features Ultradent’s Dymetech™ phosphate monomer blend for enhanced strength and greater versatility
- Bonds to all dental substrates
- Ideal for direct and indirect bonding, as well as post and core procedures
- Works with self-etch and total-etch techniques
- Available in syringe or bottle delivery

**ExperTemp™**
TEMPORARY CROWN AND BRIDGE MATERIAL

- 10:1 self-cured chemistry provides exceptional strength, flexibility, and high abrasion resistance
- Fluoresces similarly to enamel
- Low oxygen inhibition at polymerization
- Easily repaired or characterized with a packable composite, a flowable composite, or additional ExperTemp material
- Trims easily and polishes beautifully (polishing optional)
- Available in A1, A2, A3, A3.5, B1, and Bleach White shades

ExperTemp temporary crown and bridge material is a bis-acryl composite provisional material used to fabricate temporary crowns, bridges, inlays, and onlays as well as long-term temporaries. Superior performance combined with a natural esthetic make ExperTemp material the material of choice for temporization.

**Mosaic™**

**UNIVERSAL COMPOSITE**

- Smooth, pliable consistency
- Cuts easily and doesn’t stick to instruments
- Won’t flow or slump out of place after being shaped
- Allows ample working time under ambient light

Mosaic universal composite balances beauty and performance for lasting, lifelike results. Mosaic composite can be used for all restorative purposes: basic or complex. Its nanohybrid formula is composed of zirconia-silica glass ceramic and 20 nanometer silica. Filler load is 68% by volume for dentin shades and 56% for enamel shades. The exceptional handling, natural esthetics, and high durability of Mosaic composite enable clinicians to create restorations of the highest quality.

Mosaic composite is used for direct and indirect restorations (inlays, onlays, and veneers) in both the anterior and posterior regions.

*Trademark of a company other than Ultradent. 1. realityesthetics.com. 2. Data on file. 3. Data on file. Final gloss measured after 10,000 brush cycles in gloss units (GU).*
Vit-l-escence esthetic restorative material is a composite system that features the fluorescent and opalescent qualities of natural tooth structure. It is a Bis-GMA-based, radiopaque microhybrid system with an average particle size of 0.7 μm.* The all-composite shade guide contains uniquely shaped tabs to assist in the most refined layering and shade selection possible. Low-translucency, highly fluorescent dentin shades combined with high-translucency, opalescent/translucent enamel shades facilitate superior reproduction of natural teeth.

Vit-l-escence esthetic restorative material is ideal for creating artistic anterior composite restorations, including direct veneers. Its strength and wear resistance also make it perfect for posterior restorations.

* Dependent on modality for particle size measurement.

“As a 30-year vet of trying to make anterior restorations look like teeth and having tried all the ‘latest and greatest’ new composites over this time, I have found Vit-l-escence material to be the only composite with which I can predictably achieve my goal.”
—DR. JACK MULLEN – ROCKY MOUNT, NC

“The ability to match various shades and nuances of natural teeth has given me the tools to produce results I would not have believed possible. This product alone raised my skill level at least two notches higher.”
—DR. HARPER JONES II – PENDLETON, OR

“Just the right amount of translucency and pearliness allows invisible blending on enamel margins for posterior restorations. Combined with the easy handling and finishability of your Vit-l-escence products, these shades are truly ‘pear’ precious and beautiful.”
—DR. MARYANN PITTMAN – SAINT PETERSBURG, FL

“With Vit-l-escence material, I can do Class IV restorations that are indistinguishable from natural teeth. What a great product!”
—DR. SARAH BALSER – COLUMBUS, OH
VIT-L-ESCENCE MATERIAL LAYERING TECHNIQUE

1. For Class IV restorations, veneers, or diastema closures. A silicon putty matrix fabricated from diagnostic wax-up is recommended.

2. Use matrix as a guide for basic shape of restoration and to support initial lingual placement of material.

3. Use thin layer of Pearl Neutral to establish lingual contour. This is not necessary if tooth structure exists on lingual wall.

4. Inner dentin body layer includes basic hue of exposed dentin. A3.5 is applied at cervical towards incisal. Create mamelons using a carver.

5. Cover body and extend enamel edge with appropriate translucent shade. To achieve a “halo” (white line at the incisal edge), place thin roll of Pearl Frost or Opaque Snow.

NATURAL ENAMEL OPALESCENCE AND DENTIN FLUORESCENCE

Vit-l-escence material can be even more translucent than porcelain.

VIT-L-ESCENCE COMPOSITE SHADE OPACITY RANGE

In a simple technique, Vit-l-escence™ esthetic restorative material allows you to layer enamel shades over dentin shades, creating the most lifelike restorations possible.

Glossary of Terms:

Hue: The wavelength of reflected light as determined by the dentin shade. The individual color of the tooth.

Shade: The variance in hue due to the introduction of lighter or darker colors.

Chroma: The level of saturation, or the intensity of the hue.

Value: The lightness or darkness of the tooth.

Translucency: The ability of a tooth to permit the passage of light.

Opacify: The ability of a tooth to block the passage of light.
5016 - Vit-l-escence Essentials Kit—9 Shades
1 x Each 2.5 g Vit-l-escence dentin shade - A1, A2, A3, and B1 syringe

A1, A2, A3, A3.5, A4, A5, B1, B2, OW, OS, PF, PN, PA, PS, TF, TM, TS, TB, TO, TG, TI, TY, TA, IB
(Shades A6, B3, B4, B5, C1, C2, C3, C4, C5, and D3 are NOT included)

Optional KleenSleeve™ QuadraSpense™

QUAD KEY
Use to remove the white quad flanges on the Vit-l-escence syringe to create an open-bore delivery barrel if desired.

Facilitates removal of small amounts of material.

Shades are identified on both the barrel and the stem.
Amelogen™ Plus
COMPOSITE RESTORATIVE MATERIAL

- Simple, affordable system
- Excellent, nonslumping consistency
- Brilliant polishing capability

Amelogen Plus composite restorative material is a state-of-the-art, radiopaque, Bis-GMA material that is 76% filled by weight with a 0.7 μm average particle size. It displays exceptional handling, optical, and polishing characteristics. Amelogen Plus composite will not slump or stick to instruments, providing extra control in handling.

Amelogen Plus composite is an excellent choice for designing Class I, II, III, IV, V, and VI restorations, as well as direct veneers. It is perfect for both posterior and anterior restorations because of its wear resistance, strength, simplicity, and polishability.

The simple and intuitive shade system of Amelogen Plus composite allows dentists to achieve beautiful and natural-looking restorations without the complication of most esthetic composite systems.

SHADE AND TRANSLUCENCY

“I am pleased with Amelogen composite’s ease of placement, its adaptability to tooth color, and its predictability to last as a posterior restoration.”
—DR. MARK H. WEBB – BRISTOL, TN

DIRECT COMPOSITE LAYERING TECHNIQUE

For enamel-only restorations use a single shade of Amelogen® Plus composite, usually enamel.

For the most common cases of both dentin and enamel restorations in intermediate-size cavities, use both a dentin and an enamel shade. Make sure that composite enamel layer is thinner than natural enamel layer.

For major enamel and dentin replacements or esthetically challenging restorations, use multiple dentin shades (darkest at the lowest point) and characterize with translucent shades if needed.

**3098 - Amelogen Plus Basic Kit—7 Shades**
1 x Each 2.5 g Amelogen Plus dentin shade - A1, A2, A3, A4, A5, B1, and C2 syringe
1 x 1.2 ml PermaSeal syringe
1 x Each shade guide, half-size syringe organizer, and quad key
10 x Black Micro FX tips

**315 - Amelogen Plus Cosmetic Kit—7 Shades**
1 x Each 2.5 g Amelogen Plus dentin shade - A1, A2, and A3 syringe
1 x Each 2.5 g Amelogen enamel shade - Opaque White, Enamel White, Enamel Neutral, and Translucent White syringe

Composite Wetting Resin

- Facilitates composite adaptation
- Moistens dry composite during contouring
- Hydrophobic and solvent free resin

Composite Wetting Resin is a 45%-filled, light-cured, liquid resin. It is significantly superior to single-component adhesives, which contain solvents and inhibit composite polymerization.

Use Composite Wetting Resin during incremental layering of composite materials, and when the oxygen-inhibited layer has been removed or disturbed (e.g., washing the composite surface following contamination). Composite Wetting Resin may be placed on the composite surface if it has become dry during contouring. Use Composite Wetting Resin on an instrument or brush to enhance glide. Composite Wetting Resin greatly facilitates adaptation of the composite restoration and preparation.

PermaFlo™ Pink

- Acts as an attractive solution for esthetic gingival substitute

PermaFlo Pink composite is an excellent alternative to gingival grafting, which is not always an option. Use as a masking agent in Class V restorations where root structure is exposed. Also use to mask gingival recession.

Ultradent™ Composite Gun

- Ergonomic
- Autoclavable
- Drop ‘n’ lock feature makes it easy to load
- Use with all prefilled and empty capsules on the market

Ultradent™ Composite Gun

1. Following tooth prep and application of Peak® Universal Bond adhesive, build restoration incrementally with PermaFlo Pink composite.

963 - PermaFlo Pink Syringe Kit
2 x 1.2 ml syringes
4 x Micro 20 ga tips

“I use Composite Wetting Resin instead of a bonding agent to facilitate adaptation of composite. Bonding agents often contain acetone or alcohol that can cause the resins and fillers in the composite to separate, which weakens the surface of the restoration. They also may change the composite’s shade after curing.”

—DR. JAIMEE MORGAN – SALT LAKE CITY, UT

1. realityesthetics.com.
PermaFlo™
FLOWABLE COMPOSITE

- High-fill, high-flow formula
- Highly radiopaque
- Fluoride-releasing formulation
- Superior polishability
- Strong and wear resistant
- Available in 8 shades

PermaFlo flowable composite is light-cured, radiopaque, methacrylate-based, and available in 8 shades. Its thixotropic properties impart ideal flowability for improved adaptation. PermaFlo composite is 68% filled by weight, with an average particle size of 0.7 μm and a low film thickness.

Use PermaFlo flowable composite for anterior and posterior restorations: Class I, II, III, IV, and V. It can also be used to restore missing subgingival tooth structure prior to endodontic procedures (the “Donut Technique”).

### FILM THICKNESS

<table>
<thead>
<tr>
<th>PermaFlo™ composite</th>
<th>5.80 μm</th>
</tr>
</thead>
<tbody>
<tr>
<td>AELITEFLO™*</td>
<td>17.4 μm</td>
</tr>
<tr>
<td>Revolution™*</td>
<td>14.2 μm</td>
</tr>
<tr>
<td>Flow It™*</td>
<td>18.0 μm</td>
</tr>
</tbody>
</table>

PermaFlo composite exhibits very low film thickness.

### COMRESSIVE STRENGTH

<table>
<thead>
<tr>
<th>PermaFlo™ composite</th>
<th>363.16 MPa</th>
</tr>
</thead>
<tbody>
<tr>
<td>AELITEFLO™*</td>
<td>394.18 MPa</td>
</tr>
<tr>
<td>Revolution™*</td>
<td>326.53 MPa</td>
</tr>
<tr>
<td>Flow It™*</td>
<td>384.32 MPa</td>
</tr>
</tbody>
</table>

PermaFlo composite performs favorably with other flowable composites. Being 68% filled, it provides very high compressive strength.

2. The flowable composite offers unsurpassed adaptation as it fills from preparation floor up.
3. Finished, radiopaque, 0.7 μm hybrid restoration.

### MICRO RESTORATIVE

### MASKER

• High-fill, high-flow formula
• Highly radiopaque
• Fluoride-releasing formulation
• Superior polishability
• Strong and wear resistant
• Available in 8 shades

### METAL MASKING

Place a thin layer of PermaFlo Dentin Opaquer over exposed metal and light cure for 10 seconds on Standard Power mode with VALO™ curing light.

SUPERADAPTIVE INITIAL LAYER

After bonding agent, apply a thin layer of PermaFlo composite at gingival margin, proximal box axial margins, and internal line angles to ensure quality adaptation of composite.

PEDiATRIC RESTORATIONS

1. Rampant caries in a 3-year-old.
2. Slow speed and large round bur to remove all caries. Verify with Sable™ Seek™ caries indicator to ensure prep is in firm mineral dentin. Quality tissue management is an absolute here; pack an Ultrapak™ cord soaked in hemostatic agent first.
3. Etch preparations and apply Peak™ Universal Bond adhesive. Light cure for 10 seconds on Standard Power mode with VALO curing light. Apply a thin first layer of PermaFlo composite to the adhesive layer with Micro 20 ga tip. Light cure.
4. Apply and cure 1 or 2 additional increments. Quickly finish restorations with finishing burs and abrasive cups.
5. One year later.

“The opaque PermaFlo composite shade is a terrific tool for difficult esthetic restorations. It allows me to mask metal when repairing a PFM crown and eliminates the gray hue. I am able to cover dark stains and restore the tooth to its natural beautiful shade.”
—DR. KENNETH B. ALLEN – FORT COLLINS, CO

“PermaFlo composite allows us to restore in so many different situations. The material seems to ‘flex’ better in those difficult Class V restorations, which serves us and our patients more successfully.”
—DR. PAT PRENDERGAST – ENGLEWOOD, CO

“I literally use PermaFlo composite on every patient. I love the shades and the way it flows and handles. I use it around my posts, prior to core buildups. The stuff is awesome!”
—DR. IAN E. MODESTOW – FLORENCE, MA

1273 - PermaFlo Universal Kit
1 x Each 1.2 ml PermaFlo A1, A2, A3, A3.5, A4, B1, Dentin Opaquer, and Translucent syringe
1 x 1.2 ml Peak Universal Bond syringe
1 x 1.2 ml Ultra-Etch syringe
1 x Each half-size syringe organizer and shade guide
6 x Inspiral Brush tips
20 x Black Mini tips
20 x Micro 20 ga tips

HIGH FILL! HIGH FLOW!
The original Uveneer template kit has everything you need to create a highly esthetic restoration with a perfect finish on both uppers and lowers. The templates help make procedures quick, cost effective, and minimally invasive. Templates from the original kit were designed to create beautiful, symmetrical smiles. The templates create a blank canvas for the dentist to add custom contours and anatomy to fit each patient's needs.

Uveneer Extra templates expand on this one-of-a-kind system, offering an innovative new esthetic in a wider variety of sizes for more versatility and less finishing time. Uveneer Extra templates are made from scans of actual teeth with mamelons and other tooth contours built right into the templates. The new system also offers additional sizes for more patients, including Extra Large, Large, Medium, and Square.

Both Uveneer template systems can be used for mock-ups, shade matching, provisionals, and composite veneers.

- Creates predictable, reproducible, natural-looking composite restorations
- Prevents the oxygen inhibition layer during curing, resulting in a hard, glossy surface
- Allows light to pass through the template to the composite for effective curing
- Works with any preferred composite
- Releases easily from cured composite resin
- Requires minimal adjusting or polishing, saving time
- Facilitates application on individual or multiple teeth
- Autoclavable and reusable, making it a cost-effective choice

The original Uveneer template kit has everything you need to create a highly esthetic restoration with a perfect finish on both uppers and lowers. The templates help make procedures quick, cost effective, and minimally invasive. Templates from the original kit were designed to create beautiful, symmetrical smiles. The templates create a blank canvas for the dentist to add custom contours and anatomy to fit each patient’s needs.

Uveneer Extra templates expand on this one-of-a-kind system, offering an innovative new esthetic in a wider variety of sizes for more versatility and less finishing time. The new system also offers additional sizes for more patients, including Extra Large, Large, Medium, and Square.

Both Uveneer template systems can be used for mock-ups, shade matching, provisionals, and composite veneers.

“Terrific tool to quickly and easily create beautiful anterior restorations.”
— DR. GARY M. RADZ, DDS

“The Uveneer template makes the practice of the anterior esthetic dentistry easier, faster, and better.”
— DR. GEORGE FREEDMAN, DDS

“The simplicity of the Uveneer template is absolutely remarkable. Why didn’t I think of this?”
— DR. JOHN C. COMISI, DDS, MAGD

“In a single day I was able to do 11 mock-up veneers that were not part of the original schedule, resulting in several new cases being accepted. I wouldn’t want to work without them now.”
— DR. CHAD WAGENER, DDS

1. realityesthetics.com.
DIRECT COMPOSITE TECHNIQUE GUIDE

1. Select the template that corresponds with the tooth being restored. See handle of template for corresponding tooth position, size, and arch. Choose preferred composite shade(s).

2. Remove all caries if needed and minimally prepare the tooth.

3. Place interproximal separating matrices and apply Ultra-Etch™ etchant, Peak™ SE Primer, or preferred etchant.

4. Rinse etchant and air dry according to manufacturer’s instructions. Do not rinse if using Peak SE Primer; air thin.

5. Apply Peak™ Universal Bond adhesive or preferred adhesive to tooth surface.

6. Light cure with VALO™ curing light 10 seconds on Standard Power. If using other curing light, cure according to manufacturer instructions.

7a. If using a single shade technique, apply preferred composite directly onto tooth. Do not light cure composite.

7b. If using a layering technique, place deepest composite layer directly onto the tooth and superficial composite layers into the template. Do not light cure composite.

8. Place selected template over uncured composite. Align centerline of template parallel to the midline of the face and perpendicular to the incisal plane. Using thumb, press the concave side of the template onto the tooth. Press firmly to remove any trapped air.

9. Remove any excess uncured composite from the periphery. Verify template alignment.

10. Using VALO curing light, cure composite through template. For every 2 mm layer, cure 10 seconds on Standard Power, 4 seconds on High Power, or 3 seconds on Xtra Power. If using other curing light, cure according to manufacturer’s instructions.

11. Remove the Uveneer™ template by gently lifting the handle.

12. Final cure composite directly with the VALO curing light. Cure 5 seconds on Standard Power, 4 seconds on High Power, or 3 seconds on Xtra Power. If using other curing light, cure according to manufacturer’s instructions.

13. Avoiding the glossy facial surface, trim bulk of cured composite from periphery with a fine flame-shaped bur from the Jiffy™ Composite Finishing Bur Kit. Use a file for anything next to the margin to avoid altering the margin of the permanent restoration. Use Jiffy™ Composite Finishers, Brushes, Diamond Strips, or Proximal Saws for minimal finishing and adjusting if desired.

14. Immediately after use, thoroughly wipe template with an alcohol pad and then dry, bag, and autoclave according to Uveneer template IFU. Do not leave any composite residue on the template in order to maintain translucency and shine.

Do not autoclave the black base.

UVK3 - Uveneer Kit
16 x Medium upper and lower arch templates
16 x Large upper and lower arch templates

Medium and large templates provide 2 central incisors, 2 lateral incisors, 2 canines, and 2 premolar templates for both the upper and lower arches.

UVKEV1 - Uveneer Extra Kit
6 x Extra Large upper anterior templates
6 x Large upper anterior templates
6 x Medium upper anterior templates
6 x Square upper anterior templates

Uveneer Extra kits include canine to canine templates.

UVKEXLSQV1 - Uveneer Extra XL & SQ Kit
6 x Extra Large upper anterior templates
6 x Square upper anterior templates

UVKELMV1 - Uveneer Extra L & M Kit
6 x Large upper anterior templates
6 x Medium upper anterior templates
**PermaSeal™
Penetrating Composite Sealer**

- Bonds to composite and etched enamel
- Seals microcracks
- Protects and revitalizes composite restorations

PermaSeal composite sealer is a light-cured, methacrylate-based, unfilled resin. Its low viscosity allows excellent penetration, and the ultrathin layer minimizes the need for occlusal adjustment.

PermaSeal composite sealer seals voids and irregularities created during the polishing process, minimizing staining and wear. Place on Class V composite margins to reduce microleakage.² For the final glaze-type finish of resin provisionals, cover PermaSeal sealer with DeOx™ barrier solution prior to light curing. PermaSeal sealer bonds well to composite-type provisional restorations such as ExperTemp™ material and can be used to revitalize old composites as well.

**NEW RESTORATIONS**

Before: Interproximal spaces and slight rotations to be corrected with Peak™ Universal Bond adhesive and composite.

After restoring and polishing, etch 5 seconds and apply PermaSeal composite sealer to seal composite and create a glossy finish. Air thin and light cure for 10 seconds.

**EXISTING RESTORATIONS**

Clean surfaces and margins to be sealed thoroughly with Consepsis™ Scrub, a micro etcher, or freshen with a bur and rinse thoroughly. Etch the enamel immediately adjacent to the restoration and all accessible composite surfaces for 15 seconds. If the enamel is not prepared as described above, etch for 30 seconds.

Four-year-old bonded composite following PermaSeal composite sealer treatment.

**PrimaDry™
Drying Agent**

PrimaDry drying agent contains 99% organic solvents and 1% primer and is optimal for pit and fissure drying and preparation. It rapidly volatilizes moisture content of pits and fissures and microcracks of existing restorations following the etching process. The ultrafine primer film allows UltraSeal XT™ plus sealant or PermaSeal sealer to flow perfectly into every pit and fissure. Also useful prior to placing composite repairs. Do not use on dentin.

**631 - PermaSeal Syringe Kit**

4 x 1.2 ml syringes

10 x Black Micro FX tips

**716 - PrimaDry Syringe 4pk**

717 - PrimaDry Syringe 20pk

1.2 ml syringes

Before: Interproximal spaces and slight rotations to be corrected with Peak™ Universal Bond adhesive and composite.

“Hands down, your composite sealer makes the composite look finished, gives it a glossy look, and ‘fills’ the microscopic pits. It makes or breaks my composites! I can’t live without it!”

—DR. RICHARD J. HAULEY – SALT LAKE CITY, UT

PrimaDry drying agent is great in conjunction with air drying just prior to PermaSeal composite sealer placement.

QUESTIONS ABOUT Endo?
WE HAVE YOUR SOLUTIONS.

