

Ducati Helmets

The range of Ducati helmets

Safety

Safety is a top priority for Ducati, and the helmet is one of the most critical elements in ensuring the protection of motorcycle riders.

To maintain helmet's high-performance standards, it is essential to replace it every five years. Ducati helmets, manufactured by Arai and Nolan, come with an extended 5-year warranty, significantly exceeding the 2-year legal requirement.

A Helmet for Every Ducati Enthusiast

Helmets are designed to cater to the specific needs of motorcyclists, offering solutions for diverse riding preferences. Known for its bikes tailored to various riding contexts, Ducati provides customers with an extensive and versatile range of helmets, designed to meet various needs.

Racing

Ideal for the track, racing helmets are designed for a forward-leaning riding position. They feature a highly efficient ventilation system, ensuring stability at high speeds, a snug fit, and a broad field of vision, with a center of gravity optimized to minimize neck strain.

Sport

Helmets designed for sporty road riding strike a balance between performance and comfort, to enhance the riding experience. While similar to the racing models, they include features suited for less extreme speeds and riding postures, offering effective ventilation and specific design elements aimed at reducing noise.

Touring and off-road

Touring helmets are built for long trips, prioritizing comfort and quietness, with a high center of gravity and adequate ventilation for an upright riding position. The range also includes a model with an opening chin guard. Intercom is available as an optional accessory.

Urban

Urban helmets are perfect for everyday city use, designed for upright riding at lower speeds. Their sleek, minimalist design often features monochromatic finishes, aligning with a modern urban aesthetic.

Partnerships with leading brands

Ducati has always partnered exclusively with market-leading companies to ensure the highest quality and safety for its customers.

The graphics for our helmets are designed by Aldo Drudi, a renowned figure in the industry for decades.

Ducati Corse V8

Disponibile in 10 colori e 5 misure. EEE DDOT JSISECCC

Designed by Drudi Performance and built on an Arai base with top-quality materials and solutions, the Ducati Corse V9, Ducati Corse V8 and Ducati Corse V7 full-face helmets boasts distinctive racing properties in terms of both style and performance. The inner shell provides exceptional rigidity in case of impact and features a reinforced protective band in the upper area for enhanced safety.

The detachable inner liner made from Eco-Pure® fabric is extremely compact, guaranteeing better comfort, decreased pressure, and an excellent fit. These features are also optimized by the Facial Contour System (FCS), which makes it easier to put the helmet on thanks to

a special elastic support. The oversized thermoformed visor, with anti-scratch and anti-fog properties, ensures excellent peripheral vision and a broader field of view, significantly improving visibility when cornering.

Ventilation has been improved to ensure stability and efficiency even at high speeds. The sliding closure on the vents reduces noise while increasing durability and impermeability. Designed to ensure optimal track performance, this helmet is offered in three striking design variants.

An accessory that will be sure to please even the most demanding riders, even in terms of style.

Speed Evo V2

Available certifications ECE - DOT

The Speed Evo V2 helmet is dedicated to Ducati enthusiasts who crave the thrill of a sporty ride without compromising on comfort. Its Ultra Carbon outer shell is both durable and lightweight, while the interior padding is designed to adapt perfectly to the shape of the rider's head, for maximum comfort.

The visor is equipped with Safety Visor Lock so that it stays firmly in place, preventing the risk of accidental opening at high speeds. The helmet's advanced ventilation system promotes optimal airflow, helping maintain an ideal

temperature for peak focus, even at high speeds. Speed Evo V2 is prepared for camel back installation and is available in two color versions.

Focus on Speed Evo V2

UltraCarbon shell
Combines a high concentration of carbon with aramid and glass fibers for optimal durability and strength.

RAS (Racetrack Aerodynamic Setup)
Shell with spoiler designed to maximize aerodynamics, thanks to the concave rear design. The spoiler can be removed to decrease the helmet's size when riding in twos, for greater comfort.

Ultrawide Flat Visor with Pinlock anti-fog system
A visor with a racing-specific design and a fitting that sits higher on the head for improved lateral and upper visibility. Provides sharp vision in all weather conditions.

High ventilation points
The ventilation points at the top of the shell provide the helmet with superior airflow and enhanced comfort

Visor safety lock
Prevents accidental visor openings at high speeds and enhances stability when slightly open to reduce fogging.

Optimized visor mechanism
Features a screw-closure system to minimize the risk of visor detachment in the event of a fall. The reduced internal size and bulk enhance EPS performance and improve protection in the event of side impacts. The adjustable visor positioning ensures a perfect closure during use.

Emergency release system
Enables quick and safe helmet removal during emergencies, while maintaining ease of assembly and disassembly, without requiring any hooks.

