4. Install the mounting bracket with the engine mount pad toward the front of the engine using the OEM engine mount locations (Figures 3 & 4).

Installation Instructions

Thank you for choosing to use HOOKER™ engine swap mounting brackets as part of your GEN3 HEMI Swap project. These mounting brackets are part of the most comprehensively engineered system of mounting components, headers and exhaust systems available for this application. Please read these instructions thoroughly before attempting installation.

IMPORTANT: Low mount A/C Compressors will only work with engines using VVT front accessory drive.

*** These Engine mounting plates will not work with **NON VVT**- low mount A/C compressor configurations.

PRE-INSTALLATION CONSIDERATIONS:

- Installation of these brackets requires the use of new OE style Mopar V8 engine B/E-Body rubber engine mounts. These are available at Holley.com **PN: 24096LKW** or your local parts store (Example: POWER TORQUE PN: 2250). These mounts will need to be modified for clearance at the engine block **See Figure 5** on page 3 of these instructions for details.
- K-Member clearance will need to be performed to accommodate low mount A/C compressors (**VVT engines only**). **See Figure 7** on page 4 of these instructions.
- Mopar Performance 45 Degree Oil Filter Adapter Kits **PN: 77072447** or remote oil filter location will be required.
- Use of a Mid Sump oil pan and pick up tube required (**Holley PN: 302-61 VVT** or **PN: 302-60 NON VVT** - See www.holley.com for a complete selection of Hemi Swap oil pans and pickup tubes).
- 6.2L Hellcat engine installations may require supercharger water manifold (**PN: HEMI0005ERL**).
- Only Blackheart Headers **PN: BH2358** have been tested for correct fitment with these engine mounting plates.

Visit www.holley.com for a complete selection of Transmission Crossmember, Headers, Exhaust, and more GEN3 HEMI support products to complete your E-Body Hemi Swap.

COMPATIBILITY INFORMATION:

PN: BHS566 Mounting plates **WILL NOT** work with the following combinations

- Low mount A/C Compressors on **NON VVT ENGINES** - (VVT timing cover and accessory drive is required to use low mount A/C)
- OEM Hemi K-Members
- 6 Cylinder K-Members
- Late K-Members using Barrel style Engine mounts

RACING EQUIPMENT AND BRAKES MUST BE MAINTAINED AND SHOULD BE CHECKED REGULARLY FOR FATIGUE, DAMAGE, AND WEAR.

Installation Notes and Precautions

- Check the length and diameter of the push rod from the pedal or power booster. It should fully engage the bottom of the recess in the master cylinder piston assembly without interference along the sides or shoulders. For short push rod power brake boosters, use the spacer supplied to reduce the overall depth of the piston recess. The piston detail diagram on page 2 illustrates the overall depth and diameter of the push-rod recess.
- When the pedal is released, the piston assembly must fully return to the snap-ring retainer at the end of the cylinder bore. Consequently, the push rod must be long enough to remain captured inside the piston recess when the pedal is fully retracted. Adjust the length of the push rod and available pedal travel as necessary. Return springs and pedal stops are always recommended.