Ultradent offers the most comprehensive list of chemistries and compatible tips for endodontic procedures. The products are designed to complement each other in order to maximize benefits and make each procedure safer and more efficient.
ChlorCid™ Surf
3% SODIUM HYPOCHLORITE SOLUTION WITH SURFACTANT

ChlorCid Surf 3% sodium hypochlorite solution includes surfactant to modify surface tension. This allows the irrigant to flow into the difficult areas of the root anatomy.

4613 - ChlorCid Surf Bottle 1pk
480 ml bottle

Check with local dealer for availability.

97 - ChlorCid Surf IndiSpense™ Syringe 1pk
30 ml syringe

ChlorCid™ and ChlorCid™ V
3% SODIUM HYPOCHLORITE SOLUTIONS

ChlorCid V solution is perfect for cleaning and debriding during instrumentation. ChlorCid V solution is a more viscous solution for enhanced flow control and lubrication, if desired.

4612 - ChlorCid Bottle 1pk
480 ml bottle

Check with local dealer for availability.

1467 - ChlorCid V IndiSpense Syringe 1pk
30 ml syringe

Ultrawave™ XS
Ultrasonic device, see page 56.

Sodium hypochlorite with surfactant vs. without surfactant used with ultrasonics activation has been shown to be the most effective method for soft tissue dissolution.¹

File-Eze™ EDTA Lubricant

File-Eze file lubricant is an effective 19% EDTA in a water-soluble, viscous solution for chelating, lubricating, and debriding root canal preparations.

- Peroxide free; will not affect the set of resin sealers

Note: The following lubricants contain peroxides that are not compatible with EndoREZ™ canal sealer: EndoGel,* EndoSequence,* Glyde,* ProLube,* RC-Prep,* and SlickGel ES.*

Ultradent™ EDTA 18% Solution

A root canal chelating agent that conditions/cleans through a chelation process, Ultradent EDTA 18% Solution is the irrigant of choice for smear layer removal and can be used as a final irrigant prior to obturation.

1. After canal instrumentation (no irrigants or lubricants). Smear layer intact.
2. After canal instrumentation plus sodium hypochlorite. Smear plugs still intact.
3. After canal instrumentation with both sodium hypochlorite and EDTA. Smear layer is removed. Clean, open tubules.
4. Close-up of Figure 3.

*Trademark of a company other than Ultradent.
Consepsis™

2% CHLORHEXIDINE ANTIBACTERIAL SOLUTION

Consepsis antibacterial solution is recommended for procedural endodontic disinfection, and as a final endodontic rinse prior to canal obturation.¹⁻²³ Consepsis solution should be used after smear layer removal for canal disinfection. Sodium hypochlorite should be rinsed and removed prior to using Consepsis solution.

Note: DO NOT mix Consepsis solution or any chlorhexidine solution with ChlorCid™ sodium hypochlorite solution in the canal, as a harmful brown precipitate will form.

1. realityesthetics.com.

Consepsis™ V

2% CHLORHEXIDINE ANTIBACTERIAL VISCOUS SOLUTION

• Designed for endodontic cleaning purposes
• A more viscous formulation of Consepsis antibacterial solution
• Stays in place, even in maxillary canals

The viscosity of Consepsis V antibacterial viscous solution makes it the perfect antibacterial irrigant in cases where you want to have more control than a liquid will give you.

Consepsis V solution can be used in the canal in place of formocresol as an antibacterial agent and interappointment intracanal medication.

Note: In cases of emergency treatments when there isn’t enough space created to place calcium hydroxide, Consepsis V solution can be placed as the interappointment medicament. Use a NaviTip tip to express Consepsis V solution into the canal and seal with temporary restoration.

All of Ultradent’s irrigants, lubricants, and medicaments are compatible with methacrylate resin sealers.
UltraCal XS calcium hydroxide paste is a uniquely formulated calcium hydroxide paste that is both aqueous and radiopaque, with a high pH (12.5). It is recommended to use the larger 29 ga NaviTip Single Sideport tip for predictable flow, enabling direct placement. UltraCal XS paste can be thoroughly removed from the canal using Ultradent Citric Acid and a NaviTip™ FX™ tip.

UltraCal XS paste elevates the dentin pH to alkaline, making it the ideal medium to be used as an interappointment dressing in clinical situations involving root resorption, dressing material, pulp capping, apexification, and perforations.1

Ultradent Citric Acid 20% Solution

Ultradent Citric Acid is a mild acidic material that is effective at dissolving/cleaning calcium hydroxide from canals (e.g., UltraCal XS paste). It is also recommended as a cleanser/conditioner to remove smear layer from dentinal walls.

- Recommended as a cleanser/conditioner of prepared root canals
- Removes smear layer
- Slightly viscous formula facilitates lubrication
- Removes calcium hydroxide paste

5144 - UltraCal XS Syringe Kit
- 4 x 1.2 ml syringes
- 5 x Each 29 ga NaviTip single sideport tips
  - 17 mm, 21 mm, 25 mm, and 27 mm

5145 - UltraCal XS Syringe 4pk
5149 - UltraCal XS Syringe 20pk
- 1.2 ml syringes

329 - Citric Acid IndiSpense™ Syringe 1pk
- 30 ml syringe

All of Ultradent’s irrigants, lubricants, and medicaments are compatible with methacrylate resin sealers.
**NaviTip™ Tip Reference Guide**

- Provide controlled delivery close to the apical third
- Flexible, stainless steel cannulae easily navigate curved canals

PermaFlo Purple
ANATOMICAL INDICATING COMPOSITE

PermaFlo Purple is used with an adhesive system to create an easily identified coronal seal. The purple color simplifies location of the pulp chamber floor when accessing the pulp chamber for future therapy.

1. Root canal has just been completed and cleaned of excess EndoREZ canal sealer in the pulp chamber. (If significant unset EndoREZ canal sealer is exposed at canal orifice, coat with thin layer of Ultra-Blend™ plus liner and light cure.) Blot or air dry. Note: If eugenol- or similar-based sealers have been used, wait until set and freshen all chamber and/or preparation surfaces with diamond bur prior to bonding.

2. Etch and place Peak™ Universal Bond adhesive; light cure.

3. Apply 1–1.5 mm-thick layer of PermaFlo Purple. Light cure 20 seconds to create an immediate “coronal seal.” When a post and/or core is prepared, the purple identifies the position of root canal preparation. The contrast shows the clinician the pulp chamber floor in relation to the canal orifices, minimizing risk of perforation.

Note: Apply dentin bonding agent first. Remember that eugenol-containing sealers can prevent polymerization of bonding resins. We recommend EndoREZ® hydrophilic resin sealer.

Ultrawave™ XS LED Piezo Ultrasonic

• Ultrawave XS device comes with LED handpiece for better visibility and working comfort
• Large-capacity, detachable 300 ml tank for irrigation solution
• Lightweight and ergonomic handpiece reduces physical stress caused by repetitive movements
• The unique Color-Coding System matches tips to the ideal power setting
• Wide range of amplitudes (power) for multiple clinical procedures
• Less water needed than other devices, increasing patient comfort
• Can be used with Ultradent irrigants directly from the bottles using the bottle connector kit

Ultrawave™ XS NiTiSonic Tip, Bottle Connector Kit, and Bottle Caps

4307 - Ultrawave XS NiTiSonic Tip & Bottle Connector Kit
1 x Each bottle cap with valve, connector base, empty bottle and Ultrawave Metal Flat Wrench
4 x Ultrawave NiTiSonic tips

4308 - Ultrawave XS Bottle Cap 1pk

The common method of irrigation is syringe-based, which generates low fluid velocity with little interaction between the irritant and canal walls. The unique Ultrawave NiTiSonic tip is designed for continuous or intermittent passive ultrasonic irrigation, making the most important procedure in endodontics more efficient. The ultrasonic vibration of the tip allows the irrigation liquid to disrupt surface-adherent biofilms and reach anatomic complexities within root canal systems. The NiTiSonic tip is smooth and flexible, designed to navigate the curvatures of the root without removing dentin.

Note: NiTiSonic tips are designed for use with Ultradent’s Ultrawave XS device only.

**Ultrawave™ XS Nitisonic Tip and Bottle Connector Kit**

The common method of irrigation is syringe-based, which generates low fluid velocity with little interaction between the irritant and canal walls. **Micro Capillary™ Tips**

- Bright color is easily identified against soft tissues
- The world’s smallest molded tips

**Capillary Tips**

Evacuates canals and substantially minimizes use of paper points.
- Narrow, flexible taper accesses curved canals
- Great for dental abscess procedures

Attach to the Ultradent™ Luer Vacuum Adapter for moisture removal from endodontic canals.

**Endo-Eze™ Irrigator Tip**

- Provides ideal reach reducing risk of expressing chemicals past the apex
- Comes with a flexible, blunt cannula with a unique, anti-obturating end
- Non-sterile

Designed for: Ultradent™ 5 ml syringe.

**Endo-Eze™ Tips**

- Great for endodontic procedures such as post cementation and core buildups
- Flexible, strong cannulae
- Bend easily
- Length 19 mm

Designed for: Luting materials and air/water delivery. Use with: TriAway™ Adapter, PermaFlo™ DC (20 ga), and other Ultradent syringes.

WARNING:
• Use recommended endodontic tip  • Make sure rubber stopper is in position
• Take extra precaution when not using sideport tips  • Make sure tip is not wedged in the canal

NaviTip™ Tips 29 ga

with Single Sideport

• Designed to direct the flow of chemistry through the sideport of the tip before flowing down into the area of the apex, thus reducing the risk of product extrusion
• Flexible, stainless steel cannula easily navigates curved canals
• Bendable tip 0.33 mm

29 ga delivers paste materials: MTAFlow™, EndoREZ™, and UltraCal™ XS.

NaviTip™ Tips 29 ga

• Provide controlled delivery to the apex
• Flexible, stainless steel cannula easily navigate curved canals
• Bendable tip 0.33 mm

29 ga delivers paste materials: MTAFlow™ and EndoREZ™.

NaviTip™ Tips 30 ga

• Provide controlled delivery to the apex
• Flexible, stainless steel cannula easily navigate curved canals
• Bendable tip 0.30 mm

30 ga delivers solutions/gels: File-Eze™, Ultradent™ EDTA 18% Solution and Consepsis™.

NaviTip™ 31 ga Tips

with Double Sideport Irrigator

• Double sideports deliver irrigants safely, minimizing the possibility of chemicals being expressed past the apex
• One of the world’s smallest cannula navigates the most intricate canal spaces

Designed for: ChlorCid™, ChlorCid™ V, ChlorCid™ Surf, Ultradent™ EDTA 18% Solution, and Ultradent™ Citric Acid 20%.

NaviTip™ FX™ Tips 30 ga

• One-of-a-kind brush cleans, scrubs, and irrigates simultaneously
• Rigid cannula

Designed for: Ultradent™ Citric Acid 20% Solution.

NOTE: UltraCal™ XS calcium hydroxide paste should only be used with NaviTip 29 ga Single Sideport tips.

Listed as an “EXCELLENT” product by a prominent independent research institute.¹

MTAFlow repair cements have a smooth consistency due to the ultrafine powder and proprietary gel medium. The formulation is resistant to washout, which helps to ensure that the mixture stays right where you place it. Plus, it can be delivered using Ultradent’s syringes and tips, ensuring precise placement for effective treatment.

**THE DIFFERENCE YOU CAN FEEL**

1. Use a cement spatula to remove excess powder. DO NOT use powder without leveling at edge of scoop.
2. Shake from top to bottom 3 times. Make sure that gel is in tip end of bottle before expressing.
3. After mixing, load the mixed MTAFlow cement into back of clear Skini syringe.
4. Insert the plunger and express a small amount of material through the tip.
5. Mixed Endo-Eze MTAFlow cement inside syringe will be usable for up to 15 minutes.
6. Use thin consistency and a NaviTip™ 29 ga tip to deliver MTAFlow cement inside canal.

After 5 minutes you can lightly rinse and air dry the area and it will not dislodge the MTAFlow cement. MTAFlow cement, mixed and placed inside the Skini syringe, can be used for up to 15 minutes after mixing. Full setting is one hour. Complete cure and strengthening is 4 weeks.

**Warning: MTA has limited antimicrobial properties. When MTAFlow cement is used in primary dentition vital pulpotomy, use only sterile water during the procedure.**

THE RIGHT CONSISTENCY FOR THE RIGHT PROCEDURE

The mixing ratio of the powder and gel components of MTAFlow repair cements are adaptable based on the procedure. MTAFlow White cement’s nonstaining formula is specifically designed to be used for procedures like primary dentition vital pulpotomy and pulp capping. After placing MTAFlow repair cement, allow initial set time of 5 minutes, then cover with UltraBlend™ plus liner and restore.

Whatever consistency you need, you can be sure MTAFlow repair cement will be effective, non-gritty, and easy to deliver accurately. More gel or powder may be added at any time during mixing to achieve the desired consistency.

EVERYTHING YOU NEED IN ONE PLACE

MTAFlow repair cement kits come with the essential tools you’ll need to mix and deliver cement. The kits contain enough MTA powder and gel to complete 8–10 applications.

4980 - MTAFlow White Repair Cement Kit
1 x Each Technique guide, instructions for use, 2 g MTAFlow powder, 2 ml MTAFlow gel, measuring spoon, and mixing pad
10 x Skini syringes
10 x Luer Lock caps
20 x Micro 20 ga tips

3980-US - MTAFlow Repair Cement Kit
1 x Each Technique guide, instructions for use, 2 g MTAFlow powder, 2 ml MTAFlow gel, measuring spoon, and mixing pad
10 x Skini syringes
10 x Luer Lock caps
20 x Micro 20 ga tips

3981-US - MTAFlow Repair Cement Refill
1 x Each Technique guide, instructions for use, 2 g MTAFlow powder, 2 ml MTAFlow gel, measuring spoon, and mixing pad
**EndoREZ™ CANAL SEALER**

20–30 minute regular set
5–12 minute set when used with accelerator

- The world's first hydrophilic and self-priming resin sealer
- More effective obturation in less time
- Provides a complete, thorough seal
- Has the same radiopacity as gutta percha
- Bonds to resin-based core/composite materials
- Retractable when combined with gutta percha
- Provides syringe delivery to the apical third

EndoREZ canal sealer minimizes the amount of chair time required for obturation. This thixotropic material has an affinity for the moisture found deep in dentinal tubules and lateral canals and provides the most complete seal available. Since methacrylate-based EndoREZ canal sealer relies on chemistry rather than heat or pressure to fill the canal, the risk of additional root trauma/fracture is greatly reduced. Additionally, studies show that EndoREZ canal sealer is versatile enough to be used as the sealer with any obturation method, e.g., master cone, lateral condensation, or warm gutta percha. Create a “monobloc” by using EndoREZ resin-coated gutta percha points.

EndoREZ canal sealer contains a special hydrophilic organophosphate methacrylate monomer that increases its hydrophilicity and produces a resin with a strong affinity for moisture with resin penetration of 1200µ into tubules.

EndoREZ canal sealer penetrates into tubules and adapts to the walls like no other sealer on the market.

Cases of incomplete formation of apex or reabsorbed foramen can be treated in one visit with an apical MTAFlow cement plug. This will prevent the extrusion of the EndoREZ canal sealer and create a biological seal at apical foramen.

**CANAL SEALING**

EndoREZ resin-based canal sealer is designed with enhanced flowability properties. The delivery technique using a Skini syringe and NaviTip tip allows for insertion of EndoREZ canal sealer at the apical third. Insertion level is based on the final instrument used. For small diameters (25 to 30), final instrumentation (left) allows insertion at 2 mm before working length. For large diameters (60 to 80), final instrumentation (right) is recommended for insertion 4 mm less than the working length.

Note: The following lubricants contain peroxides that are not compatible with EndoREZ canal sealer: EndoGel,* EndoSequence,* Glyde,* ProLube,* RC-Prep,* and SlickGel ES.*

*Trademark of a company other than Ultradent.

1. realityesthetics.com.
**EndoREZ Canal Sealer Sequence of Clinical Use**

1. Fit an EndoREZ® gutta percha point to working length. Verify radiographically.

2. Remove moisture from canal space using Capillary tip and Ultradent® Luer Vacuum Adapter, followed by a paper point (paper point should be damp 1–3 mm at tip). Canal should be damp, not desiccated, prior to obturating with hydrophilic EndoREZ sealer. Deliver hydrophilic EndoREZ sealer using a NaviTip™ tip 29 ga, inserting the tip 2–4 mm short of working length.

3. Express EndoREZ canal sealer with light pressure into canal while withdrawing tip. Keep the NaviTip tip orifice buried in material while expressing EndoREZ canal sealer and withdrawing tip.

4. Slowly insert master EndoREZ gutta percha point cone to working length. Be sure to use a single gentle movement toward apical area. Avoid using a “pump” movement with cone. Passive or cold lateral compactions can be used. Without using accelerator, EndoREZ canal sealer will set in about 20–30 minutes.

5. Light cure EndoREZ canal sealer with VALO™ LED curing light for 40 seconds. Initial surface polymerization with curing light (without EndoREZ Accelerator) is less than 0.3 mm thick and aids in immediate restoration. Trim excess gutta percha with a very hot instrument or using the Ultrawave™ XS EX1 tip with ultrasoundification (no water). Complete restorations following obturation to properly seal canal entrance. Do not leave cotton pellets between obturation and temporary restoration.

---

**EndoREZ™ Accelerator**

EndoREZ canal sealer sets in 5–12 minutes!

- Accelerates EndoREZ sealer polymerization
- Enables post preparation in the same appointment

EndoREZ Accelerator reduces EndoREZ canal sealer set time from 20–30 minutes to about 5–12 minutes before the commencement of post-endo restorative procedures, enabling the start of definitive post restorations right away. It is designed to work hand in hand with the groundbreaking EndoREZ canal sealer for reliable obturation and minimized chair time.

---

**EndoREZ Products**

- **5901 - EndoREZ Obturation .02 Taper Kit**
  - 1 x 5 ml syringe
  - 20 x Mixing tips
  - 20 x 29 ga Variety NaviTip tips
  - 120 x EndoREZ Points

- **5902 - EndoREZ Obturation .04 Taper Kit**

- **5900 - EndoREZ Syringe Kit**
  - 1 x 5 ml syringe
  - 20 x Mixing tips
**EndoREZ™ Points**

*RESIN-COATED GUTTA PERCHA POINTS*

- The ONLY resin-coated gutta percha
- Chemically bonds to EndoREZ canal sealer and other resin-based sealers

EndoREZ Points are standard ISO-sized gutta percha points coated with a thin resin coating, which bonds chemically to EndoREZ canal sealer. They are the first gutta percha points to achieve a chemical bond with the sealer, providing a more effective seal than traditional gutta percha.

**GUTTA PERCHA SEM**

Coated Uncoated

---

**Absorbent Paper Points**

- Sterile
- Color coded
- Highly absorbent
- 28 mm length

Ultradent’s paper points quickly and efficiently absorb liquid from the canal and are sold in packs of 200 for a cost-effective solution. For a more efficient way to dry canals, use Ultradent’s Luer Vacuum Adapter with Capillary tips before using paper points.

1590 - Empty Patient Variety Kit 12pk
3 x Each white, yellow, blue, and green with sponges

---

**Endo-Eze™ Ruler**

1295 - Endo-Eze Ruler 25pk
In dentistry, air often gets in the way of the materials used in canals. Displacing that air is essential for achieving a predictable seal and completely filling the canal preparation. The EndoREZ delivery system is optimized to displace air and create the highest seal possible by delivering materials from the bottom of the canal up, achieving bubble-free and complete application.

### Skini and Clear Skini Delivery Syringes

1. Transfer EndoREZ™ canal sealer out of dual barrel syringe into back of a Skini syringe using the Mixing tip.
2. Fill syringe to back flange so no air remains between plunger and EndoREZ canal sealer.
3. Attach a 29 ga NavTip™ tip of appropriate length. Express a small amount of EndoREZ canal sealer extraorally to verify flow. Make sure tip end is not bound in the apical region before expressing sealant.

UniCore™
POST, DRILL, AND ACCESSORY POST SYSTEM

- Superior strength
- Esthetic and radiopaque
- Color-matched drills and posts
- Ultradent’s UniCore “Kit of Kits” provides all items needed for post requirements
- Accessory Posts allow for better adaptation in flared or oval canals

UniCore Posts are composed of glass fibers. The translucent and radiopaque UniCore Post responds to compressive forces as dentin would, without compromising the durability of the restoration. The gentle taper of the UniCore Post corresponds to the natural anatomy of the tooth and perfectly matches the post space created by the UniCore Drill. The five sizes and colors of UniCore Posts correspond to those of the UniCore Drill. The UniCore Drill is unique in its ability to remove obturators while preparing a post chamber that perfectly corresponds to its post. The UniCore Drill features a patented heat-generating tip, which facilitates the removal of fiber posts, rigid carriers, and traditional gutta percha. Its heat-dissipating, diamond-coated collar preserves tooth structure, and its specially designed flutes cut canal walls laterally instead of vertically. UniCore Accessory Posts are placed alongside the master post to allow better adaptation in the case of flared or oval canals.

---

“The literature clearly describes the C-Factor conditions that can lead to substantial polymer stress buildup in root canals. It has been estimated that up to 54% of the dentin bond interface can separate, resulting in gap formation and subsequent early failure of the endodontic post and core. When the area of the most coronal aspect of the root canal is over 25% larger than the diameter of the Master UniCore Fiber Post, it is prudent to insert the UniCore Accessory Posts alongside the Master Post to take up the core composite space/volume with longitudinal fiber. This technique is fast and effective. We at the Dugoni School of Dentistry have produced AADR/IADR studies that show the pushout strength increases when the core composite volume is decreased by displacing it with Accessory Fiber Posts. For just a few dollars more, the dentist can assure maximum robust adhesion to dentinal walls as well as create a more substantial core to prepare for the final crown. Flexural strength, anti-rotation/pull-out resistance, and compressive strength are all enhanced with these great new UniCore Accessory Posts.”