Removable spoiler
To use the helmet with a passenger and minimize the rear spoiler's protrusion, the RAS can be disassembled using the special tool included in the helmet's package.

Ducati Tonal

Available certifications ECE

The Ducati Tonal full-face helmet is built on an Arai shell designed for road use. It features a minimal, urban-inspired design that remains unmistakably Ducati, created by Drudi Performance.

The shell is engineered to distribute impact energy over the widest possible surface, offering an excellent balance of rigidity, strength and lightness. The visor provides the rider with a wide field of vision thanks to a variable-axis system that allows every corner to be tackled with the correct angle.

The interior is made of hypoallergenic fabric, removable and washable for improved hygiene.

A patented ventilation system creates airflow from the inside to the outside, reducing wind noise and turbulence while improving hot air extraction.

The Ducati Tonal helmet also features dedicated housings for speakers.

D-Rider V2

Available certifications ECE - DOT - JIS - CCC

Made by Arai specifically for sporty use, the D-Rider V2 helmet boasts a design by Drudi Performance.

Two Super Fiber layers and one intermediate layer made with a special fiber exclusive to Arai, to maximize protection and lightness. The patented inner shell is made of variable-density EPS whose compactness changes according to the position in order to further increase resistance. Its visor offers riders a wide field of vision, allowing every turn to be taken with excellent precision.

The helmet is easy to put on thanks to the elastic foam support in the cheeks, which compresses and expands under minimum pressure, thus ensuring excellent stability and greater comfort.

A perfect mix of safety and riding comfort.

Ducati Theme V2

Available certifications ECE - DOT - JIS - CCC

The outer shell of the Ducati Theme V2 helmet is made of materials that offer an excellent compromise between rigidity, strength and weight, whilst maintaining impact resistance.

This lightweight, stylish helmet is the quintessence of comfort while providing an exceptional level of protection and ultimate riding style.

Exceptional performance is ensured by the FFS system, which reduces wind noise and turbulence while increasing hot air dissipation.

Ducati Logo Peak 2.0

Available certifications ECE - DOT

The Ducati Logo Peak 2.0 full-face helmet has been designed for multiple uses, guaranteeing ideal levels of comfort and safety.

The inner shell is made from TRICARBOCO (carbon-aramid-glass fiber), and features dynamic and high-performance contours. Developed and optimized in the wind tunnel, it offers good performance and comfort for road, sport, and urban use.

The inner shell is made from differentiated density polystyrene in order to allow for the gradual and progressive absorption of impact forces.

Thermal comfort is ensured by the air intakes and ventilation system. The sporty design by Drudi Performance stands out thanks to its captivating graphics, complete with the Italian flag and Ducati logo.

Ducati Logo

Available certifications ECE - DOT

Ducati Logo is an eclectic full-face helmet that is suitable for both urban and road sport use. The shell is crafted from TRICARBOCO, a blend of carbon and fiber bonded with resin.

The inner shell is made of a differentiated density polystyrene, designed to allow a gradual and progressive absorption of the impact force generated by a collision.

The polycarbonate visor is easy to remove, thanks to a practical, tool-free mechanism.

The ventilation system facilitates efficient air exchange, promoting comfort and clarity while riding.

The four color variants (Arctic white, dark black, Ducati red, and yellow) allow it to

Dark Black

Yellow

Horizon V3

Available certifications ECE - DOT

Boasting a modern and minimalist design, the Horizon V3 helmet highlights the glossy carbon texture of the shell made from Ultra Carbon and aramid glass fibers. The Carbon Fitting inner padding is designed to keep the head cool and dry. The Ultrawide visor surface provides exceptional visibility and ensures maximum riding safety. Whether for a short weekend getaway or a long road adventure, this helmet delivers everything needed for travel in total safety and comfort.

Intercom N-Com B 902.1 X - Intercom system for the Horizon helmet The exclusive advanced intercom system compatible with the Ducati Horizon helmet, designed to ensure maximum comfort during your ride.

Strada Tour V5

Available certifications ECE - DOT - JIS - CCC

The Strada Tour V5 helmet is engineered for adventurous Ducati enthusiasts who balance touring with more extreme off-road excursions. It offers excellent protection thanks to the Super Fiber Laminate outer shell and the patented EPS inner shell with different densities, characterized by areas that are more or less compact depending on the position.

The reflective material inserts provide increased visibility during night rides or under low-light conditions. This highly versatile helmet may be worn with different combinations of peak, visor and goggles, in order to provide

riders with the perfect riding condition, regardless of the situation. An advanced ventilation system ensures ample airflow, featuring multiple inlets and an outlet via extractors on the nape of the neck and lower head areas.

