Guide to the new
G M IGNITION SWITCH

The new LOCK system has been provided to decrease the theft hazard of your new car. It locks the electrical system, the transmission, and steering mechanism as well. Here's how it works.

AUTOMATIC TRANSMISSION

The KEY CAN BE REMOVED ONLY when the transmission selector is in PARK and the key is in the lock position. This means that not only is the electrical system locked, but the transmission and steering mechanism are locked also.

MANUAL TRANSMISSION

The KEY CAN BE REMOVED ONLY when the shift lever is in REVERSE and the key is in the lock position. To start the engine, the clutch pedal MUST be depressed.