—DR. PATRICK L. ROETZER, DDS, FICD, FACD – UNIVERSITY OF THE PACIFIC, DUGONI SCHOOL OF DENTISTRY – CALIFORNIA, USA

1. realityesthetics.com.
**UNICORE™ DRILL**
**Ultrasafe**

- Durable drill can be used up to 15 times to remove gutta percha during post preparation or rigid carrier removal, and up to 5 uses on preexisting fiber post removal
- Drills and posts are color coded according to size, simplifying chairside use
- Patented diamond-coated collar prevents binding in access openings
- Uniquely designed flutes ensure rapid and consistent removal of debris from canal
- Heat-generating tip eases all obturator removal procedures

**UNICORE™ POST**
**Prestressed fibers and bondable**

- Microporous surface ensures micromechanical retention
- No chairside chemical treatment required
- Radiopaque beyond highest ISO standards
- Translucent post transmits light to the complete depth of preparation
- Gently tapered design follows natural tooth anatomy
- Can be removed if endodontic retreatment is required

The UniCore Post is noticeably more radiopaque than the leading competitor.
Ultradent™ Luer Vacuum Adapter

- A great time saver for any practice
- Dries canals quickly and efficiently
- Minimizes paper point use

Note: Capillary Tips should never be used to deliver irrigating materials or endodontic sealers.

Slide Ultradent’s Luer Vacuum Adapter onto any chairside HVE unit to efficiently remove irrigants and debris. Compatible with any Luer tip, the Luer Vacuum Adapter saves time and minimizes the use of paper points. It can be used with Capillary tips, which have tapered, flexible cannulae that reach deep into canals for enhanced cleaning and drying.

DRIES CANALS FASTER THAN EVER

1. Isolate with rubber dam and OpalDam resin barrier. Irrigate canals through NaviTip™ 31 ga Double Sideport Irrigator tip.
2. With Capillary tip attached to vacuum, slide tip deep into canal. Move tip in and out while vacuuming.
3. The Capillary tip allows visibility to see what is coming from inside the canal, easily identifying its content.
4. Insert paper points to verify level of dryness.

“The Luer Vacuum Adapter eliminates the need for fumbling with paper points! And the canals seem to be much drier—we couldn’t do without it!”
—DR. JEFF ROSENTHAL – CHESTERLAND, OH

DermaDam™ Rubber Dam

- Low dermatitis potential
- Strong and tear resistant
- Powder free to reduce allergic reactions

DermaDam rubber dam is made from pure latex rubber and is powder free, which reduces the possibility of latex reactions. Quality processing ensures a low content of surface proteins.

311 - DermaDam Medium 0.20 mm 36pk
6” x 6” (15 cm x 15 cm)

314 - DermaDam Heavy 0.25 mm 36pk
6” x 6” (15 cm x 15 cm)

DermaDam™ Synthetic Dental Dam

- Zero sensitizing proteins

DermaDam Synthetic dental dam is not made with natural rubber latex, but is designed to be just as flexible and durable as dams that are composed of natural rubber latex.

299 - DermaDam Medium Synthetic 0.20 mm 20pk
330 - DermaDam Medium Synthetic 0.20 mm 60pk
6” x 6” (15 cm x 15 cm)

230 - Luer Vacuum Adapters 10pk

TriAway™ Adapter

Use for controlled administration of water and/or air to depths of tiny cavity preparations, such as minimally invasive operative-type preparations or endodontic preparations. Note: Do NOT use in open canals.

TriAway Adapter Irrigator 20pk

Every VALO™ LED curing light starts as a single bar of tempered, high-grade aerospace aluminum, which is CNC precision milled at Ultradent’s facility in Utah, USA and ends as the most advanced curing light in the world.

True unibody construction via machining ensures durability and superior heat dissipation and facilitates the elegant, ergonomic, and streamlined design that enables the VALO light to access areas other curing lights simply cannot reach.

VALO™ curing lights have custom LED packs that contain chips in 3 wavelengths, which enable VALO lights to cure all dental materials, whether containing proprietary photoinitiators such as Lucirin TPO, PPD, or more commonly found camphorquinone.

Unique glass lens system forms the light’s collimated blended beam

All VALO LED curing lights use a custom, multiwavelength light-emitting diode (LED) for producing high-intensity light at 385–515 nm, which is capable of polymerizing all light-cured dental materials. This intensity will also penetrate porcelain and is capable of curing underlying resin cements similar to a quality halogen light.

“Time VALO line of light curing products and accessories keeps setting the industry standard for highly efficient, effective, ergonomic, no-nonsense, virtually indestructible products.”
—DR. FRED RUEGGEBERG, DDS
IMPORTANT DESIGN FEATURES

Available on ALL VALO curing lights.

- Energy-efficient hardened glass lens resists scratching
- Lowest-profile head for a broadband LED
- Scratch-resistant sapphire-hard coating
- Teflon® seal provides ease of cleaning
- Incredibly lightweight
  - VALO Corded: 4.1 oz
  - VALO Cordless: 6 oz with batteries
  - VALO Grand: 6 oz with batteries
- Unibody construction ensures durability and unsurpassed heat dissipation

Available on VALO Grand and VALO Grand corded curing lights.

- 50% bigger lens
  - 12 mm
- Two activation buttons

Available on VALO corded and VALO Grand corded curing lights.

- Thin cord is long enough for freedom of movement and features Kevlar® strands for unprecedented strength, durability, and flexibility

Average competitor surface area
- 46 mm²

VALO curing light surface area
- 78 mm²

VALO Grand curing light surface area
- 107 mm²

The angle of competitor’s 60° light guide causes overextension of jaw and often makes it impossible for light to reach all aspects of preparation.

The VALO light’s slim head allows easy and direct access to all curing sites.

Angled light on a restoration with a matrix band can result in insufficient curing.

The VALO light’s direct access and a collimated beam result in complete curing.

VALO™ Grand Cordless

LED CURING LIGHT

• Ultra-high-energy broadband LEDs cure all dental materials
• Three curing modes—Standard Power, High Power Plus, and Xtra Power—accommodate your preferences
• Optimally collimated beam delivers consistent, uniform power
• Extremely durable, slim, ergonomic shape allows unprecedented access to all restoration sites
• Unique unibody design is extremely durable and lightweight
• Highly efficient LEDs and aerospace unibody aluminum keep wand body cool to the touch

• Second activation button on the underside allows for intuitive operation
• Battery-operated, cordless wand design provides optimal convenience and flexibility
• Operates on environmentally responsible, safe, inexpensive, rechargeable batteries

VALO Grand Cordless curing light uses a custom, multiwavelength light-emitting diode (LED) for producing high-intensity light at 385–515 nm, which is capable of polymerizing all light-cured dental materials. This intensity will also penetrate porcelain and is capable of curing underlying resin cements similar to a quality halogen light. The VALO Grand Cordless curing light uses VALO rechargeable batteries and a battery charger suitable for power outlets from 100 to 240 volts. The handpiece is designed to rest in a standard dental unit bracket or can be custom-mounted using the bracket included in the kit. It can also be stored on a countertop or in a drawer. The VALO Grand curing light is equipped with a sensor that registers movement of the light; when the light is not being used, the VALO Grand curing light will automatically go into sleep mode and when moved will return to the most recently used setting.

WARNING: Only use rechargeable batteries stated in the IFU. Some rechargeable batteries can affect the function of the VALO curing light.

“The VALO light is a fantastic piece of equipment. Clinicians no longer have to choose between normal output, high-intensity output, or the power of a PAC light, because the VALO light offers all three in one lightweight, compact, durable unit. The VALO light’s ability to produce the greatest amount of energy at distances up to 10 mm from the tooth is just amazing. I have been using this light for some time and would not want to be without it.”
—DR. JOHN KANCA, DDS – MIDDLEBURY, CT

“A new wave of LEDs is here! The sleek VALO light operates with standard curing, and innovative high-powered curing options. It is compact, light to the touch, and offers the benefits of three lights in one.”
—DR. MARK COLONNA, DDS – WHITEFISH, MT

Gemini™
810 + 980 DIODE LASER

• 20 watts of peak super-pulsed power for faster, smoother cutting
• Dual wavelength technology combines the optimal pigment absorption of the 810 nm wavelength and the optimal water absorption of the 980 nm wavelength in diode lasers
• Sleek, innovative design features a stunning transparent electroluminescent display
• Simple user interface and 20 preset procedures enhance ease of use
• Wireless foot pedal and battery operation allow for convenient movement from operatory to operatory
• Autoclavable handpiece for simple sterilization between procedures
• Designed/assembled in the U.S. from U.S./imported components

**Ultrawave™ Piezo Ultrasonic**

- Connects directly with your in-office water supply for constant flow
- Compact design of unit makes it portable and easy to fit on a counter or treatment tray
- Reflex™ technology allows automatic frequency adjustments creating a high precision application
- Lightweight and ergonomic handpiece reduces physical stress caused by repetitive movements
- The unique Color-Coding System matches tips to the ideal power setting
- Wide range of amplitudes (power) for multiple clinical procedures
- Less water needed than other devices, increasing patient comfort

Ultrawave and Ultrawave XS piezoelectric devices utilize advanced ultrasonic technology. Unlike sonic or magnetostrictive scalers, these piezoelectric devices offer improved performance and better control of the various tips. As the tips move in a linear motion at an ultrasonic frequency of up to 36 kHz, a microstreaming effect creates a cavitation that helps eliminate biofilm in the periodontal pocket and inside the root canals.

---

**Ultrawave™ XS LED Piezo Ultrasonic**

- Ultrawave XS device comes with LED handpiece for better visibility and working comfort
- Large-capacity, detachable 300 ml tank for irrigation solution
- Reflex™ technology allows automatic frequency adjustments creating a high precision application
- Lightweight and ergonomic handpiece reduces physical stress caused by repetitive movements
- The unique Color-Coding System matches tips to the ideal power setting
- Wide range of amplitudes (power) for multiple clinical procedures
- Less water needed than other devices, increasing patient comfort
- Can be used with Ultradent irrigants directly from bottles via bottle connector

### Ultrawave™ Acteon®* Satelec®* Tips

- **Corrosion resistant:** steel alloy is resistant to corrosion caused by decontamination
- **Variety of applications:** tips are available for scaling, endodontics, periodontal treatment, and restorative procedures
- **Tensile strength:** each tip is designed to meet the specific requirements of the procedure
- **Sterilization:** tips are autoclavable and suitable for sterilization
- **Ring color correlates with Ultrawave Power**

#### Scaling

- Supragingival and subgingival tips are ideal for standard scaling, as well as cases where high power is needed for tenacious calculus removal.

#### Restoration

- Ball-diamond tips are ideal for preparing small proximal cavities and allow interproximal treatment while preserving the adjacent tooth.

ChlorCid™

3% SODIUM HYPOCHLORITE SOLUTIONS

ChlorCid solution contain 3% sodium hypochlorite for cleaning and debriding during instrumentation. ChlorCid V solution is a more viscous solution for enhanced flow control and lubrication, if desired.

4612 - ChlorCid Bottle 1pk
480 ml bottle

Check with local dealer for availability.

ChlorCid™ Surf

3% SODIUM HYPOCHLORITE SOLUTION WITH SURFACTANT

ChlorCid Surf 3% sodium hypochlorite solution includes surfactant to modify surface tension. This allows the irrigant to flow into the difficult areas of the root anatomy.

4613 - ChlorCid Surf Bottle 1pk
480 ml bottle

Check with local dealer for availability.

Ultradent™ EDTA 18% Solution

A root canal chelating agent that conditions/cleans through a chelation process, Ultradent EDTA 18% Solution is the irrigant of choice for smear layer removal and can be used as a final irrigant prior to obturation.

4616 - EDTA Bottle 1pk
480 ml bottle

Check with local dealer for availability. Ground shipping only.

Consepsis™

2% CHLORHEXIDINE ANTIBACTERIAL SOLUTION

Consepsis antibacterial solution is recommended for procedural endodontic disinfection, and as a final endodontic rinse prior to canal obturation.²⁻³ Consepsis solution should be used after smear layer removal for canal disinfection. Sodium hypochlorite should be rinsed and removed prior to using Consepsis solution.

Note: DO NOT mix Consepsis solution or any chlorhexidine solution with ChlorCid™ sodium hypochlorite solution in the canal, as a harmful brown precipitate will form.

4614 - Consepsis Bottle 1pk
480 ml bottle

Check with local dealer for availability.

Ultra-Blend plus
Consepsis
Ultra-Etch™
ETCH AND RINSE ETCHANT

- Self-limiting on dentin
- Penetrates smallest fissures and won’t run on a vertical surface
- Precise placement
- Etch and rinse
- Rinses cleanly—leaves no residue

Ultra-Etch etchant 35% phosphoric acid solution features ideal viscosity, facilitates precise placement and superior control. It is self-limiting in its depth of etch (average depth of 1.9 μm with 15-second etch), creating an etch pattern that adhesives can penetrate for increased bond strength. Studies demonstrate Ultra-Etch etchant’s unique self-limiting chemistry on dentin creates an optimal surface to receive resin. Though Ultra-Etch etchant is viscous, it can penetrate into the occlusal fissures or vertical surfaces due to physical and chemical properties that promote capillary action. Its ideal viscosity maintains a layer that is thick enough to prevent premature drying.

Ultra-Etch etchant is indicated for use on dentin and enamel to create optimal bonding surfaces. Ultra-Etch can be used for 5 seconds to remove the salts created by etching porcelain.

Note: Do not use phosphoric etchant on metals or zirconia, as this will reduce bond strength.

Clinical experience and SEM evaluations show that 15 seconds etch time on dentin and cut enamel—30 seconds on uncut enamel—provides optimal conditioning of both substrates.

“Ultra-Etch etchant has the best consistency and viscosity I’ve found. I’ve used it every day in my practice for over 19 years. Etches that come in kits or as samples are never opened … and some are hard to give away!”
—DR. C. BRADFORD THOMAS – GALVESTON, TX

“I am a self-proclaimed ‘bondodontist.’ I use Ultra-Etch etchant almost every time I sit down to work. It is perfect—especially the viscosity. It goes where you want it to go and stays there until I rinse it off. Other reps are always bringing me something to try, and it either doesn’t flow, flows too much, or doesn’t come in a syringe. Enough said.”
—DR. DAVID D. MAY – HEMET, CA

Peak™ SE Primer
NO-RINSE SELF-ETCHING PRIMER

Black Mini™ Brush Tip page 122

- Top-rated bond strengths by an independent non-profit dental education and product testing institute
- Delivers fresh, stable chemistry
- Easy, one-coat technique
- Precise and convenient application
- No rinse needed

Peak SE Primer is a self-etching primer mixed and delivered in the unique JetMix™ syringe. JetMix technology separates precise quantities of strong acid (pH 1.2) and optimized priming resin to prevent the hydrolytic breakdown and degradation that occurs with other self-etch chemistries. Components are kept separate until the clinician activates them. Peak SE Primer is used prior to Peak Universal Bond adhesive to achieve unsurpassed bond strengths.

Ideal for all light-accessible bonding procedures, the Peak Self-Etch Adhesive System can also be used for immediate dentin sealing prior to impressions and temporization in order to decrease post-op and cementation sensitivity.

FOR INDIRECT BONDING

2. Thin/dry for 3 seconds.
3. Apply a puddle coat of Peak Universal Bond adhesive and scrub for 10 seconds into dentin.
4. Thin/dry for 10 seconds and light cure for 10 seconds on Standard Power mode with VALO™ curing light.

Highest Bond Strengths to dentin and enamel!?
COMPARISON OF 3 SELF-ETCH ADHESIVE SYSTEMS, UNIVERSITY OF IOWA COLLEGE OF DENTISTRY*

**Peak™ Universal Bond**

**LIGHT-CURED ADHESIVE**

- Features Ultradent's Dymetech™ phosphate monomer blend for enhanced strength and greater versatility
- Bonds to all dental substrates
- Ideal for direct and indirect bonding, as well as post and core procedures
- Works with self-etch and total-etch techniques
- Available in syringe or bottle delivery

The versatile formulation of Peak Universal Bond adhesive is ideal for direct and indirect bonding, including post and core procedures. With a 7.5% filler content and a blend of custom-synthesized phosphate monomers, its viscosity has been optimized for minimal film thickness and superior strength. It contains an ethyl alcohol solvent carrier and will cure with any dental curing light, including LEDs.

PQ1™
SINGLE-RESIN BONDING

Inspiral™ Brush Tip page 123

- High bond strengths to dentin creating long lasting bonds
- Ideal for direct bonding procedures
- Highly filled for convenient placement and ease of use
- Chemistry is radiopaque
- Cures with all dental curing lights

PQ1 resin is a syringe-delivered, single-component, light-cured bonding resin that uses ethyl alcohol as a solvent. It is 40% filled and radiopaque.

The unique, patented chemistry of PQ1 resin bonds to dentin/enamel, cast metal, porcelain, zirconia, amalgam, and composite. PQ1 resin is also effective for indirect procedures where light curing is possible.

Note: Exceptional filler penetration for high-strength bonding.

Peak™-ZM
ZIRCONIA/METAL PRIMER

Black Mini™ Brush Tip page 122

Zirconia and metal have met their match!

- Includes a unique blend of phosphate monomers, as well as the MDP monomer
- Convenient syringe and bottle delivery options
- Significantly enhances bond strengths to resin cements
- Strong bond strengths to zirconia, alumina, and metal restorations

Peak-ZM Zirconia/Metal primer is specifically designed to provide high adhesion between the zirconia or metal surface and the luting material. Thanks to a chemistry containing the MDP monomer, Peak-ZM primer can increase bond strengths 5 times compared to using a resin cement alone. With Peak-ZM primer, you can feel confident in your zirconia and metal restorations.

Note: Not for use with RMGI or GI.

PEAK-ZM ZIRCONIA/METAL PRIMER TECHNIQUE GUIDE

1. Clean, rinse, and dry preparation. Verify fit of zirconia or metal prosthesis.
   NOTE: Contamination to the internal surface of the prosthesis will cause a decrease in bond strength. Keep area clean and free of phosphoric acid etch and saliva.
3. Clean tooth surface by applying an abrasive that is both oil and fluoride free such as Consepsis™ Scrub slurry.
4. Scrub abrasive with the STARbrush™ intercoronal brush to clean and remove any residual cement. Rinse and then air dry.

CHOOSE

TOTAL-ETCH TECHNIQUE

SELF-ETCH TECHNIQUE

6. Apply a puddle coat of Peak™ Universal Bond adhesive in a scrubbing motion for 10 seconds.
7. Thin aggressively with air and vacuum.
8. Light cure Peak Universal Bond adhesive for 10 seconds with VALO curing light on Standard Power mode.
9. Apply Peak-ZM primer to the air-abraded prosthesis for 3 seconds and air thin/dry using full pressure. NOTE: Do not use a zirconia primer if luting with a glass ionomer or resin modified glass ionomer.
10. Apply a thin layer of a resin-based cement (PermaFlo™ DC resin) to the prosthesis and firmly seat in place. Cure according to instructions. Remove excess cement.
**Ultradent™ Porcelain Repair Kit**

**ETCH, SILANE, BOND RESIN, AND FLOWABLE COMPOSITE**

- Includes all necessary pre-composite placement materials
- Yields high bond strengths
- Provides quick, easy repairs without mixing

Porcelain repair procedures are becoming more common. It is financially advantageous and less invasive to repair a chipped porcelain restoration rather than replace it. The Ultradent Porcelain Repair Kit contains all the products and tips needed for composite-to-porcelain, porcelain-to-metal, and porcelain-to-porcelain repairs.

“Ultradent’s Porcelain Repair Kit gives us a good, dependable system for repairing bridges and crowns that chip or break.”
—DR. FRED WALDSCHMIDT – BOURBONNAIS, IL

“Ultradent’s Porcelain Repair Kit is the only one that works. It includes all the necessary materials and isn’t overpriced. All the products are quality.”
—DR. LLOYD B. SCHWARTZ – TROY, NY

“The Ultradent Porcelain Repair Kit actually works! I have made repairs, and patients haven’t had to come back. With other kits I have tried, the patient ends up having to come back due to refactoring.”
—DR. FELICIA CHU – ELGIN, IL

Rated excellent by a prominent independent research institute.2

**STEP-BY-STEP GUIDE FOR PORCELAIN REPAIR**

Note: This Quick Guide is meant only to provide an overview; it is not a substitute for instructions provided with individual products. Please carefully read instructions and warnings delivered with products before using them.

1. Place rubber dam if necessary, and/or cover surrounding teeth and gingival tissue with OpalDam™ light-cured resin barrier using a Black Mini™ tip. Light cure 10 seconds on Standard Power mode with VALO™ curing light.

2. Roughen ceramic and/or metal surfaces to be repaired using a microabrasion system with 50 µm aluminum oxide particles for at least 60 seconds. Alternatively (although less effective), use a diamond bur.

3. **Option:** Apply Porcelain Etch with an Inspiral™ Brush tip onto the fractured porcelain surface.

4. Etch surface for 90 seconds; then suction off gel and carefully rinse with water spray.

5. **Option:** Apply Ultra-Etch™ etchant for 5 seconds to remove porcelain salts.

6. Rinse and thoroughly air dry fractured surface.

7. Apply Silane onto fractured porcelain surface with a Black Mini™ Brush tip.

8. Let evaporate for 1 minute, and blow with a gentle stream of air until completely dry.

9. Apply Peak™ Universal Bond adhesive with an Inspiral Brush tip onto fractured surfaces. Air thin gently but thoroughly. DO NOT scrub.

10. Light cure Peak Universal Bond adhesive for 10 seconds with a VALO LED curing light.

11. Cover exposed metal with a thin layer of PermaFlo® Dentin Opaquer composite using a Micro 20 ga tip, then light cure with VALO™ curing light 10 seconds on Standard Power. If using other curing light, cure according to manufacturer’s instructions.