A mix of versatility, comfort and safety, without prejudice to the unmistakable Ducati style

Focus on Strada Tour V5

PB-CLC outer shell

The Complex Laminate construction with a Peripheral Belt enhances shell strength and flexibility while keeping the weight down and maintaining a lower center of gravity. A patented foam fiber layer reinforces the structure without adding any significant weight to the helmet.

VAS visor and VAS-A system

Offers a wide field of vision and superior visibility. The visor is easily replaceable and the peak can be quickly removed, allowing for quick transitions between the Adventure, Off-Road, and On-Road configurations. The VAS-A visor and peak system also improves impact energy deflection.

Emergency release system

Enables quick and safe helmet removal during emergencies, while maintaining ease of assembly and disassembly, without requiring any hooks.

Peak

Enhances ventilation by directing the airflow efficiently to the intakes. Riding comfort is improved with an adjustable peak designed to provide sun protection.

Interiors

The inner lining material is antimicrobial, odor-resistant, and stain-resistant. The inner liner is fully removable. The breath deflector simplifies goggle use, while the FCS cheek pads ensure a secure and comfortable fit for both on- and off-road riding.

Ventilation system

The AR spoiler and chin guard air vent provide superior ventilation under all conditions. The chin guard features an internal shutter, which can be adjusted to channel the airflow toward the mouth or visor, helping to prevent fogging.

AR Spoiler

Optimally positioned for Adventure riding, the AR spoiler reduces turbulence-induced fatigue and expels hot air from the crown area. It can be easily adjusted, even while wearing gloves.

3D ARAI logo duct ventilation

This system channels air through two 10 mm intakes, and can be easily closed, even while wearing gloves. The system is optimized for upright riding positions and lower-speeds.

Ducati Desmo

Available certifications ECE

The Ducati Desmo helmet has been developed for off-road use and is dedicated to Enduro and Motocross riders. The outer shell is made of composite materials that provide 40% greater strength compared to standard fiberglass.

The removable Eco-Pure® fabric inner lining ensures maximum hygiene, even after prolonged use. Ventilation is one of the Ducati Desmo helmet's key strengths, thanks to the aerodynamically optimized peak, rear diffusers that create a Venturi effect, and multiple air intakes that improve internal airflow.

The sun peak, extended and rounded to protect against mud and other debris, features front cooling vents and multiple exhaust ports to reduce lift at high speeds. Excellent protection from debris is also ensured by the mouth vent, mounted externally for improved penetration resistance, and by the stainless steel mesh grille, which provides an additional barrier against splashes while reducing mud accumulation. The Ducati Desmo helmet graphics are inspired by the theme of the fluorescent red curve on a Ducati red base, a visual element that characterizes all garments dedicated to the motocross world.

Goggles Explorer

The Explorer V3 goggles represent a blend of protection, performance and style designed for off-road riding.

This accessory includes everything needed to ensure a wide field of vision on the track or trail, as well as excellent eye protection, including from UV rays. The foam padding features a microfiber layer capable of rapidly absorbing moisture, preventing sweat from reaching the eyes or entering the goggles.

Visibility is further enhanced by the NoFog™ treatment, which prevents condensation and fogging. A series of technical solutions ensure that the goggles fit helmets of any shape and size, guaranteeing optimal comfort and excellent stability.

The clean design of this accessory allows it to be perfectly paired with Ducati cross and dual helmets, protecting the rider's eyes even in the most extreme riding conditions, without compromising on style.

D-Attitude V2

Available certifications ECE - DOT - JIS - CCC

The D-Attitude V2 helmet is the perfect companion for every adventure. Featuring a sophisticated design with an urban feel, it provides maximum comfort without compromising on protection.

The rigid and resistant outer shell is combined with a patented inner shell made of variable-density EPS, featuring more or less compact areas.

The highly efficient ventilation system helps maintain an optimal temperature, and offers stability under all conditions of use.

The inner liners are designed to accommodate an intercom device and glasses, making this helmet the perfect companion for both urban and summer journeys.

SCR62 Milestone

Available certifications ECE - DOT - JIS - CCC

The Milestone helmet, made by the Ducati Style Center on an Arai base, has a minimal and sophisticated design conceived for urban use but also suitable for Touring use.

The outer shell is rigid and sturdy and provides excellent protection in the case of impact. Inside, the patented EPS inner shell with different densities is characterized by areas that are more or less compact depending on the area to protect.

Besides outstanding protection, this helmet offers a wider field of vision thanks to the visor with VAS (variable axis system).

The ventilation system and the natural and ergonomic shape of the shell help to stabilize the helmet at high speeds and reduce turbulence, maximizing comfort and making it perfect for long-distance use.
