

PTE Academic Lesson Plan Ideas: Test Taking Strategies

Lesson 19 – Highlight incorrect words

Time allocated: 60 minutes

Step 1: Introduce the Item Type

This is an item type that integrates listening and reading skills, and requires test takers to listen for and point out the differences between a recording and a transcription.

You will hear a recording. Below is a transcription of the recording. Some words in the transcription differ from what the speaker(s) said. Please click on the words that are different.

Status: Beginning in 10 seconds.

Volume 

So far in our discussion of chemical equations we have assumed that these reactions only go in one direction, the forward direction, from left to right as we read it in the equation. That's why our arrowhead points from left to right: reactants react together to make products. However, this is not exactly how things occur in reality. In fact, practically every chemical reaction is reversible, meaning the products can also react together to reform the reactants that they were made of. So instead of writing that single arrow facing from right to top, a more appropriate symbol would be a double arrow, one going from left to right and one going from right to left. Reactants are continually - continuously - reacting to form produce. But at the same time as those products are formed, they remake the reactants. They're both going simultaneously, forming each other. This is what we would call a state of equality.

Step 2: Present the Item Type Strategies

Strategy 1

You only have ten seconds to read through the text before the recording starts. Focus on quickly reading and working out the pronunciation of the content words.

Strategy 2

As you listen, concentrate on every single content word you hear, i.e., nouns, verbs, adjectives and adverbs. Pay attention not only to words that carry the sentence stress, but also to those that may be de-emphasized.

Strategy 3

As you listen, silently read each content word on the screen, and quickly compare what you hear to what you see.

Step 3: Explain and Practice Each Strategy

Strategy 1

Explain to your students that they only have ten seconds to go through the text, so they should focus on the content words while reading and ignore grammar words such as prepositions or articles. The incorrect words will most likely be nouns, verbs, adjectives or adverbs, such as easily-confused words that are similar in sound, spelling or meaning, e.g., *accept* and *except*, *jealous* and *zealous*, *south* and *north*, *colonize* and *conquer*, *accomplished* and *unaccomplished*.

As they read the text, students should try to sound out the content words silently. Working out the pronunciation of the written words will help students figure out the incorrect words when they hear the recording and compare the written and spoken forms.

To practice this strategy, ask your class to do the following activities:

- Display some easily-confused words, such as *affect*, *allusion*, *climactic*, *credible*, *ingenious*, *official*, *reluctant*. Have students read the words in pairs. Make sure they know the correct pronunciation.
- Then dictate words that look or sound alike, e.g., *effect*, *illusion*, *climatic*, *credulous*, *ingenuous*, *officious*, *reticent*, and have students write each word next to the one that sounds similar.
- Give students copies of Item 1. Have students read the text silently, then practice in pairs to work out the pronunciation of any unfamiliar words.

Strategy 2

Explain to your students that they will hear the recording only once, so they should concentrate while listening and try not to miss any words as they quickly move through the text. Remind them that the wrong words are most likely to be content words such as nouns, verbs, adjectives and adverbs, and that not all content words will carry the sentence stress. This is why they should also listen to words that are pronounced quickly or de-emphasized by the speaker.

To practice this strategy, ask your class to do the following activities in pairs:

- Display some sentences, e.g., *Global climate change is the greatest environmental challenge we face. We have at most a few decades to make the necessary investments to prevent the most serious impacts of climate change. Future generations will judge us based on the investments we are considering now.* Read them aloud naturally, and have students identify the de-emphasized content words.
- Have students look at their copies of Item 1. Play the audio [L19_Highlight_incorrect_words_1], and have them follow the text as they listen to every single content word.

Strategy 3

Remind your students of Strategy 1, i.e., they should be able to pronounce each content word in the transcription of the text. This will help them quickly compare what they hear with what appears on the screen, and identify the incorrect words.