13. Finish and polish repaired area.

**1108 - Ultradent Porcelain Repair Syringe Kit**

- 1 x 1.2 ml PermaFlo Dentin Opaquer syringe
- 1 x 1.2 ml EtchArrest syringe
- 1 x 1.2 ml OpalDam syringe
- 1 x 1.2 ml Peak Universal Bond syringe
- 1 x 1.2 ml Porcelain Etch syringe
- 1 x 1.2 ml Ultradent Silane syringe

ultradent.com
Ultradent™ Porcelain Etch and Silane

90-Second Etch—60-Second Silane

- Etch is easy to control and place
- Yields highest porcelain-to-resin bond strengths
- Silane is a single component
- Use on feldspathic and lithium disilicate (IPS e.max®) restorations

Ultradent Porcelain Etch is a viscous, buffered 9% hydrofluoric acid. Silane is a single-component solution.

Porcelain Etch is designed for intraoral or extraoral porcelain etching. Use it for in-office etching of indirect restorations, such as veneers, inlays, etc. After porcelain etching, clean residual debris with Ultra-Etch™ etchant for 5 seconds and rinse thoroughly; follow with Silane application. Studies have demonstrated that Silane, when used with Porcelain Etch and a quality bonding resin, yields the highest bond strength to porcelain when compared with other porcelain bonding products.

1. Porcelain Etch is delivered from Inspiral Brush tip to prepared porcelain.
2. After removing porcelain salts with Ultra-Etch, Ultradent™ Silane is applied and dried, followed by Peak™ Universal Bond adhesive.

1. Diamond-cut porcelain surface.
2. Same porcelain following 90-second etch with Ultradent Porcelain Etch.

Residual silica salts on porcelain, post hydrofluoric acid etching for 90 seconds with Ultradent Porcelain Etch.

Use Ultra-Etch etchant for 5 seconds and rinse to clean residual debris, producing a clean surface for bonding.

1. Etch ceramic bonding surface with Porcelain Etch for 90 seconds, rinse, and dry.
2. Apply Ultra-Etch™ etchant for five seconds to remove porcelain salts and debris formed by hydrofluoric acid etching.

3. Apply a puddle coat of Silane to the inside surface of the prosthesis for 60 seconds, dry, and set aside. Do not rinse. Prosthesis now ready for luting/cementing.

When I use Ultradent Porcelain Etch and Silane, my veneer cases bond securely, and the patient can feel my confidence. At the end of the appointment, I can smile along with my patient.” —DR. TERRY BRAUN – OCALA, FL
Ultra-Blend™ plus
DENTIN LINER AND PROTECTIVE BASE

- Bioactive liner and pulp-capping material
- Superior calcium release
- Light curable
- Controlled, precise syringe delivery
- No mixing necessary
- Will not dissolve over time
- Radiopaque
- Highly filled
- Use to cover MTAFlow cement for pulp capping prior to restoration

Ultra-Blend plus liner is a light-activated, radiopaque material with calcium hydroxide in a urethane dimethacrylate (UDMA) base. It’s perfect for pulp capping and will not dissolve over time. Ultra-Blend plus liner is highly filled for minimal shrinkage.

"We have been using Ultra-Blend plus liner on a daily basis. I use it primarily in deeper cavities as a liner and insulator. The syringe makes it easy to dispense the material, and it hardens quickly with the curing light. It is reliable and has adequate adhesion. I think all of Ultradent’s products are excellent."
—DR. TERRY BRAUN – OCALA, FL

“We have been using Ultra-Blend plus liner on a daily basis. I use it primarily in deeper cavities as a liner and insulator. The syringe makes it easy to dispense the material, and it hardens quickly with the curing light. It is reliable and has adequate adhesion. I think all of Ultradent’s products are excellent.”
—DR. SHELDON BORUCHOW – AUDUBON, PA

“Ultra-Blend plus liner has been working well and is easy to use compared to other products.”
—DR. SUEETTE WIMAS – CARMEL, IN

“Ultra-Blend plus liner application is easy!“
—DR. MIMI V. JOHNSON – BELLWOOD, IL

**Consepsis™**

2% CHLORHEXIDINE ANTIBACTERIAL SOLUTION

- Reduces potential for postoperative sensitivity
- No bond strength compromise
- Syringe delivery makes placement easy

Consepsis antibacterial solution is a 2.0% chlorhexidine gluconate solution free of emollients that interfere with bond strength, unlike chlorhexidine mouth rinses.

Minimize post-op and sensitivity by thoroughly cleaning the preparation prior to sealing and restoring. Use prior to cementation, luting (provisional and/or permanent), and direct restorative placement. Clean with near-neutral Consepsis solution prior to pulp-capping.

In vivo studies have shown that restorations not treated with chlorhexidine (CHX) exhibited a significant DECREASE in the structural integrity of the collagen network and in bond strength (38% bond strength degradation vs. no degradation in CHX-treated teeth).2–3

Use Consepsis antibacterial solution prior to dentin bonding agent application to clean root surface with sensitive root treatment or when bonding.

**Jiffy™**

**ORIGINAL COMPOSITE SYSTEM**

- Excellent for adjusting and polishing any composite material including Vit-l-escence™ and Mosaic™ composites
- Polishing cups feature a flared, flexible thin-wall design that is ideal for polishing near the gingiva
- Available with or without autoclavable aluminum blocks*
- Jiffy grit gives a beautiful finish on any composite material
- Not made with natural rubber latex
- Autoclavable

---

**INTRAORAL SHAPING**

**Recommended speed: 7,500–10,000 RPM**

- Jiffy Coarse Green cup shapes cusps, labial/buccal, and cervical surfaces.
- Jiffy Coarse Green disk shapes labial/buccal surfaces.

---

**INTRAORAL POLISHING**

**Recommended speed: 7,500–10,000 RPM**

- Use Jiffy Medium Yellow cup to polish margins and labial/buccal surfaces.
- Jiffy Medium Yellow disk polishes labial/buccal surfaces.

---

**Gross to Fine Shaping**

Use the green (coarse), yellow (medium), and then the white (fine) Jiffy polishers for quick shaping of composites with overbuilds and slight irregularities.

---

**High Shine Polish**

Use the blue (ultrafine) Jiffy HiShine system as an additional polishing step to provide an extra smooth and highly polished finish.

---

**Final Finish Option**

The unique Jiffy™ Goat Hair Brush used with Ultradent™ Diamond Polish Mint gives a final esthetic finish to composite or ceramic restorations.

---

"Jiffy Polishers provide a great finish to my composite restoration in a time-efficient manner."

— DR. MARK KOENEN – DANVILLE, CA
INTRAORAL POLISHING CONT.
Recommended speed: 5,000–7,500 RPM

- Jiffy Fine White cup creates final polish on cusp, labial/buccal, and cervical areas.
- Jiffy Fine White disk creates final polish on labial/buccal surfaces.

4254 - Jiffy Composite Adjusting & Polishing Kit
- 3 x Each cups, disks, and points (1 coarse, 1 medium, 1 fine)
- 2 x Jiffy brushes (1 regular, 1 pointed)

848 - Jiffy Composite Polishing Variety Pack
- 5 x Each cups and disks (2 coarse, 2 medium, 1 fine)
- 10 x Points (4 coarse, 4 medium, 2 fine)

INTRAORAL FINAL POLISHING
Recommended speed: 5,000–7,500 RPM

- Use Jiffy Ultrafine Blue HiShine cup as an additional step to create an extra smooth and highly polished finish on cusp, labial/buccal, and cervical areas.
- Use Jiffy Ultrafine Blue HiShine disk as an additional step to create an extra smooth and highly polished finish on labial/buccal surfaces.

850 - Jiffy Regular Brush 10pk
1009 - Jiffy Pointed Brush 10pk

Use Jiffy Ultrafine Blue HiShine point as an additional step to create an extra smooth and highly polished finish on occlusal and labial/buccal surfaces.

* Ultradent recommends the use of an aluminum block when autoclaving to prevent warping and deformation.
1. realityesthetics.com.
Jiffy™
UNIVERSAL CERAMIC
ADJUSTING AND POLISHING SYSTEM

- Universal application on all ceramic materials eliminates the need for multiple adjusters and polishers, saving you time and money
- Specially formulated Ultradent diamond grit provides optimal smoothness and outstanding polishing results while still being gentle on any ceramic material including zirconia
- Multi-grit diamond particles allow for effective adjustment of ceramics for a truly smooth and high-gloss finish
- Optimized two-step adjusting and polishing sequence
- Maximum diamond retention ensures a long service life
- Autoclavable aluminum block extends the life of the system

**EXTRAORAL ADJUSTING**
- Use light hand pressure
- Coarse diamond instruments and traditional abrasive stones can generate high heat, causing microfractures, and are not recommended

Recommended speed: 8,000–12,000 RPM

- Jiffy Universal Coarse Green grinders are recommended for grinding down sprues and gross adjustment.
- Jiffy Universal Medium Yellow grinders are designed for adjustments of lithium disilicate, zirconia, and feldspathic porcelain.

**EXTRAORAL POLISHING**
- Use light hand pressure
- Reduce speed with each step to achieve an ultra-smooth surface

Recommended speed: 7,000–10,000 RPM

1. Use Jiffy HP Medium Universal wheel to pre-polish.
2. Use Jiffy HP Fine Universal wheel to create final polish.

**INTRAORAL POLISHING**
- Use light hand pressure
- Reduce speed with each step to achieve an ultra-smooth surface

Recommended speed: 5,000–7,000 RPM

1. Use Jiffy Universal RA Medium point and cup to pre-polish.
2. Use Jiffy Universal RA Fine point and cup to create final polish.

**UNIVERSAL CERAMIC ADJUSTING AND POLISHING SYSTEM**

**Final Finish Option**
The unique Jiffy™ Goat Hair Brush used with Ultradent™ Diamond Polish Mint gives a final esthetic finish to ceramic restorations.
“These are by far the quickest and best polishing kits I have ever used. The polish on zirconia is incredible. I have never seen a better, more glass-like appearance on zirconia than I have with the Jiffy Universal System.”
—DR. ERIC HOLLANDER DDS, AUSTIN, TX

“These polishing kits give a very nice sheen and are better than any others I’ve used.”
—DR. WILLIAM J. DUNBAR DDS, GLENCOE, MN

**4235-1 - Jiffy RA Fine Polishing Cup 5pk**
The Jiffy Natural composite finishing and polishing system consists of malleable spiral-shaped wheels that are designed to easily conform to all tooth surfaces, and a twirl shaped polisher that is ideal for occlusal surfaces.

Recommended speed: 5,000–8,000 RPM

Jiffy Natural Medium Yellow wheels polish all areas except near the gingiva, where a Jiffy Medium cup should be used.

Use Jiffy Fine White Natural wheels to create final polish on all areas except near the gingiva, where a Jiffy Fine White Polishing cup should be used.

Note: Do not use Jiffy Natural Universal polishing wheels to polish the labial surface near the gingival line. This can tear the gingiva.
The Jiffy Natural Universal ceramic system consists of malleable spiral-shaped wheels that are designed to easily conform to tooth anatomy. Their pliable finger-like extensions easily reach where cups and points can't, and soften super high-gloss finishes for a natural enamel-like result. They are designed to be used in conjunction with the Jiffy Universal ceramic adjusting and polishing system to easily achieve a natural, high-quality finish on all ceramic restorations. The diamond-impregnated wheels are available in extraoral and intraoral in both medium and fine grits. The efficient two-step process allows you to easily achieve the most natural finish on any ceramic material including zirconia, lithium disilicate, and porcelain.

**EXTRAORAL POLISHING**

Recommended speed: 7,000–10,000 RPM

- Use Jiffy Natural Universal HP Medium 26 mm wheel to pre-polish.
- Use Jiffy Natural Universal HP Fine 26 mm wheel to create final polish.

**INTRAORAL POLISHING**

Recommended speed: 5,000–8,000 RPM

- Use Jiffy Natural Universal RA Medium 14 mm wheel to pre-polish all areas except near the gingiva, where a Jiffy RA Medium Universal cup should be used.
- Use Jiffy Natural Universal RA Fine 14 mm wheel to create final polish on all areas except near the gingiva, where a Jiffy Fine Universal cup should be used.

* Ultradent recommends the use of an aluminum block when autoclaving to prevent warping and deformation.
Ultradent™ Diamond Polish Mint

- High-grade white microcrystalline diamond particles
- Unsurpassed esthetic polish
- Ideal for porcelain or composite restorations

Use Ultradent Diamond Polish Mint with Jiffy Goat Hair Brushes.

Jiffy™ Composite Polishing Brushes

- Each bristle is a polishing instrument. Special fibers are impregnated with abrasive silicon carbide particles.
- Easily recognizable by their golden shafts.

- Each bristle contains thousands of silicon carbide polishing particles
- Access and polish occlusal fissures of composites or ceramics
- For composite polishing, “whip” bristles with firm pressure and high RPM in a slow-speed handpiece

Recommended speed: 1,000–3,000 RPM

Jiffy™ Goat Hair Brush

- Constructed of fine goat hairs
- Use moderate/firm pressure and high RPM in slow-speed handpiece

Recommended speed: 10,000 RPM

Jiffy Goat Hair Brush is used with Ultradent Diamond Polish for a final esthetic finish on composite or ceramic restorations.

Jiffy™ Composite Polishing Brushes

REGULAR AND POINTED

850 - Jiffy Regular Brush 10pk

Jiffy™ Goat Hair Brush

1029 - Jiffy Goat Hair Brush 10pk

Use Jiffy Composite brushes to create a final finish on all surfaces. For best results, apply pressure during polishing.

“The jiffy brushes are versatile, durable, and dependable.”
—DR. ANTHONY J. LUPINETTI – YORK, PA

Jiffy™ Goat Hair Brush is used with Ultradent Diamond Polish for a final esthetic finish on composite or ceramic restorations.
DeOx™

VISCOUS OXYGEN BARRIER SOLUTION

DeOx barrier solution is a viscous, glycerine-based gel designed to prevent formation of an oxygen-inhibited layer on the surface of resin materials when they are polymerized.

Jiffy™ Proximal Saw

The Jiffy Proximal Saw is a very thin stainless steel strip with serrations on one edge. It may be sterilized by autoclave or dry heat.

4680 - Jiffy Proximal Saw Stainless Steel 10pk
10 x Stainless Steel Ribbon Saw

4670 - Jiffy Diamond Strips Perforated Narrow Assorted 15pk
4674 - Jiffy Diamond Strips Perforated Wide Assorted 15pk
5 x Each Stainless Steel electroplated diamond strips (5 Medium, 5 Fine, and 5 Xfine)

4671 - Jiffy Diamond Strips Perforated Narrow Medium 10pk
4683 - Jiffy Diamond Strips Perforated Wide Medium 10pk
10 x Stainless Steel electroplated diamond strips

4672 - Jiffy Diamond Strips Perforated Narrow Fine 10pk
4676 - Jiffy Diamond Strips Perforated Wide Fine 10pk
10 x Stainless Steel electroplated diamond strips

4673 - Jiffy Diamond Strips Perforated Narrow Xfine 10pk
4677 - Jiffy Diamond Strips Perforated Wide Xfine 10pk
10 x Stainless Steel electroplated diamond strips

238 - DeOx Syringe 4pk
1.2 ml syringes

Veneer containing luting resin is placed. Before curing, excess resin is removed from margin. DeOx barrier solution is coated over margins as shown here. Result: No oxygen inhibition on margin of luting resin surface upon polymerization; no ditching at margin.

These finishing strips are flexible, durable, thin, and more aggressive than aluminum oxide strips. The perforated design enhances visibility for more precise contouring. Available in two widths, wide and narrow.
PermaSeal™
PENETRATING COMPOSITE SEALER

• Bonds to composite and etched enamel
• Seals microcracks
• Protects and revitalizes composite restorations

PermaSeal composite sealer is a light-cured, methacrylate-based, unfilled resin. Its low viscosity allows excellent penetration, and the ultrathin layer minimizes the need for occlusal adjustment.

PermaSeal composite sealer seals voids and irregularities created during the polishing process, minimizing staining and wear. Place on Class V composite margins to reduce microleakage. For the final glaze-type finish of resin provisional, cover PermaSeal sealer with DeOx™ barrier solution prior to light curing. PermaSeal sealer bonds well to composite-type provisional restorations such as ExperTemp™ material and can be used to revitalize old composites as well.

NEW RESTORATIONS

Before: Interproximal spaces and slight rotations to be corrected with Peak™ Universal Bond adhesive and composite.

After restoring and polishing, etch 5 seconds and apply PermaSeal composite sealer to seal composite and create a glossy finish. Air thin and light cure for 10 seconds.

EXISTING RESTORATIONS

Clean surfaces and margins to be sealed thoroughly with Consepsis™ Scrub, a micro etcher, or freshen with a bur and rinse thoroughly. Etch the enamel immediately adjacent to the restoration and all accessible composite surfaces for 15 seconds. If the enamel is not prepared as described above, etch for 30 seconds.

Four-year-old bonded composite following PermaSeal composite sealer treatment.

631 - PermaSeal Syringe Kit
4 x 1.2 ml syringes
10 x Black Micro FX tips

Note: PrimaDry drying agent is great in conjunction with air drying just prior to PermaSeal composite sealer placement.

Chromaclone Alginate
Chromaclone PVS
Thermo Clone™ VPS
VINYL POLYSILOXANE IMPRESSION MATERIAL

TAKE A GREAT IMPRESSION THE FIRST TIME

• Thermal-Accelerated Set ensures a long working time and short intraoral setting time
• Increased hydrophilicity reliably captures margins
• Highly thixotropic material flows into all gaps for maximum detail
• High tear strength with superb elastic recovery
• Bubble Gum scent

Thermo Clone impression material is heat-sensitive. This means that as the temperature of the material increases, the setting time decreases. We call this a Thermal-Accelerated Set.

At room temperature, Thermo Clone material stays unset, with a working time of up to 1:00. Once the tray is placed in the patient’s mouth, the material rapidly begins to set due to the increased temperature. This accelerated setting time means there’s less chance of distortion. See graph in the next column for a comparison of setting times for Thermo Clone heavy body fast set material.

1. There is no minimum working time; Thermo-Accelerated Set ensures that the material begins to set as soon as it is placed in the patient’s mouth.
2. In these examples, with 30 second and 60 second working times, Thermo Clone material was out of the critical zone and fully set at 2:45 mins and 3:15 mins respectively.

The Thermal-Accelerated Set provided by Thermo Clone material gives you a long working time if desired and a short setting time, hence minimal time in the critical zone.

Note: The Critical Zone denotes the time between when the material starts to set intraorally and when it is completely set. This is when distortions most often occur, resulting in extra lab work, poorly fitting restorations, and costly retakes.

FOR IMPRESSION TAKING

An astringent is a substance that eliminates permeability of epithelium to tissue fluid flow. The result is a dry field, an important tissue management solution. An ideal impression for successful crowns and bridges must accurately capture the preparation margins. This can be ensured only through reliable hemostasis and gingival displacement.

HYDROPHILIC

Hydrophilicity ensures precision in your impressions by displacing moisture on all tooth surfaces to capture exact details of teeth.

Hydrophilicity is evaluated based on contact angle, which measures how flat a drop of water spreads over the material. Thermo Clone material is among the industry leaders in hydrophilicity.

BLEEDING

HEMOSTASIS

1. Subgingival preparation with bleeding.
2. Scrub Astringedent™ X hemostatic firmly against bleeding sulcus with Metal Dento-Infusor™ tip.

THIXOTROPIC

Thixotropic materials become more fluid as they are agitated—like when they are applied to a crown preparation—and thicken when they are in place. This means that when Thermo Clone material is placed, the material flows into the sulcus and the spaces between teeth. This ensures a detailed impression and clear margins.

CLEANING/TESTING

DISPLACEMENT

3. Firm air/water spray removes residual coagulum and tests tissue for quality, profound hemostasis.

5100 - Dispensing Gun 1pk

Thermo Clone™ VPS Accessories

4074 - Tray Adhesive 10 ml Bottle 1pk

RESULT

7. Predictable quality impressions.
IMPRESSIONS

• Dimensionally stable up to five days
• Great Bubble Gum flavor
• Dust-free mixing
• Silicone-like consistency
• Highly accurate
• Fast Set changes color
• Extra Fast Set is ideal for sensitive patients
• Great for gaggers

In your busy dental office, every second counts. Every extra minute you save lets you breathe a little easier. With Chromaclone alginate you’ll get more than a few extra minutes—you’ll get a few extra days. That’s because the formulation offers a full five days for you to pour your impressions, not just the few hours you’re used to.*

And as always, Chromaclone 5-day alginate offers the same dust-free formula and reliable set times you depend on. The Fast Set time (53 seconds) features a convenient color-changing formula, while the Extra Fast Set time (45 seconds) is ideal for both young and sensitive patients. Both formulas are available in a pleasant Bubble Gum flavor.

*NOTE: Wrap the impression with a damp paper towel and store in a sealed plastic bag at room temperature (23°C/73°F) to ensure dimensional stability for up to five days.

Fast Set: 53 seconds time in mouth
Extra Fast Set: 45 seconds time in mouth

- 1 x 1 lb bag of Chromaclone 5-day

1. realityesthetics.com.
Chromaclone™ PVS
HYDROPHILIC POLYVINYL SILOXANE IMPRESSION MATERIAL

- Hydrophilic and thixotropic
- Dimensionally stable with great elastic recovery
- Allows you to pour at your convenience
- Tear resistant
- Highly accurate even with multiple pours
- Four viscosities, Fast and Regular Set
- Bubble Gum flavor

Chromaclone PVS impression material captures even the smallest details, enabling you to take effective impressions the first time, every time. Its extremely low contact angle allows it to flow deep into the sulcus for highly visible margins.

The material is super hydrophilic not only during application, but also during immediate pouring of gypsum. It contains special reinforcing branched silicone resins for superior tear resistance so impressions can be easily removed. And its elastic recovery ensures dimensional stability for weeks, allowing you to pour at your convenience.

Note: The accuracy of any impression material can be increased with the use of Ultradent’s Tissue Management System. Profound hemostasis is paramount before making impressions.

PROCEDURE

1. Apply light body impression material around outer edges of preparation.
2. Cover preparation in light body impression material.
3. Insert tray and make impression.
4. Remove the tray and examine the impression. Chromaclone PVS material provides excellent margin detail.

