Sobotta

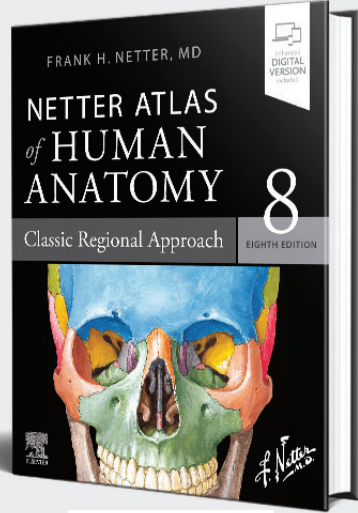

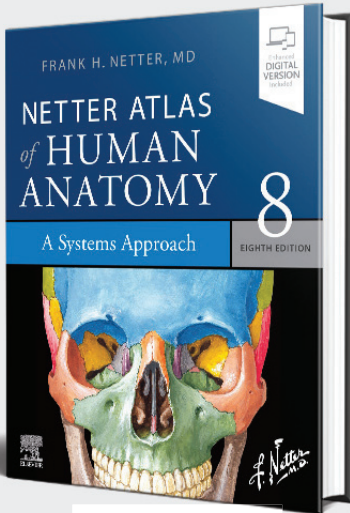

Gray's

In 1858, Drs Henry Gray and Henry Vandyke Carter created a book for their surgical colleagues that established an enduring standard among anatomical texts. After more than 160 years of continuous publication, Gray's Anatomy has expanded and remains the definitive, comprehensive reference on the subject, offering ready access to the information you need to ensure safe, effective practice.

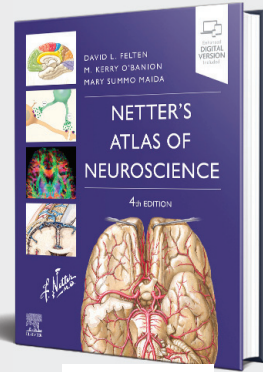

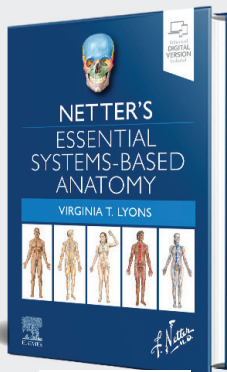

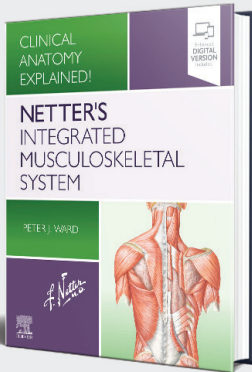

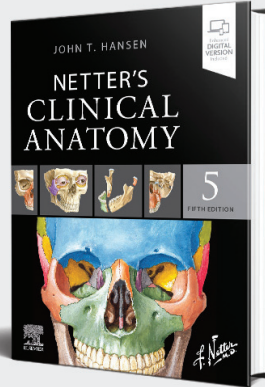

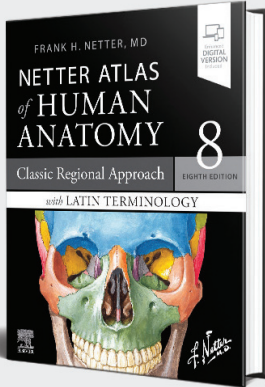

Netter

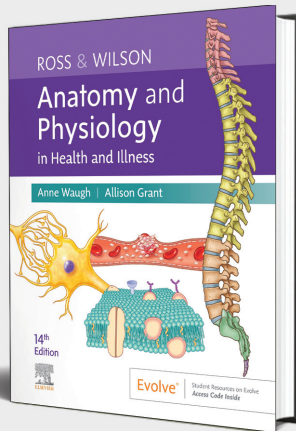

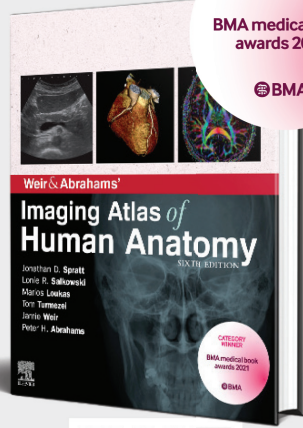

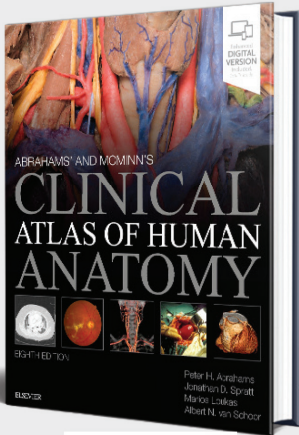

Unique among anatomy atlases, with paintings by Dr. Frank Netter as well as Dr. Carlos A. G. Machado, one of today's foremost medical illustrators, the all new Netter Atlas of Human Anatomy, 8th edition contains illustrations that emphasise anatomic relationships that are most important to students and clinical professionals who are learning anatomy, participating in a dissection lab, sharing anatomy knowledge with patients, or refreshing their anatomy knowledge.

The 8th edition comes for the first time with a new separate version the "Netter Atlas of Human Anatomy - A systems Approach" that illustrates the body, system by system, in clear, brilliant detail from a clinician's perspective.