After the recording finishes, students should not re-read the text and try to correct any responses they made. Explain that even the incorrect words may fit into the text logically and grammatically, and unless they are absolutely certain that there is a factual error, or the same name is repeated in the text (e.g., the *Northwest Pasture* is referred to as the *Northwest Passage* later in the transcription), they should not make any corrections based on context or intuition.

To practice this strategy, ask your class to do the following activities:

- Have students look at their copies of Item 1. Play the audio [L19_Highlight_incorrect_words_1] again, and have students listen, read the text silently and circle the incorrect words.
- Have students compare their answers with the correct ones.

Step 4: Respond to a Highlight Incorrect Words Item

Explain to your students that they will now respond to a test item simulating the test conditions. They will have ten seconds to skim the transcription, listen to the recording and give their response. Remind students of the three strategies covered in this lesson and ask them to apply these strategies.

Give out copies of Item 2. Play the audio [L19_Highlight_incorrect_words_2], and have students circle the incorrect words.

Step 5: Provide Feedback

Ask your students if they were able to use the strategies. Which one was the most difficult to apply? Which one do they think was the most useful?

Ask students to compare each other's responses in pairs or groups. Then get them to check their answers with the correct ones and play the audio again.

Item 1

You will hear a recording. Below is a transcription of the recording. Some words in the transcription differ from what the speaker(s) said. Please circle the words that are different.

So far in our discussion of chemical equations we have assumed that these reactions only go in one direction, the forward direction, from left to right as we read it in the equation. That's why our arrowhead points from left to right: reactants react together to make products. However, this is not exactly how things occur in reality. In fact, practically every chemical reaction is reversible, meaning the products can also react together to reform the reactants that they were made of. So instead of writing that single arrow facing from right to top, a more appropriate symbol would be a double arrow, one going from left to right and one going from right to left. Reactants are continually - continuously - reacting to form produce. But at the same time as those products are formed, they remake the reactants. They're both going simultaneously, forming each other. This is what we would call a state of equality.

Item 2

You will hear a recording. Below is a transcription of the recording. Some words in the transcription differ from what the speaker(s) said. Please circle the words that are different.

I think the importance of creativity today really reflects a fundamental rift in the nature of the economy. You know, in the old days, wealth was created because in the industrial era, you manufactured everything, you got economies of scale, you had long production runs, you were really effective - you know, you could get a Model T, any color just so long as it was black. Right? So there was centralization. And there was a whole set of presumptions about how to manage, how to create an organization - you know, a typical kind of hierarchical organization - to make sure that things ran smoothly. Well, that may be great for a relatively stable era of history - relatively stable - but now things are functionally unstable - and so we need less economies of scale and more economies of recovery. Which means that the management approach, the organizational approach, has got to shift as well.

I think the importance of creativity today really reflects a fundamental shift in the nature of the economy. You know, in the old days, wealth was created because in the industrial era, you manufactured something, you got economies of scale, you had long production runs, you were really efficient - you know, you could get a Model T, any color just so long as it was black. Right? So there was standardization. And there was a whole set of assumptions about how to manage, how to create an organization - you know, a typical kind of hierarchical organization - to make sure that things ran smoothly. Well, that may be great for a relatively stable era of history - relatively stable - but now things are fundamentally unstable - and so we need less economies of scale and more economies of discovery. Which means that the management approach, the organizational approach, has got to shift as well.

Answers

I think the importance of creativity today really reflects a fundamental **shift** in the nature of the economy. You know, in the old days, wealth was created because in the industrial era, you manufactured **everything**, you got economies of scale, you had long production runs, you were really **effective** - you know, you could get a Model T, any color just so long as it was black. Right? So there was **centralization**. And there was a whole set of **presumptions** about how to manage, how to create an organization - you know, a typical kind of hierarchical organization - to make sure that things ran smoothly. Well, that may be great for a relatively stable era of history - relatively stable - but now things are **functionally** unstable - and so we need less economies of scale and more economies of **recovery**. Which means that the management approach, the organizational approach, has got to shift as well.