JAMES STOSICH - Falls at Jordan Lake, Uintahs
VALO™ Ortho Cordless
LED CURING LIGHT

• Unique Xtra Power Quadrant mode quickly and efficiently cures five teeth with one touch of a button
• Powerful, optimally collimated beam delivers consistent, even cures directly over the labial face of the bracket
• Slim, low-profile design allows unprecedented access anywhere in the mouth
• Highly efficient LEDs keep the wand body cool to the touch
• Intuitive timer controls are easy to operate and user-friendly

• Battery-operated, cordless wand provides optimal convenience and flexibility
• Rechargeable batteries are environmentally responsible, safe, and inexpensive

VALO Ortho Cordless curing light uses a custom, multiwavelength light-emitting diode (LED) for producing high-intensity light at 385–515 nm, which is capable of polymerizing all light-cured dental materials. This intensity will also penetrate porcelain and is capable of curing underlying resin cements similar to a quality halogen light. The VALO Ortho Cordless curing light uses VALO rechargeable batteries and a battery charger suitable for power outlets from 100 to 240 volts. The handpiece is designed to rest in a standard dental unit bracket or can be custom-mounted using the bracket included in the kit. It can also be stored on a countertop or in a drawer. The VALO Ortho Cordless curing light is equipped with a sensor that registers movement of the light; when the light is not being used, the VALO Ortho Cordless curing light will automatically go into sleep mode and when moved will return to the most recently used setting.

“The fact that the VALO light is small and lightweight makes it one of a kind and an ideal choice for an orthodontist.”
—DR. PAUL UPATHAM, DDS, MS – SAN DIEGO, CA

WARNING: Only use rechargeable batteries stated in the IFU. Some rechargeable batteries can affect the function of the VALO curing light.

• 2021 READER'S CHOICE AWARD
• 2015 BEST LED CURING LIGHT*
Essential tools for indirect orthodontic bonding, Emiluma and Lumaloc indirect bonding materials are made of transparent silicone that allows quick and precise delivery to the arch.

Emiluma material is soft enough to remove indirect trays without debonding brackets yet firm enough to maintain accurate bracket positioning. Lumaloc material cures stiff to ensure proper tray fit and precise bracket placement, yet it’s still easy to shape, mold, and trim.

Supported by Dr. Richard P. McLaughlin and the developer of the Quick IDBS™—DRS. MASATADA KOGA, KAZUYA WATANABE, AND TAKAKO KOGA

3 x 50 ml cartridges
30 x mixing tips

5100 - Dispensing Gun 1pk

1. Take impression and bond brackets on stone model.
2. Express Emiluma material onto model in a continuous stream, with a bead-sized amount over each bracket. Immediately follow with placement of Lumaloc material.
3. Wrap the model in plastic film (recommended width: 25 mm, length: 250 mm), while Lumaloc material sets up. Surround the facial wall of the tray and cover the occlusal surface.
4. When Lumaloc material is set, remove plastic film from model. Trim excess material around tray.
5. Place model in water for 30 minutes.
6. Starting with the posterior, remove the tray from model, ensuring that brackets remain in the tray.
7. Clean bracket base, removing all debris but leaving adhesive.
8. Mark the center of the tray to ease placement. Proceed with bracket placement.
**Gishy Goo™**

*POLYVINYL SILoxANE ELASTOMER*

- Reduces costly emergency appointments
- Remains in place better than wax
- Provides lasting comfort for patients’ lips, cheeks, and tongue

Gishy Goo material is a specially formulated polyvinyl siloxane elastomer that helps patients get comfortable with orthodontic appliances such as brackets, lingual braces, molar tubes, fixed and functional appliances, mouthguards, and other applications where soft tissues can be protected.

1. Squeeze some Gishy Goo material from the syringe onto your finger.
2. Mix Gishy Goo material thoroughly between your fingers for 10 seconds. Don’t wait too long or it will set up.
3. Place Gishy Goo material immediately over braces where it hurts. Mold and shape Gishy Goo material. Wait two minutes for it to set.

**Opal™ Etch**

*35% PHOSPHORIC ACID*

Where Strong Bonds Begin

- Penetrates smallest fissures but won’t migrate on a vertical surface
- Precise placement
- Rinses cleanly—leaves no residue

**UltraSeal XT™ hydro**

Black Light Keychain

- Use to assist in placement or removal of Opal Seal sealant
Opal™ Seal

**FLUORIDE-RELEASING AND RECHARGING PRIMER AND SEALANT**

- Releases and recharges fluoride\(^1\)
- 38% filled with glass ionomer fillers plus nanofillers for long-lasting strength
- Nonyellowing and stain resistant
- Drying agent seeks out moisture and draws resin in, ensuring superior bonding and fluoride uptake
- Fluorescent properties make reapplication and removal easy and convenient

Opal Seal 38%-filled primer and sealant is used to prepare etched enamel for orthodontic bonding. Apply a thin layer of Opal Seal sealant to etched enamel prior to bracket placement to enhance bonding and recharge fluoride uptake.\(^1\)

![Healthy enamel after orthodontic treatment with Opal Seal primer and sealant.](image)

Opal Band Cement’s bright blue chemistry is easy to see whether you’re applying or removing it.

- Triple-cure formula provides optimum bond strength for both regular banding and high-force appliance banding
- Convenient syringe delivery system offers superior control and no mixing of liquid and powders
- Glass ionomer fillers release fluoride for additional protection
- Bright blue chemistry facilitates easy placement, cleanup, and removal

Opal Band Cement eliminates the need to have one cement for regular banding and a different cement for high-force appliance banding. Its unique triple-cure formula creates optimal bond strengths for both. Opal Band Cement also contains glass ionomer fillers that react with moisture to strengthen the cure and release fluoride for additional health benefits.

Opal Band Cement comes in a convenient dual-barrel syringe that mixes the chemistry for you. It creates the ideal viscosity for easy placement and removal, and it makes application simple and mess free. No more mixing powders and liquids.

Opal™ Bond Flow A2
Opal™ Bond Flow Blue

- Ideal for permanent retainers, bite ramps, occlusal buildups, and indirect bonding
- Optimal flow characteristics ease delivery and placement and help prevent slumping
- Contains a micro-nano hybrid filler for durable strength and wear
- Available in two shades: A2 and Blue
- Compatible with any light-cured bonding system
- Smooth finish and kind to opposing enamel

Opal™ Bond MV
MEDIUM-VISCOITY LIGHT-CURED BONDING ADHESIVE

- Medium viscosity
- Butters easily into bracket mesh and minimizes drift upon placement
- Proprietary loading process nearly eliminates “run-on”
- Ergonomic contra-angle syringe delivers adhesive with precision and economy

**Sable™ Seek™ and Seek™**  
**CARIES INDICATORS**

- Stains carious and demineralized dentin  
- Provides precise, mess-free delivery  
- Available in dark green for working near pulp  
- Aids in identifying root canal orifices  

Sable Seek caries indicator contains FD&C dyes, and Seek caries indicator contains D&C dyes in a glycol base. Both are used to stain carious and demineralized dentin.

Seek and Sable Seek caries indicators stain carious and demineralized dentin and can be very useful for difficult to see areas, for example; undercuts of preparations, dark dentin, areas along the DE junction, etc. Both Seek and Sable Seek caries indicators can provide a fast, effective way to locate calcified root canal orifices. Green Sable Seek caries indicator helps visualization of decay in deep caries cases to help avoid pulp exposures.

**PROCEDURE**

1. Apply Sable Seek indicator with Black Mini Brush tip.
2. Rinse with air/water and suction. Carious dentin is easily identified.
3. Remove green-black color (carious dentin) with slow-speed round bur or excavator. To control overexcavating near the pulp, remove final portion of caries with hand excavator.
4. Reapply. Rinse and verify appropriate caries removal.

The Umbrella cheek retractor is ideal for a variety of procedures that require clear access without compromising patient comfort, including but not limited to: in-office whitening, scanning, impressions, bite registrations, surgical procedures and more.

• Developed to give you a clear treatment field while making patient comfort a top priority
• Easy to place
• Disposable
• Naturally and gently helps the patient hold their mouth open without pulling or stretching their lips
• A new, innovative tongue-retraction design allows the tongue to comfortably rest behind the tongue guard, keeping it back and away from the working area
• Designed with anatomically placed/shaped bumpers, so clinicians can rest a hand on the patient’s mouth without causing discomfort
• Provides relief and comfort to gaggers—it doesn’t initiate the gag reflex for most
• Can be kept in place when checking bite

The Umbrella cheek retractor is ideal for a variety of procedures that require clear access without compromising patient comfort, including but not limited to: in-office whitening, scanning, impressions, bite registrations, surgical procedures and more.

DermaDam™

RUBBER DAM

- Low dermatitis potential
- Strong and tear resistant
- Powder free to reduce allergic reactions

DermaDam rubber dam is made from pure latex rubber and is powder free, which reduces the possibility of latex reactions. Quality processing ensures a low content of surface proteins.

311 - DermaDam Medium 0.20 mm 36pk

1. realityesthetics.com
**OraSeal™**

**CAULKING AND PUTTY**

- Adheres under water and saliva
- Provides a protective seal against gingival exposure to peroxide or hydrofluoric acid
- Ideal for blocking out unwanted spaces for impressions
- Effectively adheres to wet rubber dams, tissue, teeth, and metal
- OraSeal Putty material has a stiffer consistency than the Caulking material, which some doctors prefer

Use OraSeal Caulking material when an adequate seal is difficult to obtain with compromised teeth or roots. It may also be used to repair rubber dam leaks. It seals the rubber dam when performing a porcelain repair, protecting gingiva from hydrofluoric acid. Deliver into undercuts and below implant bars, precision attachments, etc. to prevent cold cure acrylic or impression material from locking into empty spaces. Fill in gingival embrasures of splints and bridges to facilitate easy cleanup of permanent cement. Also used to fill in screw holes on implant impressions prior to making impressions.

**USES**

- Ensure rubber dam seal when using strong peroxide for vital whitening, or when porcelain etching with hydrofluoric acid.
- Block out undercuts below and around prosthetic implant clip. Flexing component of clip is covered with putty to accommodate clip flexure during insertion and removal.
- Ensure moisture control when bonding lower orthodontic brackets. Seal with Caulking or Putty to prevent saliva from seeping through embrasures and contaminating area.
- Block out large interproximal spaces for easy and distortion-free removal of impression.
- Use under fixed partial or implant bar prior to making an impression.
- Use as a block-out medium prior to anchoring attachments, clips, etc. with cold cure acrylic.

**PROCEDURE**

- Apply OraSeal Caulking material with Black Mini™ or White Mac delivery tips to prevent leakage of rubber dam during treatment. Shape with wet gloved finger, wet cotton swab, or instrument. Procedure can then be performed in a clean, dry field.

**352 - OraSeal Syringe Kit**

- 2 x 1.2 ml OraSeal Caulking syringes
- 2 x 1.2 ml OraSeal Putty syringes

Consepsis™ Scrub  
**CHLORHEXIDINE ANTIBACTERIAL SLURRY**

- Reduces post-op sensitivity  
- Does not compromise bond strength  
- Nonsplatter formula  
- Use to clean prior to cementation or around ortho brackets  
- Use with STARbrush™ brush in grooves prior to sealant placement

Consepsis Scrub antibacterial slurry is a lightly flavored 2.0% chlorhexidine gluconate (relative to liquid component) antibacterial scrub. Consepsis Scrub slurry uses inert, finely ground Pyrex® glass as an abrasive scrub, unlike pumice, which may contain several trace impurities from volcanic ash.

**Note:** Never use prophy paste for prep cleaning, as it contains several potentially contaminating ingredients.

Use Consepsis Scrub slurry for removing residual temporary cement prior to permanent cementation and for removing debris. Scouring with a quality antibacterial prior to restoring minimizes the potential for post-op sensitivity associated with an influx of microorganisms into dentinal tubules.

**Note:** Evidence demonstrates that you can further reduce post-op sensitivity by sealing dentin before cementation. Use PermaFlo™ DC luting resin.

See page 70 for Consepsis™ chlorhexidine antibacterial solution.

---

**PROCEDURE**

Use Consepsis Scrub antibacterial slurry with a rubber cup or STARbrush™ coronal brush to remove residual cement.

---

**PROBLEM:**
Staining under provisional crowns.

**SOLUTION:**
After proper selection of hemostatic agents, clean tooth well prior to cementing provisionals and use quality sealing provisional hydrophilic cements (e.g., UltraTemp™ temporary luting material).

**CHEMISTRIES (THE “WHYS”):**
1. Hemostatic agents as well as the blood from cut tissues are both sources of iron, which reacts with the hydrogen sulfide gas (rotten egg gas, H₂S) produced by anaerobic bacteria in this septic environment. The reaction yields ferric sulfide, the harmless yet annoying dark surface stain that is seen below. This stain can occur to a lesser degree solely from the natural iron in blood.

2. Non-sealing cements allow saliva and bacteria to move between the temporary and preparation. Additionally, non-sealing provisionals are problematic as saliva and/or bacteria removes the smear layer, opening tubules to bacteria.

**HOW TO PREVENT/TREAT:**
1. If there is no bleeding you can use a hemostatic agent that is not ferric sulfate-based (e.g., ViscoStat™ Clear hemostatic). If a ferric sulfate-based agent is required, be sure to clean the preparation well as instructed below.

2. Clean the preparation well. This can be done with Consepsis Scrub slurry and a STARbrush coronal brush or by etching with Ultra-Etch etchant for a couple of seconds and rinsing well.

3. Use a quality hydrophilic provisional cement like Ultradent’s non-eugenol, polycarboxylate, paste-to-paste UltraTemp temporary luting material.

Note: Similar staining can occur even under definitive direct and indirect restorations if contamination is on the preparation prior to bonding. It is recommended to etch with Ultra-Etch etchant prior to application of the dentin bonding agent.

**CASE 1**
Two weeks earlier Viscostat hemostatic agent was used to arrest bleeding. Provisional crowns were cemented with a popular NON-sealing, hydrophilic, resin-based temporary cement.

**CASE 2**
Provisionals have been removed. Characteristic dark stain is observed on preparations. This can be removed by ultrasonic scaling and scouring with Consepsis™ Scrub slurry. It’s preferable to prevent it by using a hydrophilic provisional cements such as UltraTemp™ temporary luting material.

---

**STARbrush™ CORONAL BRUSH**

- Effectively cleans in hard-to-reach areas
- Tight fibers help to prevent messes and apply appropriate pressure
- Great for cleaning pits and fissures with Consepsis™ Scrub antibacterial slurry prior to sealants

Omni-Matrix™
DISPOSABLE RETAINER AND MATRIX

- Innovative shape allows procedural visibility and patient comfort
- Ultra-thin burnishable stainless steel adapts to preparations
- Unique winged and wingless styles meet individual case needs
- Disposable design saves you time and money

The Omni-Matrix disposable retainer and matrix is a superior circumferential matrix band solution. It’s a simple restorative tool designed to perfectly customize to any preparation. The band’s circumference can be easily adjusted simply by twisting the handle and the pivoting head allows it to access any quadrant of the mouth. Once the restoration is complete, the Omni-Matrix band easily releases without disturbing the restorative material.

“Fast, easy, convenient, disposable! What else could you ask for?”
—DR. GEORGE FREEDMAN

Omni-Matrix™ Original
DISPOSABLE RETAINER AND MATRIX

- Disposable
- Easy to place
- Color coded
- Comfortable for patients
- Adaptive, burnishable band (stainless steel version)
- No placement instruments required
- No lip, cheek, or glove capture

Omni-Matrix is a quick, easy-to-use, disposable retainer and matrix. Simply adjust the band's circumference by twisting the conical handle. Its patented, articulated head swivels, fitting comfortably into any quadrant of the mouth. Once the restoration is complete, the Omni-Matrix band is easily released, leaving restorative material intact. The stainless steel matrix band is thin, adaptive, and burnishable, and the wingless design allows wedges to be placed with ease. Also available in mylar.

Omni-Matrix™ Sectional
MATRICES AND SECTIONAL MATRIX RINGS

- Creates restorations with natural anatomy
- Thin, flexible bands easily conform to any surface
- No special matrix pliers required
- One clamp fits all teeth
- Clamps are stackable

Omni-Matrix Sectional bands conform to the natural anatomy of the tooth, while the clamp tines provide multiple contact points. The specialized band contour ensures the edge of the matrix will not catch on the gingival margin during placement. The retainer clamps stack easily, allowing both sides of the tooth to be held in a matrix at the same time. The retainer can be placed with any rubber dam forceps or sectional matrix forceps. The bands are interchangeable with all brands of sectional retainers.

INSTRUCTIONS

1. Place matrices then wedge.
2. Place retainer clamp.
Optional: Stack multiple clamps.

CONSTANT RADIUS VS. REVERSE CURVE

Traditional sectional matrices often catch on the gingival margin. This prevents you from being able to position the matrix readily and often deforms it.

The Omni-Matrix Sectional system was created with the natural contour of the tooth in mind, eliminating the problems experienced with traditional systems.

**Triodont® V3 System™**  
**SECTIONAL MATRIX SYSTEM**

- Has wide applications for sectional matrix use  
- Consistently achieves accurate contacts  
- Creates predictable, tight contacts  
- Ring and wedge system combine to seal and shape the restoration to minimize required finishing  
- System is among the simplest and most accurate matrix solutions on the market  
- Can be used on molars, premolars, and primary teeth

The contoured shape of the SuperCurve Matrix saves you time and allows you to achieve even better restorations, and the non-stick coating makes removing the matrix easier and faster. It’s the perfect system for any Class II restoration.

### WHY CHOOSE A SECTIONAL MATRIX?

**Sectional Matrix Restoration**
- User-friendly system  
- Natural contours  
- Tight, anatomically correct contact points at correct height of contour

**Circumferential Band (Tofflemire-style) Restoration**
- Large food trap below  
- Fails to restore proximal anatomy  
- Thin contact at the marginal ridge  
- Likelihood of fracture, occlusal interference, recurrent caries, and periodontal disease

1. realityesthetics.com.
**Triodent® SuperCurve Matrix**

*SUPERSNUG NON-STICK MATRICES*

- Matrix hugs the tooth and prevents any interference with ring placement
- Matrix shape features anatomical accuracy and curvature
- Ultra-thin non-stick finish minimizes adhesion of the bonding agent or composite to the matrix band
- Gingival apron provides matrix coverage for deeper preparations

**Triodent® V3 Tab-Matrix™**

*SECTIONAL MATRIX*

- Matrix bands feature significantly greater horizontal curvature ensuring that more curvature remains as the matrix wraps around the tooth
- Pronounced marginal ridge produces accurate anatomy
- Matrix bands are shaped for commonly encountered cavities and produce excellent seals at the gingival margin
- Super thin matrices
- Placement tab and removal holes are designed for easy gripping with Pin-Tweezers
- Gingival apron on larger sizes provide matrix coverage for deeper preparations

The V3 Tab-Matrix has a pronounced ridge on the occlusal margin, designed to produce natural-looking Class II composite restorations.

**Triodent® ClearMetal™ Matrix**

- Transparent matrix band has the advantages of metal malleability
- Matrix can be used with the V3 Ring and AdaptiVe Wedge for precise anatomy and a “clear” advantage
- Anatomical design produces precise contours, saving finishing time
- Greater matrix curvature hugs tooth for stability during placement
- Matrix wings won’t get in the way during ring placement
- Non-stick finish makes matrix removal easy

**InterGuard®**
INTERPROXIMAL TOOTH GUARD

The InterGuard interproximal tooth guard reduces risk of iatrogenic damage by protecting adjacent teeth. Stable curls at each end leave transition angles clear for full access. The .004 thick stainless steel InterGuard tooth guard is great for tunnel preparations and protecting the adjacent tooth during air abrasion.

"InterGuard interproximal tooth guard was developed as a protective shield following the publication of a clinical investigation proving that two-thirds of the approximal surfaces of adjacent teeth showed evidence of iatrogenic preparation damage. In my office I soon found that InterGuard allows you to work both faster and safer, and I am proud to have contributed with a tool which has been called another step in the direction of higher quality dentistry."

UltraSeal XT™ plus
HYDROPHOBIC PIT AND FISSURE SEALANT

• High retention rate
• Direct delivery into difficult-to-access areas
• Bubble-free, drip-free placement
• High marginal retention prevents microleakage
• Penetrates deepest pits and fissures
• Thixotropic/ideal viscosity flowability
• Four shades: Opaque White, Clear, A1, and A2

UltraSeal XT plus hydrophobic pit and fissure sealant is a light-cured, radiopaque composite sealant that contains fluoride. It is stronger and more wear resistant because it is a 58%-filled resin and has less polymerization shrinkage than competitive products. Used with the Inspiral™ Brush Tip, the thixotropic nature of UltraSeal XT plus sealant causes itself to thin as it’s expressed from the tip—allowing it to penetrate deep into the pits and fissures. When the resin stops flowing the shear thinning ceases and placement is complete—preventing it from running before it can be light cured. Using PrimaDry™ drying agent with UltraSeal XT plus sealant enhances penetration into pits and fissures by eliminating moisture that can cause failure in hydrophobic sealants.

BEFORE AND AFTER

Before. After UltraSeal XT plus sealant.

Before. After UltraSeal XT plus sealant.

FIVE SIMPLE STEPS

1. Etch for 30 seconds on uncut enamel, 15 seconds on cut enamel. Rinse.
2. Remove visible moisture. PrimaDry™ drying agent will desiccate.
3. Apply PrimaDry agent for 5 seconds with Black Micro™ FX™ tip, then air dry.
4. Place UltraSeal XT plus sealant.
5. Cure for 3 seconds with VALO™ curing light on Xtra Power mode or 10 seconds on Standard Power mode.

“Before and After” pictures show the effectiveness of UltraSeal XT plus sealant.

“With its adjustable fibers and helical channel, the Inspiral™ Brush tip is designed to optimally deliver UltraSeal XT sealants. Image of the bristles and tooth (on the right) were taken at the same magnification, and then overlaid.”

“The LEADER IN SEALANTS since 1998!”

---

“Before. After UltraSeal XT plus sealant.”

“Before. After UltraSeal XT plus sealant.”

---

“We use this wonderful product on at least 30 patients a day. As a pediatric dentist for 38 years, prevention of cavities is the cornerstone of our practice. We have tried all the sealant products, and UltraSeal XT plus sealant has been the absolute best for ease of application and long-term retention and durability. The best testimony is having moms who were our patients bring their kids to us for sealants. Many of the moms still have sealants in place and have no cavities.” —DR. JAMES HEFFNER – DAVIDSONVILLE, MD

“Being a pediatric dentist, this is one material I cannot practice without. I have never found such a user-friendly sealant that is so easy to apply and with such excellent retention as the UltraSeal XT plus sealant.” —DR. DAVID GOLDSTEIN – ORLANDO, FL

“I love the UltraSeal XT plus sealant. I have used many different sealant products in my office as well as the dental school in which I am faculty. Actually, all the pediatric dental instructors had tried eight different sealants to compare, and UltraSeal XT plus was unanimously the sealant of choice. The viscosity, multiple shades, partially filled consistency, and the fact it is fluoride-releasing make UltraSeal XT plus the most reliable and superior sealant that I choose to use on my patients.” —DR. ANGELA M. STOUT – ERDENHEIM, PA
• For use with UltraSeal XT plus pit and fissure sealant
• Reduces microleakage in hydrophobic sealants

PrimaDry drying agent is optimal for pit and fissure drying and prior to placement of hydrophobic sealants. It contains 99% organic solvents and 1% primer. PrimaDry drying agent rapidly volatilizes moisture content of pits and fissures after rinsing off etchant with water spray and air drying. The ultrafine primer film allows UltraSeal XT™ plus pit and fissure sealant to flow perfectly into every pit and fissure. Do not use on dentin.
UltraSeal XT™ hydro
HYDROPHILIC PIT AND FISSURE SEALANT

- It is hydrophilic before it is cured, hydrophobic once cured, and has a self-adhesive quality
- Advanced adhesive technology
- Fluoresces under black light to ensure sealant is still in place
- Highly filled resin - 53%
- Thixotropic/ideal viscosity flowability
- Two shades: Opaque White and Natural

UltraSeal XT hydro hydrophilic pit and fissure sealant is a light-cured, radiopaque composite sealant that contains fluoride. It is stronger and more wear resistant because it is a 53%-filled resin and has less polymerization shrinkage than competitive products. Used with the Inspiral™ Brush Tip, the thixotropic nature of UltraSeal XT plus sealant causes itself to thin as it’s expressed from the tip—allowing it to penetrate deep into the pits and fissures. When the resin stops flowing the shear thinning ceases and placement is complete—preventing it from running before it can be light cured. The advanced hydrophilic chemistry works when all visible moisture has been removed. UltraSeal XT hydro sealant is more forgiving of moisture deep inside pits and fissures.

FOUR SIMPLE STEPS

1. Etch for 30 seconds on uncut enamel, 15 seconds on cut enamel. Rinse.
2. Remove visible moisture.
3. Place UltraSeal XT hydro sealant.
4. Cure for 3 seconds with VALO™ LED curing light on Xtra Power mode or 10 seconds on Standard Power mode.

"Since I have had such great success with Opalescence™ Boost™ and Opalescence™ PF whitening, I also ordered the UltraSeal XT hydro sealant. I was previously using a competitor's sealant and they would pop off within a few weeks at times and just sat on top of the tooth. While placing the UltraSeal XT hydro sealant, you can literally see the sealant going into the pits and fissures! Day and night difference, and the use of the little light is a fun way to show the kids and parents and be able to check them at their 6-month appointments!!!"
—STEPHANIE VIEAU, DENTAL ASSISTANT – CENTREVILLE, VIRGINIA

MARGINAL RETENTION AND MICROLEAKAGE

UltraSeal XT hydro Sealant

No microleakage. Sealed margins.

Competitor Hydrophilic Sealant

Microleakage. Peeling from margins.

After placing a sealant, it is often difficult to check margins and retention. UltraSeal XT™ hydro sealant addresses that difficulty with added fluorescent properties. Fully viewable under a black light, the sealant’s fluorescence allows you to check the integrity of the sealant at the time of placement and at subsequent visits.

ULTRADENT'S TOOTH FAIRY PROGRAM

Redeem extracted teeth for credit towards Ultradent's high-quality products!

PROGRAM DETAILS

We will credit your Ultradent account with $1.00 for each usable tooth you send us.

In order for Ultradent to develop the quality dental products that we provide, it is necessary that many products be tested on human teeth.

With this in mind, and for your convenience, we have set up a simple process whereby you can dispose of and redeem extracted teeth for credit. This credit can be used to purchase Ultradent products. We will supply you with 50 ml bottles of .05% Chlorhexidine Gluconate* solution for safe storage and shipping. For each usable tooth** you send us, we will credit your Ultradent account with $1.00 toward future purchases of Ultradent products.

To order your bottles for the program, please contact us at 801.552.5512 ext. 4180 or anita.raisch@ultradent.com. We appreciate your contribution.

*Chlorhexidine Gluconate is a decontaminant that conforms to OSHA standards and state laws for shipping teeth. Specific bio-hazard or color-coded labeling is not required under OSHA requirements.

**Usable teeth include whole adult teeth without root canals or major decay. Teeth should be unbroken with the coronal portion significantly intact. Teeth with small fillings or small- to medium-sized decay are acceptable.

35551 - Black Light Keychain 1pk

Featuring an ergonomic handpiece, innovative prophy angle designs, and low splatter prophy pastes, our Ultrapro Tx family of products offer a powerful, comfortable, and effective solution to all your polishing needs.

- Lightweight—2.2 oz to reduce hand and arm fatigue
- Ergonomically shaped and low vibration for maximum comfort
- Swivels 360° for easy rotation
- Soft-start motor to minimize splatter
- Maximum speed of 4,000 RPMs
- Universal E-type motor for multifunctionality
- Compatible with nearly all disposable prophy angles

Ultrapro Tx disposable prophy angles feature smooth, quiet gears and an ergonomic design so that both you and your patient have a comfortable experience. With an advanced cup design both inside and out, the Extra, Skini, and Sweep angles are built to clean better than ever.

- Lightweight—2.2 oz to reduce hand and arm fatigue
- Ergonomically shaped and low vibration for maximum comfort
- Swivels 360° for easy rotation
- Soft-start motor to minimize splatter
- Maximum speed of 4,000 RPMs
- Universal E-type motor for multifunctionality
- Compatible with nearly all disposable prophy angles

DISPOSABLE PROPHY ANGLES

Ultrapro™ Tx

- Innovative cup design for reduced splatter and efficient cleaning
- Designed for better access and improved visibility, with 20% shorter head and 25% slimmer neck (Skini and Sweep angles)
- All designs feature optimal flare
- Outer ridges for improved interproximal cleaning (Extra, Skini, and Sweep angles)
- Available in right- or contra-angle designs (Extra and Skini angles)
- Comfortable, ergonomic design
- Not made with natural latex rubber
- Skini angle is sterile to minimize risk of infection

Ultrapro Tx disposable prophy angles feature smooth, quiet gears and an ergonomic design so that both you and your patient have a comfortable experience. With an advanced cup design both inside and out, the Extra, Skini, and Sweep angles are built to clean better than ever.

- Lightweight—2.2 oz to reduce hand and arm fatigue
- Ergonomically shaped and low vibration for maximum comfort
- Swivels 360° for easy rotation
- Soft-start motor to minimize splatter
- Maximum speed of 4,000 RPMs
- Universal E-type motor for multifunctionality
- Compatible with nearly all disposable prophy angles

DISPOSABLE PROPHY ANGLES WITH BRUSH GUARD

Ultrapro™ Tx Sweep

- Brush helps prevent accumulation of saliva and paste on outside of the cup
- Sweeps paste back toward the tooth, allowing the clinician to continue working and make fewer stops to refill the cup with prophy paste
- Advanced internal blade design
- Outer ridges for interproximal cleaning
- A 20% shorter head and 25% slimmer neck design gives better access and improved visibility
- Optimal flare
- Comfortable, ergonomic shape
- Not made with rubber latex
- Available in soft or firm cup design

The Ultrapro Tx Sweep disposable prophy angle has an innovative brush guard designed to keep the treatment field clean and free of excess saliva and paste. The flexible bristles efficiently keep saliva from collecting and roping around the outside of the cup. The cup also sweeps the prophy paste back toward the tooth, so the paste is not wasted and lost in the saliva.

Reduces splatter by up to 95% to help prevent cross contamination.1

ultradent.com
Enamelast fluoride varnish produces a mechanical occlusion of the dentinal tubules in the treatment of tooth hypersensitivity. This makes it ideal to use before or after whitening to help ease patient discomfort in the cervical area.

**Before and After**

Before Enamelast fluoride varnish.  
Immediately after applying Enamelast fluoride varnish.

Enamelast varnish produces a mechanical occlusion of the dentinal tubules in the treatment of tooth hypersensitivity. The AAPD recommends fluoride varnish for use as a preventative adjunct to reduce the risk of caries. The use of fluoride varnish for caries prevention has also been endorsed by the ADA.

Enamelast fluoride varnish is a xylitol-sweetened, 5% sodium fluoride in a resin carrier. Its unique formula is made with a patented adhesion-promoting agent for enhanced retention, while providing superior fluoride release and uptake. Available in syringe applications in Walterberry flavor and unit-dose applications in Walterberry, Orange Cream, Cool Mint, Bubble Gum, Caramel flavors, and Flavor-Free.

Enamelast fluoride varnish produces a mechanical occlusion of the dentinal tubules in the treatment of tooth hypersensitivity. **Ultradent™ Universal Dentin Sealant**

FOR TRANSIENT ROOT SENSITIVITY

- Quick application—paint and dry
- Great for hygienists’ “tool box”
- Ideal following scaling and root planing
- Temporary blockage of tubules

Ultradent Universal Dentin Sealant is a biocompatible, nonpolymerizable, high-molecular-weight resin in a volatile organic solvent.

Coat sensitive roots with Ultradent Universal Dentin Sealant to seal tubules and reduce discomfort after root planing or scaling.

![Image of Ultradent Universal Dentin Sealant](image)

**Opalpix™**

INTERPROXIMAL CLEANER

- Will not splinter or break
- Has a textured surface for better cleaning
- Perfect balance between flexibility and rigidity
- Massages interproximal tissue while removing debris and plaque
- Personalized stickers available with 100pk upon request

![Image of Toothpicks vs. Opalpix cleaners](image)

**Uses**

Use Opalpix interproximal cleaners to clean under and around bonded retainers and brackets.

![Image of Opalpix cleaners in use](image)

**265 - Universal Dentin Sealant Syringe Kit**

- 4 x 1.2 ml syringes
- 20 x Black Mini Brush tips

**266 - Universal Dentin Sealant Syringe 4pk**

- 1.2 ml syringes

**6600 - Opalpix 12pk**

- 5590 - Opalpix 100pk

- Each pk contains 32 Opalpix cleaners

**Note:** Ultradent Universal Dentin Sealant is NOT a bonding agent. For unsurpassed bonding products, see pages 64. If base or liner is needed, use Ultra-Blend™ plus liner, page 69.
Opalescence™ Whitening Toothpaste

**PREVENT AND HYGIENE**

1. Results in as little as one week¹
2. Proven to whiten teeth in four weeks¹
3. Contains hydrated silica which is proven to remove staining¹
4. Gentle on gums¹
5. Safe for long-term daily use
6. Contains sodium fluoride to help prevent cavities and strengthen enamel²
7. Exceptional fluoride uptake³
8. 90 RDA for maximum enamel, dentin, and restoration protection⁴
9. Triclosan and TiO₂ free
10. Vegan - no animal products are used

Opalescence™ whitening is the leader in tooth whitening. Part of that product family is Opalescence™ Whitening Toothpaste, which was developed by a dentist. It actively removes surface stains and is gentle enough to use every day, thanks to its unique silica blend.

- Three kinds of exotic mint are blended into a fresh, clean, cool flavor
- Sweetened with xylitol which may reduce the risk of tooth decay
- Our Sensitivity Relief formula provides all the whitening benefits of the Original, with the added benefit of maximum strength 5% potassium nitrate

Surgical

OsteoGen Plug
• The OsteoGen® Bone Grafting Plug is an easy and affordable way to clinically deliver bone graft. It’s mainly used for ridge maintenance and socket preservation.

• The idea is simple: a collagen plug is filled with OsteoGen® non-ceramic bone graft crystals. This creates the OsteoGen® Bone Grafting Plug.

• The result is a bone graft combined with a collagen plug for ease of clinical delivery—without the need for a membrane.

• The OsteoGen® Bone Grafting Plug combines Bioactive Resorbable Calcium Apatite with a bovine Achilles tendon collagen matrix. This creates a structure that mimics the organic and inorganic components of physiologic bone.

• OsteoGen® is a bioactive and resorbable calcium apatite-based bone graft. It is physicochemically and crystallographically similar to human bone. ¹

• The OsteoGen® non-ceramic production process yields a resorbable bone graft with a unique Ca:P ratio. It is NOT a β-TCP and NOT a non-resorbable dense ceramic HA (nor is it a biphasic mixture of the two).

• The Bovine Achilles Tendon collagen carries the bone graft for easy and efficient delivery to the site. Thus, the hassle and time spent mixing and packing particulate bone grafts is eliminated—and so is the potential for particulate wash out.

• The Type I collagen acts as a wound dressing—not only to stabilize the clot, but also to absorb and deliver blood flow to the slowly resorbing graft (a feature critical for the initiation of bone formation and early angiogenesis).

• The collagen found in the OsteoGen® Plug provides a scaffold for keratinized tissue to develop over the grafted site.

• The OsteoGen® Bone Grafting Plug will show radiolucent on the day of placement. It becomes radiopaque in 3–5 months when it has been replaced with host bone. Implant placement can then be achieved.

STEPs TO SUCCESS

1. Extract tooth and thoroughly debride site in order to increase the healing capacity of the affected tissues.2
2. Insert OsteoGen® Plug to deliver bone graft and absorb blood flow. This will stabilize the clot and initiate early bone formation and angiogenesis.
3. Approximate tissue and crisscross suture over top to keep OsteoGen Bone Grafting Plug in place. There is no need to use a membrane to cover.
4. While OsteoGen Plug resorbs, the OsteoGen bone graft crystals offer a slowly resorbing bioactive scaffold for bone formation while the collagen provides a scaffold for developing tissue.
5. The OsteoGen crystals resorb over 3–5 months (patient specific) and will turn from radiolucent to radiopaque—which indicates sufficient bone formation.

CLINICAL APPLICATION

1. Tooth 12, set to be extracted.
2. The surgical site was initially debrided to induce bleeding and establish the Regional Acceleratory Phenomenon.
3. Insert appropriately sized OsteoGen Bone Grafting Plugs and allow blood to absorb.
4. When OsteoGen Plugs are in place, suture over top of socket to contain. No membrane is required.
5. OsteoGen is a low density bone graft and the OsteoGen Plugs will show radiolucent on the day of placement.

1. As the OsteoGen crystals are resorbed and replaced by host bone, the site will become radiopaque.
2. The collagen promotes keratinized soft tissue coverage over the graft.
3. Solid bone is seen upon reentry prior to implant placement. In this image, a core sample was retrieved.
4. Implant is placed. Note the histology below showing mature osteocytes in lamellar bone formation.
5. Some of the larger OsteoGen crystals and clusters are slowly resorbing. Bioactivity is demonstrated by the high bone to crystal contact absent of any fibrous tissue encapsulation.2

ULTRADENT™ TIPS
DESIGNED TO DELIVER

Check out our tips with **LOK-TITE**

Luer Lock tips with Lok-Tite feature double threads that lock the tip into place on the syringe for increased security, and wings for easy attachment and removal.

The chemistries you use are different. Some are chemically activated, needing to be mixed immediately before delivery. Others have varying viscosities. Some work in pits and fissures, some inside canals, and some on smooth surfaces. Each chemistry you use is designed for a specific purpose. Shouldn’t the same be true for your tips?

Ultradent makes tips designed to deliver each chemistry we create. Whether you’re delivering a solution, a flowable composite, a viscous gel, or thick impression material, we make the perfect tip for the job. And since our tips are engineered on-site, we test each design to ensure it works perfectly with the chemistry it’s intended for.

**Black Micro™ FX™ Tip**
- Accommodates various viscosities
- Flocked tip fans out to spread materials in a thin, uniform layer

Designed for: PrimaDry™ and PermaSeal™.

**Black Mini™ Tip**
- Dispenses large volumes
- Opaque plastic preserves flow of light-cured materials

Designed for: Ultra-Blend™ plus, Ultradent™ LC Block-Out Resin, PermaFlo™, PermaFlo™ Purple, DeOx™, TriAway™ Adapter, UltraTemp™, Opalescence® Boost™, Ultradent® Diamond Polish Mint, OpalDam™, Opalescence® Endo, and OraSeal™ Caulking.

**Black Mini™ Brush Tip**
- Precise, controlled delivery of aqueous materials
- Tight, adjustable brush fibers minimize bubbles
- Unique to Ultradent

Designed for: Consepsis®, Peak® SE, Peak®-ZM, Seek®/Sable® Seek®, Ultradent® Silane, and Ultradent® Universal Dentin Sealant.
RESTORATIVE TIPS

Black Micro™ Tip
- Provides pinpoint precision

### Intraoral Tip
- Allows precise placement
- Attaches to dual-barrel mixing tips

Designed for: PermaFlo® DC.

### Metal Dento-Infusor™ Tip
- Places hemostatic agents precisely and effectively removes superficial coagulum
- Blunt, bent cannula with padded brush enables gentle pressure in the sulcus
- Ultradent’s first tip, the “MDI” remains paramount for successful tissue management

### Micro Capillary™ Tips
- Bright color is easily identified against soft tissues
- The world’s smallest molded tips

### Micro 20 ga Tip
- Large-gauge cannula enables consistent flow
- Standard flowable composite delivery tip

Designed for: Opalescence® Boost®, MTAFlow®, PermaFlo®, PermaFlo® Purple, PermaFlo® Pink, OpalDam®, and OpalDam® Green.
RESTORATIVE AND ENDODONTIC TIPS

SoftEZ™ Tip
- Tip fibers provide visible, controlled delivery
- Brush fibers facilitate smooth application
Designed for: Enamelast™.

SST™ - Surgical Suction Tip
- Ideal for delicate surgeries
- Large-diameter tip opening
Designed for: Ultradent™ Luer Vacuum Adapter for small periodontic or endodontic procedures and controlled suction of Opalescence™ Boost™.

Ultradent™ Mixing Tip
- Mixes and delivers in one action
Designed for: UltraTemp™, EndoREZ™, and PermaFlo™ DC.

White Mac™ Tip
- Dispenses thick and large volumes
- All-plastic delivery tip
- Greater angle for easy intraoral delivery
Designed for: OraSeal™ Caulking, OraSeal™ Putty, Consepsis™ Scrub, Opalustre™, and thicker paste chemistries.

White Mini™ Tip
- Dispenses large volumes
- All-plastic delivery tip
- Easily dispenses viscous chemistries
Designed for: Consepsis™ Scrub and Opalustre™.

**Endodontic Tips**

**Capillary Tips**
- Never use to deliver irrigating materials or endodontic chemistries.
- Evacuates canals and substantially minimizes use of paper points.
- Narrow, flexible taper accesses curved canals.
- Great for dental abscess procedures.

Attach to the Ultradent™ Luer Vacuum Adapter for moisture removal from endodontic canals.

**Micro Capillary™ Tips**
- Bright color is easily identified against soft tissues.
- The world’s smallest molded tips.

**Endo-Eze™ Irrigator Tip**
- Provides ideal reach, reducing risk of expressing chemicals past the apex.
- Comes with a flexible, blunt cannula with a unique, anti-obturating end.
- Non-sterile.

Designed for: Ultradent™ 5 ml syringe.

**Endo-Eze™ Tips**
- Great for endodontic procedures such as post cementation and core buildups.
- Flexible, strong cannulae.
- Bend easily.
- Tip length 19 mm.

Designed for: Luting materials and air/water delivery. Use with: TriAway™ Adapter, PermaFlo™ DC (20 ga), and other Ultradent syringes.

---

**WARNING:**
- Use recommended endodontic tip.
- Make sure rubber stopper is in position.
- Take extra precaution when not using sideport tips.
- Make sure tip is not wedged in the canal.

---

WARNING:
• Use recommended endodontic tip • Make sure rubber stopper is in position
• Take extra precaution when not using sideport tips • Make sure tip is not wedged in the canal

NaviTip™ Tips 29 ga
with Single Sideport
• Designed to direct the flow of chemistry through the sideport of the tip before flowing down into the area of the apex, thus reducing the risk of product extrusion
• Flexible, stainless steel cannula easily navigates curved canals
• Bendable tip 0.33 mm

29 ga delivers paste materials: MTAFlow™, EndoREZ™, and UltraCal™ XS.

NaviTip™ Tips 29 ga
• Provide controlled delivery to the apex
• Flexible, stainless steel cannulae easily navigate curved canals
• Bendable tip 0.33 mm

29 ga delivers paste materials: MTAFlow™ and EndoREZ™.

NaviTip™ Tips 30 ga
• Provide controlled delivery to the apex
• Flexible, stainless steel cannulae easily navigate curved canals
• Bendable tip 0.30 mm

30 ga delivers solutions/gels: File-Eze™, Ultradent™ EDTA 18% Solution and Consepsis™.

NaviTip™ 31 ga Tips
with Double Sideport Irrigator
• Double sideports deliver irrigants safely, minimizing the possibility of chemicals being expressed past the apex
• One of the world’s smallest cannula navigates the most intricate canal spaces

Designed for: ChlorCid™, ChlorCid™ V, ChlorCid™ Surf, Ultradent™ EDTA 18% Solution, and Ultradent™ Citric Acid 20%.

NaviTip™ FX™ Tips 30 ga
• One-of-a-kind brush cleans, scrubs, and irrigates simultaneously
• Rigid cannula

Designed for: Ultradent™ Citric Acid 20% Solution.

NOTE: UltraCal™ XS calcium hydroxide paste should only be used with NaviTip 29 ga Single Sideport tips.

ORTHODONTIC AND IMPRESSION TIPS

Metal Opal™ Seal Tip
- Soft fibers are ideal for applying a consistent, even, thin layer to etched enamel
- Metal cannula provides ideal flow and ease of expression

Metal Opal Seal 19 ga

Opal™ Band Cement Mixing Tip
- Mixes and delivers in one action

Opal Band Cement 500-086

Opal™ Bond Flow Tip
- Large-gauge cannula enables consistent flow
- Standard flowable composite delivery tip

Opal Bond Flow 20 ga

Impression Mixing Tips
- Enable direct delivery of impression materials
- Automixing, disposable, and color coded

Yellow 2902
Pink 2903
Teal 2904

IntraOral Impression Tip
- Allows precise placement
- Attaches to impression mixing tips

IntraOral Impression 2906

Dynamic Mixing Tip
- Easily and securely locks on cartridge
- Provides consistent mixing of base and catalyst

Dynamic Mixing 4075
Skini Delivery and Clear Skini Delivery Syringes
- Generates pressure in the syringe with low force to the plunger, resulting in more precise apical delivery
- Low waste
Designed for: EndoREZ™, MTAFlow™, and PermaFlo™ DC.

ViscoStat™ Delivery Syringe
- Snug Luer Lock threads prevent tips from popping off
- Colored plastic is light sensitive to preserve chemistry
Designed for: 30 ml IndiSpense™ syringes of ViscoStat™, ViscoStat™ Clear, Astringedent™, and Astringedent™ X.

Ultra-Etch™ Delivery Syringe
- Snug Luer Lock threads prevent tips from popping off
- Blue color makes identification easy
Designed for: 30 ml IndiSpense syringes of Ultra-Etch™.

1.2 ml Delivery Syringe
- Snug Luer Lock threads prevent tips from popping off
Designed for: All 30 ml IndiSpense™ syringes.

5 ml Delivery Syringe
- Syringe barrel flanges positioned for optimum control/leverage
Designed for: Irrigants for in-office or dentist-supervised procedures, as well as Capillary tip, ChlorCid™, Ultradent® Citric Acid, Ultradent® EDTA 18% Solution, and Consepsis™.

Ultradent™ Syringe Cover
- Provides an easy, reliable barrier
- Ensures asepsis of syringe during cleanup
Designed for: All 1.2 ml syringes.
# ACCESSORIES

## Ultradent™ Mixing Wells

FOR PROFOUND
HEMOSTASIS

Tissue Management

Unparalleled tissue management starts with rapid, profound hemostasis. For more than 40 years, dentists have trusted the immediate hemostatic power, detailed margins, and elimination of surface bleeding and sulcular fluid provided by Ultradent’s tissue management products.

FOR HEMOSTASIS AND FLUID CONTROL

Our complete line of solutions continuously sets the standard for superior control and predictability while offering dentists fast, reliable, and affordable products.

For continuous control of bleeding and sulcular fluid, no one offers a more complete line of solutions.

1. With the Dento-Infusor® tip, scrub hemostatic firmly against cut bleeding tissues until bleeding stops.

2. Give firm air/water spray to remove residual coagulum and to test for profound hemostasis. If bleeding continues, repeat.

3. After complete hemostasis has been attained, excellent retraction is achieved using UltraPak® knitted cord placed with the UltraPak® packer.

Reduce cross-contamination and need for sterilizing by loading unit dose syringe directly from the IndiSpense™ syringé.

Firmly rub Viscostat™, Astringedent™, or Astringedent™ X hemostatics against the cut bleeding tissue to obtain hemostasis.

FERRIC SULFATE - ACTIVE HEMOSTASIS
Note: Perfect sulcular fluid control is mandatory if bonding and luting is adjacent to gingival sulcus.

FOR IMPRESSION TAKING
An astringent is a substance that eliminates permeability of epithelium to tissue fluid flow. The result is a dry field, an important tissue management solution. An ideal impression for successful crowns, veneers, and bridges must accurately capture the preparation margins. This can be ensured only through reliable hemostasis and gingival displacement.

BLEEDING
1. Subgingival preparation with bleeding.

HEMOSTASIS
2. Scrub Astringedent™ X hemostatic firmly against bleeding tissues with Metal Dento-Infusor™ tip.

CLEANING/TESTING
3. Firm air/water spray removes residual coagulum and tests tissue for quality, profound hemostasis.

DISPLACEMENT
4. Soak Ultrapak™ knitted cord in Astringedent™ X hemostatic, pack, and leave for 5 minutes.

DRYING/TESTING
5. Remove Ultrapak™ knitted cord, follow with a firm air/water spray and dry.

TAKE IMPRESSION
6. Express Thermo Clone™ VPS impression material.

RESULT
7. Predictable quality impressions.

FOR VITAL PULPOTOMY IN PRIMARY TEETH - EXPANDED APPLICATION
HEMOSTASIS
1. Control bleeding. Use Dento-Infusor tip with ViscoStat or Astringedent™ hemostatics. Use sterile water for this procedure.

PROTECTION
2. Place a thin layer of MTAFlow™ White repair cement over the root canal orifice.

BARRIER
3. Apply a thin layer of Ultra-Blend™ plus liner.

ETCH
4. Apply Ultra-Etch™ phosphoric acid or Peak™ SE Primer.

BOND
5. Apply Peak™ Universal Bond bonding agent.

RESTORE
6. Use your preferred restorative material for definitive restoration.

"We have many products and procedures in dentistry that are technique sensitive—tissue management is especially so. Done right, it’s gorgeous! You see results almost immediately. Done wrong, the bleeding doesn’t stop, and you end up with that awful coagulum everywhere."
—DR. DAN FISCHER, DDS

Using the correct tip is essential to achieving profound, dependable hemostasis and sulcular fluid control.

Hemostatic agents are only as good as their delivery systems. Dento-Infusor tips infuse hemostatic agents into bleeding capillaries. The padded brush end rubs the agent into capillaries and wipes coagulum away. The result is a clean, dry preparation ready for impressions.

Tip infuses ferric sulfate hemostatic agent into capillaries, forming a cork-like “plug,” then cleans coagulum away.

The softer padded end on the Blue Mini™ Dento-Infusor™ tip enables hemostatic to temporarily close off capillary ends by causing collagen in them to swell.

FOR CHALLENGING CASES

1. Old, fractured amalgam filling. Patient has been chewing on fragments for months, leaving gingiva inflamed.

2. Remove old amalgam. Keep caries as a barrier for the time being, in case pulp is exposed.

3. Expose gingival margin of restoration before placing a rubber dam. Move to step 4, if necessary, to improve visibility.

4. If necessary, achieve profound hemostasis by applying ViscoStat™ hemostatic or Astringedent™ X hemostatic with brush end of Metal Dento-Infusor™ tip.

5. Place a dental dam; then remove residual caries. Treat exposed pulp if necessary. Etch and bond with Peak™ Universal Bond adhesive.

6. DO NOT wedge matrix band until first layer of composite has been placed.

7. First, place matrix band to create a gingival barrier, etch and bond after placing matrix band, then place first layer of composite.

8. Wedge after first layer. Loosen matrix band and contour for good interproximal contact. Place an initial adaptive layer with PermaFlo™ flowable composite and fill cavity with one of our quality composites.

Bleeding must be controlled before starting any direct bonding procedure.

Profound hemostasis achieved, preparation is ready to restore.

As a rule, the Metal Dento-Infusor is the tip of choice for use with ViscoStat™, ViscoStat™ Clear, Astringedent™, and Astringedent™ X hemostatic agents. It can be used with enough pressure to infuse the capillaries with the hemostatic agent. If control of only sulcular fluid is required, the softer tip end of the plastic Blue Mini™ Dento-Infusor™ tip may be gentler on the newly healed epithelium at the time of bonding subgingival definitive restorations.

Both infusors allow hemostatic agents to be scrubbed into the tissue in a targeted and sparing way, which is not possible with other means such as cotton pellets, micro brushes, and special brushes.

Dento-Infusor Tips, see pages 123–124.
ViscoStat™
20% FERRIC SULFATE

- Provides profound hemostasis
- Stops moderate bleeding
- Saves chair time
- Does not impede hard or soft tissue healing
- Eliminates sulcular fluid contamination for optimal bonding
- Decreases costly impression remakes

ViscoStat hemostatic is a 20% ferric sulfate equivalent hemostatic agent with inert binding agents in a viscous, aqueous solution. It contains fumed silica to limit the acidic activity, making it kind to hard and soft tissue.

ViscoStat hemostatic solution is suited for a variety of dental and oral surgery procedures to arrest surface capillary bleeding. Such procedures include fixed prosthodontics, restorative-operative, periodontal treatment, etc. ViscoStat hemostatic is also recommended for retrofillings, canine impactions, gingivectomies, and as a “fixative” for pulpotomies.

Tip: Prevent leakage caused by sulcular fluid contamination during direct bonding procedures. Soak an Ultrapak™ knitted cord in a hemostatic and isolate the tissues. Follow with a firm air/water spray.

“ViscoStat hemostatic has allowed me to take clean, dry, accurate impressions even in some of the most hemorrhagic situations. Thank you! I appreciate it, my lab man appreciates it, and my patients appreciate it.”
—DR. MONTE PERSON – FRESNO, CA

“ViscoStat hemostatic can stop bleeding in the cervical area of a crown prep like nothing else I have ever seen! It is a miracle solution! I wish I knew how many thousands of hours it has saved me over the years. Thank you, Ultradent!”
—DR. SCOTT J. HADLEY – HAXTUN, CO

“Without a doubt I would be lost without ViscoStat hemostatic! It quickly stops sulcular bleeding, allowing me to place the Ultrapak #000 cord and get an excellent impression on the first try. It is also great to use when bonding composites near gingival tissues. ViscoStat hemostatic is a vital part of my crown prep and composite armamentarium.”
—DR. JULIE ANN ROUTHIER – SAVANNAH, GA

Note: Do not use epinephrine preparations with ferric sulfate products (ViscoStat, Astringedent), as blue/black precipitate will occur.

1. realityesthetics.com
ViscoStat™ Clear
25% ALUMINUM CHLORIDE

- Does not discolor the gingiva
- Stops minor bleeding
- Rinses easily
- Viscous gel
- Does not interfere with bonding

ViscoStat Clear hemostatic is a 25% aluminum chloride gel in a viscous, aqueous solution. Its tissue-kind silica formula temporarily eliminates minor bleeding. No coagulum is formed, nor does residue adhere to the preparation, which is especially critical in the esthetic zone. ViscoStat Clear hemostatic will not stain the hard or soft tissues.

ViscoStat Clear hemostatic is intended for sulcus retraction prior to impression making and to control bleeding and gingival fluid in restorative and operative dentistry. It is designed to be used with Ultrapak retraction cord and the Dento-Infusor tip. The gel facilitates the insertion of the cord into the sulcus.

1. realityesthetics.com

PROCEDURE

1. Subgingival preparation and bleeding sulcus.
2. Scrub hemostatic firmly against bleeding tissues with the Blue™ Mini™ Dento-Infusor tip. The clear gel allows easy visibility and rinses away quickly.
3. Place soaked Ultrapak™ cord into the sulcus. Leave for 5 minutes.
5. Finished restoration 2 weeks post-op.
Astringedent™
15.5% FERRIC SULFATE

- The “Classic” hemostatic agent for profound hemostasis
- Stops moderate bleeding
- Eliminates sulcular fluid contamination for optimal bonding
- Decreases costly impression remakes

Astringedent hemostatic is an aqueous 15.5% ferric sulfate hemostatic solution with a pH of ~1.0.

Astringedent hemostatic solution is well suited for a variety of dental and oral surgery procedures to arrest bleeding. Astringedent hemostatic can be used to prevent leakage caused by sulcular fluid contamination during direct bonding procedures.

Listed as a “CAN’T LIVE WITHOUT” product by a prominent independent research institute.¹

Note: ViscoStat™ and Astringedent hemostatic agents should be used with a Metal Dento-Infusor™ tip. The plastic Blue Mini™ Dento-Infusor™ tip should be used when you are dealing with newly healed epithelium, as the softer tip is slightly less aggressive.

Astringedent™ X
12.7% IRON SOLUTION

- Clinicians “go-to” hemostatic for all case situations
- Stops minor to severe bleeding

Astringedent X hemostatic is an aqueous 12.7% iron solution that works quickly to stop bleeding in seconds. It contains equivalent ferric sulfate and ferric subsulfate. Note: Diluted Astringedent X hemostatic does not equal ViscoStat or Astringedent hemostatics.

Use when a stronger, more potent hemostatic is required and when the attainment of quality hemostasis may be more challenging (e.g., in cases of difficult-to-stop, problem bleeding).

Astringedent™ X hemostatic and Metal Dento-Infusor tip facilitate profound hemostasis, even with challenging cases.

Astringedent™ Spot Remover
CLEANING SOLUTION

Astringedent Spot Remover is designed to remove ViscoStat hemostatic, Astringedent hemostatic, and Astringedent X hemostatic stains that will not come out of clothing with soap and water. Not for intraoral use.

Ultrapak™ and Ultrapak™ E
KNITTED AND EPINEPHRINE KNITTED CORD

- The original knitted cord
- Provides optimal tissue displacement and detailed margins for quality impressions
- Facilitates easy packing and stays in place better than twisted or braided cord
- Compresses upon packing then expands for optimal retraction
- Available with or without epinephrine²

Ultrapak cord is made of 100% cotton which has been knitted into thousands of tiny loops to form long, interlocking chains. After hemostasis is achieved, this unique knitted design exerts a gentle, continuous outward force following placement as the knitted loops seek to open. Optimal tissue displacement occurs in 5 minutes. Ultrapak E knitted cord is impregnated with racemic epinephrine hydrochloride.

Ultrapak cord can also be used to deliver ferric sulfate solutions subgingivally for sulcular fluid control. Ultrapak cord is designed to enhance tissue management techniques that use ViscoStat™ and Astringedent™ hemostatics. Conventional techniques using alum, aluminum chloride, etc. are also enhanced when using Ultrapak plain knitted cords, which carry significantly greater quantities of hemostatic solution than conventional cords.

Note: Do not use Ultrapak E knitted cord or other epinephrine preparations with ferric sulfate solutions, including ViscoStat, Astringedent, and Astringedent X hemostatics, as blue/black precipitate will occur.

THE ONE WITH THE STRIPE!™
With easy packing, excellent absorption, and exceptional retention, the proprietary knitted design of the Ultrapak cord has been the preferred choice for years.

Listed as a “CANT LIVE WITHOUT” product by a prominent independent research institute.³

* Data on file. ** Trademark of a company other than Ultradent. 1. realityesthetics.com. 2. Note: Do not use Ultrapak E knitted cord or other epinephrine preparations with ferric sulfate solutions, including ViscoStat, Astringedent, and Astringedent X hemostatics, as a blue/black precipitate will occur. Ultrapak knitted cord with epinephrine is not available in all countries. 3. “Can’t Live Without” Clinical Research Associates Newsletter, Volume 21, Issue 7, July 1997.
Knitted Ultrapak cord is composed of thousands of tiny, interlocking loops so it compresses and expands easier than other cords. 100% cotton fibers provide high absorption of hemostatic agents and sulcular fluids.

"Ultrapak cord is excellent at displacing the gingival tissue and allowing proper hemostasis, and is easy to place and remove. It works very well for all retraction purposes. The different sizes are good for all situations."
—DR. Y. CLEMENT SHEK – SAN FRANCISCO, CA

"In dentistry, time is money. Ultrapak cord's woven design makes packing the cord quick and easy, plus the tooth can be prepped or touched up without snagging the cord. This increases patient comfort in shortening the appointment with far less repeat impressions."
—DR. THOMAS J. FRANKFURTH – TAMPA, FL

"Ultrapak cord has taken the stress out of cord packing. This was the most frustrating part of my day when I was using other products. Add the amazing Astringedent hemostatic and... LIFE IS GOOD!"
—DR. LISA MARSHALL – XENIA, OH

Ultrapak cord is composed of thousands of tiny, interlocking loops so it compresses and expands easier than other cords. 100% cotton fibers provide high absorption of hemostatic agents and sulcular fluids.
Each bottle contains 8 ft/244 cm of cord.

198 - Ultrapak Cord #0 Epinephrine 1pk

#0 - .045” (1,143 mm)
- Upper cord for “double-cord” technique
- Protective “pre-preparation” cord

Note: Do not use Ultrapak E knitted cord or other epinephrine preparations with ferric sulfate solutions, including ViscoStat, Astringedent, and Astringedent X hemostatics, as blue/black precipitate will occur.
Fischer’s Ultrapak™ Packers

**THIN SERRATED PACKING INSTRUMENTS**

These specially designed packers ease the packing of Ultrapak™ knitted cord. Their thin edges and fine serrations press into the cord, preventing it from slipping off and reducing the risk of cutting the gingival attachment.

**45° TO HANDLE:** Our most popular packers, with heads at 45° to the handle and three packing sides. Circular packing of the prep can be completed without the need to flip the instrument end to end. Use the small packer on lower anteriors and upper lateral incisors.

**90° AND PARALLEL TO HANDLE:** Same size design as the 45° to handle packer, except one of the heads is in line with the shank and the other is at a right angle to the shank.

“Ultrapak Packers help place the cords properly in a quick and efficient manner. Thanks to the inventors!”
— DR. JOHN LUI – BELLEVUE, WA

171 - Small Packer - 45° to handle 1pk
170 - Regular Packer - 45° to handle 1pk
174 - Small Packer - 90° to handle 1pk
172 - Regular Packer - 90° to handle 1pk

Fischer’s Slide Packers

**THIN, CIRCULAR, NON-SERRATED PACKING INSTRUMENTS**

These thin, non-serrated slide packers are designed to place and compress cord with a sliding action as the clinician places cord around the prep. The thin head presses into the cord, and the smooth, circular head allows placement of cord in a sliding motion around the preparation without lifting the instrument from the cord.

834 - Small Slide Packer - 45° to handle 1pk
833 - Regular Slide Packer - 45° to handle 1pk
WHITEN YOUR SMILE - Questions Behind Tooth Whitening

There are many causes of tooth staining. Certain medicines, tooth trauma, root fillings, and foods and beverages can cause tooth discoloration over time. Some discolorations are superficial, while others are internal. Both can be effectively treated by a dentist. Professional whitening is the best option to safely lighten discolored teeth.

HOW DOES WHITENING WORK?
Opalescence whitening gels contain an active whitening ingredient, either carbamide peroxide or hydrogen peroxide. Peroxide gels break down into water, oxygen, and reactive oxygen molecules. These reactive oxygen molecules treat both the enamel and the dentin, oxidizing the bonds of discolored stain molecules. By changing the stained molecules, the tooth becomes lighter.1

Reactive oxygen molecules permeate the entire tooth, so there is no need for the whitening agent to be in contact with every surface of the tooth for the entire tooth to be whitened.

Because the reactive oxygen molecules need to dissipate from the tooth before bonding, it is necessary to wait 7–10 days before any bonding procedure.2–4

WILL WHITENING AFFECT BOND STRENGTH?
Even though whitening agents release oxygen into the tooth, existing bonds are not weakened.

Note: Allow a period of 7–10 days after whitening treatment before placing any resin. The high concentration of oxygen in the tooth could have a significant adverse effect on polymerization of the resins.

HOW LONG DO WHITENING RESULTS LAST?
Whitening results are very stable. However, depending on the patient’s diet and lifestyle habits, whitening may need to be redone periodically. Due to the safety of the whitening agents, this should not cause any concerns.

WILL WHITENING CAUSE TOOTH SENSITIVITY?
Tooth sensitivity can occur as a result of whitening. If sensitivity occurs, it is transient and disappears after the completion of whitening treatments. If desensitizing treatments are desired, we recommend the use of UltraEZ™ desensitizing gel or Enamelast™ fluoride varnish. Opalescence™ Whitening Toothpaste Sensitivity Relief can also be used to help prevent or lessen sensitivity if it occurs.

WILL WHITENING WITH OPALESCENCE WHITENING PRODUCTS WEAKEN THE TOOTH’S ENAMEL?
No. Opalescence whitening has not been shown to weaken tooth enamel.5–6

IMPORTANT: DENTIST SUPERVISION IS THE BEST WAY TO WHITEN!
Opalescence tooth whitening treatments are effective and safe if they are used appropriately and with the correct materials. This includes a comprehensive exam, briefing on the chosen whitening process, and monitoring of the patient during the treatment phase. Self-treatment by the patient with store-bought products often does not provide the results desired, and leaves the patient without options for managing potential sensitivity or other concerns.

Whitening Treatment Protocol
We recommend the following steps for professional whitening evaluation and treatment.

1. TAKE PATIENT’S MEDICAL HISTORY
   - Pregnant or breastfeeding women should not whiten.
   - Patients with serious health concerns should consult their primary care provider prior to treatment.

2. PERFORM DENTAL EXAM
   - Determine origin of staining, evaluate gingival and dental health.
   - Check for restorations in the esthetic zone that may not match after whitening. Discuss changing them out or resurfacing after whitening.

3. MANAGE PATIENT’S EXPECTATIONS
   - Discuss the possibilities and limitations of whitening for their specific circumstance and help them to establish realistic expectations.

4. PERFORM HYGIENE TREATMENT
   - Proceed to the hygiene treatment. Use polishing paste to remove all plaque. For patients with known sensitivity, apply Enamelast™ fluoride varnish after polishing.

5. DETERMINE THE INITIAL TOOTH COLOR
   - Identify the initial tooth color with the aid of a shade guide.
   - Take a photograph with shade tab after hygiene treatment.

6. EDUCATE PATIENT
   - Tooth whitening results can last a year or more. Depending on the patient’s nutrition and lifestyle habits, whitening may need to be repeated periodically to maintain the look they desire.
   - Instruct patient how to use the chosen whitening products and answer any questions or concerns.

7. CREATE WHITENING TREATMENT PLAN
   - Multiple Opalescence™ whitening products may be used as part of the whitening treatment plan to help the patient achieve their desired results. If patient has a history of tooth sensitivity, add a desensitizing protocol prior to the whitening treatment and consider using a lower concentration of gel and/or reduced wear time.
   - Patients can also use Opalescence Whitening Toothpaste Sensitivity Relief before and throughout their whitening treatment. Additionally, if patient tolerates whitening treatments without sensitivity, consider providing a higher concentration gel for more rapid results.

8. OBTAIN PATIENT’S CONSENT
   - Have the patient sign a whitening consent form that outlines the whitening treatment and cost involved.

9. DETERMINE THE FINAL TOOTH COLOR
   - Identify the final tooth color using the shade guide. Take a photograph with initial and final shade tab. A definitive color change should only be recorded a few days after the end of the treatment, as the teeth may continue to whiten after the final whitening treatment.

10. PROVIDE SENSITIVITY MANAGEMENT IF NECESSARY
    - Some patients may experience lingering sensitivity.
    - We recommend using UltraEZ™ desensitizing gel or Enamelast™ fluoride varnish. Opalescence™ Whitening Toothpaste Sensitivity Relief can also be used to help minimize sensitivity.

Note: Allow a period of 7–10 days after whitening treatment before placing any resin. The high concentration of oxygen in the tooth could have a significant adverse effect on polymerization of resins.

Opalescence™

10%

CARBAMIDE PEROXIDE

- Opalescence PF tooth whitening gels contain PF (potassium nitrate and fluoride)
- Opalescence PF whitening gel is designed to maximize patient comfort
- Sticky, viscous gel won’t migrate to soft tissues and ensures tray stays securely in place
- Formulated to prevent dehydration and shade relapse
- Five concentrations for treatment flexibility
- Opalescence PF whitening available in Mint, Melon, and Regular flavors
- Opalescence 10% whitening available in Mint and Regular flavors
- Day or night wear

The sticky, viscous formula of Opalescence gel does not leach from the tray like other whitening agents, and the sticky gel holds the comfortable tray securely in place. Opalescence PF gel contains potassium nitrate and fluoride. Opalescence is effective in helping reduce shade relapse as compared to competitor tooth bleaching products. Opalescence whitening gel is made up of at least 20% water which helps prevent dehydration. A university study proves that the gel stays active for 8–10 hours during overnight whitening, which means patients experience results quickly, increasing compliance. Opalescence gel is available in a variety of concentrations, formulations, flavors, and kit configurations to meet all your patients’ whitening needs.

Opalescence gel is recommended for whitening discolored teeth prior to placement of composite, veneers, and/or crowns. It is effective in breaking down some or all internal tooth discolorations due to factors such as, congenital, systemic, pharmacologic, traumatic, etc., as well as aging. It is successful with mild fluorosis and even tetracycline staining.

1. realityesthetics.com
INSTRUCTIONS

1. Pour impression with fast-set plaster or dental stone. Pour alginate shortly after making impression to ensure accuracy. Trimming is less work if quantity of stone is kept to a minimum. Palate and tongue areas are not poured or should be removed after plaster has set. Allow model to dry two hours.

2. For reservoir spaces, apply Ultradent™ LC Block-Out Resin approximately 0.5 mm thick onto labial surfaces and approximately 1.5 mm shy of the gingival margin. DO NOT extend onto incisal edges or occlusal surfaces. Using VALO™ curing light, cure each tooth 5 seconds. Wipe off oxygen inhibition layer.

3. Use the vacuum former to heat Sof-Tray™ Classic tray material until it sags approximately 1/4 to 1/2 inch for the 0.035” sheets, and 1” for the 0.060” and 0.080” sheets. Adapt plastic over model. Cool and remove model from vacuum former.

4. With tactile scissors (Ultra-Trim Scalloping Scissors), carefully and precisely trim tray to clear line which is at gingival height. Scallop edges to avoid contact with gingival tissue.

5. Return tray to model; check tray extensions. Gently flame polish the edges one quadrant at a time, if necessary, with a butane torch. While still warm, immediately hold periphery of each segment firmly against model for three seconds with water-moistened gloved finger. If this over-thins the tray material, fabricate a new tray.

6. Instruct the patient to brush their teeth prior to loading and inserting tray. Go over instructions with the patient that are provided in the whitening kit. Explain the process of loading the tray by expressing one continuous bead of gel approximately halfway up from the incisal edge on the facial side of the tray from molar to molar. Explain that this should use about 1/3 to 1/2 of a syringe.

7. Place tray over teeth. Gently press tray to move gel into place. Pressing too firmly will force gel out of tray.

8. If too much gel has been placed or gel has been forced from tray, gently wipe off with a toothbrush.

9. Clean tray with toothbrush and water. Store tray in appliance case when not in use. Remind patient to follow the whitening regimen you have established.

Indiana University: Small quantities of Opalescence 10% gel were removed and analyzed at various intervals.1

“I recommend Opalescence PF gel to other doctors because the results from patients using it are consistent. The sticky, viscous Opalescence PF gel is one of the most effective solutions I’ve used. My patients feel better knowing that the application of the gel also provides beneficial results such as improving enamel health and increasing enamel microhardness.”
—DR. FRANK SPEAR – SEATTLE INSTITUTE FOR ADVANCED DENTAL EDUCATION

“On behalf of my staff as well as my patients, not one person has made a comment in regards to sensitivity while using this product.”
—DR. HEDY ATASHBAR – SILVER SPRING, MD

“Opalescence gel has had 100% patient satisfaction [in our office] for over 10 years. Despite all the changes and competition of OTC products and otherwise, Opalescence gel has been a product that we have been proud to stake our reputation on... The cosmetic aspect of my practice has been dramatically enhanced.”
—DR. GUY MINOLI – NEW YORK, NY

Opalescence Go™ 10% and 15%

**PREFILLED WHITENING TRAYS**

- **HYDROGEN PEROXIDE**

- Unique UltraFit™ tray material offers a remarkably comfortable fit and easily conforms to any patient's smile
- Molar-to-molar coverage ensures the gel comes in contact with more posterior teeth
- Opalescence Go whitening gel is designed to maximize patient comfort
- Convenient prefilled trays can be worn right out of the package
- Optimal gel quantity allows easy cleanup after whitening
- 10% - wear 30–60 minutes per tray; 15% - wear 15–20 minutes per tray
- Opalescence Go tooth whitening gel contains PF (potassium nitrate and fluoride)
- Delicious Mint and Melon flavors

Opalescence Go take-home whitening system is recommended for patients looking for professional whitening to go or as an alternative to store-bought whitening products. With no impressions, models, or lab time required, Opalescence Go whitening trays are also a perfect follow-up to in-office whitening.

**Powerful, professional whitening to go!**

Soft, thin, adaptable tray material adapts to tooth anatomy for a more comfortable fit

**Delivery tray for insertion and placement only**

**Hydrogen peroxide (10% or 15%)**
Opalescence Go gel for outstanding whitening results

**UltraFit tray before.**

**After 10 minutes in mouth.**

1. realityesthetics.com.
PATIENT INSTRUCTIONS

1. Remove product from packaging.
   "U" – Upper whitening tray
   "L" – Lower whitening tray

2. Position upper tray on teeth.

3. Bite firmly, then suck on tray for 2 seconds.

4. Remove colored outer tray, leaving white inner tray on teeth. Repeat process for the lower tray.

5. After indicated wear time, remove whitening trays and brush teeth.

BEFORE AND AFTER

Before Female patient, results with Opalescence Go™ 10% whitening after ten trays

Before Male patient, results with Opalescence Go™ 15% whitening after ten trays

Before Male patient, results with Opalescence Go™ 10% whitening after ten trays

Opalescence™ Boost™
IN-OFFICE POWER WHITENER
-40% HYDROGEN PEROXIDE

• NO LIGHT NEEDED!
• No refrigeration required before mixing
• Powerful 40% hydrogen peroxide gel
• Two to three 20-minute applications for a total of 40–60 minutes of treatment time, not exceeding 3 applications in one visit
• Opalescence Boost whitening gel is designed to maximize patient comfort
• Precise delivery
• Easy to see for placement and removal
• Chairside syringe-to-syringe mixing ensures maximum strength
• Opalescence Boost tooth whitening gel contains PF (potassium nitrate and fluoride)

Opalescence Boost in-office whitener is chemically activated, so it does not require a light for whitening. In fact, some research shows that using a light for whitening can be harmful to lips and gums.² Syringe-to-syringe mixing activates the product just prior to application. The activated 40% hydrogen peroxide is conveniently delivered via syringe and applied to teeth for whitening.

While there are many other factors to consider, the beginning shade sets the foundation for proper expectations after treatment. This is especially true with in-office whitening. Opalescence Boost whitening is an excellent in-office treatment for less severe, more mild staining as well as tetracycline staining. Patients should see immediate results and, in most cases, their teeth will continue to whiten 24–48 hours after the treatment.

"Opalescence Boost whitening gives the patient the results they are looking for: having whiter teeth after one hour of sitting in the dental chair. Instant gratification is very important to people who desire beautiful white teeth. This product achieves the results we're looking for in our practice." — DR. RONALD FISHER – DELRAY BEACH, FL

1. Confirm that the syringes are securely attached. Depress the small clear plunger (A) into the middle small clear syringe (B) to rupture the internal membrane and combine whitening agent and activator. Press the plunger of the red syringe into the larger clear syringe.

2. Press the contents of the clear syringe back into the red syringe. Thoroughly and rapidly mix the contents by pushing back and forth continually a minimum of 50 times (25 times each side).

3. Attach the Black Mini™ tip onto the red syringe. Verify flow on a cotton gauze or mixing pad prior to applying it intraorally. If resistance is met, replace the tip and recheck the flow.

4. Press all mixed gel into RED syringe and separate the two syringes.

INSTRUCTIONS
INSTRUCTIONS CONTINUED

5. Place Ultradent IsoBlock™ bite block and self-supporting plastic cheek retractors. Completely rinse and air dry teeth and gingiva.

6. Securely attach a Micro 20 ga tip to an OpalDam™ resin barrier syringe and check flow. Express a continuous bead along the gingival margin, overlapping approximately 0.5 mm onto the enamel. Begin and finish the bead one tooth beyond the most distal tooth that is being whitened. Express the resin through any open embrasures.

7. Light cure the OpalDam resin barrier for 20 seconds per arch using a scanning motion. Check the resin cure with an instrument, using caution to not disrupt the seal.

8. Apply a 0.5–1.0 mm thick layer of the gel to the labial surface of the tooth. Allow the gel to remain on the teeth for 20 minutes per application.

9. Suction gel from teeth using the Ultradent™ Luer Vacuum Adapter and SST™ tip or a surgical suction tip. To avoid gel splatter, do not use water while suctioning gel. When no gel is visible, lightly rinse and air dry. Use caution not to dislodge the isolation barrier or rubber dam seal.

10. After the final application is complete and all visible gel is removed, thoroughly rinse the teeth with an air/water spray and high volume suction.

11. Gently slide the tip of a dental instrument beneath the OpalDam resin barrier and lift it off. Check for and remove any interproximal remnants.

12. Evaluate the shade change. If additional whitening is desired and no sensitivity is noted, reschedule patient in 3–5 days for repeat treatment or dispense take-home whitening treatment.

Important Note: After mixing, Opalescence™ Boost™ gel is good for 10 days refrigerated. Before disposing of syringes, aspirate water into the syringe and express liquid down the drain. Repeat a couple of times before disposing of the syringe. Make sure any gauzes used are rinsed with water.

WARNING: Clinician, assistant, and patient must wear protective eyewear with side shields when mixing and applying Opalescence Boost in-office whitening gel.

Opalescence™ Endo
NON-VITAL “WALKING BLEACH”
- 35% HYDROGEN PEROXIDE

Opalescence Endo non-vital whitening gel is formulated specifically to whiten non-vital endodontically treated teeth using the “walking bleach” technique.

BEFORE AND AFTER

1. Completely remove all the restorative and root sealing material from the coronal pulp chamber and 2–3 mm below healthy gingiva. Place a 2 mm thick conventional glass ionomer or a resin-modified glass ionomer to seal the endodontically treated canal. Verify set of material before proceeding.
2. Express Opalescence Endo whitening into the coronal pulp chamber, avoiding soft tissues. Fill the pulp chamber with UltraTemp™ Regular temporary filling material, leaving 3–5 mm of space to allow for the necessary depth.
3. A thin cotton membrane or a small piece of cotton pellet can be used as a separator between temporary and whitening gel. Make sure to place gently to not displace the whitening gel onto the margins, as this will compromise the temporary seal. However, this is not a requirement if adequate space is left to accommodate temporization.
4. Deliver mixed UltraTemp™ Regular filling material directly to site.
5. Easily wipe away excess with a wet cotton ball or gauze before it sets. Finished. Repeat every 1–5 days until desired results are achieved.

Note: Not intended for use in traumatized teeth, any sign of cervical resorption, or after multiple previous whitening attempts.

MUST BE REFRIGERATED

MUST BE REFRIGERATED
**OpalDam™ and OpalDam™ Green**  
**LIGHT-CURED RESIN BARRIERS**

- Protects soft tissue with impervious seal
- Removes easily
- Applies directly

OpalDam light-cured resin barrier is a passively adhesive (sealing) methacrylate-based resin barrier used for isolating tissue adjacent to teeth being whitened. For single-tooth whitening, it may be used to protect adjacent teeth. OpalDam resin barrier is light reflecting to minimize heat and tissue sensitivity during curing. OpalDam Green resin barrier ensures a safe, unmistakable barrier every time.

### INSTRUCTIONS

1. Apply OpalDam resin barrier 4–6 mm wide on gingiva. Seal interproximal spaces. Overlap resin approximately 0.5 mm onto dry enamel to seal. Extend resin one tooth beyond last tooth to be whitened. Light cure using a scanning motion for 20 seconds.

2. Remove cured resin quickly and easily in one piece or a few large pieces. Check interproximally for retained resin. Designed to remove easily from embrasures and undercuts.

---

OpalDam Green resin barrier offers effective coverage of oral tissues, making in-office whitening easier than ever before.

Opalustre™ and OpalCups™
CHEMICAL AND MECHANICAL ABRASION SLURRY

Opalustre 6.6% hydrochloric acid slurry contains carbide microparticles to treat surface imperfections through gentle mechanical abrasion and chemical means. OpalCups Bristle cups are latch-type bristle polishing cups that are used with the Opalustre slurry microabrasion technique to facilitate a more aggressive action and minimize splatter. OpalCups Finishing cups are used with Opalustre slurry for micropolishing the newly treated enamel surface.

Use Opalustre slurry and OpalCups cups to quickly remove unsightly enamel decalcification defects that are less than 0.2 mm in depth. Opalustre is effective in treating mild fluorosis and stains in the superficial layer of the enamel. This treatment can be classified under ADA insurance code 9970: enamel microabrasion.

INSTRUCTIONS - RUBBER DAM

1. Before.

2. After rubber dam placement, apply Opalustre slurry to discolored enamel using the syringe.

3. Use OpalCups™ Bristle cup to compress Opalustre slurry on tooth surface using medium to heavy pressure. Suction the paste from the teeth then rinse, evaluate, and repeat as necessary. Finish treatment by polishing with OpalCups™ Finishing cup.

4. After enamel microabrasion and 21 days of using Opalescence™ whitening gel.

INSTRUCTIONS - OPALDAM

1. Isolate mottled teeth with OpalDam resin barrier. Apply Opalustre slurry directly out of the syringe with a Black Mini™ tip.

2. Press the cup against the surface at a slow speed.

3. Remove Opalustre slurry with an air/water spray. Please pay attention to careful vacuuming. Check to see if repeating the treatment is appropriate. Follow with OpalCups™ Finishing cup.

interproximal Cleaner, page 115.
Opalescence™ Whitening Toothpaste

• Results in as little as one week
• Proven to whiten teeth in four weeks
• Contains hydrated silica which is proven to remove staining
• Gentle on gums
• Safe for long-term daily use
• Contains sodium fluoride to help prevent cavities and strengthen enamel
• Exceptional fluoride uptake
• 90 RDA for maximum enamel, dentin, and restoration protection
• Tricosan and TiO₂ free
• Vegan - no animal products are used

Opalescence™ whitening is the leader in tooth whitening. Part of that product family is Opalescence™ Whitening Toothpaste, which was developed by a dentist. It actively removes surface stains and is gentle enough to use every day, thanks to its unique silica blend.

· Three kinds of exotic mint are blended into a fresh, clean, cool flavor
· Sweetened with xylitol which may reduce the risk of tooth decay
· Our Sensitivity Relief formula provides all the whitening benefits of the Original, with the added benefit of maximum strength 5% potassium nitrate

Has lower abrasiveness than other leading whitening toothpastes.

These disposable IsoBlock bite blocks relax the lips and cheeks, allowing full access to facial and buccal surfaces for in-office whitening, Class V restorations, veneers, cementation, etc.

Ultradent™ LC Block-Out Resin

- Optimal viscosity for proper application
- Blue pigment for visibility during application
- Great utility resin with multiple uses

Ultradent LC Block-Out Resin provides reservoir space for whitening trays and is useful for other laboratory procedures such as model and die repairs. Ultradent LC Block-Out Resin can be rapidly and efficiently delivered with the Black Mini tip. It must be light cured and is not intended for intraoral use.

USES

For reservoir spaces, apply Ultradent LC Block-Out Resin approximately 0.5 mm thick onto the labial surfaces, staying about 1.5 mm from gingival line, and light cure. Do not extend onto incisal edges and occlusal surfaces.

Ultradent LC Block-Out Resin is a hard, strong, no-mix material for blocking out undercuts on dies and filling in voids.

Also use for periodontal trays.

“Ultradent LC Block-Out Resin is the original resin block-out product for extraoral use and it’s still the best.” — REALITY RATINGS

Custom Tray Fabrication

Ultradent’s dental lab is available to professionally fabricate trays and night guards for all your patients’ needs. If you would like our lab to fabricate your trays or guards, please follow these steps:
1. Disinfect, wrap, and pad models to prevent breakage.
2. Identify model with patient and doctor name. Make sure Rx contains office address, phone number, and description of the desired tray.
3. Allow 5 working days after models are received and 2 to 3 days for return shipping. Shipping labels and Rx pads are available upon request. Standard shipping is FedEx Third Day.
Call 800.552.5512 X 4180.

941 - Custom Bleaching Tray

1031 - Fluoride Tray

470 - Night Guard Tray - Soft

951 - Night Guard Tray - Articulated, Soft
Sof-Tray™ Classic Sheets

Select the 0.035” for most whitening trays, and the 0.060” or the 0.080” for whitening patients who are bruxers.

226 - Sof-Tray Sheets Regular 0.035” 5” x 5” 25pk
0.9 mm - 127 x 127 mm

227 - Sof-Tray Sheets Medium 0.060” 5” x 5” 20pk

284 - Sof-Tray Sheets Heavy 0.080” 5” x 5” 20pk
2.0 mm - 127 x 127 mm

Ultradent™ Utility Vinyl Cutters

• Use for gross trimming of tray

604 - Ultradent Utility Vinyl Cutters 1pk

Ultradent™ Ultra-Trim Scalloping Scissors

• Use for precise trimming of border around interdental papilla
• Spring loaded to minimize finger fatigue
• Grips tray material easily
• Made of durable stainless steel

605 - Ultradent Ultra-Trim Scalloping Scissors 1pk

Use the vacuum former to heat Sof-Tray™ Classic tray material until it sags approximately 1/4 to 1/2 inch for the 0.035” sheets, and 1” for the 0.060” and 0.080” sheets. Adapt plastic over model. Cool and remove model from vacuum former.
# Opalescence™ Custom Tray Patient Instructions

Use these instructions to quickly and easily explain the take-home whitening process and procedure to your patients.

1. Keep Opalescence whitening system products out of reach of small children.
2. Do not swallow gel.
3. Some patients experience sensitivity with whitening. Should this occur, stop treatment and contact your dentist.
4. Some patients have noticed temporary discomfort of the gums, lips, throat, or tongue. Should any of these symptoms persist more than two days, or if they progressively worsen, call your dentist. These side effects will usually subside within 1–3 days after treatment is discontinued.
5. Coffee, tobacco, and other products can restain your teeth over time. Should this occur, the teeth can be rewhitened within a few nights with Opalescence whitening gel.
6. Some amalgam or “silver” fillings may leave a dark purple color in your whitening tray. This is normal.
7. Crowns, bridges, partial dentures, veneers, and composite fillings will not whiten.
8. Store whitening gel out of the sun and heat. Refrigeration is recommended. Do not freeze.
9. Check expiration date and store according to instructions.
10. Regular dental checkups and cleanings are important before and after whitening to maintain a healthy smile.

---

## General Precautions

Welcome to Opalescence Whitening

- Before whitening, record your starting shade to track your progress.

## Whitening Menu

Educate patients on the many whitening options available in your office and set your offerings apart from the many store-bought whiteners available.

**Opalescence™ Window Clings Small**

**3” x 6” 1pk**

- 1009765 - PF
- 1009766 - Go
- 1009767 - Boost

**Opalescence™ Mirror Cling**

**5 1/2” x 7” 1pk**

- 1005909 White
- 1006233 Go

**Plastic Display Stands**

**1pk**

- 23920 - Pocket
- 1006290

**Opalescence™ Displays**

**1pk**

- 80028
- 68218

**Opalescence™ Whitening Menu**

**50pk**

Educate patients on the many whitening options available in your office and set your offerings apart from the many store-bought whiteners available.

**Opalescence™ Custom Tray Patient Instructions**

**50pk**

Use to quickly and easily explain the take-home whitening process and procedure to your patients.

**Opalescence™ Whitening Toothpaste Handout**

**25pk**

**Enamelast™ Aftercare Treatment Card**

**25pk**

Use these instructions to quickly and easily explain the process and procedure to your patients.

---

**Place these on your windows/mirrors for patients to see and ask for more information about whitening treatments.**
